NOTICE AND INSTRUCTION TO BIDDERS

BID DOCUMENTS

DFS TERMINAL, HANGAR, AND APRON EXPANSION

DEFUNIAK SPRINGS AIRPORT

INSTRUCTIONS TO BIDDERS

Owner and Owner's Representative

The Owner as stated herein refers to the **City of DeFuniak Springs**.

The Owner's authorized representative as stated herein refers to the Owner's Consultant, AVCON, INC., herein referred to as Engineer.

Bidder Representations

By submittal of a proposal (bid), the BIDDER represents the following:

- The Bidder has read and thoroughly examined the project documents
- The Bidder has a complete understanding of the terms and conditions required for the satisfactory performance of project work.
- The Bidder has fully informed themselves of the project site, the project site conditions and the surrounding area.
- The Bidder has familiarized themselves of the requirements of working on an operating airport and understands the conditions that may in any manner affect cost, progress or performance of the work
- The Bidder has correlated their observations with that of the project documents.
- The Bidder has found no errors, conflicts, ambiguities or omissions in the project documents, except as previously submitted in writing to the owner that would affect cost, progress or performance of the work.
- The Bidder is familiar with all applicable Federal, State and local laws, rules and regulations pertaining to execution of the contract and the project work.
- The Bidder has complied with all requirements of these instructions and the associated bid documents.

Bid Documents/Project Manual

The bid documents are comprised of the following; Notice-to-Bidders, Instructions-to-Bidders, Proposal Documents, Contract Documents, General Provisions, Special Provisions, Technical Specifications, Geotechnical Investigation, any authorized addenda issued by the Owner and any document incorporated in whole or in part by reference therein.

All documents comprising the Proposal Documents are complementary to one another and together establish the complete terms, conditions and obligations of the successful bidder.

Those individual elements of the Contract Documents that are bound together shall also be referred to as the Project Manual.

Prospective bidders may obtain a copy of the project manual and project drawings from the designated office identified within the Notice-to-Bidders.

Modifications to Project Documents

Modifications to the project documents may only be made by written addendum issued by the Owner or the Engineer. Verbal explanations, interpretations or comments made by the Owner or Owner's representative shall not be binding. Addenda will be transmitted to all known official plan holders. Each bidder shall certify at the time of bid submittal that they acknowledge receipt of all issued addenda.

Errors and Discrepancies in Project Documents

Should Bidder find an error, discrepancy, ambiguity or omission in the project documents prior to submittal of a proposal, the Bidder is obligated to contact the Owner or Engineer with written notice of the error, discrepancy, ambiguity or omission. The written notice shall identify the nature and location of the error, discrepancy, ambiguity or omission. Corrections or modifications to the project documents will only be made by written addendum as prescribed herein. By submittal of a Bid Proposal, Bidder represents that they have thoroughly reviewed the project documents and that they have not identified any error, discrepancy, ambiguity or omission that would affect cost, progress or performance of the project work.

Clarifications and Interpretations

A bidder requiring a clarification or interpretation of the project documents shall make a written request to the Owner or Engineer. The Owner or Engineer must receive the written request a minimum of fourteen (14) calendar days prior to the date of the bid opening.

Interpretations of Estimated Proposal Quantities

An estimate of quantities of work to be done and materials to be furnished under these specifications is stated within the project manual. This estimate is a result of careful calculations and is believed to be correct. The estimated quantities are given only as a basis for comparison of proposals and the award of contract. The Owner does not expressly or impliedly agree that the actual quantities involved will correspond exactly with the estimated quantities. The Bidder shall not plead misunderstandings or deception because of such estimates of quantities, or of the character, location, or other conditions pertaining to the work. Payment to the Contractor will be made only for the actual quantities of work performed or materials furnished in accordance with the plans and specifications. It is understood that the quantities may be increased or decreased as hereinafter provided in the subsection titled "Alteration of Work and Quantities" of the general provisions without in any way invalidating the unit bid prices.

Examination of Plans, Specifications and Site Conditions

As stated within the "Bidder Representations" and reaffirmed herein, the Bidder is expected to carefully examine the site of the proposed work, the proposal, drawings, specifications, terms and conditions of the proposed agreement and the form of agreement. The Bidder shall satisfy themselves as to the character, quality, and quantities of work to be performed, materials to be furnished and as to the requirements of the proposed contract. The submission of a proposal shall be prima facie evidence that the Bidder has made such examination and is satisfied as to the conditions to be encountered in performing the work and as to the requirements of the proposed contract, plans and specifications.

Boring logs and other records of subsurface investigations and tests, as appropriate may be available for inspection by the Bidder. It is understood and agreed that such subsurface information, whether included in the project drawings, specifications or otherwise made available to the Bidder, was obtained and is intended for the owner's design and estimating purposes only. Such information has been made available for the convenience of all bidders. It is further understood and agreed that Bidder is solely responsible for

all assumptions, deductions, or conclusions which he or she may make from his or her examination of the boring logs and other records of subsurface investigations and tests that are furnished by the Owner.

Issuance of Proposal Forms

The Owner reserves the right to refuse to issue a proposal form to a prospective bidder should the bidder be in default for any of the following reasons:

a. Failure to comply with any pre-qualification regulations of the owner, if such regulations are cited or otherwise included, in the proposal as a requirement for bidding.

b. Failure to pay, or satisfactory settle, all bills due for labor and materials on former contracts in force (with the owner) at the time the owner issues the proposal to a prospective bidder.

c. Contractor default under previous contracts with the owner

d. Unsatisfactory work on previous contracts with the owner

Form of Proposal

All bid proposals shall be made on the forms provided by the Owner within the Project Manual, or by Addenda. No bidder may submit more than one proposal. All proposals are to be written in ink and shall be clearly legible. All blank spaces in the proposal forms shall be legibly completed for each and every bid item. The Bidder shall not qualify any bid item. The Bidder shall initial any erasures and alterations made on the proposal form by the bidder.

The Bidder shall state the price of their bid in U.S. dollars and cents in both written and numeral format. In the event of a discrepancy, the written value will take precedence.

Signature of Proposal

The proposal shall be signed and dated by an authorized representative of the Bidder. All signatures shall be made with an ink pen. The Bidder's representative shall have the legal authority to obligate and bind the Bidder to the terms and conditions of the contract. The Bidder shall legibly state the name of the Bidder's representative, the legal name of the Bidder, the address of the Bidder including City, State and Zip Code, and the telephone number of the Bidder.

- For bids by corporations, an officer of the corporation shall sign the bid, the State of incorporation shall be identified and the corporate seal affixed.

- For bids submitted by an agent, evidence of the power of attorney shall be attached to the bid.

- For bids submitted by a partnership or joint venture, the proposal shall identify the name of all firms and the authorized parties of all firms. A copy of the partnership/joint-venture agreement shall be provided to the Owner as an attachment to the proposal.

Modification or Withdrawal of Bid Proposal

Bidder may modify or withdraw their proposal at any point up to the specified time and date identified for receipt of proposals. Any request for bid withdrawal or modification by the Bidder that is received after the specified time and date for receipt of proposals will be returned unopened to the sender.

Any modification to a Bidder's proposal, subject to the time constraint noted herein, must be made on the proposal forms contained in the project manual. The Bidder's authorized representative must sign the modification. The modification shall be placed in a sealed envelope and the statement "Modification to Proposal" shall be legibly marked in the upper left-hand corner. Withdrawal of a proposal may be made, subject to the time constraint noted herein, only with written confirmation under signature of the Bidder.

Bid Guaranty

Each bid proposal shall be accompanied by a bid guaranty in the amount of five percent (5%) of the total amount of the bid. The bid guaranty may be by bid bond or certified check made payable to the Owner. The bid bond shall be from a responsible surety qualified to conduct business within the State of Florida. A certified check shall be issued from a responsible and solvent bank or trust company.

Disadvantage Business Enterprise (DBE)

The requirements of 49 CFR Part 26, Regulations of the U.S. Department of Transportation, apply to this contract. **The Owner has established a DBE contract goal of 15.4 % participation for this contract.** Award of this contract will be conditioned upon satisfying the requirements of this section. The Bidder/Offeror shall make good faith efforts, as defined in Appendix A, 49 CFR Part 26, to subcontract **15.4** % of the dollar value of the prime contract to certified DBE firms as defined in 49 CFR Part 26. These requirements apply to all Bidders/Offerors, including those who qualify as a Disadvantaged Business Enterprise. Per the provisions of Federal Regulation 29 CFR Part 26.55, qualified DBE firms that subcontract work to a non-DBE firm shall deduct the amount of the non-DBE subcontract from the total amount of the DBE participation that counts toward meeting the Owner's DBE participation goal.

All bidders shall submit the following information with their proposal on the forms provided in the project manual:

(1) The names and addresses of Disadvantaged Business Enterprise (DBE) firms that will participate in the contract;

(2) A description of the work that each DBE firm will perform;

(3) The dollar amount of the participation of each DBE firm listed under (1);

(4) Written statement from Bidder/Offeror that attest their commitment to use the DBE firm(s) listed under (1) to meet the owner's project goal;

(5) If Bidder or Offeror cannot meet the advertised project DBE goal; Evidence of good faith efforts undertaken by the Bidder or Offeror, as described in appendix A to 49 CFR Part 26.

The successful Bidder or Offeror must provide written confirmation of participation from each of the DBE firms the Bidder or Offeror list in their commitment. This Bidder or Offeror must submit the DBE's written confirmation of participation within 5 days after bid opening or with the proposal documents as a condition of bid responsiveness.

The requirements of 49 CFR Part 26 apply to this contract. It is a policy of the City of DeFuniak Springs to practice nondiscrimination based on race, color, sex or national origin in the award or performance of this contract. The Owner encourages participation by all firms qualifying under this solicitation regardless of business size or ownership.

Bidder Qualifications

Each Bidder shall furnish the owner satisfactory evidence of their competency and financial capability to perform the proposed work. The Bidder shall demonstrate that they are a responsible firm that possesses the skills, abilities, experience, and integrity to faithfully perform the project work. Evidence of competency shall consist of statements covering the Bidder's past experience on similar work, a listing of plant and equipment immediately available for use on the project, and a listing of key personnel that are available for the project. The listing for plant and equipment shall identify the type, the capacity and the present condition of the item.

Evidence of financial responsibility shall consist of a confidential statement or report of the Bidder's financial resources and liabilities as of the last calendar year. A public accountant must certify such statements and reports. If the Bidder is presently pre-qualified with the State Highway agency, evidence of this pre-qualification may serve as evidence of financial responsibility in lieu of the certified financial statements and reports.

Certification of Offerer/Bidder Regarding Debarment

By submitting a bid/proposal under this solicitation, the bidder or offeror certifies that neither it nor its principals are presently debarred or suspended by any Federal department or agency from participation in this transaction.

Certification of Lower Tier Contractors Regarding Debarment

The successful bidder, by administering each lower tier subcontract that exceeds $25,000 as a "covered transaction", must verify each lower tier participant of a "covered transaction" under the project is not presently debarred or otherwise disqualified from participation in this federally assisted project. The successful bidder will accomplish this by:

1. Checking the System for Award Management at website: http://www.sam.gov

2. Collecting a certification statement similar to the Certificate Regarding Debarment and Suspension (Bidder or Offeror), above.

3. Inserting a clause or condition in the covered transaction with the lower tier contract.

If the FAA later determines that a lower tier participant failed to disclose to a higher tier participant that it was excluded or disqualified at the time it entered the covered transaction, the FAA may pursue any available remedies, including suspension and debarment of the non-compliant participant.

Alternate Bids

Bidder shall complete all blanks provided on the proposal forms. When so permitted by the Owner, the Bidder shall legibly write the statement "No Bid" for those alternate bid options that the Bidder elects not to submit a proposal.

Submission of Bid Proposal

Bidders shall provide two (2) complete copies of the Bid Documents. Proposals shall be sent to arrive at the specified time and date for receipt of bids. Proposals received after the specified time will not receive consideration and will be returned unopened. Proposals shall be enclosed in a sealed opaque envelope. Each proposal shall be addressed to the office location identified in the Notice-to-bidders. The outside of the envelope shall be marked as follows:

Sealed Bid Proposal

Bid of {Insert Name and Address of Bidder}

Proposal for: Terminal, Hangar, and Apron Expansion (22-01-AP)

AIP Project No.: TBD

To be opened at: City of DeFuniak Springs City Hall

For a modification to a previously submitted proposal, insert "Modification to Proposal" in place of "Sealed Bid Proposal."

The envelope shall contain a signed original of the following forms found in the Project Manual:

SECTION	CONTENTS
B1	Proposal Form (in separate sealed envelope)
B2	Equal Employment Opportunity Report Statement
B3	Bidder's Qualifications
B4	Disadvantaged Business Enterprise (DBE) Utilization Statement
B4	Disadvantaged Business Enterprise (DBE) Letter of Intent
B5	Proposal Bond
B6	Buy American Preference
B7	Certification of Non-Segregated Facilities
B8	Public Entity Crime Affidavit
B9	General Civil Rights Provision
B10	Clean Air and Water Pollution Control
B11	Lobbying
B12	Procurement of Recovered Material
B13	Insurance Requirements

Bid Opening

All proposals submitted prior to the stated time and date for receipt of bids will be publicly opened and read aloud by the Owner or the Owner's representative. Bidders, their authorized agents, and other interested parties are invited to attend. Proposals submitted after the stated time and date for receipt of bids will be automatically rejected without consideration and will be returned unopened.

Evaluation of Proposals

Proposals may be held by the Owner for purposes of review and evaluation by the Owner for a period not to exceed **90** calendar days from the stated date for receipt of bids. The Owner will tabulate all bids and

verify proper extension of unit costs. The Bidder shall honor their proposal for the duration of this period of review and evaluation. The bid guaranty will be held by the Owner until this period of review has expired or a contract has been formally executed.

Bid Informalities and Irregularities

The Owner reserves the right to waive any informality or irregularity discovered in any proposal, which in the owner's judgment best serves the Owner's interest. In the situation where an extension of a unit price is found to be incorrect, the stated unit price and correct extension will govern. In the event of a discrepancy between the written and numeral values, the written value shall take precedence.

Irregular Proposals

Proposals meeting the following criteria are subject to consideration as being irregular:

1. If the proposal is on a form other than that furnished by the Owner or Owner's representative.

2. If the form furnished by the Owner or Owner's representative is altered from the original document.

3. If there are unauthorized additions, conditional or alternate pay items or irregularities of any kind that make the proposal incomplete, indefinite, or otherwise ambiguous.

4. If the proposal does not contain a unit price for each pay item listed in the proposal, except in the case of authorized pay items, for which the Bidder is not required to furnish a unit price.

5. If the proposal contains unit prices that are obviously unbalanced.

6. If the proposal is not accompanied by the bid guarantee specified herein.

Disqualification of Bid Proposals

The Owner reserves the right to reject any or all bids, as determined to be in the best interest of the Owner.

Causes for rejection of proposals include but are not limited to:

- Submittal of an irregular proposal;

- Submittal of more than one proposal from the same partnership, firm or corporation;

- Failure by Bidder to submit the bid prior to the stated time and date for receipt of bids;

- Failure by Bidder to furnish satisfactory bid guarantee;

- Failure by Bidder to provide all information required of the bid forms;

- Failure by Bidder to comply with the requirements of bid instructions;

- Failure by the Bidder to demonstrate good faith efforts in obtaining participation by certified DBE firms;

- Determination by the Owner that Bidder is not qualified to accomplish the project work;
- Determination by the Owner that the Bidder has placed conditions on or qualified their proposal;
- Discovery of any alteration, interlineations or erasure of any project requirement by the Bidder;
- Inclusion of the Bidder on the "Excluded Parties Listing System" as maintained and published by the General Services Administration;
- Evidence of collusion among bidders.

Cancellation of Award
At any time prior to execution of a contract agreement, the Owner reserves the right to cancel the award for any reason without liability to the Bidder, apart from the return of the bid guaranty, at any time prior to execution of the contract.

Notice of Award of Contract
It is the intent of the Owner, after a period of review and evaluation, to award a contract to the responsible bidder that submits the lowest responsive proposal. The successful bidder will be informed their bid has been accepted through the Owner's issuance of a Notice-of-Award. The Notice-of-Award shall not be construed as a binding agreement. The proper execution of a contract agreement shall serve as the binding agreement.

Award of Alternates
Unless specifically stated, the Owner reserves the right to accept alternates in any order or combination, which in the judgment of the Owner, best serves the Owner's interest.

Return of Bid Guaranty
The bid guaranty of the successful Bidder will be returned upon successful execution of the contract documents as specified herein. Failure by the successful Bidder to execute the contract documents within the specified time shall result in forfeiture of the bid guaranty. The bid guaranty of the second and third lowest responsible bidders will be retained for a period of 60 days pending the execution of the contract documents by the successful bidder.

Except as noted above, the bid guaranty of unsuccessful bidders will be returned at the point their proposal is rejected.

Contract Agreement
The successful Bidder shall execute the contract agreement in accordance with the accepted bid proposal within ten (10) calendar days of the date of the Notice-of-Award. Failure to execute the contract agreement within the specified time frame may result in the bid being awarded to the next low bidder and shall result in the forfeiture of the Bidder's bid guarantee as a liquidated damage.

Performance and Payment Bonds
The successful Bidder shall furnish separate performance and payment bonds each in the amount of 100% of the contract price. The bonds shall be made payable to the Owner as security for faithful performance of the contract and for the payment of all persons, firms or corporations to whom the Bidder may become legally indebted for labor, materials, tools, equipment or services in the performance of the project work.

The form of the bond shall be that provided within the project manual. The current power of attorney for the person signing the bond as a representative of the surety shall be attached to the bonds.

The executed bonds shall be delivered to the Owner within ten (10) calendar days from the date of contract execution. Bonds should not be executed prior to execution of the contract agreement. The bonds shall be issued by a solvent Surety, which is certified to operate within the State the project work is located and which is listed in the current issue of the U.S. Treasury Circular 570. If specifically requested by the Owner, the successful Bidder shall obtain and submit information on the surety's financial strength rating.

Certificates of Insurance

The successful Bidder shall furnish to the Owner all required certificates of insurance as specified within the project manual.

Approval of the Contract

Upon receipt of the Contract Agreement, Contract Bonds and Certificate of Insurance as executed by the successful Bidder, the Owner will complete execution of the contract conditioned upon the Owner's judgment that it remains in their best interest to enter into the Agreement.

Delivery of the fully executed Contract Agreement to the successful Bidder shall constitute the Owner's approval to be bound by the successful Bidder's proposal and all terms and conditions of the Contract Agreement.

Upon satisfactory execution of the contract by the successful Bidder and the Owner, all references to "Bidder" in the bid documents become equivalent to the term "Contractor".

BID FORM

TO: Owner City of DeFuniak Springs
DeFuniak Springs Airport
71 US Highway 90 West,
DeFuniak Springs, Florida 32433

FROM: Bidder _____

Address _____

City/State/Zip _____

DATE: _____

1. The undersigned hereby certifies that he/she has examined the form of contract, plans and specifications, and other associated Contract Document for the **Terminal, Hangar, and Apron Expansion** project, copies of which are on file at the DeFuniak Springs Airport, 71 US Highway 90 West, DeFuniak Springs Airport, Florida 32433. The undersigned further certifies that he/she has examined the site of the work, has determined for himself/herself the conditions affecting the work and subject to acceptance of the proposal, agrees to provide at his/her expense, all labor, insurance, superintendence, machinery, plant, equipment, tools, apparatus, appliances, and means of construction, and all materials and supplies complete the entire work, including work incidental thereto, in conformance with the plans, specifications, and associated contract documents.

2. The undersigned acknowledges that the Contract Documents consist of the Invitation for Bid, Instruction to Bidders, all issued Addenda, Proposal, Statement of Qualifications, Anticipated Sub-Contracts, Form of Proposal Guaranty, Notice of Award, Contract Agreement, Performance & Payment bonds, Notice to Proceed, Notice of Contractor's Settlement, Wage Rates, General Provisions, Special Provisions, Plans, Technical Specifications, attached appendices and referenced documents.

3. The undersigned, in compliance with the Notice to Bidders / Invitation for Bids, hereby proposes to do the work called for in said contract and specifications and shown on said plans and to furnish all materials, tools, labor, and all appliances and appurtenances necessary for the said work at the following rates and prices:

4. The undersigned understands that the above quantities of work to be done are approximate only and are intended principally to serve as a guide in evaluating the bids.

   The contract will be awarded on the basis of the total bid amount shown on the Bid Schedule for the combination of alternates ultimately awarded by the City of DeFuniak Springs.

   In the event any discrepancy exists between unit prices and total amount shown on the Standard Form of Bid, the unit prices shall govern.

5. It is understood that the schedule of minimum wage rates, as established by the Secretary of Labor and included in the Specifications, are to govern on this project, and the undersigned certifies that he or she has examined this schedule of wage rates and that the prices bid are based on such established wage rates.

6. The undersigned prime contractor, if not a certified DBE, hereby assures that they will make sufficient and reasonable efforts to meet the DBE goals, that they will subcontract **_15.4_ percent** of the dollar value of the prime contract to DBE firms, and that they will include the DBE clauses required by the sponsor's DBE Program in all subcontracts which offer subcontracting opportunities. The undersigned will complete and submit with the bid the attached DBE Participation Form, including a demonstration of a good faith effort if the DBE goal is not met.

7. The undersigned acknowledges a non-mandatory pre-bid meeting was held for this project.

8. The undersigned agree upon written notice of the acceptance of this bid, within one hundred twenty (120) days after the opening of the bids, that he or she will execute the contract in accordance with the bid as accepted and give contract (Performance and Payment) bond on attached forms within ten (10) days after the prescribed forms are presented for signature.

   If awarded the contract, the undersigned agrees to commence and complete the construction in compliance with the terms stated in the Notice to Bidders / Invitation for Bids. The undersigned agrees to accept as full payment for the completed construction work an amount equal to the total of the prices as hereinafter set forth, subject to adjustments due to changes as may be officially ordered during the progress of the work.

9. The undersigned agrees that if awarded the contract, the work of construction shall be started not later than 10 days after receipt by the Contractor of the Notice to Proceed and shall be substantially complete within 420 calendar days, subject to any extension of time that may be granted by the City of DeFuniak Springs. Failure to complete the work within the time period allowed shall subject the Contractor to the liquidated damages as defined in Special Provision 13.

10. As an evidence of good faith in submitting this proposal, the undersigned encloses a certified check or proposal bond in the amount of 5% of bid which, in case the undersigned refuses or fails to accept an award and to enter into a contract and file the required bonds within the prescribed time, shall be forfeited to the City of DeFuniak Springs, as liquidated damages.

11. The undersigned certifies that he does not maintain or provide for his employees any segregated facilities at any of his establishments, and that he does not permit his employees to perform their services at any location, under his control, where segregated facilities are maintained. The

undersigned certifies further that he will not maintain or provide for his employees any segregated facilities at any of his establishments and that he will not permit his employees to perform their services at any location under his control, where segregated facilities are maintained. The undersigned agrees that a breach of this certification is a violation of the Equal Opportunity Clause in this contract. As used in this certification, the term "segregated facilities" means any waiting rooms, work areas, restrooms and washrooms, restaurants and other eating areas, time clocks, locker rooms and other storage or dressing areas, parking lots, drinking fountains, recreation or entertainment areas, transportation and housing facilities provided for employees which are segregated by explicit directive or are in fact segregated on the basis of race, color, religion, or national origin, because of habit, local custom, or any other reason. The undersigned agrees that (except where he has obtained identical certifications from proposed subcontractor for specific time periods) he will obtain identical certifications from proposed subcontractors prior to award of subcontracts exceeding $10,000 which are not exempt from the provisions of the Equal Opportunity Clause, and that he will retain such certifications in his files.

12. It is a condition of this contract, and shall be made a condition of each subcontract entered into pursuant to this contract, that the contractor and any subcontractor shall not require any laborer or mechanic employed in performance of the contract to work in surroundings or under working conditions which are unsanitary, hazardous, or dangerous to his health or safety, as determined under Construction Safety and Health Standard (Title 29 Code of Federal Regulation, Part 1518) (36 F.R. 7340) promulgated by the United States Secretary of Labor, in accordance with Section 107 of the Contract Work Hours and Safety Standards Act, (82 Stat. 96).

13. By entering into this contract, the Contractor certifies that neither it (nor he/she) nor any person or firm who has an interest in the Contractor's firm is a person or firm ineligible to be awarded Government contracts by virtue of Section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

14. No part of this contract shall be subcontracted to any person or firm ineligible for award of a Government contract by virtue of Section 3(a) of the Davis-Bacon Act or CFR 5.12(a)(1).

15. The undersigned hereby declares that the only parties interested in this proposal are named herein, that this proposal is made without collusion with any other person, firm, or corporation, that no member of the City of DeFuniak Springs, officer or agent of the City of DeFuniak Springs or DeFuniak Springs Airport, is directly or indirectly financially interested in this bid.

16. The undersigned hereby acknowledges the following limitations to requesting payment for this project:

1) The maximum amount the undersigned may request payment for prior to September 1, 2022 is $3,590,000.

2) The maximum amount the undersigned may request payment for prior to September 1, 2023 is undersigned may request $5,150,000.

3) The undersigned may request payment exceeding $5,150,000 after September 1, 2023.

17. The undersigned acknowledges receipt of the following Addenda:

BID SUMMARY

(A) BASE BID – TERMINAL BUILDING: $_____

(B) ADD. ALTERNATE 1: MAIN ENTRY COVERED CANOPY AT DROP-OFF $_____

(C) ADD. ALTERNATE 2: COURTYARD ENCLOSURE ITEMS $_____

(D) ADD. ALTERNATE 3: LANDSIDE SITE WORK BEYOND BUILDING PAD $_____

(E) ADD. ALTERNATE 4: HANGAR BUILDING $_____

(F) ADD. ALTERNATE 5: BARN DOOR IN LIEU OF GLASS DOOR AND WALL $_____

(G) ADD. ALTERNATE 6: APRON SITE WORK $_____

(H) ADD. ALTERNATE 7: TAXIWAY CONNECTOR WIDENING SITE WORK $_____

(I) TOTAL BID AMOUNT*: $_____

** The Total Bid Amount (I) shall equal the sum of (A) through (H). The Basis of Award shall be based on the lowest total of either the Base Bid or combinations of the total of the Base Bid and any Bid Alternatives, as finally determined by the owner and the funding agencies based on the availability of funding.*

The Bidder represents that it has examined the site of the Work and informed itself fully in regard to all conditions pertaining to the place where the work is to be done; that it has examined the plans and specifications for the work and other Contract Documents relative thereto and has read all of the Addenda furnished prior to the ope2021ning of the Bids, as acknowledged below; and that it has otherwise fully informed itself regarding the nature, extent, scope and details of the Work to be performed.

If provided with a Notice of Intent to Award the Contract by the Owner, the Bidder shall execute and deliver to the Owner all of the documents required by the Contract Documents, including but not limited to, the Addendum to the Agreement and the Performance and Payment Bonds in the form contained in the Contract Documents, furnish the required evidence of the specified insurance coverages, furnish all necessary permits, license, materials, equipment, machinery, maintenance, tools, apparatus, means of transportation and labor necessary to complete the Work.

Dated and signed this _____ day of _____, 2021.

SIGNATURE OF BIDDER:

TITLE: _____

DATE: _____

NOTICE OF REQUIREMENT FOR AFFIRMATIVE ACTION TO ENSURE EQUAL EMPLOYMENT OPPORTUNITY

1. The Offeror's or Bidder's attention is called to the "Equal Opportunity Clause" and the "Standard Federal Equal Employment Opportunity Construction Contract Specifications" set forth herein.

2. The goals and timetables for minority and female participation, expressed in percentage terms for the contractor's aggregate workforce in each trade on all construction work in the covered area, are as follows:

Timetables

Goals for minority participation for each trade: 15.4%
Goals for female participation in each trade: 6.9%

These goals are applicable to all of the contractor's construction work (whether or not it is Federal or federally assisted) performed in the covered area. If the contractor performs construction work in a geographical area located outside of the covered area, it shall apply the goals established for such geographical area where the work is actually performed. With regard to this second area, the contractor also is subject to the goals for both its federally involved and non-federally involved construction.

The Contractor's compliance with the Executive Order and the regulations in 41 CFR Part 60-4 shall be based on its implementation of the Equal Opportunity Clause, specific affirmative action obligations required by the specifications set forth in 41 CFR 60-4.3(a), and its efforts to meet the goals. The hours of minority and female employment and training must be substantially uniform throughout the length of the contract, and in each trade, and the contractor shall make a good faith effort to employ minorities and women evenly on each of its projects. The transfer of minority or female employees or trainees from Contractor to Contractor or from project to project for the sole purpose of meeting the Contractor's goals shall be a violation of the contract, the Executive Order and the regulations in 41 CFR Part 60-4. Compliance with the goals will be measured against the total work hours performed.

3. The Contractor shall provide written notification to the Director of the Office of Federal Contract Compliance Programs (OFCCP) within 10 working days of award of any construction subcontract in excess of $10,000 at any tier for construction work under the contract resulting from this solicitation. The notification shall list the name, address, and telephone number of the subcontractor; employer identification number of the subcontractor; estimated dollar amount of the subcontract; estimated starting and completion dates of the subcontract; and the geographical area in which the subcontract is to be performed.

4. As used in this notice and in the contract resulting from this solicitation, the "covered area" is Florida, Walton County and City of DeFuniak Springs.

Construction: AIP funded construction work contracts and subcontracts that exceed $10,000. Construction work means construction, rehabilitation, alteration, conversion, extension, demolition or repair of buildings, highways, or other changes or improvements to real property, including facilities providing utility services. The term also includes the supervision, inspection, and other onsite functions incidental to the actual construction.

EQUAL OPPORTUNITY CLAUSE

During the performance of this contract, the contractor agrees as follows:

1. The contractor will not discriminate against any employee or applicant for employment because of race, color, religion, sex, or national origin. The contractor will take affirmative action to ensure that applicants are employed, and that employees are treated during employment without regard to their race, color, religion, sex, sexual orientation, gender identify or national origin. Such action shall include, but not be limited to the following: employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. The contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided setting forth the provisions of this nondiscrimination clause.

2. The contractor will, in all solicitations or advertisements for employees placed by or on behalf of the contractor, state that all qualified applicants will receive considerations for employment without regard to race, color, religion, sex, or national origin.

3. The contractor will send to each labor union or representative of workers with which he has a collective bargaining agreement or other contract or understanding, a notice to be provided advising the said labor union or workers' representatives of the contractor's commitments under this section, and shall post copies of the notice in conspicuous places available to employees and applicants for employment.

4. The contractor will comply with all provisions of Executive Order 11246 of September 24, 1965, and of the rules, regulations, and relevant orders of the Secretary of Labor.

5. The contractor will furnish all information and reports required by Executive Order 11246 of September 24, 1965, and by rules, regulations, and orders of the Secretary of Labor, or pursuant thereto, and will permit access to his books, records, and accounts by the administering agency and the Secretary of Labor for purposes of investigation to ascertain compliance with such rules, regulations, and orders.

6. In the event of the contractor's noncompliance with the nondiscrimination clauses of this contract or with any of the said rules, regulations, or orders, this contract may be canceled, terminated, or suspended in whole or in part and the contractor may be declared ineligible for further Government contracts or federally assisted construction contracts in accordance with procedures authorized in Executive Order 11246 of September 24, 1965, and such other sanctions may be imposed and remedies invoked as provided in Executive Order 11246 of September 24, 1965, or by rule, regulation, or order of the Secretary of Labor, or as otherwise provided by law.

7. The contractor will include the portion of the sentence immediately preceding paragraph (1) and the provisions of paragraphs (1) through (7) in every subcontract or purchase order unless exempted by rules, regulations, or orders of the Secretary of Labor issued pursuant to section 204 of Executive Order 11246 of September 24, 1965, so that such provisions will be binding upon each subcontractor or vendor. The contractor will take such action with respect to any subcontract or purchase order as the administering agency may direct as a means of enforcing such provisions, including sanctions for administering agency may direct as a means of enforcing such provisions, including sanctions for noncompliance*: Provided, however*, That in the event a contractor becomes involved in, or is threatened with, litigation with a subcontractor or vendor as a result of such direction by the administering agency the contractor may request the United States to enter into such litigation to protect the interests of the United States.

STANDARD FEDERAL EQUAL EMPLOYMENT OPPORTUNITY
CONSTRUCTION CONTRACT SPECIFICATIONS

1. As used in these specifications:

   a. "Covered area" means the geographical area described in the solicitation from which this contract resulted;

   b. "Director" means Director, Office of Federal Contract Compliance Programs (OFCCP), U.S. Department of Labor, or any person to whom the Director delegates authority;

   c. "Employer identification number" means the Federal social security number used on the Employer's Quarterly Federal Tax Return, U.S. Treasury Department Form 941;

   d. "Minority" includes:

      (1) Black (all) persons having origins in any of the Black African racial groups not of Hispanic origin);

      (2) Hispanic (all persons of Mexican, Puerto Rican, Cuban, Central or South American, or other Spanish culture or origin regardless of race);

      (3) Asian and Pacific Islander (all persons having origins in any of the original peoples of the Far East, Southeast Asia, the Indian Subcontinent, or the Pacific Islands); and

      (4) American Indian or Alaskan native (all persons having origins in any of the original peoples of North America and maintaining identifiable tribal affiliations through membership and participation or community identification).

2. Whenever the contractor, or any subcontractor at any tier, subcontracts a portion of the work involving any construction trade, it shall physically include in each subcontract in excess of $10,000 the provisions of these specifications and the Notice which contains the applicable goals for minority and female participation and which is set forth in the solicitations from which this contract resulted.

3. If the contractor is participating (pursuant to 41 CFR 60-4.5) in a Hometown Plan approved by the U.S. Department of Labor in the covered area either individually or through an association, its affirmative action obligations on all work in the Plan area (including goals and timetables) shall be in accordance with that Plan for those trades which have unions participating in the Plan. Contractors shall be able to demonstrate their participation in and compliance with the provisions of any such Hometown Plan. Each contractor or subcontractor participating in an approved plan is individually required to comply with its obligations under the EEO clause and to make a good faith effort to achieve each goal under the Plan in each trade in which it has employees. The overall good faith performance by other contractors or subcontractors toward a goal in an approved Plan does not excuse any covered contractor's or subcontractor's failure to take good faith efforts to achieve the Plan goals and timetables.

4. The contractor shall implement the specific affirmative action standards provided in paragraphs 7a through 7p of these specifications. The goals set forth in the solicitation from which this contract resulted are expressed as percentages of the total hours of employment and training of minority and female utilization the contractor should reasonably be able to achieve in each construction trade in which it has employees in the covered area. Covered construction contractors performing construction work in a geographical area where they do not have a Federal or federally assisted construction contract shall apply the minority and female goals established for the geographical area where the work is being performed. Goals are published periodically in the Federal Register in notice form, and such notices may be obtained from any Office of Federal Contract Compliance Programs office or from Federal procurement contracting officers. The contractor is expected to make substantially uniform progress in meeting its goals in each craft during the period specified.

5. Neither the provisions of any collective bargaining agreement nor the failure by a union with whom the contractor has a collective bargaining agreement to refer either minorities or women shall excuse the contractor's obligations under these specifications, Executive Order 11246 or the regulations promulgated pursuant thereto.

6. In order for the non-working training hours of apprentices and trainees to be counted in meeting the goals, such apprentices and trainees shall be employed by the contractor during the training period and the contractor shall have made a commitment to employ the apprentices and trainees at the completion of their training, subject to the availability of employment opportunities. Trainees shall be trained pursuant to training programs approved by the U.S. Department of Labor.

7. The contractor shall take specific affirmative actions to ensure equal employment opportunity. The evaluation of the contractor's compliance with these specifications shall be based upon its effort to achieve maximum results from its actions. The contractor shall document these efforts fully and shall implement affirmative action steps at least as extensive as the following:

    a. Ensure and maintain a working environment free of harassment, intimidation, and coercion at all sites, and in all facilities at which the contractor's employees are assigned to work. The contractor, where possible, will assign two or more women to each construction project. The contractor shall specifically ensure that all foremen, superintendents, and other onsite supervisory personnel are aware of and carry out the contractor's obligation to maintain such a working environment, with specific attention to minority or female individuals working at such sites or in such facilities.

b. Establish and maintain a current list of minority and female recruitment sources, provide written notification to minority and female recruitment sources and to community organizations when the contractor or its unions have employment opportunities available, and maintain a record of the organizations' responses.

c. Maintain a current file of the names, addresses, and telephone numbers of each minority and female off-the-street applicant and minority or female referral from a union, a recruitment source, or community organization and of what action was taken with respect to each such individual. If such individual was sent to the union hiring hall for referral and was not referred back to the contractor by the union or, if referred, not employed by the contractor, this shall be documented in the file with the reason therefore along with whatever additional actions the contractor may have taken.

d. Provide immediate written notification to the Director when the union or unions with which the contractor has a collective bargaining agreement has not referred to the contractor a minority person or female sent by the contractor, or when the contractor has other information that the union referral process has impeded the contractor's efforts to meet its obligations.

e. Develop on-the-job training opportunities and/or participate in training programs for the area which expressly include minorities and women, including upgrading programs and apprenticeship and trainee programs relevant to the contractor's employment needs, especially those programs funded or approved by the Department of Labor. The contractor shall provide notice of these programs to the sources compiled under 7b above.

f. Disseminate the contractor's EEO policy by providing notice of the policy to unions and training programs and requesting their cooperation in assisting the contractor in meeting its EEO obligations; by including it in any policy manual and collective bargaining agreement; by publicizing it in the company newspaper, annual report, etc.; by specific review of the policy with all management personnel and with all minority and female employees at least once a year; and by posting the company EEO policy on bulletin boards accessible to all employees at each location where construction work is performed.

g. Review, at least annually, the company's EEO policy and affirmative action obligations under these specifications with all employees having any responsibility for hiring, assignment, layoff, termination, or other employment decisions including specific review of these items with onsite supervisory personnel such a superintendents, general foremen, etc., prior to the initiation of construction work at any job site. A written record shall be made and maintained identifying the time and place of these meetings, persons attending, subject matter discussed, and disposition of the subject matter.

h. Disseminate the contractor's EEO policy externally by including it in any advertising in the news media, specifically including minority and female news media, and providing written notification to and discussing the contractor's EEO policy with other contractors and subcontractors with whom the contractor does or anticipates doing business.

i. Direct its recruitment efforts, both oral and written, to minority, female, and community organizations, to schools with minority and female students; and to minority and female recruitment and training organizations serving the contractor's recruitment area and employment needs. Not later than one month prior to the date for the acceptance of applications for apprenticeship or other training by any recruitment source, the contractor shall send written notification to organizations, such as the above, describing the openings, screening procedures, and tests to be used in the selection process.

j. Encourage present minority and female employees to recruit other minority persons and women and, where reasonable, provide after school, summer, and vacation employment to minority and female youth both on the site and in other areas of a contractor's workforce.

k. Validate all tests and other selection requirements where there is an obligation to do so under 41 l. Conduct, at least annually, an inventory and evaluation at least of all minority and female personnel, for promotional opportunities and encourage these employees to seek or to prepare for, through appropriate training, etc., such opportunities.

m. Ensure that seniority practices, job classifications, work assignments, and other personnel practices do not have a discriminatory effect by continually monitoring all personnel and employment related activities to ensure that the EEO policy and the contractor's obligations under these specifications are being carried out.

n. Ensure that all facilities and company activities are non-segregated except that separate or single user toilet and necessary changing facilities shall be provided to assure privacy between the sexes.

o. Document and maintain a record of all solicitations of offers for subcontracts from minority and female construction contractors and suppliers, including circulation of solicitations to minority and female contractor associations and other business associations.

p. Conduct a review, at least annually, of all supervisor's adherence to and performance under the contractor's EEO policies and affirmative action obligations.

8. Contractors are encouraged to participate in voluntary associations, which assist in fulfilling one or more of their affirmative action obligations (7a through 7p). The efforts of a contractor association, joint contractor union, contractor community, or other similar groups of which the contractor is a member and participant, may be asserted as fulfilling any one or more of its obligations under 7a through 7p of these specifications provided that the contractor actively participates in the group, makes every effort to assure that the group has a positive impact on the employment of minorities and women in the industry, ensures that the concrete benefits of the program are reflected in the contractor's minority and female workforce participation, makes a good faith effort to meet its individual goals and timetables, and can provide access to documentation which demonstrates the effectiveness of actions taken on behalf of the contractor. The obligation to comply, however, is the contractor's and failure of such a group to fulfill an obligation shall not be a defense for the contractor's noncompliance.

9. A single goal for minorities and a separate single goal for women have been established. The contractor, however, is required to provide equal employment opportunity and to take affirmative action for all minority groups, both male and female, and all women, both minority and non-minority. Consequently, if the particular group is employed in a substantially disparate manner (for example, even though the contractor has achieved its goals for women generally,) the contractor may be in violation of the Executive Order if a specific minority group of women is underutilized.

10. The contractor shall not use the goals and timetables or affirmative action standards to discriminate against any person because of race, color, religion, sex, or national origin.

11. The contractor shall not enter into any subcontract with any person or firm debarred from Government contracts pursuant to Executive Order 11246.

12. The contractor shall carry out such sanctions and penalties for violation of these specifications and of the Equal Opportunity Clause, including suspension, termination, and cancellation of existing subcontracts as may be imposed or ordered pursuant to Executive Order 11246, as amended, and its implementing regulations, by the Office of Federal Contract Compliance Programs. Any contractor who CFR Part 60-3. fails to carry out such sanctions and penalties shall be in violation of these specifications and Executive Order 11246, as amended.

13. The contractor, in fulfilling its obligations under these specifications, shall implement specific affirmative action steps, at least as extensive as those standards prescribed in paragraph 7 of these specifications, so as to achieve maximum results from its efforts to ensure equal employment opportunity. If the contractor fails to comply with the requirements of the Executive Order, the implementing regulations, or these specifications, the Director shall proceed in accordance with 41 CFR 60-4.8.

14. The contractor shall designate a responsible official to monitor all employment related activity to ensure that the company EEO policy is being carried out, to submit reports relating to the provisions hereof as may be required by the Government, and to keep records. Records shall at least include for each employee, the name, address, telephone number, construction trade, union affiliation if any, employee identification number when assigned, social security number, race, sex, status (e.g., mechanic, apprentice, trainee, helper, or laborer), dates of changes in status, hours worked per week in the indicated trade, rate of pay, and locations at which the work was performed. Records shall be maintained in an easily understandable and retrievable form; however, to the degree that existing records satisfy this requirement, contractors shall not be required to maintain separate records.

15. Nothing herein provided shall be construed as a limitation upon the application of other laws which establish different standards of compliance or upon the application of requirements for the hiring of local or other area residents (e.g., those under the Public Works Employment Act of 1977 and the Community Development Block Grant Program).

FEDERAL FAIR LABOR STANDARDS ACT (FEDERAL MINIMUM WAGE)

All contracts and subcontracts that result from this solicitation incorporate by reference the provisions of 29 CFR part 201, the Federal Fair Labor Standards Act (FLSA), with the same force and effect as if given in full text. The FLSA sets minimum wage, overtime pay, recordkeeping, and child labor standards for full and part time workers.

The *contractor* has full responsibility to monitor compliance to the referenced statute or regulation. The *contractor* must address any claims or disputes that arise from this requirement directly with the U.S. Department of Labor – Wage and Hour Division

PROHIBITION of SEGREGATED FACILITIES

(a) The Contractor agrees that it does not and will not maintain or provide for its employees any segregated facilities at any of its establishments, and that it does not and will not permit its employees to perform their services at any location under its control where segregated facilities are maintained. The Contractor agrees that a breach of this clause is a violation of the Equal Opportunity clause in this contract.

(b) "Segregated facilities," as used in this clause, means any waiting rooms, work areas, rest rooms and wash rooms, restaurants and other eating areas, time clocks, locker rooms and other storage or dressing areas, parking lots, drinking fountains, recreation or entertainment areas, transportation, and housing facilities provided for employees, that are segregated by explicit directive or are in fact segregated on the basis of race, color, religion, sex, or national origin because of written or oral policies or employee custom. The term does not include separate or single-user rest rooms or necessary dressing or sleeping areas provided to assure privacy between the sexes.

(c) The Contractor shall include this clause in every subcontract and purchase order that is subject to the Equal Opportunity clause of this contract.

OCCUPATIONAL SAFETY AND HEALTH ACT OF 1970

All contracts and subcontracts that result from this solicitation incorporate by reference the requirements of 29 CFR Part 1910 with the same force and effect as if given in full text. Contractor must provide a work environment that is free from recognized hazards that may cause death or serious physical harm to the employee. The Contractor retains full responsibility to monitor its compliance and their subcontractor's compliance with the applicable requirements of the Occupational Safety and Health Act of 1970 (20 CFR Part 1910). Contractor must address any claims or disputes that pertain to a referenced requirement directly with the U.S. Department of Labor – Occupational Safety and Health Administration.

BIDDERS QUALIFICATIONS

Each bidder shall furnish with his bid the following completed and signed statements on "evidence of competency" and "evidence of financial responsibility" in accordance with General Provision 20-02. In addition, the Owner reserves the right to conduct such additional investigation into the competency and responsibility of the bidders (or any particular bidder) as the Owner may deem necessary.

1. Name of Bidder: _____
2. Business address: _____
3. Telephone number: _____
4. When organized: _____
5. Where incorporated: _____
6. How many years have you been engaged in the contracting business under the present firm name?

   _____
7. What is the type of construction work in which you are principally engaged?

   _____
8. On separate sheet, list major contracts in past ten years.
9. On separate sheet, list equipment and plant available for this project.
10. Enclose evidence of financial responsibility per General Provisions Section 20-02.
11. Credit available for this Contract $_____
12. On a separate sheet, list all projects presently under Contract by name, gross amount, and percent complete.
13. Have you ever refused to sign a Contract at your original bid? _____
14. Have you ever been declared in default on a Contract? _____
15. Total amount of bonding capacity $_____
16. Total bonding capacity available for the project $_____
17. Remarks: _____

BUY AMERICAN PREFERENCE STATEMENT

BUY AMERICAN PREFERENCE

The contractor agrees to comply with 49 USC § 50101, which provides that Federal funds may not be obligated unless all steel and manufactured goods used in AIP funded projects are produced in the United States, unless the FAA has issued a waiver for the product; the product is listed as an Excepted Article, Material Or Supply in Federal Acquisition Regulation subpart 25.108; or is included in the FAA Nationwide Buy American Waivers Issued list.

A bidder or offeror must complete and submit the Buy America certification included herein with their bid or offer. The Owner will reject as nonresponsive any bid or offer that does not include a completed Certificate of Buy American Compliance.

CERTIFICATE OF BUY AMERICAN COMPLIANCE FOR TOTAL FACILITY

As a matter of bid responsiveness, the bidder or offeror must complete, sign, date, and submit this certification statement with their proposal. The bidder or offeror must indicate how they intend to comply with 49 USC § 50101 by selecting one of the following certification statements. These statements are mutually exclusive. Bidder must select one or the other (i.e. not both) by inserting a checkmark (✓) or the letter "X".

☐ Bidder or offeror hereby certifies that it will comply with 49 USC. 50101 by:

a) Only installing steel and manufactured products produced in the United States; or
b) Installing manufactured products for which the FAA has issued a waiver as indicated by inclusion on the current FAA Nationwide Buy American Waivers Issued listing; or
c) Installing products listed as an Excepted Article, Material or Supply in Federal Acquisition Regulation Subpart 25.108.

By selecting this certification statement, the bidder or offeror agrees:

1. To provide to the Owner evidence that documents the source and origin of the steel and manufactured product.
2. To faithfully comply with providing US domestic products.
3. To refrain from seeking a waiver request after establishment of the contract, unless extenuating circumstances emerge that the FAA determines justified.

☐ The bidder or offeror hereby certifies it cannot comply with the 100% Buy American Preferences of 49 USC § 50101(a) but may qualify for either a Type 3 or Type 4 waiver under 49 USC § 50101(b). By selecting this certification statement, the apparent bidder or offeror with the apparent low bid agrees:

1. To the submit to the Owner within 15 calendar days of the bid opening, a formal waiver request and required documentation that support the type of waiver being requested.
2. That failure to submit the required documentation within the specified timeframe is cause for a non-responsive determination that may result in rejection of the proposal.
3. To faithfully comply with providing US domestic products at or above the approved US domestic content percentage as approved by the FAA.

4. To furnish US domestic product for any waiver request that the FAA rejects.
5. To refrain from seeking a waiver request after establishment of the contract, unless extenuating circumstances emerge that the FAA determines justified.

Required Documentation

Type 3 Waiver - The cost of components and subcomponents produced in the United States is more that 60% of the cost of all components and subcomponents of the "facility". The required documentation for a type 3 waiver is:

a) Listing of all manufactured products that are not comprised of 100% US domestic content (Excludes products listed on the FAA Nationwide Buy American Waivers Issued listing and products excluded by Federal Acquisition Regulation Subpart 25.108; products of unknown origin must be considered as non-domestic products in their entirety)
b) Cost of non-domestic components and subcomponents, excluding labor costs associated with final assembly and installation at project location.
c) Percentage of non-domestic component and subcomponent cost as compared to total "facility" component and subcomponent costs, excluding labor costs associated with final assembly and installation at project location.

Type 4 Waiver – Total cost of project using US domestic source product exceeds the total project cost using non-domestic product by 25%. The required documentation for a type 4 of waiver is:

a) Detailed cost information for total project using US domestic product
b) Detailed cost information for total project using non-domestic product

False Statements: Per 49 USC § 47126, this certification concerns a matter within the jurisdiction of the Federal Aviation Administration and the making of a false, fictitious or fraudulent certification may render the maker subject to prosecution under Title 18, United States Code.

CERTIFICATE OF BUY AMERICAN COMPLIANCE FOR MANUFACTURED PRODUCTS

As a matter of bid responsiveness, the bidder or offeror must complete, sign, date, and submit this certification statement with their proposal. The bidder or offeror must indicate how they intend to comply with 49 USC § 50101 by selecting one on the following certification statements. These statements are mutually exclusive. Bidder must select one or the other (not both) by inserting a checkmark (✓) or the letter "X".

☐ Bidder or offeror hereby certifies that it will comply with 49 USC § 50101 by:

a) Only installing steel and manufactured products produced in the United States, or;
b) Installing manufactured products for which the FAA has issued a waiver as indicated by inclusion on the current FAA Nationwide Buy American Waivers Issued listing, or;
c) Installing products listed as an Excepted Article, Material or Supply in Federal Acquisition Regulation Subpart 25.108.

By selecting this certification statement, the bidder or offeror agrees:

1. To provide to the Owner evidence that documents the source and origin of the steel and manufactured product.
2. To faithfully comply with providing US domestic product
3. To furnish US domestic product for any waiver request that the FAA rejects
4. To refrain from seeking a waiver request after establishment of the contract, unless extenuating circumstances emerge that the FAA determines justified.

☐ The bidder or offeror hereby certifies it cannot comply with the 100% Buy American Preferences of 49 USC § 50101(a) but may qualify for either a Type 3 or Type 4 waiver under 49 USC § 50101(b). By selecting this certification statement, the apparent bidder or offeror with the apparent low bid agrees:

1. To the submit to the Owner within 15 calendar days of the bid opening, a formal waiver request and required documentation that support the type of waiver being requested.
2. That failure to submit the required documentation within the specified timeframe is cause for a non-responsive determination may result in rejection of the proposal.
3. To faithfully comply with providing US domestic products at or above the approved US domestic content percentage as approved by the FAA.
4. To refrain from seeking a waiver request after establishment of the contract, unless extenuating circumstances emerge that the FAA determines justified.

REQUIRED DOCUMENTATION

Type 3 Waiver - The cost of the item components and subcomponents produced in the United States is more that 60% of the cost of all components and subcomponents of the "item". The required documentation for a type 3 waiver is:

a) Listing of all product components and subcomponents that are not comprised of 100% US domestic content (Excludes products listed on the FAA Nationwide Buy American Waivers Issued listing and products excluded by Federal Acquisition Regulation Subpart 25.108; products of unknown origin must be considered as non-domestic products in their entirety).

b) Cost of non-domestic components and subcomponents, excluding labor costs associated with final assembly at place of manufacture.
c) Percentage of non-domestic component and subcomponent cost as compared to total "item" component and subcomponent costs, excluding labor costs associated with final assembly at place of manufacture.

Type 4 Waiver – Total cost of project using US domestic source product exceeds the total project cost using non-domestic product by 25%. The required documentation for a type 4 of waiver is:

a) Detailed cost information for total project using US domestic product
b) Detailed cost information for total project using non-domestic product

False Statements: Per 49 USC § 47126, this certification concerns a matter within the jurisdiction of the Federal Aviation Administration and the making of a false, fictitious or fraudulent certification may render the maker subject to prosecution under Title 18, United States Code.

CERTIFICATION OF NON-SEGREGATED FACILITIES FORM

The Contractor certifies that no segregated facilities are maintained and will not be maintained during the execution of this contract at any of its establishments.

The Contractor further certifies that none of its employees are permitted to perform their services at any location under the Contractor's control during the life of this contract where segregated facilities are maintained.

The Contractor certifies further that it will not maintain or provide for its employees any segregated facilities at any of its establishments, and that he will not permit his employees to perform their services at any location, under his control, where segregated facilities are maintained.

As used in this certification, the term "segregated facilities" means any waiting rooms, work area, rest rooms and wash rooms, restaurants and other eating areas, time clocks, locker rooms and other storage or dressing areas, parking lots, drinking fountains, recreation or entertainment areas, transportation, and housing facilities provided for employees which are segregated by explicit directive or are in fact segregated on the basis of race, creed, color or national origin, because of habit, local custom, or otherwise.

The Contractor agrees that (except where it has obtained identical certification from proposed subcontractors for specific time periods) it will obtain identical certifications from proposed subcontractors prior to the award of subcontract exceeding $10,000 and that it will retain such certifications in its files.

FLORIDA STATUTES ON PUBLIC ENTITY CRIMES AFFIDAVIT

Project Name:_____

Bid No.:_____

The Affiant identified below attests to the following:

1. I understand that a "public entity crime" as defined in Section 287.133(1)(g), Florida Statutes, means a violation of any State or Federal law by a person with respect to and directly related to the transaction of business with any public entity or with an agency or political subdivision of any other state or with the United States, including, but not limited to, any bid or contract for goods or services to be provided to any public entity or an agency or political subdivision of any other state or of the United States and involving antitrust, fraud, theft, bribery, collusion, racketeering, conspiracy, or material misrepresentation.

2. I understand that "convicted" or "conviction" as defined in Paragraph 287.133(1)(b), Florida Statutes, means a finding of guilt or a conviction of a public entity crimes, with or without an adjudication of guilt, in any Federal or state trial court of record relating to charges brought by indictment or information after July 1, 1989, as a result of a jury verdict, non-jury trial, or entry of a plea of guilty or nolo contendere.

3. I understand that an "affiliate" as defined in Section 287.133(1)(a), Florida Statutes, means: A predecessor or successor of a person convicted of a public entity crime: or an entity under the control of any natural person who is active in the management of the entity and how has been convicted of a public entity crime. The term "affiliate" includes those officers, directors, executives, partners, shareholders, employees, members, and agents who are active in the management of an affiliate. The ownership by one (1) person of shares constituting a controlling interest in another person, or a pooling of equipment or income among persons when not for fair market value under an arm's length agreement, shall be a prima facie case that one person controls another person. A person who knowingly enters into a joint venture with a person who has been convicted of a public entity crime in Florida during the preceding thirty-six (36) months shall be considered an affiliate.

4. I understand that a "person" as defined in Section 287.133(1)(e), Florida Statutes, means any natural person or entity organized under the laws of any state or of the United States with the legal power to enter into a binding contract and which bids or applies to bid on contracts for the provision of goods or services let by a public entity, or which otherwise transacts or applies to transact business with a public entity. The term "person" includes those officers, directors, executives, partners, shareholders, employees, members, and agents who are active in management of an entity.

5. Based on information and belief, the statement which I have marked below is true in relation to the entity submitting this sworn statement. (Note: indicate which of the below statements apply)

   _____Neither the entity submitting this sworn statement, nor any officers, directors, executives, partners, shareholders, employees, members, or agents who are active in management of the entity, nor the affiliate of the entity has been charged with and convicted of a public entity crime subsequent to July 1, 1989.

_____The entity submitting this sworn statement, or one or more of the officers, directors, executives, partners, shareholders, employees, members or agent who are active in management of the entity, or an affiliate of the entity, has been charged with and convicted of a public entity crime subsequent to July 1, 1989.

_____The entity submitting this sworn statement, or one or more of the officers, directors, executives, partners, shareholders, employees, members or agents who are active in management of the entity, or an affiliate of the entity, has been charged with and convicted of a public entity crime subsequent to July 1, 1989. However, there has been a subsequent proceeding before an Administrative Law Jury of the State of Florida, Division of Administrative Hearings and the Final Order entered by the Administrative Law Jury determined that it was not in the public interest to place the entity submitting this sworn statement on the convicted vendor list. (You must attach a copy of the final order.)

I understand that the submission of this form to the Owner and is for the Owner only and, that this form is valid through December 31, of the calendar year in which it is filed. I also understand that i am required to inform the Owner prior to entering into a contract in excess of the threshold amount provided in section 287.017, Florida Statues, for category two of any change in the information contained in this form.

GENERAL CIVIL RIGHTS PROVISIONS

The contractor agrees to comply with pertinent statutes, Executive Orders and such rules as are promulgated to ensure that no person shall, on the grounds of race, creed, color, national origin, sex, age, or disability be excluded from participating in any activity conducted with or benefiting from Federal assistance.

This provision binds the contractor and subtier contractors from the bid solicitation period through the completion of the contract. This provision is in addition to that required of Title VI of the Civil Rights Act of 1964.

Title VI Solicitation Notice

The **City of DeFuniak Springs**, in accordance with the provisions of Title VI of the Civil Rights Act of 1964 (78 Stat. 252, 42 U.S.C. §§ 2000d to 2000d-4) and the Regulations, hereby notifies all bidders that it will affirmatively ensure that any contract entered into pursuant to this advertisement, disadvantaged business enterprises will be afforded full and fair opportunity to submit bids in response to this invitation and will not be discriminated against on the grounds of race, color, or national origin in consideration for an award.

Compliance with Nondiscrimination Requirements

During the performance of this contract, the contractor, for itself, its assignees, and successors in interest (hereinafter referred to as the "contractor") agrees as follows:

1. **Compliance with Regulations:** The contractor (hereinafter includes consultants) will comply with the Title VI List of Pertinent Nondiscrimination Acts and Authorities, as they may be amended from time to time, which are herein incorporated by reference and made a part of this contract.
2. **Non-discrimination:** The contractor, with regard to the work performed by it during the contract, will not discriminate on the grounds of race, color, or national origin in the selection and retention of subcontractors, including procurements of materials and leases of equipment. The contractor will not participate directly or indirectly in the discrimination prohibited by the Nondiscrimination Acts and Authorities, including employment practices when the contract covers any activity, project, or program set forth in Appendix B of 49 CFR part 21.
3. **Solicitations for Subcontracts, Including Procurements of Materials and Equipment:** In all solicitations, either by competitive bidding, or negotiation made by the contractor for work to be performed under a subcontract, including procurements of materials, or leases of equipment, each potential subcontractor or supplier will be notified by the contractor of the contractor's obligations under this contract and the Nondiscrimination Acts and Authorities on the grounds of race, color, or national origin.
4. **Information and Reports:** The contractor will provide all information and reports required by the Acts, the Regulations, and directives issued pursuant thereto and will permit access to its books, records, accounts, other sources of information, and its facilities as may be determined by the sponsor or the Federal Aviation Administration to be pertinent to ascertain compliance with such Nondiscrimination Acts and Authorities and instructions. Where any information required of a contractor is in the exclusive possession of another who fails or refuses to furnish the information, the contractor will so certify to the sponsor or the Federal Aviation Administration, as appropriate, and will set forth what efforts it has made to obtain the information.

5. **Sanctions for Noncompliance:** In the event of a contractor's noncompliance with the Non-discrimination provisions of this contract, the sponsor will impose such contract sanctions as it or the Federal Aviation Administration may determine to be appropriate, including, but not limited to:

   a. Withholding payments to the contractor under the contract until the contractor complies; and/or

   b. Cancelling, terminating, or suspending a contract, in whole or in part.

6. **Incorporation of Provisions:** The contractor will include the provisions of paragraphs one through six in every subcontract, including procurements of materials and leases of equipment, unless exempt by the Acts, the Regulations and directives issued pursuant thereto. The contractor will take action with respect to any subcontract or procurement as the sponsor or the Federal Aviation Administration may direct as a means of enforcing such provisions including sanctions for noncompliance. Provided, that if the contractor becomes involved in, or is threatened with litigation by a subcontractor, or supplier because of such direction, the contractor may request the sponsor to enter into any litigation to protect the interests of the sponsor. In addition, the contractor may request the United States to enter into the litigation to protect the interests of the United States.

CLAUSES FOR CONSTRUCTION/USE/ACCESS TO REAL PROPERTY ACQUIRED UNDER THE ACTIVITY, FACILITY OR PROGRAM

The following clauses will be included in deeds, licenses, permits, or similar instruments/agreements entered into by the City of DeFuniak Springs pursuant to the provisions of the Airport Improvement Program grant assurances.

A. The (grantee, licensee, permittee, etc., as appropriate) for himself/herself, his/her heirs, personal representatives, successors in interest, and assigns, as a part of the consideration hereof, does hereby covenant and agree (in the case of deeds and leases add, "as a covenant running with the land") that (1) no person on the ground of race, color, or national origin, will be excluded from participation in, denied the benefits of, or be otherwise subjected to discrimination in the use of said facilities, (2) that in the construction of any improvements on, over, or under such land, and the furnishing of services thereon, no person on the ground of race, color, or national origin, will be excluded from participation in, denied the benefits of, or otherwise be subjected to discrimination, (3) that the (grantee, licensee, lessee, permittee, etc.) will use the premises in compliance with all other requirements imposed by or pursuant to the List of discrimination Acts And Authorities.

B. With respect to (licenses, leases, permits, etc.), in the event of breach of any of the above nondiscrimination covenants, the City of DeFuniak Springs will have the right to terminate the (license, permit, etc., as appropriate) and to enter or re-enter and repossess said land and the facilities thereon, and hold the same as if said (license, permit, etc., as appropriate) had never been made or issued.*

C. With respect to deeds, in the event of breach of any of the above nondiscrimination covenants, the DeFuniak Springs Airport will there upon revert to and vest in and become the absolute property of the City of DeFuniak Springs and its assigns.

Title VI List of Pertinent Nondiscrimination Acts and Authorities

During the performance of this contract, the contractor, for itself, its assignees, and successors in interest (hereinafter referred to as the "contractor") agrees to comply with the following non-discrimination statutes and authorities; including but not limited to:

- Title VI of the Civil Rights Act of 1964 (42 U.S.C. § 2000d *et seq*., 78 stat. 252), (prohibits discrimination on the basis of race, color, national origin);
- 49 CFR part 21 (Non-discrimination in Federally-Assisted Programs of The Department of Transportation—Effectuation of Title VI of The Civil Rights Act of 1964);
- The Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, (42 U.S.C. § 4601), (prohibits unfair treatment of persons displaced or whose property has been acquired because of Federal or Federal-aid programs and projects);
- Section 504 of the Rehabilitation Act of 1973, (29 U.S.C. § 794 *et seq*.), as amended, (prohibits discrimination on the basis of disability); and 49 CFR part 27;
- The Age Discrimination Act of 1975, as amended, (42 U.S.C. § 6101 *et seq*.), (prohibits discrimination on the basis of age);
- Airport and Airway Improvement Act of 1982, (49 USC § 471, Section 47123), as amended, (prohibits discrimination based on race, creed, color, national origin, or sex);
- The Civil Rights Restoration Act of 1987, (PL 100-209), (Broadened the scope, coverage and applicability of Title VI of the Civil Rights Act of 1964, The Age Discrimination Act of 1975 and Section 504 of the Rehabilitation Act of 1973, by expanding the definition of the terms "programs or activities" to include all of the programs or activities of the Federal-aid recipients, sub-recipients and contractors, whether such programs or activities are Federally funded or not);
- Titles II and III of the Americans with Disabilities Act of 1990, which prohibit discrimination on the basis of disability in the operation of public entities, public and private transportation systems, places of public accommodation, and certain testing entities (42 U.S.C. §§ 12131 – 12189) as implemented by Department of Transportation regulations at 49 CFR parts 37 and 38;
- The Federal Aviation Administration's Non-discrimination statute (49 U.S.C. § 47123) (prohibits discrimination on the basis of race, color, national origin, and sex);
- Executive Order 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations, which ensures non-discrimination against minority populations by discouraging programs, policies, and activities with disproportionately high and adverse human health or environmental effects on minority and low-income populations;
- Executive Order 13166, Improving Access to Services for Persons with Limited English Proficiency, and resulting agency guidance, national origin discrimination includes discrimination because of limited English proficiency (LEP). To ensure compliance with Title VI, you must take reasonable steps to ensure that LEP persons have meaningful access to your programs (70 Fed. Reg. at 74087 to 74100);
- Title IX of the Education Amendments of 1972, as amended, which prohibits you from discriminating because of sex in education programs or activities (20 U.S.C. 1681 et seq).

CLEAN AIR AND WATER POLLUTION CONTROL

Contractor agrees to comply with all applicable standards, orders, and regulations issued pursuant to the Clean Air Act (42 U.S.C. § 740-7671q) and the Federal Water Pollution Control Act as amended (33 U.S.C. § 1251-1387). The Contractor agrees to report any violation to the Owner immediately upon discovery. The Owner assumes responsibility for notifying the Environmental Protection Agency (EPA) and the Federal Aviation Administration.

Contractor must include this requirement in all subcontracts that exceed $150,000.

CERTIFICATION REGARDING LOBBYING

The bidder or offeror certifies by signing and submitting this bid or proposal, to the best of his or her knowledge and belief, that:

(1) No Federal appropriated funds have been paid or will be paid, by or on behalf of the Bidder or Offeror, to any person for influencing or attempting to influence an officer or employee of an agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.

(2) If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, "Disclosure Form to Report Lobbying," in accordance with its instructions.

(3) The undersigned shall require that the language of this certification be included in the award documents for all sub-awards at all tiers (including subcontracts, sub-grants, and contracts under grants, loans, and cooperative agreements) and that all sub-recipients shall certify and disclose accordingly.

This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by section 1352, title 31, U.S. Code. Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such failure.

PROCUREMENT OF RECOVERED MATERIALS

Contractor and subcontractor agree to comply with Section 6002 of the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act, and the regulatory provisions of 40 CFR Part 247. In the performance of this contract and to the extent practicable, the Contractor and subcontractors are to use of products containing the highest percentage of recovered materials for items designated by the Environmental Protection Agency (EPA) under 40 CFR Part 247 whenever:

a) The contract requires procurement of $10,000 or more of a designated item during the fiscal year; or,

b) The contractor has procured $10,000 or more of a designated item using Federal funding during the previous fiscal year.

The list of EPA-designated items is available at:
https://www.epa.gov/smm/comprehensive-procurement-guidelines-construction-products

Section 6002(c) establishes exceptions to the preference for recovery of EPA-designated products if the contractor can demonstrate the item is:

a) Not reasonably available within a timeframe providing for compliance with the contract performance schedule;

b) Fails to meet reasonable contract performance requirements; or

c) Is only available at an unreasonable price.

INSURANCE REQUIREMENTS

1. The amounts and types of insurance coverage shall conform to the following minimum requirements with the use of Insurance Services Office (ISO) forms and endorsements of their equivalents.

2. The insurance required by this Agreement shall be written for not less than the limits specified herein or required by law, whichever is greater.

3. Coverages shall be maintained without interruption from the date of commencement of the work until the date of completion and acceptance of the project by the Owner or as specified in this Agreement, whichever is longer.

4. Certificates of insurance (3 copies) acceptable to the Owner shall be filed with Owner within ten (10) calendar days after Notice of Awards is received by Contractor/Consultant/Professional. Such certificates shall contain a provision that coverages afforded under the policies will not be canceled or allowed to expire until at least thirty (30) days prior written notice has been given to the owner.

5. All insurance coverages of the Contractor/Consultant/Professional shall be primary to any insurance or self-insurance program carried by the Owner applicable to this Project.

6. The acceptance by Owner of a Certificate of Insurance does not constitute approval or agreement by the Owner that the insurance requirements have been satisfied or that the insurance policy shown on the Certificate of Insurance is in the compliance with the requirements of this Agreement.

7. Contractor/Consultant/Professional shall require each of its subcontractors to procure and maintain, until the completion of the subcontractor's work, insurance of the types and to the limits specified in this Section unless such insurance requirements for the subcontractor are expressly waived in writing by the Owner.

8. Should at any time the Contractor/Consultant/Professional not maintain the insurance coverages required herein, the Owner may terminate the Agreement or at its sole discretion shall be authorized to purchase such coverages and charge the Contractor for such coverages purchased. The Owner shall be under no obligation to purchase such insurance, nor shall it be responsible for the coverages purchased or the insurance company or companies used. The decision of the Owner to purchase such insurance coverages shall in no way be construed to be a waiver o f any its rights under the Contract Documents.

9. If the initial, or any subsequently issued Certificate of Insurance expires prior to the completion of the Work or termination of the Agreement, the Contractor/Consultant/Professional shall furnish to the County, in triplicate, renewal or replacement of Certificate(s) of Insurance not later than thirty (30) calendar days prior to the date of their expiration. Failure of the Contractor to provide the County with such renewal certificate(s) shall be considered justification for the County to terminate the Agreement.

10. Owner shall be included as an additional insured on all of Contractor's policies of general liability insurance.

11. Contractor shall comply with each of the following insurance requirements and obligations:

(a) Contractor shall obtain comprehensive general liability insurance, including, without limitation, coverage against claims for bodily injury, death, liability, and property damage by reason of, caused by, or resulting from the Work performed by, or any other acts or omissions of, Contractor, any of Contractor's personnel, employees, agents, suppliers, subcontractors, licensees, invitees or trespassers, and anyone claiming by or through the Contractor, and insure Contractor's indemnification obligations to OWNER, with a combined single limit of not less than One Million and 00/100 Dollars ($1,000,000.00) as the result of any one occurrence. Contractor's comprehensive general liability insurance shall also include premises and operation, contractors, products and completed operations and contractual liability.

(b) Contractor shall obtain worker's compensation insurance covering all employees meeting statutory limits in compliance with the applicable state and federal laws. The coverage must include employees' liability with the minimum limit of One Hundred Thousand and 00/100 Dollars ($100,000.00) for each accident. If exempt, Contractor shall obtain and submit to Owner a "Certificate of Exemption from Florida Workers' Compensation Law" in lieu of such workers' compensation insurance coverage.

(c) Contractor shall obtain automobile liability insurance for all automobiles owned, used or hired by Contractor, any of the Contractor's agents, employees, contractors, subcontractors, licensees, invitees or trespassers, and anyone claiming by or through the Contractor, with a combined single limit of not less than One Million and 00/100 Dollars ($1,000,000.00) as the result of any one occurrence.

(d) All of the insurance required under this section shall be obtained by Contractor prior to the commencement of the Work and shall thereafter, until the termination of this Agreement, be continually maintained by Contractor at its sole cost and expense.

(e) All insurance coverage of Contractor shall be in addition to, and shall in no way be construed or interpreted to be a limitation of, Contractor's indemnification obligations to Owner. It is expressly agreed that Contractor's policies of insurance required under this section shall be primary over any insurance which Owner may maintain or carry, and that Contractor shall obtain from its insurers an endorsement waiving any other insurance clauses which may be in conflict with this provision, and evidence of such waiver shall be indicated on all insurance policies or certificates of insurance furnished to Owner. Contractor shall be responsible and liable for insuring that all of Contractor's personnel, employees, agents, suppliers, subcontractors, licensees or invitees who perform any of the Work carry and comply the same insurance coverages and requirements required of Contractor under this section.

(f) Umbrella Liability may be maintained as part of the liability insurance of the Contractor/Consultant /Professional and, if so, such policy shall be excess of the Employers' Liability, Commercial General Liability and Automobile Liability coverages required herein and shall include all coverages on a "following form" basis. The policy shall contain wording to the effect that, in the event of the exhaustion of any underlying limit due to the payment of claims, the Umbrella policy will "drop down' to apply as primary insurance. The General Aggregate limit, if applicable, shall apply separately to this project and the policy shall be so endorsed.

CONTRACT DOCUMENTS

BID DOCUMENTS

DFS TERMINAL, HANGAR, AND APRON EXPANSION
DEFUNIAK SPRINGS AIRPORT

CONTRACT

THIS CONTRACT made and entered into this _____ day of _____, 2022, by and between the **City of DeFuniak Springs, Florida** (the "Owner") and _____ (the "Contractor") concerns the **DFS Terminal, Hangar, and Apron Expansion** project.

WITNESSETH:

WHEREAS, the Owner has a project entitled **DFS Terminal, Hangar, and Apron Expansion** project and Contractor is qualified to construct said project (the "Project"); and

WHEREAS, the Contractor has submitted the lowest responsible and responsive bid for the Project at the DeFuniak Springs Airport and the Owner has awarded the Project to the Contractor; and

NOW, THEREFORE, in consideration of the sum of **$** _____ **Dollars and /100 Cents,** the mutual promises and covenants contained herein, as well as other good and valuable consideration not specifically mentioned, the parties agree as follows:

1. The Contractor, for and in consideration of the payments hereinafter specified and agreed to be made by the Owner, hereby covenants and agrees to furnish and deliver all materials required, to do and perform all the work and labor, in a satisfactory and workmanlike manner, required to complete the Project within the time specified in the project manual, in strict and entire conformity with the Plans (labeled construction), Project Manual Specifications with appendices labeled construction documents, Construction Safety Phasing Plan (CSPP) and other Contract documents, on file at the DeFuniak Springs Airport, 71 US Highway 90 West, DeFuniak Springs, Florida 32433, which are duly approved by the Owner and which said Plans, Project Manual Specifications and other Contract documents are hereby made part of this Contract as fully and with the same effects as if the same had been set forth at length in the body of this Contract.

2. The Contractor agrees to make payment of all proper charges for labor and materials required in the aforementioned work, and to defend, indemnify and save harmless the City of DeFuniak Springs, Florida and all its officers and agents against and from all suits and costs of every kind and description, and from all damages to which the said Owner or any of their officers, agents or servants may be put, by reason of injury or death to persons or injury to property of other resulting from the performance of said work, or through the negligence of the Contractor, or through any improper or defective machinery, implements or appliances used by the Contractor in the aforesaid work, or through any act of omission on the part of the Contractor, or his or her agent or agents, employees or servants.

3. The Owner hereby agrees to pay to the Contractor for the said work, when fully completed, the total sum of **$** _____ (the said sum being the total of the Contractor's bid, a copy of which is attached hereto and made a part hereof for all purposes), subject to such additions and deductions as may be provided for in the Contract Documents. In the event the bid contains multiple pay items, it is understood that the amount to be paid shall be the total based on the unit price, together with lump sum prices, contained in said bid, for the work actually completed.

4. Payments on accounts will be made as provided for in the Contract Documents.

5. The Contractor shall submit bills for fees or other compensation for services or expenses in detail sufficient for a proper pre-audit and post audit thereof.

6. The Contractor shall submit bills for any travel expenses in accordance with §112.061, Florida Statutes, or the travel policy of the Owner, as applicable.

7. The Owner may unilaterally cancel this Contract and the goods and services thereunder in the event that the Contractor fails and refuses to allow public access to all documents, papers, letters, or other material subject to the provisions of Chapter 119, Florida Statutes, made or received by the Contractor in conjunction with this Contract.

8. Any unit of provision of goods and services must be approved in writing by the Owner or its agent prior to payment.

9. The Contract documents provide the criteria and the final date for completion of the Project.

10. This Contract has been executed by the parties prior to the rendering of any goods or services by the Contractor.

11. The Contractor shall provide a payment and performance bond (the "Bond") to the Owner meeting the requirements of §255.05, Florida Statutes, in the sum of $_____ and shall cause the Bond to be recorded with the Notice of Commencement in the Public Records of the City of DeFuniak Springs, Florida.

12. This Contract shall be subordinate to any rule, regulation, order or law of the United States of America, the State of Florida or City of DeFuniak Springs, Florida.

13. The Owner will use its best efforts to obtain the approval of the State of Florida Department of Transportation and the FAA to this contract. If the Owner determines that the same requires modifications in order to qualify for funding for the Project, the Contractor shall consent or the Owner shall have the right to terminate the Contract.

14. The Contractor and its employees shall promptly observe and comply with then applicable provisions of all Federal, State and local laws, rules and regulations which govern or apply to the goods and services rendered by Contractor hereunder, or to the wages paid by Contractor to its employees. Contractor shall require all of its subcontractors to comply with the provisions of this paragraph.

    Contractor shall procure and keep in force during the term of this contract all necessary licenses, registrations, certificates, permits and other authorizations as are required by law in order for Contractor to render its services hereunder. Contractor shall require all of its subcontractors to comply with the provisions of this paragraph.

15. All remedies provided in this Contract shall be deemed cumulative and additional and not in lieu of or exclusive of each other or of any other remedy available to any party at law or in equity. In the event one party shall prevail in any action (including appellate proceedings), at law or in equity arising hereunder, the losing party will pay all costs, expense, reasonable attorneys' fees and all other actual and reasonable expenses incurred in the defense and/or prosecution of any legal or arbitration proceedings, including, but not limited to, those for paralegal, investigative and legal

support services and actual fees charged by expert witnesses for testimony and analysis, incurred by the prevailing party referable thereto.

16. Contractor represents and warrants unto Owner that no officer, employee or agent of Owner has any interest, either directly or indirectly, in the business of Contractor to be conducted hereunder. Contractor further represents and warrants to Owner that it has not employed or retained any company or person, other than a bona fide employee working solely for Contractor, to solicit or secure this Contract, that it has not paid or agreed to pay any person, company, corporation, individual or firm, other than a bona fide employee working solely for Contractor, any fee, commission, percentage, gift, or any other consideration contingent upon or resulting from the award or making of this Contract, and that it has not agreed, as an express or implied condition for obtaining this Contract, to employ or retain the services of any firm or person in connection with carrying out this Contract. Contractor assures that it will insert the above provision in each of its subcontractor agreements relating to the services to be performed hereunder.

17. Contractor for itself, its successors in interest and assigns, as a part of the consideration hereof, does hereby covenant and agree that (1) in the furnishing of services to Owner hereunder, no person on the grounds of race, color or national origin shall be excluded from participation in, denied the benefits of, or otherwise be subjected to discrimination, and (2) Contractor shall comply with all other requirements imposed by or pursuant to Title 49, Code of Federal Regulations, Department of Transportation, Subtitle A, Office of the Secretary, Part 21, Nondiscrimination in Federally-assisted programs of the Department of Transportation – effectuation of Title VII of the Civil Rights Act of 1964, as said Regulations may be amended. Should Contractor authorize another person, with Owner's prior written consent, to provide services to Owner hereunder, Contractor shall obtain from such person a written agreement pursuant to which such person shall, with respect to the services which he or she is authorized to provide, undertake for such person the obligations contained in this section. Contractor shall furnish an original agreement to Owner.

    Contractor will provide all information and reports required by said Regulations, or by directives issued pursuant thereto, and shall permit access to its books, records, accounts, other sources of information, and its facilities as may be determined by Owner, the Federal Aviation Administration, the Comptroller General of the United States or any of their dully authorized representatives and the State of Florida Department of Transportation to be pertinent to ascertain whether there has been compliance with said Regulations and directives. Where any information required of Contractor is in the exclusive possession of another who fails or refused to furnish this information, Contractor shall so certify to the Owner, Federal Aviation Administration the Comptroller General of the United States or any of their dully authorized representatives and the State of Florida Department of Transportation, as appropriate, and shall set forth what efforts it has made to obtain the information. Contractor shall remain obligated under this paragraph until the expiration of three (3) years after the termination of the Contract. In the event of breach of any of the above nondiscrimination covenants, Owner shall have the right to impose such contract sanctions as it or Federal Aviation Administration the Comptroller General of the United States or any of their dully authorized representatives and the State of Florida Department of Transportation or other applicable government entity may determine to be appropriate, including withholding payments to Contractor under this Contract or canceling, terminating, or suspending this Contract in whole or in part. The rights granted to Owner by the

foregoing sentence shall not be effective until the procedures of Title 49, Code of Federal Regulations, Part 21 are followed and completed, including exercise or expiration of appeal rights.

Further, Contractor assures that it will undertake an affirmative action program as required by 14 CFR Part 152, Subpart E, to ensure that no person shall on the grounds of race, religion, creed, color, national origin or sex be excluded from participating in any employment activities covered in 14 CFR Part 152, Subpart E. Such activities shall include, but not be limited to, the following: Employment, upgrading, demotion or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. Contractor assures that no person shall be excluded on these grounds from participating in or receiving the services of any program or activity covered by this subpart. Contractor assures that it shall not discriminate on the grounds of race, color, religion, sex or national origin in the selection or retention of subcontractors. Contractor assures that it will require that its covered subcontractors provide assurances to Contractor that they similarly require assurances from their subcontractors, as required by CFR Part 152, Subpart E, to the same effect.

Owner may, from time to time, adopt additional or amended and nondiscrimination provisions concerning the furnishing of services to the Airport, and Contractor agrees that it will adopt any such requirements as a part of this Contract.

18. Policy. It is the policy of the Owner and the United States or State of Florida Department of Transportation that disadvantaged business enterprises, as defined in the Owner's Disadvantaged Business Enterprises ("DBE") Participation Policy for services as defined in 49 CFR Part 26 shall have equal opportunity to participate in the performance of services contracts awarded by the Owner, including, but not limited to, contracts financed in whole or in part with federal or State funds under this Contract. Consequently, the requirements of the Owner's DBE Participation Policy apply to this Contract.

    Contract Assurance. The contractor or subcontractor shall not discriminate on the basis of race, color, national origin, or sex in the performance of this contract. The contractor shall carry out applicable requirements of 49 CFR Part 26 in the award and administration of DOT assisted contracts. Failure by the contractor to carry out these requirements is a material breach of this contract, which may result in the termination of this contract or such other remedy as the recipient deems appropriate.

    Prompt Payment. The prime contractor agrees to pay each subcontractor under this prime contract for satisfactory performance of its contract no later than fourteen (14) days from the receipt of each payment the prime contractor receives from the City of DeFuniak Springs. The prime contractor further agrees to return retainage payments to each subcontractor within fourteen (14) days after the subcontractor's work is satisfactorily completed. Any delay or postponement of payment from the above referenced time frame may occur only for good cause following written approval of the City of DeFuniak Springs. The City of DeFuniak Springs shall have the right to terminate the services of any obligor who fails to make prompt payment to any obligee. This clause applies to both DBE and non-DBE subcontractors.

    DBE Obligation. The Contractor agrees to ensure that DBE/MWBE firms shall have the maximum opportunity to participate in the performance of contracts for subcontractor services, including,

but not limited to, those projects financed in whole or in part with federal or state funds provided under this Contract. In this regard, the Contractor and all subcontractors shall take all necessary and reasonable steps in accordance with the Owner's DBE/MWBE Participation Policies to ensure that DBE/MWBE firms have the maximum opportunity to compete for and perform contracts. The Contractor and any subcontractors shall not discriminate on the basis of race, color, national origin, or sex in the award and performance of Owner contracts.

19. Government Agencies which are not Parties. Neither the Federal Aviation Administration nor the Florida Department of Transportation has nor will they incur any obligations to Contractor under this Contract.

20. Headings. The headings of the sections of this Contract are for the purpose of convenience only and shall not be deemed to expand or limit the provisions contained in such sections.

21. Entire Agreement. This Contract, including all Contract documents, constitute the entire agreement between the parties and shall supersede and replace all prior agreements or understandings, written or oral, relating to the matters set forth herein.

22. Amendment. This Contract shall not be amended or modified other than in writing signed by the parties hereto. Notwithstanding the foregoing, any Amendments that are not being paid for, in whole or in part, with funds granted by the United States or State of Florida Department of Transportation need not be approved by them.

23. Validity. The validity, interpretation, construction and effect of this Contract shall be in accordance with and be governed by the laws of the State of Florida. In the event any provision hereof shall be finally determined to be unenforceable, or invalid, such unenforceability or invalidity shall not affect the remaining provisions of this Contract which shall remain in full force and effect.

24. Public Entity Crimes. Pursuant to Section 287.133(2)(a), Florida Statutes, a Contractor who has been placed on the convicted vendor list following a conviction for a public entity crime may not submit a bid on contract to provide services for a public entity, may not be awarded a Contract and may not transact business with a public entity for services, the value of which exceeds $15,000.00 for a period of 36 months from the date of being placed on the convicted vendor list. Contractor hereby represents that it does not fall within the class of persons identified in the previous sentence such that Contractor would be precluded from entering this Contract.

25. All Construction Contracts over $2,000.

    Davis-Bacon Requirements.

    1. Minimum Wages

        (i) All laborers and mechanics employed or working upon the site of the work will be paid unconditionally and not less often than once a week, and without subsequent deduction or rebate on any account (except such payroll deductions as are permitted by the Secretary of Labor under the Copeland Act (29 CFR Part 3)), the full amount of wages and bona fide fringe benefits (or cash equivalent thereof) due at time of payment computed at rates not less than those contained in the wage determination of the Secretary of Labor which is attached hereto and made a part

hereof, regardless of any contractual relationship which may be alleged to exist between the contractor and such laborers and mechanics.

Contributions made or costs reasonably anticipated for bona fide fringe benefits under section 1(b)(2) of the Davis-Bacon Act on behalf of laborers or mechanics are considered wages paid to such laborers or mechanics, subject to the provisions of paragraph (1)(iv) of this section; also, regular contributions made or costs incurred for more than a weekly period (but not less often than quarterly) under plans, funds, or programs which cover the particular weekly period, are deemed to be constructively made or incurred during such weekly period. Such laborers and mechanics shall be paid the appropriate wage rate and fringe benefits on the wage determination for the classification of work actually performed, without regard to skill, except as provided in 29 CFR Part 5.5(a)(4). Laborers or mechanics performing work in more than one classification may be compensated at the rate specified for each classification for the time actually worked therein: *Provided*, that the employer's payroll records accurately set forth the time spent in each classification in which work is performed. The wage determination (including any additional classification and wage rates conformed under (1)(ii) of this section) and the Davis-Bacon poster (WH-1321) shall be posted at all times by the contractor and its subcontractors at the site of the work in a prominent and accessible place where it can easily be seen by the workers.

(ii) (A) The contracting officer shall require that any class of laborers or mechanics, including helpers, which is not listed in the wage determination and which is to be employed under the contract shall be classified in conformance with the wage determination. The contracting officer shall approve an additional classification and wage rate and fringe benefits therefore only when the following criteria have been met:

(1) The work to be performed by the classification requested is not performed by a classification in the wage determination; and

(2) The classification is utilized in the area by the construction industry; and

(3) The proposed wage rate, including any bona fide fringe benefits, bears a reasonable relationship to the wage rates contained in the wage determination.

(B) If the contractor and the laborers and mechanics to be employed in the classification (if known), or their representatives, and the contracting officer agree on the classification and wage rate (including the amount designated for fringe benefits where appropriate), a report of the action taken shall be sent by the contracting officer to the Administrator of the Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Washington, D.C. 20210. The Administrator, or an authorized representative, will approve, modify, or disapprove every additional classification action within 30 days of receipt and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.

(C) In the event the contractor, the laborers or mechanics to be employed in the classification or their representatives, and the contracting officer do not agree on the proposed classification and wage rate (including the amount designated for fringe benefits where appropriate), the contracting officer shall refer the questions, including the views of all interested parties and the recommendation of the contracting officer, to the Administrator for determination. The Administrator, or an authorized representative, will issue a determination within 30 days of receipt and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.

(D) The wage rate (including fringe benefits where appropriate) determined pursuant to subparagraphs (1)(ii) (B) or (C) of this paragraph, shall be paid to all workers performing work in the classification under this contract from the first day on which work is performed in the classification.

(iii) Whenever the minimum wage rate prescribed in the contract for a class of laborers or mechanics includes a fringe benefit which is not expressed as an hourly rate, the contractor shall either pay the benefit as stated in the wage determination or shall pay another bona fide fringe benefit or an hourly cash equivalent thereof.

(iv) If the contractor does not make payments to a trustee or other third person, the contractor may consider as part of the wages of any laborer or mechanic the amount of any costs reasonably anticipated in providing bona fide fringe benefits under a plan or program, *Provided*, That the Secretary of Labor has found, upon the written request of the contractor, that the applicable standards of the Davis-Bacon Act have been met. The Secretary of Labor may require the contractor to set aside in a separate account assets for the meeting of obligations under the plan or program.

2. Withholding.
The Federal Aviation Administration or the sponsor shall upon its own action or upon written request of an authorized representative of the Department of Labor withhold or cause to be withheld from the contractor under this contract or any other Federal contract with the same prime contractor, or any other Federally-assisted contract subject to Davis-Bacon prevailing wage requirements, which is held by the same prime contractor, so much of the accrued payments or advances as may be considered necessary to pay laborers and mechanics, including apprentices, trainees, and helpers, employed by the contractor or any subcontractor the full amount of wages required by the contract. In the event of failure to pay any laborer or mechanic, including any apprentice, trainee, or helper, employed or working on the site of work, all or part of the wages required by the contract, the Federal Aviation Administration may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds until such violations have ceased.

3. Payrolls and Basic Records.
(i) Payrolls and basic records relating thereto shall be maintained by the contractor during the course of the work and preserved for a period of three years thereafter

for all laborers and mechanics working at the site of the work. Such records shall contain the name, address, and social security number of each such worker, his or her correct classification, hourly rates of wages paid (including rates of contributions or costs anticipated for bona fide fringe benefits or cash equivalents thereof of the types described in 1(b)(2)(B) of the Davis-Bacon Act), daily and weekly number of hours worked, deductions made and actual wages paid. Whenever the Secretary of Labor has found under 29 CFR 5.5(a)(1)(iv) that the wages of any laborer or mechanic include the amount of any costs reasonably anticipated in providing benefits under a plan or program described in section 1(b)(2)(B) of the Davis-Bacon Act, the contractor shall maintain records which show that the commitment to provide such benefits is enforceable, that the plan or program is financially responsible, and that the plan or program has been communicated in writing to the laborers or mechanics affected, and records which show the costs anticipated or the actual costs incurred in providing such benefits. Contractors employing apprentices or trainees under approved programs shall maintain written evidence of the registration of apprenticeship programs and certification of trainee programs, the registration of the apprentices and trainees, and the ratios and wage rates prescribed in the applicable programs.

(ii) (A) The contractor shall submit weekly for each week in which any contract work is performed a copy of all payrolls to the Federal Aviation Administration if the agency is a party to the contract, but if the agency is not such a party, the contractor will submit the payrolls to the applicant, sponsor, or owner, as the case may be, for transmission to the Federal Aviation Administration. The payrolls submitted shall set out accurately and completely all of the information required to be maintained under 29 CFR 5.5(a)(3)(i), except that full social security numbers and home addresses shall not be included on weekly transmittals. Instead the payrolls shall only need to include an individually identifying number for each employee (*e.g.* the last four digits of the employee's social security number). The required weekly payroll information may be submitted in any form desired. Optional Form WH–347 is available for this purpose from the Wage and Hour Division Web site at *http://www.dol.gov/esa/whd/forms/wh347instr.htm* or its successor site. The prime contractor is responsible for the submission of copies of payrolls by all subcontractors. Contractors and subcontractors shall maintain the full social security number and current address of each covered worker, and shall provide them upon request to the Federal Aviation Administration if the agency is a party to the contract, but if the agency is not such a party, the contractor will submit them to the applicant, sponsor, or owner, as the case may be, for transmission to the Federal Aviation Administration, the contractor, or the Wage and Hour Division of the Department of Labor for purposes of an investigation or audit of compliance with prevailing wage requirements. It is not a violation of this section for a prime contractor to require a subcontractor to provide addresses and social security numbers to the prime contractor for its own records, without weekly submission to the sponsoring government agency (or the applicant, sponsor, or owner).

(B) Each payroll submitted shall be accompanied by a "Statement of Compliance," signed by the contractor or subcontractor or his or her agent who pays or supervises the payment of the persons employed under the contract and shall certify the following:

(1) That the payroll for the payroll period contains the information required to be provided under 29 CFR § 5.5(a)(3)(ii), the appropriate information is being maintained under 29 CFR § 5.5 (a)(3)(i) and that such information is correct and complete;

(2) That each laborer and mechanic (including each helper, apprentice and trainee) employed on the contract during the payroll period has been paid the full weekly wages earned, without rebate, either directly or indirectly, and that no deductions have been made either directly or indirectly from the full wages earned, other than permissible deductions as set forth in Regulations 29 CFR Part 3;

(3) That each laborer or mechanic has been paid not less than the applicable wage rates and fringe benefits or cash equivalents for the classification of work performed, as specified in the applicable wage determination incorporated into the contract.

(C) The weekly submission of a properly executed certification set forth on the reverse side of Optional Form WH-347 shall satisfy the requirement for submission of the "Statement of Compliance" required by paragraph (3)(ii)(B) of this section.

(D) The falsification of any of the above certifications may subject the contractor or subcontractor to civil or criminal prosecution under Section 1001 of Title 18 and Section 231 of Title 31 of the United States Code.

(iii) The contractor or subcontractor shall make the records required under paragraph (3)(i) of this section available for inspection, copying or transcription by authorized representatives of the sponsor, the Federal Aviation Administration or the Department of Labor, and shall permit such representatives to interview employees during working hours on the job. If the contractor or subcontractor fails to submit the required records or to make them available, the Federal agency may, after written notice to the contractor, sponsor, applicant or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds. Furthermore, failure to submit the required records upon request or to make such records available may be grounds for debarment action pursuant to 29 CFR 5.12.

4. Apprentices and Trainees.
(i) Apprentices. Apprentices will be permitted to work at less than the predetermined rate for the work they performed when they are employed pursuant to and individually registered in a bona fide apprenticeship program registered with the U.S. Department of Labor, Employment and Training Administration, Bureau of Apprenticeship and Training, or with a State Apprenticeship Agency recognized by

the Bureau, or if a person is employed in his or her first 90 days of probationary employment as an apprentice in such an apprenticeship program, who is not individually registered in the program, but who has been certified by the Bureau of Apprenticeship and Training or a State Apprenticeship Agency (where appropriate) to be eligible for probationary employment as an apprentice. The allowable ratio of apprentices to journeymen on the job site in any craft classification shall not be greater than the ratio permitted to the contractor as to the entire work force under the registered program. Any worker listed on a payroll at an apprentice wage rate, who is not registered or otherwise employed as stated above, shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any apprentice performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. Where a contractor is performing construction on a project in a locality other than that in which its program is registered, the ratios and wage rates (expressed in percentages of the journeyman's hourly rate) specified in the contractor's or subcontractor's registered program shall be observed. Every apprentice must be paid at not less than the rate specified in the registered program for the apprentice's level of progress, expressed as a percentage of the journeymen hourly rate specified in the applicable wage determination. Apprentices shall be paid fringe benefits in accordance with the provisions of the apprenticeship program. If the apprenticeship program does not specify fringe benefits, apprentices must be paid the full amount of fringe benefits listed on the wage determination for the applicable classification. If the Administrator determines that a different practice prevails for the applicable apprentice classification, fringes shall be paid in accordance with that determination. In the event the Bureau of Apprenticeship and Training, or a State Apprenticeship Agency recognized by the Bureau, withdraws approval of an apprenticeship program, the contractor will no longer be permitted to utilize apprentices at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

(ii) Trainees. Except as provided in 29 CFR 5.16, trainees will not be permitted to work at less than the predetermined rate for the work performed unless they are employed pursuant to and individually registered in a program which has received prior approval, evidenced by formal certification by the U.S. Department of Labor, Employment and Training Administration. The ratio of trainees to journeymen on the job site shall not be greater than permitted under the plan approved by the Employment and Training Administration. Every trainee must be paid at not less than the rate specified in the approved program for the trainee's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination. Trainees shall be paid fringe benefits in accordance with the provisions of the trainee program. If the trainee program does not mention fringe benefits, trainees shall be paid the full amount of fringe benefits listed on the wage determination unless the Administrator of the Wage and Hour Division determines that there is an apprenticeship program associated with the corresponding journeyman wage rate on the wage determination which provides for less than full fringe benefits for apprentices. Any employee listed on the payroll at a trainee rate that is not registered and participating in a training plan approved by the

Employment and Training Administration shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any trainee performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. In the event the Employment and Training Administration withdraws approval of a training program, the contractor will no longer be permitted to utilize trainees at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

(iii) Equal Employment Opportunity. The utilization of apprentices, trainees and journeymen under this part shall be in conformity with the equal employment opportunity requirements of Executive Order 11246, as amended, and 29 CFR Part 30.

5. Compliance with Copeland Act Requirements.
The contractor shall comply with the requirements of 29 CFR Part 3, which are incorporated by reference in this contract.

6. Subcontracts.
The contractor or subcontractor shall insert in any subcontracts the clauses contained in 29 CFR Part 5.5(a)(1) through (10) and such other clauses as the Federal Aviation Administration may by appropriate instructions require, and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for the compliance by any subcontractor or lower tier subcontractor with all the contract clauses in 29 CFR Part 5.5.

7. Contract Termination: Debarment.
A breach of the contract clauses in paragraph 1 through 10 of this section may be grounds for termination of the contract, and for debarment as a contractor and a subcontractor as provided in 29 CFR 5.12.

8. Compliance with all rulings and interpretations of the Davis-Bacon and Related Acts contained in 29 CFR Parts 1, 3, and 5 are herein incorporated by reference in this contract.

9. Disputes Concerning Labor Standards.
Disputes arising out of the labor standards provisions of this contract shall not be subject to the general disputes clause of this contract. Such disputes shall be resolved in accordance with the procedures of the Department of Labor set forth in 29 CFR Parts 5, 6 and 7. Disputes within the meaning of this clause include disputes between the contractor (or any of its subcontractors) and the contracting agency, the U.S. Department of Labor, or the employees or their representatives.

10. Certification of Eligibility.
(i) By entering into this contract, the contractor certifies that neither it (nor he or she) nor any person or firm who has an interest in the contractor's firm is a person or firm ineligible to be awarded Government contracts by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

(ii) No part of this contract shall be subcontracted to any person or firm ineligible for award of a Government contract by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

(iii) The penalty for making false statements is prescribed in the U.S. Criminal Code, 18 U.S.C. 1001.

26. Copeland "Anti-Kickback" Act. Contractor must comply with the requirements of the Copeland "Anti-Kickback" Act (18 U.S.C. 874 and 40 U.S.C. 3145), as supplemented by Department of Labor regulation 29 CFR part 3. Contractor and subcontractors are prohibited from inducing, by any means, any person employed on the project to give up any part of the compensation to which the employee is entitled. The Contractor and each Subcontractor must submit to the Owner, a weekly statement on the wages paid to each employee performing on covered work during the prior week. Owner must report any violations of the Act to the Federal Aviation Administration.

27. Contract Workhours and Safety Standards Act Requirements.
This Provision applies to all contracts and lower tier contracts that exceed $100,000, and employ laborers, mechanics, watchmen and guards.

1. Overtime Requirements.
No contractor or subcontractor contracting for any part of the contract work which may require or involve the employment of laborers or mechanics shall require or permit any such laborer or mechanic, including watchmen and guards, in any workweek in which he or she is employed on such work to work in excess of forty hours in such workweek unless such laborer or mechanic receives compensation at a rate not less than one and one-half times the basic rate of pay for all hours worked in excess of forty hours in such workweek.

2. Violation; Liability for Unpaid Wages; Liquidated Damages.
In the event of any violation of the clause set forth in paragraph (1) of this clause, the contractor and any subcontractor responsible therefor shall be liable for the unpaid wages. In addition, such contractor and subcontractor shall be liable to the United States (in the case of work done under contract for the District of Columbia or a territory, to such District or to such territory), for liquidated damages. Such liquidated damages shall be computed with respect to each individual laborer or mechanic, including watchmen and guards, employed in violation of the clause set forth in paragraph (1) of this clause, in the sum of $10 for each calendar day on which such individual was required or permitted to work in excess of the standard workweek of forty hours without payment of the overtime wages required by the clause set forth in paragraph (1) of this clause.

3. Withholding for Unpaid Wages and Liquidated Damages.
   The Federal Aviation Administration (FAA) or the Owner shall upon its own action or upon written request of an authorized representative of the Department of Labor withhold or cause to be withheld, from any moneys payable on account of work performed by the contractor or subcontractor under any such contract or any other Federal contract with the same prime contractor, or any other Federally-assisted contract subject to the Contract Work Hours and Safety Standards Act, which is held by the same prime contractor, such sums as may be determined to be necessary to satisfy any liabilities of such contractor or subcontractor for unpaid wages and liquidated damages as provided in the clause set forth in paragraph 2 of this clause.

4. Subcontractors.
   The contractor or subcontractor shall insert in any subcontracts the clauses set forth in paragraphs (1) through (4) and also a clause requiring the subcontractor to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for compliance by any subcontractor or lower tier subcontractor with the clauses set forth in paragraphs (1) through (4) of this clause.

28. Breach of Contract Terms – Sanctions (All Contracts).
    Any violation or breach of the terms of this Contract of the part of the Contractor or subcontractors may result in the suspension or termination of this Contract or such other action that may be necessary to enforce the rights of the parties of this agreement.

    Owner will provide Contractor written notice that describes the nature of the breach and corrective actions the Contractor must undertake in order to avoid termination of the contract. Owner reserves the right to withhold payment to Contractor until such time the Contractor corrects the breach or the Owner elects to terminate the contract. The Owner's notice will identify a specific date by which the Contractor must correct the breach. Owner may proceed with termination of the contract if the Contractor fails to correct the breach by deadline indicated in the Owner's notice.

    The duties and obligations imposed by the contract documents and the rights and remedies available thereunder are in addition to, and not a limitation of, any duties, obligations, rights and remedies otherwise imposed or available by law.

29. Rights to Inventions (All Contracts).
    All rights to inventions and materials generated under this contract are subject to regulations issued by the FAA and the Owner of the Federal grant under which this contract is executed. Information regarding these rights is available from FAA and the Owner.

30. Trade Restriction Certification.
    By submission of an offer, the Offeror certifies that with respect to this solicitation and any resultant contract, the Offeror –

    a. is not owned or controlled by one or more citizens of a foreign country included in the list of countries that discriminate against U.S. firms as published by the Office of the United States Trade Representative (U.S.T.R.);

b. has not knowingly entered into any contract or subcontract for this project with a person that is a citizen or national of a foreign country included on the list of countries that discriminate against U.S. firms as published by the U.S.T.R; and

c. has not entered into any subcontract for any product to be used on the Federal on the project that is produced in a foreign country included on the list of countries that discriminate against U.S. firms published by the U.S.T.R.

This certification concerns a matter within the jurisdiction of an agency of the United States of America and the making of a false, fictitious, or fraudulent certification may render the maker subject to prosecution under Title 18, United States Code, Section 1001.

The Offeror/Contractor must provide immediate written notice to the Owner if the Offeror/Contractor learns that its certification or that of a subcontractor was erroneous when submitted or has become erroneous by reason of changed circumstances. The Contractor must require subcontractors provide immediate written notice to the Contractor if at any time it learns that its certification was erroneous by reason of changed circumstances.

Unless the restrictions of this clause are waived by the Secretary of Transportation in accordance with 49 CFR 30.17, no contract shall be awarded to an Offeror or subcontractor:

a. who is owned or controlled by one or more citizens or nationals of a foreign country included on the list of countries that discriminate against U.S. firms published by the U.S.T.R. or

b. whose subcontractors are owned or controlled by one or more citizens or nationals of a foreign country on such U.S.T.R. list or

c. who incorporates in the public works project any product of a foreign country on such U.S.T.R. list;

Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by this provision. The knowledge and information of a contractor is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

The Offeror agrees that, if awarded a contract resulting from this solicitation, it will incorporate this provision for certification without modification in in all lower tier subcontracts. The contractor may rely on the certification of a prospective subcontractor that it is not a firm from a foreign country included on the list of countries that discriminate against U.S. firms as published by U.S.T.R, unless the Offeror has knowledge that the certification is erroneous.

This certification is a material representation of fact upon which reliance was placed when making an award. If it is later determined that the Contractor or subcontractor knowingly rendered an erroneous certification, the Federal Aviation Administration may direct through the Owner cancellation of the contract or subcontract for default at no cost to the Owner or the FAA.

31. Termination of Contract (All Contracts in Excess of $10,000).
    a. The Owner may terminate this contract in whole or in part at any time by providing written notice to the Contractor. Such action may be without cause and without prejudice to any other right or remedy of Owner. Upon receipt of a written notice of termination, except as explicitly directed by the Owner, the Contractor shall immediately proceed with the following obligations regardless of any delay in determining or adjusting amounts due under this clause:

        1. Contractor must immediately discontinue work as specified in the written notice.

        2. Terminate all subcontracts to the extent they relate to the work terminated under the notice.

        3. Discontinue orders for materials and services except as directed by the written notice.

        4. Deliver to the owner all fabricated and partially fabricated parts, completed and partially completed work, supplies, equipment and materials acquired prior to termination of the work and as directed in the written notice.

        5. Complete performance of the work not terminated by the notice.

        6. Take action as directed by the owner to protect and preserve property and work related to this contract that Owner will take possession.

    Owner agrees to pay Contractor for:

    a. Completed and acceptable work executed and accordance with the contract documents prior to the effective date of termination;

    b. Documented expenses sustained prior to the effective date of termination in performing work and furnishing labor, materials, or equipment as required by the contract documents in connection with uncompleted work;

    c. Reasonable and substantiated claims, cost and damages incurred in settlement of terminated contracts with subcontractors and suppliers; and

    d. Reasonable and substantiated expenses to the contractor directly attributable to Owner's termination action

    e. If the termination is due to failure to fulfill the contractor's obligations, the Owner may take over the work and prosecute the same to completion by contract or otherwise. In such case, the Contractor shall be liable to the Owner for any additional cost occasioned to the Sponsor (Owner) thereby.

    Owner will not pay Contractor for loss of anticipated profits or revenue or other economic loss arising out of or resulting from the Owner's termination action.

    The rights and remedies this clause provides are in addition to any other rights and remedies provided by law or under this contract.

Termination for Default:
Section 80-09 of FAA Advisory Circular 150/5370-10 establishes conditions, rights and remedies associated with Owner termination of this contract due default of the Contractor.

32. Suspension and Debarment Requirements for all Contracts over $25,000 (and for all Contracts for Auditing Services Regardless of the Amount).
The bidder/offeror certifies, by submission of this proposal or acceptance of this contract that neither it nor its principals is presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participation in this transaction by any Federal department or agency. It further agrees by submitting this proposal that it will include this clause without modification in all lower tier transaction, solicitations, proposals, contracts, and subcontracts. Where the bidder/offeror/contractor or any lower tier participant is unable to certify to this statement, it shall attach an explanation to this solicitation/proposal.

33. Veteran's Preference (All Construction Contracts).
In the employment of labor (except in executive, administrative, and supervisory positions), the contractor and all sub-tier contractors must give preference to covered veterans as defined within Title 49 United States code Section 47112. Covered Veterans include Vietnam-era, Persian Gulf, Afghanistan-Iraq war veterans, disabled veterans, and small business concerns (as defined by 15 U.S.C. 632) owned and controlled by disabled Veterans. This preference only applies when they are covered Veterans readily available and qualified to perform the work to which the employment relates.

34. Notwithstanding anything to the contrary in the Contract Documents, an extension in the Contract Time, to the extent permitted under the Contract Documents, shall be the sole remedy of the Contractor for any (i) delay in the commencement, prosecution or completion of the Work, (ii) hindrance or obstruction in the performance of the Work, (iii) loss of productivity, or (iv) other similar claims (collectively referred to as "Delay") whether or not such Delay is foreseeable, unless the Delay is caused by acts of the Owner constituting active interference with the Contractor's performance of the Work, and only to the extent such acts continue after the Contractor furnishes the Owner with notice of such interference. In no event shall the contractor be entitled to any compensation or recovery of any damage in connection with any Delay, including, without limitation, consequential damages, lost opportunity costs, impact damages or other similar remuneration. The Owner's exercise of any of its rights or remedies under the Contract Documents (including, without limitation, ordering changes in the Work, or directing suspension, rescheduling or correction of the Work), regardless of the extent or frequency of Owner's exercise of such rights or remedies, shall not be construed as active interference with the Contractor's performance of the Work.

35. Texting When Driving.
In accordance with Executive Order 13513, "Federal Leadership on Reducing Text Messaging While Driving" (10/1/2009) and DOT order 3902.10 "Text Messaging While Driving" (12/30/2009), FAA encourages recipients to Federal grant funds to adopt and enforce safety policies that decrease crashes by distracted drivers, including policies to ban text messaging while driving when performing work related to a grant or sub-grant.

The Contractor must promote policies and initiatives for employees and other work personnel that decrease crashes by distracted drivers, including policies to ban text messaging while driving.

The Contractor must include these policies in each third-party subcontract exceeding $3,500 and involve driving a motor vehicle in performance of work activities associated with this project.

36. Employment Eligibility (Using E-Verify). Agency/Vendors/Contractors.
Contractors and subcontractors performing work or providing services pursuant to this contract shall utilize the U.S. Department of Homeland Security's E-Verify system to verify the employment eligibility of all new employees hired by the contractor or subcontractor during the contract term.

IN WITNESS WHEREOF, the Owner and Contractor hereto have executed this Contract on the day and date first above written in three counterparts, each deemed an original contract.

Contractor shall indicate whether

Corporation, **Partnership**, **Company** or **Individual**

(Circle one)

The person signing shall, in his own handwriting, sign the principal's name, his own name, and his title.

Where the person signing for a corporation is other than the President or Vice President, he must by affidavit, as contained herein, show his authority to bind the corporation.

PERFORMANCE BOND

KNOW ALL MEN BY THESE PRESENTS: That_____ as Principal, hereinafter called Contractor, and _____, as Surety, hereinafter called Surety, are held and firmly bound unto the City of DeFuniak Springs as Obligee, hereinafter called Owner, in the amount of **$_____ Dollars and /100 Cents** for the payment whereof Contractor and Surety bind themselves, their heirs, executors, administrators, and successors and assigns, jointly and severally, firmly by these presents.

WHEREAS, Contractor has, by written agreement dated _____, entered into a contract with Owner for the **DFS Terminal, Hangar, and Apron Expansion** project at DeFuniak Springs Airport, in accordance with Plans and Specifications prepared by AVCON, INC., which Contract is by reference made a part hereof, and is hereinafter referred to as the Contract.

NOW, THEREFORE, THE CONDITION OF THIS OBLIGATION is such that if Contractor shall promptly and faithfully perform said Contract, then the obligation shall be null and void; otherwise, it shall remain in full force and effect.

The Surety hereby waives notice of any alteration or extension of time made by the Owner.

Whenever Contractor shall be, and declared by Owner to be, in default under the Contract, the Owner having performed Owner's obligations thereunder, the Surety may promptly remedy the default, or shall promptly:

(1) Complete the Contract in accordance with its terms and conditions, or

(2) Obtain a bid or bids for completing the Contract in accordance with its terms and conditions, upon determination by Surety of the lowest responsive bidder, or, if the Owner elects, upon determination by the Owner and the Surety jointly of the lowest responsive Bidder, arrange for a contract between such Bidder and Owner, and make available as work progresses (even though there should be a default or a succession of defaults under the Contract or Contracts of completion arranged under this paragraph) sufficient funds to pay the cost of completion less the balance of the Contract price; but not exceeding, including other costs and damages for which the Surety may be liable hereunder, the amount set forth in the first paragraph hereof. The term "balance of the Contract price," as used in this paragraph, shall mean the total amount payable by Owner to Contractor under the Contract and any amendments thereto, less the amount properly paid by Owner to Contractor.

Any suit under this Bond must be instituted before the expiration or 1 year from the date on which final payment under the Contract falls due.

No right of action shall accrue on this Bond to or for the use of any person or corporation other than the Owner named herein or the heirs, executors, administrators, or successors of the Owner.

LABOR AND MATERIAL PAYMENT BOND

KNOW ALL MEN BY THESE PRESENTS: That _____ as Principal, hereinafter called Contractor, and _____, as Surety, hereinafter called Surety, are held and firmly bound unto the City of DeFuniak Springs as Obligee, hereinafter called Owner, for the use and benefit of claimants as here in below defined, in the amount of **$** _____

_____

Dollars and 00/100 Cents for the payment whereof Contractor and Surety bind themselves, their heirs, executors, administrators, successors, and assigns, jointly and severally, firmly by these presents.

WHEREAS, Contractor has, by written agreement dated _____ entered into a Contract with Owner for the **DFS Terminal, Hangar, and Apron Expansion** project at the DeFuniak Springs Airport, in accordance with Plans and Specifications prepared by AVCON, INC., which Contract is by reference made a part hereof, and is hereinafter referred to as the Contract.

NOW, THEREFORE, THE CONDITION OF THIS OBLIGATION is such that if Contractor shall promptly make payment to all claimants as herein after defined, for all labor and material used or reasonably required for use in the performance of the Contract, then this obligation shall be void; otherwise, it shall remain in full force and effect, subject, however, to the following conditions:

1. A claimant is defined as one having a direct Contract with the Contractor or with a Subcontractor of the Contractor for labor, material, or both, used or reasonably required for use in the performance of the Contract, labor and material being construed to include that part of water, gas, power, light, heat, oil, gasoline, telephone service, or rental of equipment directly applicable to the Contract.

2. The above-named Contractor and Surety hereby jointly and severally agree with the Owner that every claimant, as herein defined, who has not been paid in full before the expiration of a period of 90 days after the date on which the last of such claimant's work or labor was done or performed, or materials were furnished by such claimant, may sue on this Bond for the use of such claimant, prosecute the suit to final judgment for such sum or sums as may be justly due claimant, and have execution thereon. The Owner shall not be liable for the payment of any costs or expenses of any such suit.

3. No suit or action shall be commenced hereunder by any claimant.

    a. Unless claimant, other than one having a direct contract with the Contractor, shall have given written notice to any two of the following: the Contractor, the Owner, or the Surety above-named, within 90 days after such claimant did or performed the last of the work or labor, or furnished the last of the materials for which said claim is made, stating with substantial accuracy the amount claimed and the name of the party to whom the materials were furnished, or for whom the work or labor was done or performed. Such notice shall be served by mailing the same by registered mail or certified mail, postage prepaid, in an envelope addressed to the Contractor, Owner, or Surety, at any place where an office is regularly maintained for the transaction of business, or served in any manner in which legal process may be served in the state in which the aforesaid project is located, save that such service need not be made by a public officer.

b. After the expiration of 2 years following the date on which Principal ceased work on said Contract, it being understood, however, that if any limitation embodied in this Bond is prohibited by any law controlling the construction hereof, such limitation shall be deemed to be amended so as to be equal to the minimum period of limitation permitted by such law.

c. Other than in a state court of competent jurisdiction in and for the county or other political subdivision of the state in which the Project, or any part thereof, is situated, or in the United States District Court for the district in which the Project, or any part thereof, is situated, and not elsewhere.

4. The amount of this Bond shall be reduced by and to the extent of any payment or payments made in good faith hereunder, inclusive of the payment by Surety of mechanics' liens which may be filed of record against said improvement, whether or not claim for the amount of such lien be presented under and against this Bond.

Signed and sealed this _____ day of _____, 20___.

FEDERAL AVIATION ADMINISTRATION GENERAL PROVISIONS

BID DOCUMENTS

DFS TERMINAL, HANGAR, AND APRON EXPANSION
DEFUNIAK SPRINGS AIRPORT

GENERAL PROVISIONS

Section 10 Definition of Terms

Whenever the following terms are used in these specifications, in the contract, or in any documents or other instruments pertaining to construction where these specifications govern, the intent and meaning shall be interpreted as follows:

10-01 AASHTO. The American Association of State Highway and Transportation Officials, the successor association to AASHO.

10-02 Access road. The right-of-way, the roadway and all improvements constructed thereon connecting the airport to a public highway.

10-03 Advertisement. A public announcement, as required by local law, inviting bids for work to be performed and materials to be furnished.

10-04 Airport Improvement Program (AIP). A grant-in-aid program, administered by the Federal Aviation Administration (FAA).

10-05 Air operations area (AOA). For the purpose of these specifications, the term air operations area (AOA) shall mean any area of the airport used or intended to be used for the landing, takeoff, or surface maneuvering of aircraft. An air operation area shall include such paved or unpaved areas that are used or intended to be used for the unobstructed movement of aircraft in addition to its associated runway, taxiway, or apron.

10-06 Airport. Airport means an area of land or water which is used or intended to be used for the landing and takeoff of aircraft; an appurtenant area used or intended to be used for airport buildings or other airport facilities or rights of way; and airport buildings and facilities located in any of these areas, and includes a heliport.

10-07 ASTM International (ASTM). Formerly known as the American Society for Testing and Materials (ASTM).

10-08 Award. The Owner's notice to the successful bidder of the acceptance of the submitted bid.

10-09 Bidder. Any individual, partnership, firm, or corporation, acting directly or through a duly authorized representative, who submits a proposal for the work contemplated.

10-10 Building area. An area on the airport to be used, considered, or intended to be used for airport buildings or other airport facilities or rights-of-way together with all airport buildings and facilities located thereon.

10-11 Calendar day. Every day shown on the calendar.

10-12 Change order. A written order to the Contractor covering changes in the plans, specifications, or proposal quantities and establishing the basis of payment and contract time adjustment, if any, for the work affected by such changes. The work, covered by a change order, must be within the scope of the contract.

10-13 Contract. The written agreement covering the work to be performed. The awarded contract shall include, but is not limited to: Advertisement, Contract Form, Proposal, Performance Bond,

Payment Bond, any required insurance certificates, Specifications, Plans, and any addenda issued to bidders.

10-14 Contract item (pay item). A specific unit of work for which a price is provided in the contract.

10-15 Contract time. The number of calendar days or working days, stated in the proposal, allowed for completion of the contract, including authorized time extensions. If a calendar date of completion is stated in the proposal, in lieu of a number of calendar or working days, the contract shall be completed by that date.

10-16 Contractor. The individual, partnership, firm, or corporation primarily liable for the acceptable performance of the work contracted and for the payment of all legal debts pertaining to the work who acts directly or through lawful agents or employees to complete the contract work.

10-17 Contractor's laboratory. The Contractor's quality control organization in accordance with the Contractor Quality Control Program.

10-18 Construction Safety and Phasing Plan (CSPP). The overall plan for safety and phasing of a construction project developed by the airport operator or developed by the airport operator's consultant and approved by the airport operator. It is included in the invitation for bids and becomes part of the project specifications.

10-19 Drainage system. The system of pipes, ditches, and structures by which surface or subsurface waters are collected and conducted from the airport area.

10-20 Engineer. The individual, partnership, firm, or corporation duly authorized by the Owner to be responsible for engineering of the contract work and acting directly or through an authorized representative.

10-21 Equipment. All machinery, together with the necessary supplies for upkeep and maintenance, and also all tools and apparatus necessary for the proper construction and acceptable completion of the work.

10-22 Extra work. An item of work not provided for in the awarded contract as previously modified by change order or supplemental agreement, but which is found by the Engineer to be necessary to complete the work within the intended scope of the contract as previously modified.

10-23 FAA. The Federal Aviation Administration of the U.S. Department of Transportation. When used to designate a person, FAA shall mean the Administrator or his or her duly authorized representative.

10-24 Federal specifications. The Federal Specifications and Standards, Commercial Item Descriptions, and supplements, amendments, and indices thereto are prepared and issued by the General Services Administration of the Federal Government.

10-25 Force account. Force account work is planning, engineering, or construction work done by the Sponsor's employees.

10-26 Inspector. An authorized representative of the Engineer assigned to make all necessary inspections and observation of tests of the work performed or being performed, or of the materials furnished or being furnished by the Contractor.

10-27 Intention of terms. Whenever, in these specifications or on the plans, the words "directed," "required," "permitted," "ordered," "designated," "prescribed," or words of like import are used, it shall be understood that the direction, requirement, permission, order, designation, or prescription of the Engineer is intended; and similarly, the words "approved," "acceptable," "satisfactory," or words of like import, shall mean approved by, or acceptable to, or satisfactory to the Engineer, subject in each case to the final determination of the Owner.

Any reference to a specific requirement of a numbered paragraph of the contract specifications or a cited standard shall be interpreted to include all general requirements of the entire section, specification item, or cited standard that may be pertinent to such specific reference.

10-28 Laboratory. The official testing laboratories of the Owner or such other laboratories as may be designated by the Engineer. Also referred to as "Engineer's Laboratory" or "quality assurance laboratory."

10-29 Lighting. A system of fixtures providing or controlling the light sources used on or near the airport or within the airport buildings. The field lighting includes all luminous signals, markers, floodlights, and illuminating devices used on or near the airport or to aid in the operation of aircraft landing at, taking off from, or taxiing on the airport surface.

10-30 Major and minor contract items. A major contract item shall be any item that is listed in the proposal, the total cost of which is equal to or greater than 20% of the total amount of the award contract. All other items shall be considered minor contract items.

10-31 Materials. Any substance specified for use in the construction of the contract work.

10-32 Notice to Proceed (NTP). A written notice to the Contractor to begin the actual contract work on a previously agreed to date. If applicable, the Notice to Proceed shall state the date on which the contract time begins.

10-33 Owner. The term "Owner" shall mean the party of the first part or the contracting agency signatory to the contract. Where the term "Owner" is capitalized in this document, it shall mean airport Sponsor only.

10-34 Passenger Facility Charge (PFC). Per 14 CFR Part 158 and 49 USC § 40117, a PFC is a charge imposed by a public agency on passengers enplaned at a commercial service airport it controls."

10-35 Pavement. The combined surface course, base course, and subbase course, if any, considered as a single unit.

10-36 Payment bond. The approved form of security furnished by the Contractor and his or her surety as a guaranty that the Contractor will pay in full all bills and accounts for materials and labor used in the construction of the work.

10-37 Performance bond. The approved form of security furnished by the Contractor and his or her surety as a guaranty that the Contractor will complete the work in accordance with the terms of the contract.

10-38 Plans. The official drawings or exact reproductions which show the location, character, dimensions and details of the airport and the work to be done and which are to be considered as a part of the contract, supplementary to the specifications.

10-39 Project. The agreed scope of work for accomplishing specific airport development with respect to a particular airport.

10-40 Proposal. The written offer of the bidder (when submitted on the approved proposal form) to perform the contemplated work and furnish the necessary materials in accordance with the provisions of the plans and specifications.

10-41 Proposal guaranty. The security furnished with a proposal to guarantee that the bidder will enter into a contract if his or her proposal is accepted by the Owner.

10-42 Runway. The area on the airport prepared for the landing and takeoff of aircraft.

10-43 Specifications. A part of the contract containing the written directions and requirements for completing the contract work. Standards for specifying materials or testing which are cited in the contract specifications by reference shall have the same force and effect as if included in the contract physically.

10-44 Sponsor. A Sponsor is defined in 49 USC § 47102(24) as a public agency that submits to the FAA for an AIP grant; or a private Owner of a public-use airport that submits to the FAA an application for an AIP grant for the airport.

10-45 Structures. Airport facilities such as bridges; culverts; catch basins, inlets, retaining walls, cribbing; storm and sanitary sewer lines; water lines; underdrains; electrical ducts, manholes, handholes, lighting fixtures and bases; transformers; flexible and rigid pavements; navigational aids; buildings; vaults; and, other manmade features of the airport that may be encountered in the work and not otherwise classified herein.

10-46 Subgrade. The soil that forms the pavement foundation.

10-47 Superintendent. The Contractor's executive representative who is present on the work during progress, authorized to receive and fulfill instructions from the Engineer, and who shall supervise and direct the construction.

10-48 Supplemental agreement. A written agreement between the Contractor and the Owner covering (1) work that would increase or decrease the total amount of the awarded contract, or any major contract item, by more than 25%, such increased or decreased work being within the scope of the originally awarded contract; or (2) work that is not within the scope of the originally awarded contract.

10-49 Surety. The corporation, partnership, or individual, other than the Contractor, executing payment or performance bonds that are furnished to the Owner by the Contractor.

10-50 Taxiway. For the purpose of this document, the term taxiway means the portion of the air operations area of an airport that has been designated by competent airport authority for movement of aircraft to and from the airport's runways, aircraft parking areas, and terminal areas.

10-51 Work. The furnishing of all labor, materials, tools, equipment, and incidentals necessary or convenient to the Contractor's performance of all duties and obligations imposed by the contract, plans, and specifications.

10-52 Working day. A working day shall be any day other than a legal holiday, Saturday, or Sunday on which the normal working forces of the Contractor may proceed with regular work for at

least six (6) hours toward completion of the contract. When work is suspended for causes beyond the Contractor's control, it will not be counted as a working day. Saturdays, Sundays and holidays on which the Contractor's forces engage in regular work will be considered as working days.

END OF SECTION 10

GENERAL PROVISIONS (AIP)

Section 20 Proposal Requirements and Conditions

20-01 Advertisement (Notice to Bidders).

Sealed proposals, in duplicate, will be received by the **City of DeFuniak Springs in the Office of the City Manager, at City Hall,** located at **71 US Highway 90 West, DeFuniak Springs, Florida 32433** until **2:00 PM** on **May 20, 2021**, **CST**, at which time, **in the City Council Chambers** all proposals received will be publicly opened and read aloud. Bidders are invited to submit proposals for:

TERMINAL, HANGAR, AND APRON EXPANSION
AT
DEFUNIAK SPRINGS AIRPORT

The proposed construction scope consists of an approx. 7,200 sf airport terminal, approx. 10,700 sf aircraft hangar, and associated parking lot, aircraft apron expansion, drainage, utility, and security improvements.

Bidders are invited to submit Proposals for this work on the Proposal Forms provided. Other proposal forms will not be accepted.

The complete examination and understanding of the Contract Documents consisting of the Plans and Specifications, and all addenda or other revisions, and site of the proposed work is necessary to properly submit a Proposal. Contract Documents consisting of the Plans and Specifications will be available beginning **Monday, April 19, 2021** for examination or may be obtained via email by contacting **AVCON INC. with offices at 320 Bayshore Drive, Suite A, Niceville, Florida 32578, Phone (850) 678-0050**. There is **no** charge for an electronic copy of the Contract Documents. Hard copy sets of the Contract Documents are not available.

A Bid Bond in the form as bound in the Contract Documents or Certified Check in the amount of not less than five percent (5%) of the total amount bid must accompany each Bid.

Successful Bidder shall be required to execute and to provide a Payment Bond and Performance Bond each in an amount of not less than one hundred percent (100%) of the total value of the Contract awarded with a satisfactory surety or sureties for the full and faithful performance of the work.

The time of completion for this Work is anticipated to be **420 calendar days** to achieve Substantial Completion; exact time requirements are defined in the Instructions to Bidders.

A Non-Mandatory Pre-Bid Conference will be conducted at the City of DeFuniak Springs City Hall, 71 US Highway 90 W, Defuniak Springs, Florida 32433 on Wednesday, April 28, 2021 at 10 am central time. A Site Visit will be conducted immediately following the Pre-Bid Conference.

The City of DeFuniak Springs, in accordance with Title VI of the Civil Rights Act of 1964 (42 U.S.C. 2000d) and 49 CFR, Part 26, Participation by Disadvantaged Business Enterprises (DBE) in Department of Transportation Programs, hereby notifies all bidders that it will affirmatively ensure that disadvantaged business enterprises are afforded full opportunity to submit bids in response to

this invitation and will not be discriminated against on the grounds of race, color, sex or national origin in consideration for an award.

No bid may be withdrawn after closing time for the receipt of Proposals for a period of one hundred and twenty (120) days.

The **City of DeFuniak Springs** reserves the right to waive any informalities or irregularities in or reject any or all bids and to award or refrain from awarding the Contract for the Work.

This project is funded by FDOT PTGA 429681-2-94-01 and the Federal Aviation Administration.

20-02 Qualification of bidders. Each bidder shall furnish the Owner satisfactory evidence of his or her competency to perform the proposed work. Such evidence of competency, unless otherwise specified, shall consist of statements covering the bidder's past experience on similar work, a list of equipment that would be available for the work, and a list of key personnel that would be available. In addition, each bidder shall furnish the Owner satisfactory evidence of his or her financial responsibility. Such evidence of financial responsibility, unless otherwise specified, shall consist of a confidential statement or report of the bidder's financial resources and liabilities as of the last calendar year or the bidder's last fiscal year. Such statements or reports shall be certified by a public accountant. At the time of submitting such financial statements or reports, the bidder shall further certify whether his or her financial responsibility is approximately the same as stated or reported by the public accountant. If the bidder's financial responsibility has changed, the bidder shall qualify the public accountant's statement or report to reflect the bidder's true financial condition at the time such qualified statement or report is submitted to the Owner.

Unless otherwise specified, a bidder may submit evidence that he or she is prequalified with the State Highway Division and is on the current "bidder's list" of the state in which the proposed work is located. Such evidence of State Highway Division prequalification may be submitted as evidence of financial responsibility in lieu of the certified statements or reports specified above.

Each bidder shall submit "evidence of competency" and "evidence of financial responsibility" to the Owner at the time of bid opening.

20-03 Contents of proposal forms. The Owner shall furnish bidders with proposal forms. All papers bound with or attached to the proposal forms are necessary parts and must not be detached.

The plans, specifications, and other documents designated in the proposal form shall be considered a part of the proposal whether attached or not.

20-04 Issuance of proposal forms. The Owner reserves the right to refuse to issue a proposal form to a prospective bidder should such bidder be in default for any of the following reasons:

a. Failure to comply with any prequalification regulations of the Owner, if such regulations are cited, or otherwise included, in the proposal as a requirement for bidding.

b. Failure to pay, or satisfactorily settle, all bills due for labor and materials on former contracts in force with the Owner at the time the Owner issues the proposal to a prospective bidder.

c. Documented record of Contractor default under previous contracts with the Owner.

d. Documented record of unsatisfactory work on previous contracts with the Owner.

20-05 Interpretation of estimated proposal quantities. An estimate of quantities of work to be done and materials to be furnished under these specifications is given in the proposal. It is the result of careful calculations and is believed to be correct. It is given only as a basis for comparison of proposals and the award of the contract. The Owner does not expressly, or by implication, agree that the actual quantities involved will correspond exactly therewith; nor shall the bidder plead misunderstanding or deception because of such estimates of quantities, or of the character, location, or other conditions pertaining to the work. Payment to the Contractor will be made only for the actual quantities of work performed or materials furnished in accordance with the plans and specifications. It is understood that the quantities may be increased or decreased as hereinafter provided in the subsection 40-02 titled ALTERATION OF WORK AND QUANTITIES of Section 40 without in any way invalidating the unit bid prices.

20-06 Examination of plans, specifications, and site. The bidder is expected to carefully examine the site of the proposed work, the proposal, plans, specifications, and contract forms. Bidders shall satisfy themselves as to the character, quality, and quantities of work to be performed, materials to be furnished, and as to the requirements of the proposed contract. The submission of a proposal shall be prima facie evidence that the bidder has made such examination and is satisfied as to the conditions to be encountered in performing the work and as to the requirements of the proposed contract, plans, and specifications.

See the Project Manual, Miscellaneous Documents for the Nova Geotechnical Report.

20-07 Preparation of proposal. The bidder shall submit his or her proposal on the forms furnished by the Owner. All blank spaces in the proposal forms must be correctly filled in where indicated for each and every item for which a quantity is given. The bidder shall state the price (written in ink or typed) both in words and numerals for which they propose to do for each pay item furnished in the proposal. In case of conflict between words and numerals, the words, unless obviously incorrect, shall govern.

The bidder shall sign the proposal correctly and in ink. If the proposal is made by an individual, his or her name and post office address must be shown. If made by a partnership, the name and post office address of each member of the partnership must be shown. If made by a corporation, the person signing the proposal shall give the name of the state under the laws of which the corporation was chartered and the name, titles, and business address of the president, secretary, and the treasurer. Anyone signing a proposal as an agent shall file evidence of his or her authority to do so and that the signature is binding upon the firm or corporation.

20-08 Responsive and responsible bidder. A responsive bid conforms to all significant terms and conditions contained in the Sponsor's invitation for bid. It is the Sponsor's responsibility to decide if the exceptions taken by a bidder to the solicitation are material or not and the extent of deviation it is willing to accept.

A responsible bidder has the ability to perform successfully under the terms and conditions of a proposed procurement, as defined in 49 CFR § 18.36(b)(8). This includes such matters as Contractor integrity, compliance with public policy, record of past performance, and financial and technical resources.

20-09 Irregular proposals. Proposals shall be considered irregular for the following reasons:

a. If the proposal is on a form other than that furnished by the Owner, or if the Owner's form is altered, or if any part of the proposal form is detached.

b. If there are unauthorized additions, conditional or alternate pay items, or irregularities of any kind that make the proposal incomplete, indefinite, or otherwise ambiguous.

c. If the proposal does not contain a unit price for each pay item listed in the proposal, except in the case of authorized alternate pay items, for which the bidder is not required to furnish a unit price.

d. If the proposal contains unit prices that are obviously unbalanced.

e. If the proposal is not accompanied by the proposal guaranty specified by the Owner.

The Owner reserves the right to reject any irregular proposal and the right to waive technicalities if such waiver is in the best interest of the Owner and conforms to local laws and ordinances pertaining to the letting of construction contracts.

20-10 Bid guarantee. Each separate proposal shall be accompanied by a certified check, or other specified acceptable collateral, in the amount specified in the proposal form. Such check, or collateral, shall be made payable to the Owner.

20-11 Delivery of proposal. Each proposal submitted shall be placed in a sealed envelope plainly marked with the project number, location of airport, and name and business address of the bidder on the outside. When sent by mail, preferably registered, the sealed proposal, marked as indicated above, should be enclosed in an additional envelope. No proposal will be considered unless received at the place specified in the advertisement or as modified by Addendum before the time specified for opening all bids. Proposals received after the bid opening time shall be returned to the bidder unopened.

20-12 Withdrawal or revision of proposals. A bidder may withdraw or revise (by withdrawal of one proposal and submission of another) a proposal provided that the bidder's request for withdrawal is received by the Owner in writing or by email before the time specified for opening bids. Revised proposals must be received at the place specified in the advertisement before the time specified for opening all bids.

20-13 Public opening of proposals. Proposals shall be opened, and read, publicly at the time and place specified in the advertisement. Bidders, their authorized agents, and other interested persons are invited to attend. Proposals that have been withdrawn (by written or telegraphic request) or received after the time specified for opening bids shall be returned to the bidder unopened.

20-14 Disqualification of bidders. A bidder shall be considered disqualified for any of the following reasons:

a. Submitting more than one proposal from the same partnership, firm, or corporation under the same or different name.

b. Evidence of collusion among bidders. Bidders participating in such collusion shall be disqualified as bidders for any future work of the Owner until any such participating bidder has been reinstated by the Owner as a qualified bidder.

c. If the bidder is considered to be in "default" for any reason specified in the subsection 20-04 titled ISSUANCE OF PROPOSAL FORMS of this section.

END OF SECTION 20

GENERAL PROVISIONS

Section 30 Award and Execution of Contract

30-01 Consideration of proposals. After the proposals are publicly opened and read, they will be compared on the basis of the summation of the products obtained by multiplying the estimated quantities shown in the proposal by the unit bid prices. If a bidder's proposal contains a discrepancy between unit bid prices written in words and unit bid prices written in numbers, the unit price written in words shall govern.

Until the award of a contract is made, the Owner reserves the right to reject a bidder's proposal for any of the following reasons:

a. If the proposal is irregular as specified in the subsection 20-09 titled IRREGULAR PROPOSALS of Section 20.

b. If the bidder is disqualified for any of the reasons specified in the subsection 20-14 titled DISQUALIFICATION OF BIDDERS of Section 20.

In addition, until the award of a contract is made, the Owner reserves the right to reject any or all proposals, waive technicalities, if such waiver is in the best interest of the Owner and is in conformance with applicable state and local laws or regulations pertaining to the letting of construction contracts; advertise for new proposals; or proceed with the work otherwise. All such actions shall promote the Owner's best interests.

30-02 Award of contract. The award of a contract, if it is to be awarded, shall be made within 120 calendar days of the date specified for publicly opening proposals, unless otherwise specified herein.

Award of the contract shall be made by the Owner to the lowest, qualified bidder whose proposal conforms to the cited requirements of the Owner.

30-03 Cancellation of award. The Owner reserves the right to cancel the award without liability to the bidder, except return of proposal guaranty, at any time before a contract has been fully executed by all parties and is approved by the Owner in accordance with the subsection 30-07 titled APPROVAL OF CONTRACT of this section.

30-04 Return of proposal guaranty. All proposal guaranties, except those of the two lowest bidders, will be returned immediately after the Owner has made a comparison of bids as specified in the subsection 30-01 titled CONSIDERATION OF PROPOSALS of this section. Proposal guaranties of the two lowest bidders will be retained by the Owner until such time as an award is made, at which time, the unsuccessful bidder's proposal guaranty will be returned. The successful bidder's proposal guaranty will be returned as soon as the Owner receives the contract bonds as specified in the subsection 30-05 titled REQUIREMENTS OF CONTRACT BONDS of this section.

30-05 Requirements of contract bonds. At the time of the execution of the contract, the successful bidder shall furnish the Owner a surety bond or bonds that have been fully executed by the bidder and the surety guaranteeing the performance of the work and the payment of all legal debts that may be incurred by reason of the Contractor's performance of the work. The surety and the form of the bond or bonds shall be acceptable to the Owner. Unless otherwise specified in this subsection, the surety bond or bonds shall be in a sum equal to the full amount of the contract.

30-06 Execution of contract. The successful bidder shall sign (execute) the necessary agreements for entering into the contract and return the signed contract to the Owner, along with the fully executed surety bond or bonds specified in the subsection 30-05 titled REQUIREMENTS OF CONTRACT BONDS of this section, within 15 calendar days from the date mailed or otherwise delivered to the successful bidder.

30-07 Approval of contract. Upon receipt of the contract and contract bond or bonds that have been executed by the successful bidder, the Owner shall complete the execution of the contract in accordance with local laws or ordinances, and return the fully executed contract to the Contractor. Delivery of the fully executed contract to the Contractor shall constitute the Owner's approval to be bound by the successful bidder's proposal and the terms of the contract.

30-08 Failure to execute contract. Failure of the successful bidder to execute the contract and furnish an acceptable surety bond or bonds within the 15 calendar day period specified in the subsection 30-06 titled EXECUTION OF CONTRACT of this section shall be just cause for cancellation of the award and forfeiture of the proposal guaranty, not as a penalty, but as liquidation of damages to the Owner.

END OF SECTION 30

GENERAL PROVISIONS

Section 40 Scope of Work

40-01 Intent of contract. The intent of the contract is to provide for construction and completion, in every detail, of the work described. It is further intended that the Contractor shall furnish all labor, materials, equipment, tools, transportation, and supplies required to complete the work in accordance with the plans, specifications, and terms of the contract.

40-02 Alteration of work and quantities. The Owner reserves and shall have the right to make such alterations in the work as may be necessary or desirable to complete the work originally intended in an acceptable manner. Unless otherwise specified herein, the Engineer shall be and is hereby authorized to make such alterations in the work as may increase or decrease the originally awarded contract quantities, provided that the aggregate of such alterations does not change the total contract cost or the total cost of any major contract item by more than 25% (total cost being based on the unit prices and estimated quantities in the awarded contract). Alterations that do not exceed the 25% limitation shall not invalidate the contract nor release the surety, and the Contractor agrees to accept payment for such alterations as if the altered work had been a part of the original contract. These alterations that are for work within the general scope of the contract shall be covered by “Change Orders” issued by the Engineer. Change orders for altered work shall include extensions of contract time where, in the Engineer’s opinion, such extensions are commensurate with the amount and difficulty of added work.

Should the aggregate amount of altered work exceed the 25% limitation hereinbefore specified, such excess altered work shall be covered by supplemental agreement. If the Owner and the Contractor are unable to agree on a unit adjustment for any contract item that requires a supplemental agreement, the Owner reserves the right to terminate the contract with respect to the item and make other arrangements for its completion.

Supplemental agreements shall be approved by the FAA and shall include all applicable Federal contract provisions for procurement and contracting required under AIP. Supplemental agreements shall also require consent of the Contractor’s surety and separate performance and payment bonds.

40-03 Omitted items. The Engineer may, in the Owner’s best interest, omit from the work any contract item, except major contract items. Major contract items may be omitted by a supplemental agreement. Such omission of contract items shall not invalidate any other contract provision or requirement.

Should a contract item be omitted or otherwise ordered to be non-performed, the Contractor shall be paid for all work performed toward completion of such item prior to the date of the order to omit such item. Payment for work performed shall be in accordance with the subsection 90-04 titled PAYMENT FOR OMITTED ITEMS of Section 90.

40-04 Extra work. Should acceptable completion of the contract require the Contractor to perform an item of work for which no basis of payment has been provided in the original contract or previously issued change orders or supplemental agreements, the same shall be called “Extra Work.” Extra Work that is within the general scope of the contract shall be covered by written change order. Change orders for such Extra Work shall contain agreed unit prices for performing the change order work in accordance with the requirements specified in the order, and shall contain any adjustment to the contract time that, in the Engineer’s opinion, is necessary for completion of such Extra Work.

When determined by the Engineer to be in the Owner's best interest, the Engineer may order the Contractor to proceed with Extra Work as provided in the subsection 90-05 titled PAYMENT FOR EXTRA WORK of Section 90. Extra Work that is necessary for acceptable completion of the project, but is not within the general scope of the work covered by the original contract shall be covered by a Supplemental Agreement as defined in the subsection 10-48 titled SUPPLEMENTAL AGREEMENT of Section 10.

Any claim for payment of Extra Work that is not covered by written agreement (change order or supplemental agreement) shall be rejected by the Owner.

40-05 Maintenance of traffic. It is the explicit intention of the contract that the safety of aircraft, as well as the Contractor's equipment and personnel, is the most important consideration.

a. It is understood and agreed that the Contractor shall provide for the free and unobstructed movement of aircraft in the air operations areas (AOAs) of the airport with respect to his or her own operations and the operations of all subcontractors as specified in the subsection 80-04 titled LIMITATION OF OPERATIONS of Section 80. It is further understood and agreed that the Contractor shall provide for the uninterrupted operation of visual and electronic signals (including power supplies thereto) used in the guidance of aircraft while operating to, from, and upon the airport as specified in the subsection 70-15 titled CONTRACTOR'S RESPONSIBILITY FOR UTILITY SERVICE AND FACILITIES OF OTHERS in Section 70.

b. With respect to his or her own operations and the operations of all subcontractors, the Contractor shall provide marking, lighting, and other acceptable means of identifying personnel, equipment, vehicles, storage areas, and any work area or condition that may be hazardous to the operation of aircraft, fire-rescue equipment, or maintenance vehicles at the airport.

c. When the contract requires the maintenance of vehicular traffic on an existing road, street, or highway during the Contractor's performance of work that is otherwise provided for in the contract, plans, and specifications, the Contractor shall keep such road, street, or highway open to all traffic and shall provide such maintenance as may be required to accommodate traffic. The Contractor shall be responsible for the repair of any damage caused by the Contractor's equipment and personnel. The Contractor shall furnish, erect, and maintain barricades, warning signs, flag person, and other traffic control devices in reasonable conformity with the Manual on Uniform Traffic Control Devices (MUTCD) (http://mutcd.fhwa.dot.gov/), unless otherwise specified. The Contractor shall also construct and maintain in a safe condition any temporary connections necessary for ingress to and egress from abutting property or intersecting roads, streets or highways.

40-06 Removal of existing structures. All existing structures encountered within the established lines, grades, or grading sections shall be removed by the Contractor, unless such existing structures are otherwise specified to be relocated, adjusted up or down, salvaged, abandoned in place, reused in the work or to remain in place. The cost of removing such existing structures shall not be measured or paid for directly, but shall be included in the various contract items.

Should the Contractor encounter an existing structure (above or below ground) in the work for which the disposition is not indicated on the plans, the Engineer shall be notified prior to disturbing such structure. The disposition of existing structures so encountered shall be immediately determined by the Engineer in accordance with the provisions of the contract.

Except as provided in the subsection 40-07 titled RIGHTS IN AND USE OF MATERIALS FOUND IN THE WORK of this section, it is intended that all existing materials or structures that may be encountered (within the lines, grades, or grading sections established for completion of the work) shall be used in the work as otherwise provided for in the contract and shall remain the property of the Owner when so used in the work.

40-07 Rights in and use of materials found in the work. Should the Contractor encounter any material such as (but not restricted to) sand, stone, gravel, slag, or concrete slabs within the established lines, grades, or grading sections, the use of which is intended by the terms of the contract to be either embankment or waste, the Contractor may at his or her option either:

a. Use such material in another contract item, providing such use is approved by the Engineer and is in conformance with the contract specifications applicable to such use; or,

b. Remove such material from the site, upon written approval of the Engineer; or

c. Use such material for the Contractor's own temporary construction on site; or,

d. Use such material as intended by the terms of the contract.

Should the Contractor wish to exercise option a., b., or c., the Contractor shall request the Engineer's approval in advance of such use.

Should the Engineer approve the Contractor's request to exercise option a., b., or c., the Contractor shall be paid for the excavation or removal of such material at the applicable contract price. The Contractor shall replace, at his or her own expense, such removed or excavated material with an agreed equal volume of material that is acceptable for use in constructing embankment, backfills, or otherwise to the extent that such replacement material is needed to complete the contract work. The Contractor shall not be charged for use of such material used in the work or removed from the site.

Should the Engineer approve the Contractor's exercise of option a., the Contractor shall be paid, at the applicable contract price, for furnishing and installing such material in accordance with requirements of the contract item in which the material is used.

It is understood and agreed that the Contractor shall make no claim for delays by reason of his or her exercise of option a., b., or c.

The Contractor shall not excavate, remove, or otherwise disturb any material, structure, or part of a structure which is located outside the lines, grades, or grading sections established for the work, except where such excavation or removal is provided for in the contract, plans, or specifications.

40-08 Final cleanup. Upon completion of the work and before acceptance and final payment will be made, the Contractor shall remove from the site all machinery, equipment, surplus and discarded materials, rubbish, temporary structures, and stumps or portions of trees. The Contractor shall cut all brush and woods within the limits indicated and shall leave the site in a neat and presentable condition. Material cleared from the site and deposited on adjacent property will not be considered as having been disposed of satisfactorily, unless the Contractor has obtained the written permission of such property Owner.

END OF SECTION 40

GENERAL PROVISIONS

Section 50 Control of Work

50-01 Authority of the Engineer. The Engineer shall decide any and all questions which may arise as to the quality and acceptability of materials furnished, work performed, and as to the manner of performance and rate of progress of the work. The Engineer shall decide all questions that may arise as to the interpretation of the specifications or plans relating to the work. The Engineer shall determine the amount and quality of the several kinds of work performed and materials furnished which are to be paid for the under contract.

The Engineer does not have the authority to accept pavements that do not conform to FAA specification requirements.

50-02 Conformity with plans and specifications. All work and all materials furnished shall be in reasonably close conformity with the lines, grades, grading sections, cross-sections, dimensions, material requirements, and testing requirements that are specified (including specified tolerances) in the contract, plans or specifications.

If the Engineer finds the materials furnished, work performed, or the finished product not within reasonably close conformity with the plans and specifications but that the portion of the work affected will, in his or her opinion, result in a finished product having a level of safety, economy, durability, and workmanship acceptable to the Owner, the Engineer will advise the Owner of his or her determination that the affected work be accepted and remain in place. In this event, the Engineer will document the determination and recommend to the Owner a basis of acceptance that will provide for an adjustment in the contract price for the affected portion of the work. The Engineer's determination and recommended contract price adjustments will be based on sound engineering judgment and such tests or retests of the affected work as are, in the Engineer's opinion, needed. Changes in the contract price shall be covered by contract change order or supplemental agreement as applicable.

If the Engineer finds the materials furnished, work performed, or the finished product are not in reasonably close conformity with the plans and specifications and have resulted in an unacceptable finished product, the affected work or materials shall be removed and replaced or otherwise corrected by and at the expense of the Contractor in accordance with the Engineer's written orders.

For the purpose of this subsection, the term "reasonably close conformity" shall not be construed as waiving the Contractor's responsibility to complete the work in accordance with the contract, plans, and specifications. The term shall not be construed as waiving the Engineer's responsibility to insist on strict compliance with the requirements of the contract, plans, and specifications during the Contractor's execution of the work, when, in the Engineer's opinion, such compliance is essential to provide an acceptable finished portion of the work.

For the purpose of this subsection, the term "reasonably close conformity" is also intended to provide the Engineer with the authority, after consultation with the FAA, to use sound engineering judgment in his or her determinations as to acceptance of work that is not in strict conformity, but will provide a finished product equal to or better than that intended by the requirements of the contract, plans and specifications.

The Engineer will not be responsible for the Contractor's means, methods, techniques, sequences, or procedures of construction or the safety precautions incident thereto.

50-03 Coordination of contract, plans, and specifications. The contract, plans, specifications, and all referenced standards cited are essential parts of the contract requirements. A requirement occurring in one is as binding as though occurring in all. They are intended to be complementary and to describe and provide for a complete work. In case of discrepancy, calculated dimensions will govern over scaled dimensions; contract technical specifications shall govern over contract general provisions, plans, cited standards for materials or testing, and cited advisory circulars (ACs); contract general provisions shall govern over plans, cited standards for materials or testing, and cited ACs; plans shall govern over cited standards for materials or testing and cited ACs. If any paragraphs contained in the Special Provisions conflict with General Provisions or Technical Specifications, the Special Provisions shall govern.

From time to time, discrepancies within cited testing standards occur due to the timing of the change, edits, and/or replacement of the standards. If the Contractor discovers any apparent discrepancy within standard test methods, the Contractor shall immediately ask the Engineer for an interpretation and decision, and such decision shall be final.

LIST OF SPECIAL PROVISIONS

Special Provision No. 1: Utilities

Special Provision No. 2: Airport Safety and Security Requirements

Special Provision No. 3: Protection of Airport Cables, NAVAIDS and Other Facilities

Special Provision No. 4: Staging and Phasing Provisions for Contractor Operations

Special Provision No. 5: Visible Warning Markers for Taxiways and Aircraft Operations Areas

Special Provision No. 6: Time of Completion

Special Provision No. 7: Airport Project Procedures

Special Provision No. 8: Vehicle Operation on the AOA

Special Provision No. 9: Federal Labor and EEO Provisions

50-04 Cooperation of Contractor. The Contractor will be supplied with five copies each of the plans and specifications. The Contractor shall have available on the work at all times one copy each of the plans and specifications. Additional copies of plans and specifications may be obtained by the Contractor for the cost of reproduction.

The Contractor shall give constant attention to the work to facilitate the progress thereof, and shall cooperate with the Engineer and his or her inspectors and with other contractors in every way possible. The Contractor shall have a competent superintendent on the work at all times who is fully authorized as his or her agent on the work. The superintendent shall be capable of reading and thoroughly understanding the plans and specifications and shall receive and fulfill instructions from the Engineer or his or her authorized representative.

50-05 Cooperation between contractors. The Owner reserves the right to contract for and perform other or additional work on or near the work covered by this contract.

When separate contracts are let within the limits of any one project, each Contractor shall conduct the work so as not to interfere with or hinder the progress of completion of the work being performed by other Contractors. Contractors working on the same project shall cooperate with each other as directed.

Each Contractor involved shall assume all liability, financial or otherwise, in connection with his or her contract and shall protect and save harmless the Owner from any and all damages or claims that may arise because of inconvenience, delays, or loss experienced because of the presence and operations of other Contractors working within the limits of the same project.

The Contractor shall arrange his or her work and shall place and dispose of the materials being used so as not to interfere with the operations of the other Contractors within the limits of the same project. The Contractor shall join his or her work with that of the others in an acceptable manner and shall perform it in proper sequence to that of the others.

50-06 Construction layout and stakes. The Engineer shall establish horizontal and vertical control only. The Contractor must establish all layout required for the construction of the work. Such stakes and markings as the Engineer may set for either their own or the Contractor's guidance shall be preserved by the Contractor. In case of negligence on the part of the Contractor, or their employees, resulting in the destruction of such stakes or markings, an amount equal to the cost of replacing the same may be deducted from subsequent estimates due the Contractor at the discretion of the Engineer.

The Contractor will be required to furnish all lines, grades and measurements from the control points necessary for the proper execution and control of the work contracted for under these specifications.

The Contractor must give copies of survey notes to the Engineer for each area of construction and for each placement of material as specified to allow the Engineer to make periodic checks for conformance with plan grades, alignments and grade tolerances required by the applicable material specifications. All surveys must be provided to the Engineer prior to commencing work items that will cover or disturb the survey staking as set by the Contractor's surveyor. Survey(s) and notes shall be provided in the following format(s): DWG and PDF**.** In the case of error, on the part of the Contractor, their surveyor, employees or subcontractors, resulting in established grades, alignment or grade tolerances that do not concur with those specified or shown on the plans, the Contractor is solely responsible for correction, removal, replacement and all associated costs at no additional cost to the Owner.

No direct payment will be made, unless otherwise specified in contract documents, for this labor, materials, or other expenses. The cost shall be included in the price of the bid for the various items of the Contract.

Construction Staking and Layout includes but is not limited to:

a. Clearing and Grubbing perimeter staking

b. Rough Grade slope stakes at 100-foot (30-m) stations

c. Drainage Swales slope stakes and flow line blue tops at 50-foot (15-m) stations

Subgrade blue tops at 25-foot (7.5-m) stations and 25-foot (7.5-m) offset distance (maximum) for the following section locations:

a. Runway – minimum five (5) per station

b. Taxiways – minimum three (3) per station

c. Holding apron areas – minimum three (3) per station

d. Roadways – minimum three (3) per station

Base Course blue tops at 25-foot (7.5-m) stations and 25-foot (7.5-m) offset distance (maximum) for the following section locations:

a. Runway – minimum five (5) per station

b. Taxiways – minimum three (3) per station

c. Holding apron areas – minimum three (3) per station

Pavement areas:

a. Edge of Pavement hubs and tacks (for stringline by Contractor) at 100-foot (30-m) stations.

b. Between Lifts at 25-foot (7.5-m) stations for the following section locations:

1) Runways – each paving lane width

2) Taxiways – each paving lane width

3) Holding areas – each paving lane width

c. After finish paving operations at 50-foot (15-m) stations:

1) All paved areas – Edge of each paving lane prior to next paving lot

d. Shoulder and safety area blue tops at 50-foot (15-m) stations and at all break points with maximum of 50-foot (15-m) offsets.

e. Fence lines at 100-foot (30-m) stations minimum.

f. Electrical and Communications System locations, lines and grades including but not limited to duct runs, connections, fixtures, signs, lights, Visual Approach Slope Indicators (VASIs), Precision Approach Path Indicators (PAPIs), Runway End Identifier Lighting (REIL), Wind Cones, Distance Markers (signs), pull boxes and manholes.

g. Drain lines, cut stakes and alignment on 25-foot (7.5-m) stations, inlet and manholes.

h. Painting and Striping layout (pinned with 1.5 inch PK nails) marked for paint Contractor. (All nails shall be removed after painting).

i. Laser, or other automatic control devices, shall be checked with temporary control point or grade hub at a minimum of once per 400 feet (120 m) per pass (that is, paving lane).

The establishment of Survey Control and/or reestablishment of survey control shall be by a State Licensed Land Surveyor.

Controls and stakes disturbed or suspect of having been disturbed shall be checked and/or reset as directed by the Engineer without additional cost to the Owner.

50-07 Automatically controlled equipment. Whenever batching or mixing plant equipment is required to be operated automatically under the contract and a breakdown or malfunction of the automatic controls occurs, the equipment may be operated manually or by other methods for a

period 48 hours following the breakdown or malfunction, provided this method of operations will produce results which conform to all other requirements of the contract.

50-08 Authority and duties of inspectors. Inspectors shall be authorized to inspect all work done and all material furnished. Such inspection may extend to all or any part of the work and to the preparation, fabrication, or manufacture of the materials to be used. Inspectors are not authorized to revoke, alter, or waive any provision of the contract. Inspectors are not authorized to issue instructions contrary to the plans and specifications or to act as foreman for the Contractor.

Inspectors are authorized to notify the Contractor or his or her representatives of any failure of the work or materials to conform to the requirements of the contract, plans, or specifications and to reject such nonconforming materials in question until such issues can be referred to the Engineer for a decision.

50-09 Inspection of the work. All materials and each part or detail of the work shall be subject to inspection. The Engineer shall be allowed access to all parts of the work and shall be furnished with such information and assistance by the Contractor as is required to make a complete and detailed inspection.

If the Engineer requests it, the Contractor, at any time before acceptance of the work, shall remove or uncover such portions of the finished work as may be directed. After examination, the Contractor shall restore said portions of the work to the standard required by the specifications. Should the work thus exposed or examined prove acceptable, the uncovering, or removing, and the replacing of the covering or making good of the parts removed will be paid for as extra work; but should the work so exposed or examined prove unacceptable, the uncovering, or removing, and the replacing of the covering or making good of the parts removed will be at the Contractor's expense.

Any work done or materials used without supervision or inspection by an authorized representative of the Owner may be ordered removed and replaced at the Contractor's expense unless the Owner's representative failed to inspect after having been given reasonable notice in writing that the work was to be performed.

Should the contract work include relocation, adjustment, or any other modification to existing facilities, not the property of the (contract) Owner, authorized representatives of the Owners of such facilities shall have the right to inspect such work. Such inspection shall in no sense make any facility owner a party to the contract, and shall in no way interfere with the rights of the parties to this contract.

50-10 Removal of unacceptable and unauthorized work. All work that does not conform to the requirements of the contract, plans, and specifications will be considered unacceptable, unless otherwise determined acceptable by the Engineer as provided in the subsection 50-02 titled CONFORMITY WITH PLANS AND SPECIFICATIONS of this section.

Unacceptable work, whether the result of poor workmanship, use of defective materials, damage through carelessness, or any other cause found to exist prior to the final acceptance of the work, shall be removed immediately and replaced in an acceptable manner in accordance with the provisions of the subsection 70-14 titled CONTRACTOR'S RESPONSIBILITY FOR WORK of Section 70.

No removal work made under provision of this subsection shall be done without lines and grades having been established by the Engineer. Work done contrary to the instructions of the Engineer, work done beyond the lines shown on the plans or as established by the Engineer, except as herein

specified, or any extra work done without authority, will be considered as unauthorized and will not be paid for under the provisions of the contract. Work so done may be ordered removed or replaced at the Contractor's expense.

Upon failure on the part of the Contractor to comply with any order of the Engineer made under the provisions of this subsection, the Engineer will have authority to cause unacceptable work to be remedied or removed and replaced and unauthorized work to be removed and to deduct the costs incurred by the Owner from any monies due or to become due the Contractor.

50-11 Load restrictions. The Contractor shall comply with all legal load restrictions in the hauling of materials on public roads beyond the limits of the work. A special permit will not relieve the Contractor of liability for damage that may result from the moving of material or equipment.

The operation of equipment of such weight or so loaded as to cause damage to structures or to any other type of construction will not be permitted. Hauling of materials over the base course or surface course under construction shall be limited as directed. No loads will be permitted on a concrete pavement, base, or structure before the expiration of the curing period. The Contractor shall be responsible for all damage done by his or her hauling equipment and shall correct such damage at his or her own expense.

50-12 Maintenance during construction. The Contractor shall maintain the work during construction and until the work is accepted. Maintenance shall constitute continuous and effective work prosecuted day by day, with adequate equipment and forces so that the work is maintained in satisfactory condition at all times.

In the case of a contract for the placing of a course upon a course or subgrade previously constructed, the Contractor shall maintain the previous course or subgrade during all construction operations.

All costs of maintenance work during construction and before the project is accepted shall be included in the unit prices bid on the various contract items, and the Contractor will not be paid an additional amount for such work.

50-13 Failure to maintain the work. Should the Contractor at any time fail to maintain the work as provided in the subsection 50-12 titled MAINTENANCE DURING CONSTRUCTION of this section, the Engineer shall immediately notify the Contractor of such noncompliance. Such notification shall specify a reasonable time within which the Contractor shall be required to remedy such unsatisfactory maintenance condition. The time specified will give due consideration to the exigency that exists.

Should the Contractor fail to respond to the Engineer's notification, the Owner may suspend any work necessary for the Owner to correct such unsatisfactory maintenance condition, depending on the exigency that exists. Any maintenance cost incurred by the Owner, shall be deducted from monies due or to become due the Contractor.

50-14 Partial acceptance. If at any time during the execution of the project the Contractor substantially completes a usable unit or portion of the work, the occupancy of which will benefit the Owner, the Contractor may request the Engineer to make final inspection of that unit. If the Engineer finds upon inspection that the unit has been satisfactorily completed in compliance with the contract, the Engineer may accept it as being complete, and the Contractor may be relieved of further responsibility for that unit. Such partial acceptance and beneficial occupancy by the Owner shall not void or alter any provision of the contract.

50-15 Final acceptance. Upon due notice from the Contractor of presumptive completion of the entire project, the Engineer and Owner will make an inspection. If all construction provided for and contemplated by the contract is found to be complete in accordance with the contract, plans, and specifications, such inspection shall constitute the final inspection. The Engineer shall notify the Contractor in writing of final acceptance as of the date of the final inspection.

If, however, the inspection discloses any work, in whole or in part, as being unsatisfactory, the Engineer will give the Contractor the necessary instructions for correction of same and the Contractor shall immediately comply with and execute such instructions. Upon correction of the work, another inspection will be made which shall constitute the final inspection, provided the work has been satisfactorily completed. In such event, the Engineer will make the final acceptance and notify the Contractor in writing of this acceptance as of the date of final inspection.

50-16 Claims for adjustment and disputes. If for any reason the Contractor deems that additional compensation is due for work or materials not clearly provided for in the contract, plans, or specifications or previously authorized as extra work, the Contractor shall notify the Engineer in writing of his or her intention to claim such additional compensation before the Contractor begins the work on which the Contractor bases the claim. If such notification is not given or the Engineer is not afforded proper opportunity by the Contractor for keeping strict account of actual cost as required, then the Contractor hereby agrees to waive any claim for such additional compensation. Such notice by the Contractor and the fact that the Engineer has kept account of the cost of the work shall not in any way be construed as proving or substantiating the validity of the claim. When the work on which the claim for additional compensation is based has been completed, the Contractor shall, within 10 calendar days, submit a written claim to the Engineer who will present it to the Owner for consideration in accordance with local laws or ordinances.

Nothing in this subsection shall be construed as a waiver of the Contractor’s right to dispute final payment based on differences in measurements or computations.

50-17 Cost reduction incentive. NOT USED.

END OF SECTION 50

GENERAL PROVISIONS

Section 60 Control of Materials

60-01 Source of supply and quality requirements. The materials used in the work shall conform to the requirements of the contract, plans, and specifications. Unless otherwise specified, such materials that are manufactured or processed shall be new (as compared to used or reprocessed).

In order to expedite the inspection and testing of materials, the Contractor shall furnish complete statements to the Engineer as to the origin, composition, and manufacture of all materials to be used in the work. Such statements shall be furnished promptly after execution of the contract but, in all cases, prior to delivery of such materials.

At the Engineer's option, materials may be approved at the source of supply before delivery is stated. If it is found after trial that sources of supply for previously approved materials do not produce specified products, the Contractor shall furnish materials from other sources.

The Contractor shall furnish airport lighting equipment that conforms to the requirements of cited materials specifications. In addition, where an FAA specification for airport lighting equipment is cited in the plans or specifications, the Contractor shall furnish such equipment that is:

a. Listed in advisory circular (AC) 150/5345-53, Airport Lighting Equipment Certification Program, and Addendum that is in effect on the date of advertisement; and,

b. Produced by the manufacturer as listed in the Addendum cited above for the certified equipment part number.

The following airport lighting equipment is required for this contract and is to be furnished by the Contractor in accordance with the requirements of this subsection:

L-108-1	1/C L-824-TYPE C UNSHIELDED #8 AWG 5 KV STRANDED CU CABLE
L-108-2	1/C #2 AWG SOLID COPPER COUNTERPOISE CABLE
L-108-3	0.75" DIAMETER BY 10.00' LONG COPPER CLAD STEEL GROUND ROD
L-110-1	1 WAY 2" PVC, SCHEDULE 40 DIRECT BURIED DUCT
L-110-2	1 WAY 2" PVC, SCHEDULE 40 CONDUIT, CONCRETE ENCASED
L-110-3	1 WAY 4" SPLIT DUCT
L-125-1	L-858(L) SIGN – SINGLE/DOUBLE FACE, LED, SIZE 2 – 2 MODULE
L-125-2	L-858(L) SIGN – SINGLE/DOUBLE FACE, LED, SIZE 2 – 4 MODULE
L-125-3	L-861T(L) OMNIDIRECTIONAL, BLUE LED, TAXIWAY EDGE LIGHT

60-02 Samples, tests, and cited specifications. Unless otherwise designated, all materials used in the work shall be inspected, tested, and approved by the Engineer before incorporation in the work. Any work in which untested materials are used without approval or written permission of the Engineer shall be performed at the Contractor's risk. Materials found to be unacceptable and unauthorized will not be paid for and, if directed by the Engineer, shall be removed at the Contractor's expense.

Unless otherwise designated, quality assurance tests in accordance with the cited standard methods of ASTM, American Association of State Highway and Transportation Officials (AASHTO), Federal Specifications, Commercial Item Descriptions, and all other cited methods, which are current on the date of advertisement for bids, will be made by and at the expense of the Engineer.

The testing organizations performing on-site quality assurance field tests shall have copies of all referenced standards on the construction site for use by all technicians and other personnel, including the Contractor's representative at his or her request. Unless otherwise designated, samples for quality assurance will be taken by a qualified representative of the Engineer. All materials being used are subject to inspection, test, or rejection at any time prior to or during incorporation into the work. Copies of all tests will be furnished to the Contractor's representative at their request after review and approval of the Engineer.

The Contractor shall employ a testing organization to perform all Contractor required Quality Control tests. The Contractor shall submit to the Engineer resumes on all testing organizations and individual persons who will be performing the tests. The Engineer will determine if such persons are qualified. All the test data shall be reported to the Engineer after the results are known. A legible, handwritten copy of all test data shall be given to the Engineer daily, along with printed reports, in an approved format, on a weekly basis. After completion of the project, and prior to final payment, the Contractor shall submit a final report to the Engineer showing all test data reports, plus an analysis of all results showing ranges, averages, and corrective action taken on all failing tests.

60-03 Certification of compliance. The Engineer may permit the use, prior to sampling and testing, of certain materials or assemblies when accompanied by manufacturer's certificates of compliance stating that such materials or assemblies fully comply with the requirements of the contract. The certificate shall be signed by the manufacturer. Each lot of such materials or assemblies delivered to the work must be accompanied by a certificate of compliance in which the lot is clearly identified.

Materials or assemblies used on the basis of certificates of compliance may be sampled and tested at any time and if found not to be in conformity with contract requirements will be subject to rejection whether in place or not.

The form and distribution of certificates of compliance shall be as approved by the Engineer.

When a material or assembly is specified by "brand name or equal" and the Contractor elects to furnish the specified "brand name," the Contractor shall be required to furnish the manufacturer's certificate of compliance for each lot of such material or assembly delivered to the work. Such certificate of compliance shall clearly identify each lot delivered and shall certify as to:

a. Conformance to the specified performance, testing, quality or dimensional requirements; and,

b. Suitability of the material or assembly for the use intended in the contract work.

Should the Contractor propose to furnish an “or equal” material or assembly, the Contractor shall furnish the manufacturer’s certificates of compliance as hereinbefore described for the specified brand name material or assembly. However, the Engineer shall be the sole judge as to whether the proposed “or equal” is suitable for use in the work.

The Engineer reserves the right to refuse permission for use of materials or assemblies on the basis of certificates of compliance.

60-04 Plant inspection. The Engineer or his or her authorized representative may inspect, at its source, any specified material or assembly to be used in the work. Manufacturing plants may be inspected from time to time for the purpose of determining compliance with specified manufacturing methods or materials to be used in the work and to obtain samples required for acceptance of the material or assembly.

Should the Engineer conduct plant inspections, the following conditions shall exist:

a. The Engineer shall have the cooperation and assistance of the Contractor and the producer with whom the Engineer has contracted for materials.

b. The Engineer shall have full entry at all reasonable times to such parts of the plant that concern the manufacture or production of the materials being furnished.

c. If required by the Engineer, the Contractor shall arrange for adequate office or working space that may be reasonably needed for conducting plant inspections. Office or working space should be conveniently located with respect to the plant.

It is understood and agreed that the Owner shall have the right to retest any material that has been tested and approved at the source of supply after it has been delivered to the site. The Engineer shall have the right to reject only material which, when retested, does not meet the requirements of the contract, plans, or specifications.

60-05 Engineer’s field office. NOT USED.

60-06 Storage of materials. Materials shall be so stored as to assure the preservation of their quality and fitness for the work. Stored materials, even though approved before storage, may again be inspected prior to their use in the work. Stored materials shall be located to facilitate their prompt inspection. The Contractor shall coordinate the storage of all materials with the Engineer. Materials to be stored on airport property shall not create an obstruction to air navigation nor shall they interfere with the free and unobstructed movement of aircraft. Unless otherwise shown on the plans, the storage of materials and the location of the Contractor’s plant and parked equipment or vehicles shall be as directed by the Engineer. Private property shall not be used for storage purposes without written permission of the Owner or lessee of such property. The Contractor shall make all arrangements and bear all expenses for the storage of materials on private property. Upon request, the Contractor shall furnish the Engineer a copy of the property Owner’s permission.

All storage sites on private or airport property shall be restored to their original condition by the Contractor at his or her entire expense, except as otherwise agreed to (in writing) by the Owner or lessee of the property.

60-07 Unacceptable materials. Any material or assembly that does not conform to the requirements of the contract, plans, or specifications shall be considered unacceptable and shall be

rejected. The Contractor shall remove any rejected material or assembly from the site of the work, unless otherwise instructed by the Engineer.

Rejected material or assembly, the defects of which have been corrected by the Contractor, shall not be returned to the site of the work until such time as the Engineer has approved its use in the work.

60-08 Owner furnished materials. The Contractor shall furnish all materials required to complete the work, except those specified, if any, to be furnished by the Owner. Owner-furnished materials shall be made available to the Contractor at the location specified.

All costs of handling, transportation from the specified location to the site of work, storage, and installing Owner-furnished materials shall be included in the unit price bid for the contract item in which such Owner-furnished material is used.

After any Owner-furnished material has been delivered to the location specified, the Contractor shall be responsible for any demurrage, damage, loss, or other deficiencies that may occur during the Contractor's handling, storage, or use of such Owner-furnished material. The Owner will deduct from any monies due or to become due the Contractor any cost incurred by the Owner in making good such loss due to the Contractor's handling, storage, or use of Owner-furnished materials.

END OF SECTION 60

GENERAL PROVISIONS

Section 70 Legal Regulations and Responsibility to Public

70-01 Laws to be observed. The Contractor shall keep fully informed of all Federal and state laws, all local laws, ordinances, and regulations and all orders and decrees of bodies or tribunals having any jurisdiction or authority, which in any manner affect those engaged or employed on the work, or which in any way affect the conduct of the work. The Contractor shall at all times observe and comply with all such laws, ordinances, regulations, orders, and decrees; and shall protect and indemnify the Owner and all his or her officers, agents, or servants against any claim or liability arising from or based on the violation of any such law, ordinance, regulation, order, or decree, whether by the Contractor or the Contractor's employees.

70-02 Permits, licenses, and taxes. The Contractor shall procure all permits and licenses, pay all charges, fees, and taxes, and give all notices necessary and incidental to the due and lawful execution of the work.

70-03 Patented devices, materials, and processes. If the Contractor is required or desires to use any design, device, material, or process covered by letters of patent or copyright, the Contractor shall provide for such use by suitable legal agreement with the Patentee or Owner. The Contractor and the surety shall indemnify and hold harmless the Owner, any third party, or political subdivision from any and all claims for infringement by reason of the use of any such patented design, device, material or process, or any trademark or copyright, and shall indemnify the Owner for any costs, expenses, and damages which it may be obliged to pay by reason of an infringement, at any time during the execution or after the completion of the work.

70-04 Restoration of surfaces disturbed by others. The Owner reserves the right to authorize the construction, reconstruction, or maintenance of any public or private utility service, FAA or National Oceanic and Atmospheric Administration (NOAA) facility, or a utility service of another government agency at any time during the progress of the work. To the extent that such construction, reconstruction, or maintenance has been coordinated with the Owner, such authorized work (by others) is indicated as follows: NONE.

Except as listed above, the Contractor shall not permit any individual, firm, or corporation to excavate or otherwise disturb such utility services or facilities located within the limits of the work without the written permission of the Engineer.

Should the Owner of public or private utility service, FAA, or NOAA facility, or a utility service of another government agency be authorized to construct, reconstruct, or maintain such utility service or facility during the progress of the work, the Contractor shall cooperate with such Owners by arranging and performing the work in this contract to facilitate such construction, reconstruction or maintenance by others whether or not such work by others is listed above. When ordered as extra work by the Engineer, the Contractor shall make all necessary repairs to the work which are due to such authorized work by others, unless otherwise provided for in the contract, plans, or specifications. It is understood and agreed that the Contractor shall not be entitled to make any claim for damages due to such authorized work by others or for any delay to the work resulting from such authorized work.

70-05 Federal aid participation. For Airport Improvement Program (AIP) contracts, the United States Government has agreed to reimburse the Owner for some portion of the contract costs. Such reimbursement is made from time to time upon the Owner's request to the FAA. In consideration of the United States Government's (FAA's) agreement with the Owner, the Owner has included

provisions in this contract pursuant to the requirements of Title 49 of the USC and the Rules and Regulations of the FAA that pertain to the work.

As required by the USC, the contract work is subject to the inspection and approval of duly authorized representatives of the FAA Administrator, and is further subject to those provisions of the rules and regulations that are cited in the contract, plans, or specifications.

No requirement of the USC, the rules and regulations implementing the USC, or this contract shall be construed as making the Federal Government a party to the contract nor will any such requirement interfere, in any way, with the rights of either party to the contract.

70-06 Sanitary, health, and safety provisions. The Contractor shall provide and maintain in a neat, sanitary condition such accommodations for the use of his or her employees as may be necessary to comply with the requirements of the state and local Board of Health, or of other bodies or tribunals having jurisdiction.

Attention is directed to Federal, state, and local laws, rules and regulations concerning construction safety and health standards. The Contractor shall not require any worker to work in surroundings or under conditions that are unsanitary, hazardous, or dangerous to his or her health or safety.

70-07 Public convenience and safety. The Contractor shall control his or her operations and those of his or her subcontractors and all suppliers, to assure the least inconvenience to the traveling public. Under all circumstances, safety shall be the most important consideration.

The Contractor shall maintain the free and unobstructed movement of aircraft and vehicular traffic with respect to his or her own operations and those of his or her subcontractors and all suppliers in accordance with the subsection 40-05 titled MAINTENANCE OF TRAFFIC of Section 40 hereinbefore specified and shall limit such operations for the convenience and safety of the traveling public as specified in the subsection 80-04 titled LIMITATION OF OPERATIONS of Section 80 hereinafter.

70-08 Barricades, warning signs, and hazard markings. The Contractor shall furnish, erect, and maintain all barricades, warning signs, and markings for hazards necessary to protect the public and the work. When used during periods of darkness, such barricades, warning signs, and hazard markings shall be suitably illuminated. Unless otherwise specified, barricades, warning signs, and markings for hazards that are in the air operations area (AOAs) shall be a maximum of 18 inches (0.5 m) high. Unless otherwise specified, barricades shall be spaced not more than 4 feet (1.2 m) apart. Barricades, warning signs, and markings shall be paid for under subsection 40-05.

For vehicular and pedestrian traffic, the Contractor shall furnish, erect, and maintain barricades, warning signs, lights and other traffic control devices in reasonable conformity with the Manual on Uniform Traffic Control Devices.

When the work requires closing an air operations area of the airport or portion of such area, the Contractor shall furnish, erect, and maintain temporary markings and associated lighting conforming to the requirements of advisory circular (AC) 150/5340-1, Standards for Airport Markings.

The Contractor shall furnish, erect, and maintain markings and associated lighting of open trenches, excavations, temporary stock piles, and the Contractor’s parked construction equipment that may be hazardous to the operation of emergency fire-rescue or maintenance vehicles on the airport in reasonable conformance to AC 150/5370-2, Operational Safety on Airports During Construction.

The Contractor shall identify each motorized vehicle or piece of construction equipment in reasonable conformance to AC 150/5370-2.

The Contractor shall furnish and erect all barricades, warning signs, and markings for hazards prior to commencing work that requires such erection and shall maintain the barricades, warning signs, and markings for hazards until their removal is directed by the Engineer.

Open-flame type lights shall not be permitted.

70-09 Use of explosives. When the use of explosives is necessary for the execution of the work, the Contractor shall exercise the utmost care not to endanger life or property, including new work. The Contractor shall be responsible for all damage resulting from the use of explosives.

All explosives shall be stored in a secure manner in compliance with all laws and ordinances, and all such storage places shall be clearly marked. Where no local laws or ordinances apply, storage shall be provided satisfactory to the Engineer and, in general, not closer than 1,000 feet (300 m) from the work or from any building, road, or other place of human occupancy.

The Contractor shall notify each property Owner and public utility company having structures or facilities in proximity to the site of the work of his or her intention to use explosives. Such notice shall be given sufficiently in advance to enable them to take such steps as they may deem necessary to protect their property from injury.

The use of electrical blasting caps shall not be permitted on or within 1,000 feet (300 m) of the airport property.

70-10 Protection and restoration of property and landscape. The Contractor shall be responsible for the preservation of all public and private property, and shall protect carefully from disturbance or damage all land monuments and property markers until the Engineer has witnessed or otherwise referenced their location and shall not move them until directed.

The Contractor shall be responsible for all damage or injury to property of any character, during the execution of the work, resulting from any act, omission, neglect, or misconduct in manner or method of executing the work, or at any time due to defective work or materials, and said responsibility shall not be released until the project has been completed and accepted.

When or where any direct or indirect damage or injury is done to public or private property by or on account of any act, omission, neglect, or misconduct in the execution of the work, or in consequence of the non-execution thereof by the Contractor, the Contractor shall restore, at his or her own expense, such property to a condition similar or equal to that existing before such damage or injury was done, by repairing, or otherwise restoring as may be directed, or the Contractor shall make good such damage or injury in an acceptable manner.

70-11 Responsibility for damage claims. The Contractor shall indemnify and save harmless the Engineer and the Owner and their officers, and employees from all suits, actions, or claims, of any character, brought because of any injuries or damage received or sustained by any person, persons, or property on account of the operations of the Contractor; or on account of or in consequence of any neglect in safeguarding the work; or through use of unacceptable materials in constructing the work; or because of any act or omission, neglect, or misconduct of said Contractor; or because of any claims or amounts recovered from any infringements of patent, trademark, or copyright; or from any claims or amounts arising or recovered under the “Workmen’s Compensation Act,” or any other law, ordinance, order, or decree. Money due the Contractor under and by virtue of

his or her contract considered necessary by the Owner for such purpose may be retained for the use of the Owner or, in case no money is due, his or her surety may be held until such suits, actions, or claims for injuries or damages shall have been settled and suitable evidence to that effect furnished to the Owner, except that money due the Contractor will not be withheld when the Contractor produces satisfactory evidence that he or she is adequately protected by public liability and property damage insurance.

70-12 Third party beneficiary clause. It is specifically agreed between the parties executing the contract that it is not intended by any of the provisions of any part of the contract to create for the public or any member thereof, a third party beneficiary or to authorize anyone not a party to the contract to maintain a suit for personal injuries or property damage pursuant to the terms or provisions of the contract.

70-13 Opening sections of the work to traffic. Should it be necessary for the Contractor to complete portions of the contract work for the beneficial occupancy of the Owner prior to completion of the entire contract, such “phasing” of the work shall be specified herein and indicated on the plans. When so specified, the Contractor shall complete such portions of the work on or before the date specified or as otherwise specified. The Contractor shall make his or her own estimate of the difficulties involved in arranging the work to permit such beneficial occupancy by the Owner as described below:

Per the phasing plan in the contract documents.

Upon completion of any portion of the work listed above, such portion shall be accepted by the Owner in accordance with the subsection 50-14 titled PARTIAL ACCEPTANCE of Section 50.

No portion of the work may be opened by the Contractor for public use until ordered by the Engineer in writing. Should it become necessary to open a portion of the work to public traffic on a temporary or intermittent basis, such openings shall be made when, in the opinion of the Engineer, such portion of the work is in an acceptable condition to support the intended traffic. Temporary or intermittent openings are considered to be inherent in the work and shall not constitute either acceptance of the portion of the work so opened or a waiver of any provision of the contract. Any damage to the portion of the work so opened that is not attributable to traffic which is permitted by the Owner shall be repaired by the Contractor at his or her expense.

The Contractor shall make his or her own estimate of the inherent difficulties involved in completing the work under the conditions herein described and shall not claim any added compensation by reason of delay or increased cost due to opening a portion of the contract work.

Contractor shall be required to conform to safety standards contained AC 150/5370-2 (see Special Provisions).

Contractor shall refer to the approved Construction Safety Phasing Plan (CSPP) to identify barricade requirements and other safety requirements prior to opening up sections of work to traffic.

70-14 Contractor’s responsibility for work. Until the Engineer’s final written acceptance of the entire completed work, excepting only those portions of the work accepted in accordance with the subsection 50-14 titled PARTIAL ACCEPTANCE of Section 50, the Contractor shall have the charge and care thereof and shall take every precaution against injury or damage to any part due to the action of the elements or from any other cause, whether arising from the execution or from the non-execution of the work. The Contractor shall rebuild, repair, restore, and make good all injuries or damages to any portion of the work occasioned by any of the above causes before final

acceptance and shall bear the expense thereof except damage to the work due to unforeseeable causes beyond the control of and without the fault or negligence of the Contractor, including but not restricted to acts of God such as earthquake, tidal wave, tornado, hurricane or other cataclysmic phenomenon of nature, or acts of the public enemy or of government authorities.

If the work is suspended for any cause whatever, the Contractor shall be responsible for the work and shall take such precautions necessary to prevent damage to the work. The Contractor shall provide for normal drainage and shall erect necessary temporary structures, signs, or other facilities at his or her expense. During such period of suspension of work, the Contractor shall properly and continuously maintain in an acceptable growing condition all living material in newly established planting, seeding, and sodding furnished under the contract, and shall take adequate precautions to protect new tree growth and other important vegetative growth against injury.

70-15 Contractor's responsibility for utility service and facilities of others. As provided in the subsection 70-04 titled RESTORATION OF SURFACES DISTURBED BY OTHERS of this section, the Contractor shall cooperate with the Owner of any public or private utility service, FAA or NOAA, or a utility service of another government agency that may be authorized by the Owner to construct, reconstruct or maintain such utility services or facilities during the progress of the work. In addition, the Contractor shall control their operations to prevent the unscheduled interruption of such utility services and facilities.

To the extent that such public or private utility services, FAA, or NOAA facilities, or utility services of another governmental agency are known to exist within the limits of the contract work, the approximate locations have been indicated on the plans and the Owners are indicated as follows: NONE.

It is understood and agreed that the Owner does not guarantee the accuracy or the completeness of the location information relating to existing utility services, facilities, or structures that may be shown on the plans or encountered in the work. Any inaccuracy or omission in such information shall not relieve the Contractor of the responsibility to protect such existing features from damage or unscheduled interruption of service.

It is further understood and agreed that the Contractor shall, upon execution of the contract, notify the Owners of all utility services or other facilities of his or her plan of operations. Such notification shall be in writing addressed to THE PERSON TO CONTACT as provided in this subsection and subsection 70-04 titled RESTORATION OF SURFACES DISTURBED BY OTHERS of this section. A copy of each notification shall be given to the Engineer.

In addition to the general written notification provided, it shall be the responsibility of the Contractor to keep such individual Owners advised of changes in their plan of operations that would affect such Owners.

Prior to beginning the work in the general vicinity of an existing utility service or facility, the Contractor shall again notify each such Owner of their plan of operation. If, in the Contractor's opinion, the Owner's assistance is needed to locate the utility service or facility or the presence of a representative of the Owner is desirable to observe the work, such advice should be included in the notification. Such notification shall be given by the most expeditious means to reach the utility owner's PERSON TO CONTACT no later than two normal business days prior to the Contractor's commencement of operations in such general vicinity. The Contractor shall furnish a written summary of the notification to the Engineer.

The Contractor's failure to give the two days' notice shall be cause for the Owner to suspend the Contractor's operations in the general vicinity of a utility service or facility.

Where the outside limits of an underground utility service have been located and staked on the ground, the Contractor shall be required to use hand excavation methods within 3 feet (1 m) of such outside limits at such points as may be required to ensure protection from damage due to the Contractor's operations.

Should the Contractor damage or interrupt the operation of a utility service or facility by accident or otherwise, the Contractor shall immediately notify the proper authority and the Engineer and shall take all reasonable measures to prevent further damage or interruption of service. The Contractor, in such events, shall cooperate with the utility service or facility owner and the Engineer continuously until such damage has been repaired and service restored to the satisfaction of the utility or facility owner.

The Contractor shall bear all costs of damage and restoration of service to any utility service or facility due to their operations whether due to negligence or accident. The Owner reserves the right to deduct such costs from any monies due or which may become due the Contractor, or his or her surety.

70-15.1 FAA facilities and cable runs. NOT USED.

70-16 Furnishing rights-of-way. The Owner will be responsible for furnishing all rights-of-way upon which the work is to be constructed in advance of the Contractor's operations.

70-17 Personal liability of public officials. In carrying out any of the contract provisions or in exercising any power or authority granted by this contract, there shall be no liability upon the Engineer, his or her authorized representatives, or any officials of the Owner either personally or as an official of the Owner. It is understood that in such matters they act solely as agents and representatives of the Owner.

70-18 No waiver of legal rights. Upon completion of the work, the Owner will expeditiously make final inspection and notify the Contractor of final acceptance. Such final acceptance, however, shall not preclude or stop the Owner from correcting any measurement, estimate, or certificate made before or after completion of the work, nor shall the Owner be precluded or stopped from recovering from the Contractor or his or her surety, or both, such overpayment as may be sustained, or by failure on the part of the Contractor to fulfill his or her obligations under the contract. A waiver on the part of the Owner of any breach of any part of the contract shall not be held to be a waiver of any other or subsequent breach.

The Contractor, without prejudice to the terms of the contract, shall be liable to the Owner for latent defects, fraud, or such gross mistakes as may amount to fraud, or as regards the Owner's rights under any warranty or guaranty.

70-19 Environmental protection. The Contractor shall comply with all Federal, state, and local laws and regulations controlling pollution of the environment. The Contractor shall take necessary precautions to prevent pollution of streams, lakes, ponds, and reservoirs with fuels, oils, bitumens, chemicals, or other harmful materials and to prevent pollution of the atmosphere from particulate and gaseous matter.

70-20 Archaeological and historical findings. Unless otherwise specified in this subsection, the Contractor is advised that the site of the work is not within any property, district, or site, and does

not contain any building, structure, or object listed in the current National Register of Historic Places published by the United States Department of Interior.

Should the Contractor encounter, during his or her operations, any building, part of a building, structure, or object that is incongruous with its surroundings, the Contractor shall immediately cease operations in that location and notify the Engineer. The Engineer will immediately investigate the Contractor's finding and the Owner will direct the Contractor to either resume operations or to suspend operations as directed.

Should the Owner order suspension of the Contractor's operations in order to protect an archaeological or historical finding, or order the Contractor to perform extra work, such shall be covered by an appropriate contract change order or supplemental agreement as provided in the subsection 40-04 titled EXTRA WORK of Section 40 and the subsection 90-05 titled PAYMENT FOR EXTRA WORK of Section 90. If appropriate, the contract change order or supplemental agreement shall include an extension of contract time in accordance with the subsection 80-07 titled DETERMINATION AND EXTENSION OF CONTRACT TIME of Section 80.

END OF SECTION 70

GENERAL PROVISIONS

Section 80 Execution and Progress

80-01 Subletting of contract. The Owner will not recognize any subcontractor on the work. The Contractor shall at all times when work is in progress be represented either in person, by a qualified superintendent, or by other designated, qualified representative who is duly authorized to receive and execute orders of the Engineer.

The Contractor shall provide copies of all subcontracts to the Engineer. The Contractor shall perform, with his organization, an amount of work equal to at least 25% percent of the total contract cost.

Should the Contractor elect to assign his or her contract, said assignment shall be concurred in by the surety, shall be presented for the consideration and approval of the Owner, and shall be consummated only on the written approval of the Owner.

80-02 Notice to proceed. The notice to proceed shall state the date on which it is expected the Contractor will begin the construction and from which date contract time will be charged. The Contractor shall begin the work to be performed under the contract within 10 days of the date set by the Engineer in the written notice to proceed, but in any event, the Contractor shall notify the Engineer at least 24 hours in advance of the time actual construction operations will begin. The Contractor shall not commence any actual construction prior to the date on which the notice to proceed is issued by the Owner.

80-03 Execution and progress. Unless otherwise specified, the Contractor shall submit their progress schedule for the Engineer's approval within 10 days after the effective date of the notice to proceed. The Contractor's progress schedule, when approved by the Engineer, may be used to establish major construction operations and to check on the progress of the work. The Contractor shall provide sufficient materials, equipment, and labor to guarantee the completion of the project in accordance with the plans and specifications within the time set forth in the proposal.

If the Contractor falls significantly behind the submitted schedule, the Contractor shall, upon the Engineer's request, submit a revised schedule for completion of the work within the contract time and modify their operations to provide such additional materials, equipment, and labor necessary to meet the revised schedule. Should the execution of the work be discontinued for any reason, the Contractor shall notify the Engineer at least 24 hours in advance of resuming operations.

The Contractor shall not commence any actual construction prior to the date on which the notice to proceed is issued by the Owner.

80-04 Limitation of operations. The Contractor shall control his or her operations and the operations of his or her subcontractors and all suppliers to provide for the free and unobstructed movement of aircraft in the air operations areas (AOA) of the airport.

When the work requires the Contractor to conduct his or her operations within an AOA of the airport, the work shall be coordinated with airport operations (through the Engineer) at least 48 hours prior to commencement of such work. The Contractor shall not close an AOA until so authorized by the Engineer and until the necessary temporary marking and associated lighting is in place as provided in the subsection 70-08 titled BARRICADES, WARNING SIGNS, AND HAZARD MARKINGS of Section 70.

When the contract work requires the Contractor to work within an AOA of the airport on an intermittent basis (intermittent opening and closing of the AOA), the Contractor shall maintain constant communications as specified; immediately obey all instructions to vacate the AOA; immediately obey all instructions to resume work in such AOA. Failure to maintain the specified communications or to obey instructions shall be cause for suspension of the Contractor's operations in the AOA until the satisfactory conditions are provided. The following AOA cannot be closed to operating aircraft to permit the Contractor's operations on a continuous basis and will therefore be closed to aircraft operations intermittently as follows:

Per phasing plan in contract documents.

Contractor shall be required to conform to safety standards contained in AC 150/5370-2, Operational Safety on Airports During Construction (see Special Provisions).

80-04.1 Operational safety on airport during construction. All Contractors' operations shall be conducted in accordance with the project Construction Safety and Phasing Plan (CSPP) and the provisions set forth within the current version of AC 150/5370-2. The CSPP included within the contract documents conveys minimum requirements for operational safety on the airport during construction activities. The Contractor shall prepare and submit a Safety Plan Compliance Document that details how it proposes to comply with the requirements presented within the CSPP.

The Contractor shall implement all necessary safety plan measures prior to commencement of any work activity. The Contractor shall conduct routine checks to assure compliance with the safety plan measures.

The Contractor is responsible to the Owner for the conduct of all subcontractors it employs on the project. The Contractor shall assure that all subcontractors are made aware of the requirements of the CSPP and that they implement and maintain all necessary measures.

No deviation or modifications may be made to the approved CSPP unless approved in writing by the Owner or Engineer.

80-05 Character of workers, methods, and equipment. The Contractor shall, at all times, employ sufficient labor and equipment for prosecuting the work to full completion in the manner and time required by the contract, plans, and specifications.

All workers shall have sufficient skill and experience to perform properly the work assigned to them. Workers engaged in special work or skilled work shall have sufficient experience in such work and in the operation of the equipment required to perform the work satisfactorily.

Any person employed by the Contractor or by any subcontractor who violates any operational regulations or operational safety requirements and, in the opinion of the Engineer, does not perform his work in a proper and skillful manner or is intemperate or disorderly shall, at the written request of the Engineer, be removed forthwith by the Contractor or subcontractor employing such person, and shall not be employed again in any portion of the work without approval of the Engineer.

Should the Contractor fail to remove such persons or person, or fail to furnish suitable and sufficient personnel for the proper execution of the work, the Engineer may suspend the work by written notice until compliance with such orders.

All equipment that is proposed to be used on the work shall be of sufficient size and in such mechanical condition as to meet requirements of the work and to produce a satisfactory quality of

work. Equipment used on any portion of the work shall be such that no injury to previously completed work, adjacent property, or existing airport facilities will result from its use.

When the methods and equipment to be used by the Contractor in accomplishing the work are not prescribed in the contract, the Contractor is free to use any methods or equipment that will accomplish the work in conformity with the requirements of the contract, plans, and specifications.

When the contract specifies the use of certain methods and equipment, such methods and equipment shall be used unless others are authorized by the Engineer. If the Contractor desires to use a method or type of equipment other than specified in the contract, the Contractor may request authority from the Engineer to do so. The request shall be in writing and shall include a full description of the methods and equipment proposed and of the reasons for desiring to make the change. If approval is given, it will be on the condition that the Contractor will be fully responsible for producing work in conformity with contract requirements. If, after trial use of the substituted methods or equipment, the Engineer determines that the work produced does not meet contract requirements, the Contractor shall discontinue the use of the substitute method or equipment and shall complete the remaining work with the specified methods and equipment. The Contractor shall remove any deficient work and replace it with work of specified quality, or take such other corrective action as the Engineer may direct. No change will be made in basis of payment for the contract items involved nor in contract time as a result of authorizing a change in methods or equipment under this subsection.

80-06 Temporary suspension of the work. The Owner shall have the authority to suspend the work wholly, or in part, for such period or periods as the Owner may deem necessary, due to unsuitable weather, or such other conditions as are considered unfavorable for the execution of the work, or for such time as is necessary due to the failure on the part of the Contractor to carry out orders given or perform any or all provisions of the contract.

In the event that the Contractor is ordered by the Owner, in writing, to suspend work for some unforeseen cause not otherwise provided for in the contract and over which the Contractor has no control, the Contractor may be reimbursed for actual money expended on the work during the period of shutdown. No allowance will be made for anticipated profits. The period of shutdown shall be computed from the effective date of the Engineer's order to suspend work to the effective date of the Engineer's order to resume the work. Claims for such compensation shall be filed with the Engineer within the time period stated in the Engineer's order to resume work. The Contractor shall submit with his or her claim information substantiating the amount shown on the claim. The Engineer will forward the Contractor's claim to the Owner for consideration in accordance with local laws or ordinances. No provision of this article shall be construed as entitling the Contractor to compensation for delays due to inclement weather, for suspensions made at the request of the Owner, or for any other delay provided for in the contract, plans, or specifications.

If it should become necessary to suspend work for an indefinite period, the Contractor shall store all materials in such manner that they will not become an obstruction nor become damaged in any way. The Contractor shall take every precaution to prevent damage or deterioration of the work performed and provide for normal drainage of the work. The Contractor shall erect temporary structures where necessary to provide for traffic on, to, or from the airport.

80-07 Determination and extension of contract time. The number of calendar or working days allowed for completion of the work shall be stated in the proposal and contract and shall be known as the CONTRACT TIME.

Should the contract time require extension for reasons beyond the Contractor's control, it shall be adjusted as follows:

a. CONTRACT TIME based on WORKING DAYS shall be calculated weekly by the Engineer. The Engineer will furnish the Contractor a copy of his or her weekly statement of the number of working days charged against the contract time during the week and the number of working days currently specified for completion of the contract (the original contract time plus the number of working days, if any, that have been included in approved CHANGE ORDERS or SUPPLEMENTAL AGREEMENTS covering EXTRA WORK).

The Engineer shall base his or her weekly statement of contract time charged on the following considerations:

1) No time shall be charged for days on which the Contractor is unable to proceed with the principal item of work under construction at the time for at least six (6) hours with the normal work force employed on such principal item. Should the normal work force be on a double-shift, 12 hours shall be used. Should the normal work force be on a triple-shift, 18 hours shall apply. Conditions beyond the Contractor's control such as strikes, lockouts, unusual delays in transportation, temporary suspension of the principal item of work under construction or temporary suspension of the entire work which have been ordered by the Owner for reasons not the fault of the Contractor, shall not be charged against the contract time.

2) The Engineer will not make charges against the contract time prior to the effective date of the notice to proceed.

3) The Engineer will begin charges against the contract time on the first working day after the effective date of the notice to proceed.

4) The Engineer will not make charges against the contract time after the date of final acceptance as defined in the subsection 50-15 titled FINAL ACCEPTANCE of Section 50.

5) The Contractor will be allowed one (1) week in which to file a written protest setting forth his or her objections to the Engineer's weekly statement. If no objection is filed within such specified time, the weekly statement shall be considered as acceptable to the Contractor.The contract time (stated in the proposal) is based on the originally estimated quantities as described in the subsection 20-05 titled INTERPRETATION OF ESTIMATED PROPOSAL QUANTITIES of Section 20. Should the satisfactory completion of the contract require performance of work in greater quantities than those estimated in the proposal, the contract time shall be increased in the same proportion as the cost of the actually completed quantities bears to the cost of the originally estimated quantities in the proposal. Such increase in contract time shall not consider either the cost of work or the extension of contract time that has been covered by change order or supplemental agreement and shall be made at the time of final payment.

b. Contract Time based on calendar days shall consist of the number of calendar days stated in the contract counting from the effective date of the notice to proceed and including all Saturdays, Sundays, holidays, and non-work days. All calendar days elapsing between the effective dates of the Owner's orders to suspend and resume all work, due to causes not the fault of the Contractor, shall be excluded.

At the time of final payment, the contract time shall be increased in the same proportion as the cost of the actually completed quantities bears to the cost of the originally estimated quantities in the proposal. Such increase in the contract time shall not consider either cost of work or the extension of contract time that has been covered by a change order or supplemental agreement. Charges against the contract time will cease as of the date of final acceptance.

c. When the contract time is a specified completion date, it shall be the date on which all contract work shall be substantially complete.

If the Contractor finds it impossible for reasons beyond his or her control to complete the work within the contract time as specified, or as extended in accordance with the provisions of this subsection, the Contractor may, at any time prior to the expiration of the contract time as extended, make a written request to the Owner for an extension of time setting forth the reasons which the Contractor believes will justify the granting of his or her request. Requests for extension of time on calendar day projects, caused by inclement weather, shall be supported with National Weather Bureau data showing the actual amount of inclement weather exceeded what could normally be expected during the contract period. The Contractor's plea that insufficient time was specified is not a valid reason for extension of time. If the supporting documentation justify the work was delayed because of conditions beyond the control and without the fault of the Contractor, the Owner may extend the time for completion by a change order that adjusts the contract time or completion date. The extended time for completion shall then be in full force and effect, the same as though it were the original time for completion.

80-08 Failure to complete on time. For each calendar day or working day, as specified in the contract, that any work remains uncompleted after the contract time (including all extensions and adjustments as provided in the subsection 80-07 titled DETERMINATION AND EXTENSION OF CONTRACT TIME of this Section) the sum specified in the contract and proposal as liquidated damages will be deducted from any money due or to become due the Contractor or his or her surety. Such deducted sums shall not be deducted as a penalty but shall be considered as liquidation of a reasonable portion of damages including but not limited to additional engineering services that will be incurred by the Owner should the Contractor fail to complete the work in the time provided in their contract.

The maximum construction time allowed for all work shall be 420 days to achieve substantial completion. Permitting the Contractor to continue and finish the work or any part of it after the time fixed for its completion, or after the date to which the time for completion may have been extended, will in no way operate as a wavier on the part of the Owner of any of its rights under the contract.

80-09 Default and termination of contract. The Contractor shall be considered in default of his or her contract and such default will be considered as cause for the Owner to terminate the contract for any of the following reasons if the Contractor:

a. Fails to begin the work under the contract within the time specified in the Notice to Proceed, or

b. Fails to perform the work or fails to provide sufficient workers, equipment and/or materials to assure completion of work in accordance with the terms of the contract, or

c. Performs the work unsuitably or neglects or refuses to remove materials or to perform anew such work as may be rejected as unacceptable and unsuitable, or

d. Discontinues the execution of the work, or

e. Fails to resume work which has been discontinued within a reasonable time after notice to do so, or

f. Becomes insolvent or is declared bankrupt, or commits any act of bankruptcy or insolvency, or

g. Allows any final judgment to stand against the Contractor unsatisfied for a period of 10 days, or

h. Makes an assignment for the benefit of creditors, or

i. For any other cause whatsoever, fails to carry on the work in an acceptable manner.

Should the Engineer consider the Contractor in default of the contract for any reason above, the Engineer shall immediately give written notice to the Contractor and the Contractor's surety as to the reasons for considering the Contractor in default and the Owner's intentions to terminate the contract.

If the Contractor or surety, within a period of 10 days after such notice, does not proceed in accordance therewith, then the Owner will, upon written notification from the Engineer of the facts of such delay, neglect, or default and the Contractor's failure to comply with such notice, have full power and authority without violating the contract, to take the execution of the work out of the hands of the Contractor. The Owner may appropriate or use any or all materials and equipment that have been mobilized for use in the work and are acceptable and may enter into an agreement for the completion of said contract according to the terms and provisions thereof, or use such other methods as in the opinion of the Engineer will be required for the completion of said contract in an acceptable manner.

All costs and charges incurred by the Owner, together with the cost of completing the work under contract, will be deducted from any monies due or which may become due the Contractor. If such expense exceeds the sum which would have been payable under the contract, then the Contractor and the surety shall be liable and shall pay to the Owner the amount of such excess.

80-10 Termination for national emergencies. The Owner shall terminate the contract or portion thereof by written notice when the Contractor is prevented from proceeding with the construction contract as a direct result of an Executive Order of the President with respect to the execution of war or in the interest of national defense.

When the contract, or any portion thereof, is terminated before completion of all items of work in the contract, payment will be made for the actual number of units or items of work completed at the contract price or as mutually agreed for items of work partially completed or not started. No claims or loss of anticipated profits shall be considered.

Reimbursement for organization of the work, and other overhead expenses, (when not otherwise included in the contract) and moving equipment and materials to and from the job will be considered, the intent being that an equitable settlement will be made with the Contractor.

Acceptable materials, obtained or ordered by the Contractor for the work and that are not incorporated in the work shall, at the option of the Contractor, be purchased from the Contractor at

actual cost as shown by receipted bills and actual cost records at such points of delivery as may be designated by the Engineer.

Termination of the contract or a portion thereof shall neither relieve the Contractor of his or her responsibilities for the completed work nor shall it relieve his or her surety of its obligation for and concerning any just claim arising out of the work performed.

80-11 Work area, storage area and sequence of operations. The Contractor shall obtain approval from the Engineer prior to beginning any work in all areas of the airport. No operating runway, taxiway, or air operations area (AOA) shall be crossed, entered, or obstructed while it is operational. The Contractor shall plan and coordinate his or her work in such a manner as to ensure safety and a minimum of hindrance to flight operations. All Contractor equipment and material stockpiles shall be stored a minimum or **1000** feet from the centerline of an active runway. No equipment will be allowed to park within the approach area of an active runway at any time. No equipment shall be within **1000** feet of an active runway at any time.

END OF SECTION 80

GENERAL PROVISIONS

Section 90 Measurement and Payment

90-01 Measurement of quantities. All work completed under the contract will be measured by the Engineer, or his or her authorized representatives, using United States Customary Units of Measurement or the International System of Units.

The method of measurement and computations to be used in determination of quantities of material furnished and of work performed under the contract will be those methods generally recognized as conforming to good engineering practice.

Unless otherwise specified, longitudinal measurements for area computations will be made horizontally, and no deductions will be made for individual fixtures (or leave-outs) having an area of 9 square feet (0.8 square meters) or less. Unless otherwise specified, transverse measurements for area computations will be the neat dimensions shown on the plans or ordered in writing by the Engineer.

Structures will be measured according to neat lines shown on the plans or as altered to fit field conditions.

Unless otherwise specified, all contract items which are measured by the linear foot such as electrical ducts, conduits, pipe culverts, underdrains, and similar items shall be measured parallel to the base or foundation upon which such items are placed.

In computing volumes of excavation the average end area method or other acceptable methods will be used.

The thickness of plates and galvanized sheet used in the manufacture of corrugated metal pipe, metal plate pipe culverts and arches, and metal cribbing will be specified and measured in decimal fraction of inch.

The term “ton” will mean the short ton consisting of 2,000 lb (907 km) avoirdupois. All materials that are measured or proportioned by weights shall be weighed on accurate, approved scales by competent, qualified personnel at locations designed by the Engineer. If material is shipped by rail, the car weight may be accepted provided that only the actual weight of material is paid for. However, car weights will not be acceptable for material to be passed through mixing plants. Trucks used to haul material being paid for by weight shall be weighed empty daily at such times as the Engineer directs, and each truck shall bear a plainly legible identification mark.

Materials to be measured by volume in the hauling vehicle shall be hauled in approved vehicles and measured therein at the point of delivery. Vehicles for this purpose may be of any size or type acceptable for the materials hauled, provided that the body is of such shape that the actual contents may be readily and accurately determined. All vehicles shall be loaded to at least their water level capacity, and all loads shall be leveled when the vehicles arrive at the point of delivery.

When requested by the Contractor and approved by the Engineer in writing, material specified to be measured by the cubic yard (cubic meter) may be weighed, and such weights will be converted to cubic yards (cubic meters) for payment purposes. Factors for conversion from weight measurement to volume measurement will be determined by the Engineer and shall be agreed to by the Contractor before such method of measurement of pay quantities is used.

Bituminous materials will be measured by the gallon (liter) or ton (kg). When measured by volume, such volumes will be measured at 60°F (16°C) or will be corrected to the volume at 60°F (16°C) using ASTM D1250 for asphalts or ASTM D633 for tars.

Net certified scale weights or weights based on certified volumes in the case of rail shipments will be used as a basis of measurement, subject to correction when bituminous material has been lost from the car or the distributor, wasted, or otherwise not incorporated in the work.

When bituminous materials are shipped by truck or transport, net certified weights by volume, subject to correction for loss or foaming, may be used for computing quantities.

Cement will be measured by the ton (kg) or hundredweight (km).

Timber will be measured by the thousand feet board measure (MFBM) actually incorporated in the structure. Measurement will be based on nominal widths and thicknesses and the extreme length of each piece.

The term “lump sum” when used as an item of payment will mean complete payment for the work described in the contract.

When a complete structure or structural unit (in effect, “lump sum” work) is specified as the unit of measurement, the unit will be construed to include all necessary fittings and accessories.

Rental of equipment will be measured by time in hours of actual working time and necessary traveling time of the equipment within the limits of the work. Special equipment ordered by the Engineer in connection with force account work will be measured as agreed in the change order or supplemental agreement authorizing such force account work as provided in the subsection 90-05 titled PAYMENT FOR EXTRA WORK of this section.

When standard manufactured items are specified such as fence, wire, plates, rolled shapes, pipe conduit, etc., and these items are identified by gauge, unit weight, section dimensions, etc., such identification will be considered to be nominal weights or dimensions. Unless more stringently controlled by tolerances in cited specifications, manufacturing tolerances established by the industries involved will be accepted.

Scales for weighing materials which are required to be proportioned or measured and paid for by weight shall be furnished, erected, and maintained by the Contractor, or be certified permanently installed commercial scales.

Scales shall be accurate within 1/2% of the correct weight throughout the range of use. The Contractor shall have the scales checked under the observation of the inspector before beginning work and at such other times as requested. The intervals shall be uniform in spacing throughout the graduated or marked length of the beam or dial and shall not exceed one-tenth of 1% of the nominal rated capacity of the scale, but not less than 1 pound (454 grams). The use of spring balances will not be permitted.

Beams, dials, platforms, and other scale equipment shall be so arranged that the operator and the inspector can safely and conveniently view them.

Scale installations shall have available ten standard 50-pound (2.3 km) weights for testing the weighing equipment or suitable weights and devices for other approved equipment.

Scales must be tested for accuracy and serviced before use at a new site. Platform scales shall be installed and maintained with the platform level and rigid bulkheads at each end.

Scales “overweighing” (indicating more than correct weight) will not be permitted to operate, and all materials received subsequent to the last previous correct weighting-accuracy test will be reduced by the percentage of error in excess of one-half of 1%.

In the event inspection reveals the scales have been underweighing (indicating less than correct weight), they shall be adjusted, and no additional payment to the Contractor will be allowed for materials previously weighed and recorded.

All costs in connection with furnishing, installing, certifying, testing, and maintaining scales; for furnishing check weights and scale house; and for all other items specified in this subsection, for the weighing of materials for proportioning or payment, shall be included in the unit contract prices for the various items of the project.

When the estimated quantities for a specific portion of the work are designated as the pay quantities in the contract, they shall be the final quantities for which payment for such specific portion of the work will be made, unless the dimensions of said portions of the work shown on the plans are revised by the Engineer. If revised dimensions result in an increase or decrease in the quantities of such work, the final quantities for payment will be revised in the amount represented by the authorized changes in the dimensions.

90-02 Scope of payment. The Contractor shall receive and accept compensation provided for in the contract as full payment for furnishing all materials, for performing all work under the contract in a complete and acceptable manner, and for all risk, loss, damage, or expense of whatever character arising out of the nature of the work or the execution thereof, subject to the provisions of the subsection 70-18 titled NO WAIVER OF LEGAL RIGHTS of Section 70.

When the “basis of payment” subsection of a technical specification requires that the contract price (price bid) include compensation for certain work or material essential to the item, this same work or material will not also be measured for payment under any other contract item which may appear elsewhere in the contract, plans, or specifications.

90-03 Compensation for altered quantities. When the accepted quantities of work vary from the quantities in the proposal, the Contractor shall accept as payment in full, so far as contract items are concerned, payment at the original contract price for the accepted quantities of work actually completed and accepted. No allowance, except as provided for in the subsection 40-02 titled ALTERATION OF WORK AND QUANTITIES of Section 40 will be made for any increased expense, loss of expected reimbursement, or loss of anticipated profits suffered or claimed by the Contractor which results directly from such alterations or indirectly from his or her unbalanced allocation of overhead and profit among the contract items, or from any other cause.

90-04 Payment for omitted items. As specified in the subsection 40-03 titled OMITTED ITEMS of Section 40, the Engineer shall have the right to omit from the work (order nonperformance) any contract item, except major contract items, in the best interest of the Owner.

Should the Engineer omit or order nonperformance of a contract item or portion of such item from the work, the Contractor shall accept payment in full at the contract prices for any work actually completed and acceptable prior to the Engineer’s order to omit or non-perform such contract item.

Acceptable materials ordered by the Contractor or delivered on the work prior to the date of the Engineer's order will be paid for at the actual cost to the Contractor and shall thereupon become the property of the Owner.

In addition to the reimbursement hereinbefore provided, the Contractor shall be reimbursed for all actual costs incurred for the purpose of performing the omitted contract item prior to the date of the Engineer's order. Such additional costs incurred by the Contractor must be directly related to the deleted contract item and shall be supported by certified statements by the Contractor as to the nature the amount of such costs.

90-05 Payment for extra work. Extra work, performed in accordance with the subsection 40-04 titled EXTRA WORK of Section 40, will be paid for at the contract prices or agreed prices specified in the change order or supplemental agreement authorizing the extra work.

90-06 Partial payments. Partial payments will be made to the Contractor at least once each month as the work progresses. Said payments will be based upon estimates, prepared by the Engineer, of the value of the work performed and materials complete and in place, in accordance with the contract, plans, and specifications. Such partial payments may also include the delivered actual cost of those materials stockpiled and stored in accordance with the subsection 90-07 titled PAYMENT FOR MATERIALS ON HAND of this section. No partial payment will be made when the amount due to the Contractor since the last estimate amounts to less than five hundred dollars.

The Contractor is required to pay all subcontractors for satisfactory performance of their contracts no later than 30 days after the Contractor has received a partial payment. The Owner must ensure prompt and full payment of retainage from the prime Contractor to the subcontractor within 30 days after the subcontractor's work is satisfactorily completed. A subcontractor's work is satisfactorily completed when all the tasks called for in the subcontract have been accomplished and documented as required by the Owner. When the Owner has made an incremental acceptance of a portion of a prime contract, the work of a subcontractor covered by that acceptance is deemed to be satisfactorily completed.

From the total of the amount determined to be payable on a partial payment, 10% percent of such total amount will be deducted and retained by the Owner until the final payment is made, except as may be provided (at the Contractor's option) in the subsection 90-08 titled PAYMENT OF WITHHELD FUNDS of this section. The balance of the amount payable, less all previous payments, shall be certified for payment. Should the Contractor exercise his or her option, as provided in the subsection 90-08 titled PAYMENT OF WITHHELD FUNDS of this section, no such percent retainage shall be deducted.

When at least 95% of the work has been completed, the Engineer shall, at the Owner's discretion and with the consent of the surety, prepare estimates of both the contract value and the cost of the remaining work to be done.

The Owner may retain an amount not less than twice the contract value or estimated cost, whichever is greater, of the work remaining to be done. The remainder, less all previous payments and deductions, will then be certified for payment to the Contractor.

It is understood and agreed that the Contractor shall not be entitled to demand or receive partial payment based on quantities of work in excess of those provided in the proposal or covered by approved change orders or supplemental agreements, except when such excess quantities have been determined by the Engineer to be a part of the final quantity for the item of work in question.

No partial payment shall bind the Owner to the acceptance of any materials or work in place as to quality or quantity. All partial payments are subject to correction at the time of final payment as provided in the subsection 90-09 titled ACCEPTANCE AND FINAL PAYMENT of this section.

The Contractor shall deliver to the Owner a complete release of all claims for labor and material arising out of this contract before the final payment is made. If any subcontractor or supplier fails to furnish such a release in full, the Contractor may furnish a bond or other collateral satisfactory to the Owner to indemnify the Owner against any potential lien or other such claim. The bond or collateral shall include all costs, expenses, and attorney fees the Owner may be compelled to pay in discharging any such lien or claim.

90-07 Payment for materials on hand. Partial payments may be made to the extent of the delivered cost of materials to be incorporated in the work, provided that such materials meet the requirements of the contract, plans, and specifications and are delivered to acceptable sites on the airport property or at other sites in the vicinity that are acceptable to the Owner. Such delivered costs of stored or stockpiled materials may be included in the next partial payment after the following conditions are met:

a. The material has been stored or stockpiled in a manner acceptable to the Engineer at or on an approved site.

b. The Contractor has furnished the Engineer with acceptable evidence of the quantity and quality of such stored or stockpiled materials.

c. The Contractor has furnished the Engineer with satisfactory evidence that the material and transportation costs have been paid.

d. The Contractor has furnished the Owner legal title (free of liens or encumbrances of any kind) to the material so stored or stockpiled.

e. The Contractor has furnished the Owner evidence that the material so stored or stockpiled is insured against loss by damage to or disappearance of such materials at any time prior to use in the work.

It is understood and agreed that the transfer of title and the Owner's payment for such stored or stockpiled materials shall in no way relieve the Contractor of his or her responsibility for furnishing and placing such materials in accordance with the requirements of the contract, plans, and specifications.

In no case will the amount of partial payments for materials on hand exceed the contract price for such materials or the contract price for the contract item in which the material is intended to be used.

No partial payment will be made for stored or stockpiled living or perishable plant materials.

The Contractor shall bear all costs associated with the partial payment of stored or stockpiled materials in accordance with the provisions of this subsection.

90-08 Payment of withheld funds. At the Contractor's option, if an Owner withholds retainage in accordance with the methods described in subsection 90-06 PARTIAL PAYMENTS, the Contractor may request that the Owner deposit the retainage into an escrow account. The Owner's deposit of retainage into an escrow account is subject to the following conditions

a. The Contractor shall bear all expenses of establishing and maintaining an escrow account and escrow agreement acceptable to the Owner.

b. The Contractor shall deposit to and maintain in such escrow only those securities or bank certificates of deposit as are acceptable to the Owner and having a value not less than the retainage that would otherwise be withheld from partial payment.

c. The Contractor shall enter into an escrow agreement satisfactory to the Owner.

d. The Contractor shall obtain the written consent of the surety to such agreement.

90-09 Acceptance and final payment. When the contract work has been accepted in accordance with the requirements of the subsection 50-15 titled FINAL ACCEPTANCE of Section 50, the Engineer will prepare the final estimate of the items of work actually performed. The Contractor shall approve the Engineer's final estimate or advise the Engineer of the Contractor's objections to the final estimate which are based on disputes in measurements or computations of the final quantities to be paid under the contract as amended by change order or supplemental agreement. The Contractor and the Engineer shall resolve all disputes (if any) in the measurement and computation of final quantities to be paid within 30 calendar days of the Contractor's receipt of the Engineer's final estimate. If, after such 30-day period, a dispute still exists, the Contractor may approve the Engineer's estimate under protest of the quantities in dispute, and such disputed quantities shall be considered by the Owner as a claim in accordance with the subsection 50-16 titled CLAIMS FOR ADJUSTMENT AND DISPUTES of Section 50.

After the Contractor has approved, or approved under protest, the Engineer's final estimate, and after the Engineer's receipt of the project closeout documentation required in subsection 90-11 Project Closeout, final payment will be processed based on the entire sum, or the undisputed sum in case of approval under protest, determined to be due the Contractor less all previous payments and all amounts to be deducted under the provisions of the contract. All prior partial estimates and payments shall be subject to correction in the final estimate and payment.

If the Contractor has filed a claim for additional compensation under the provisions of the subsection 50-16 titled CLAIMS FOR ADJUSTMENTS AND DISPUTES of Section 50 or under the provisions of this subsection, such claims will be considered by the Owner in accordance with local laws or ordinances. Upon final adjudication of such claims, any additional payment determined to be due the Contractor will be paid pursuant to a supplemental final estimate.

90-10 Construction warranty.

a. In addition to any other warranties in this contract, the Contractor warrants that work performed under this contract conforms to the contract requirements and is free of any defect in equipment, material, workmanship, or design furnished, or performed by the Contractor or any subcontractor or supplier at any tier.

b. This warranty shall continue for a period of one year from the date of final acceptance of the work. If the Owner takes possession of any part of the work before final acceptance, this warranty shall continue for a period of one year from the date the Owner takes possession. However, this will not relieve the Contractor from corrective items required by the final acceptance of the project work.

c. The Contractor shall remedy at the Contractor's expense any failure to conform, or any defect. In addition, the Contractor shall remedy at the Contractor's expense any damage to Owner real or personal property, when that damage is the result of:

1) The Contractor's failure to conform to contract requirements; or

2) Any defect of equipment, material, workmanship, or design furnished by the Contractor.

d. The Contractor shall restore any work damaged in fulfilling the terms and conditions of this clause. The Contractor's warranty with respect to work repaired or replaced will run for one year from the date of repair or replacement.

e. The Owner will notify the Contractor, in writing, within seven (7) days after the discovery of any failure, defect, or damage.

f. If the Contractor fails to remedy any failure, defect, or damage within 14 days after receipt of notice, the Owner shall have the right to replace, repair, or otherwise remedy the failure, defect, or damage at the Contractor's expense.

g. With respect to all warranties, express or implied, from subcontractors, manufacturers, or suppliers for work performed and materials furnished under this contract, the Contractor shall: (1) Obtain all warranties that would be given in normal commercial practice; (2) Require all warranties to be executed, in writing, for the benefit of the Owner, as directed by the Owner, and (3) Enforce all warranties for the benefit of the Owner.

h. This warranty shall not limit the Owner's rights with respect to latent defects, gross mistakes, or fraud.

90-11 Project closeout. Approval of final payment to the Contractor is contingent upon completion and submittal of the items listed below. The final payment will not be approved until the Engineer approves the Contractor's final submittal. The Contractor shall:

a. Provide two (2) copies of all manufacturers warranties specified for materials, equipment, and installations.

b. Provide weekly payroll records (not previously received) from the general Contractor and all subcontractors.

c. Complete final cleanup in accordance with subsection 40-08, FINAL CLEANUP.

d. Complete all punch list items identified during the Final Inspection.

e. Provide complete release of all claims for labor and material arising out of the Contract.

f. Provide a certified statement signed by the subcontractors, indicating actual amounts paid to the Disadvantaged Business Enterprise (DBE) subcontractors and/or suppliers associated with the project.

g. When applicable per state requirements, return copies of sales tax completion forms.

h. Manufacturer's certifications for all items incorporated in the work.

i. All required record drawings, as-built drawings or as-constructed drawings.

j. Project Operation and Maintenance (O&M) Manual.

k. Security for Construction Warranty.

l. Equipment commissioning documentation submitted, if required.

END OF SECTION 90

GENERAL PROVISIONS

Section 100 Contractor Quality Control Program

100-01 General. When the specification requires a Contractor Quality Control Program, the Contractor shall establish, provide, and maintain an effective Quality Control Program that details the methods and procedures that will be taken to assure that all materials and completed construction required by this contract conform to contract plans, technical specifications and other requirements, whether manufactured by the Contractor, or procured from subcontractors or vendors. Although guidelines are established and certain minimum requirements are specified here and elsewhere in the contract technical specifications, the Contractor shall assume full responsibility for accomplishing the stated purpose.

The intent of this section is to enable the Contractor to establish a necessary level of control that will:

a. Adequately provide for the production of acceptable quality materials.

b. Provide sufficient information to assure both the Contractor and the Engineer that the specification requirements can be met.

c. Allow the Contractor as much latitude as possible to develop his or her own standard of control.

The Contractor shall be prepared to discuss and present, at the preconstruction conference, their understanding of the quality control requirements. The Contractor shall not begin any construction or production of materials to be incorporated into the completed work until the Quality Control Program has been reviewed and accepted by the Engineer. No partial payment will be made for materials subject to specific quality control requirements until the Quality Control Program has been reviewed.

The quality control requirements contained in this section and elsewhere in the contract technical specifications are in addition to and separate from the acceptance testing requirements. Acceptance testing requirements are the responsibility of the Engineer.

Paving projects over $500,000 shall have a Quality Control (QC)/Quality Assurance (QA) workshop with the Engineer, Contractor, subcontractors, testing laboratories, and Owner's representative at start of construction. The workshop shall address QC and QA requirements of the project specifications. The Contractor shall coordinate with the Airport and the Engineer on time and location of the QC/QA workshop.

100-02 Description of program.

a. General description. The Contractor shall establish a Quality Control Program to perform quality control inspection and testing of all items of work required by the technical specifications, including those performed by subcontractors. This Quality Control Program shall ensure conformance to applicable specifications and plans with respect to materials, workmanship, construction, finish, and functional performance. The Quality Control Program shall be effective for control of all construction work performed under this Contract and shall specifically include surveillance and tests required by the technical specifications, in addition to other requirements of this section and any other activities deemed necessary by the Contractor to establish an effective level of quality control.

b. Quality Control Program. The Contractor shall describe the Quality Control Program in a written document that shall be reviewed and approved by the Engineer prior to the start of any production, construction, or off-site fabrication. The written Quality Control Program shall be submitted to the Engineer for review and approval at least 5 calendar days before the Pre-Construction Conference. The Contractor's Quality Control Plan and Quality Control testing laboratory must be approved in writing by the Engineer prior to the Notice to Proceed (NTP).

The Quality Control Program shall be organized to address, as a minimum, the following items:

a. Quality control organization

b. Project progress schedule

c. Submittals schedule

d. Inspection requirements

e. Quality control testing plan

f. Documentation of quality control activities

g. Requirements for corrective action when quality control and/or acceptance criteria are not met

The Contractor is encouraged to add any additional elements to the Quality Control Program that is deemed necessary to adequately control all production and/or construction processes required by this contract.

100-03 Quality control organization. The Contractor Quality Control Program shall be implemented by the establishment of a separate quality control organization. An organizational chart shall be developed to show all quality control personnel and how these personnel integrate with other management/production and construction functions and personnel.

The organizational chart shall identify all quality control staff by name and function, and shall indicate the total staff required to implement all elements of the Quality Control Program, including inspection and testing for each item of work. If necessary, different technicians can be used for specific inspection and testing functions for different items of work. If an outside organization or independent testing laboratory is used for implementation of all or part of the Quality Control Program, the personnel assigned shall be subject to the qualification requirements of paragraph 100-03a and 100-03b. The organizational chart shall indicate which personnel are Contractor employees and which are provided by an outside organization.

The quality control organization shall, as a minimum, consist of the following personnel:

a. Program Administrator. The Program Administrator shall be a full-time on-site employee of the Contractor, or a consultant engaged by the Contractor. The Program Administrator shall have a minimum of five (5) years of experience in airport and/or highway construction and shall have had prior quality control experience on a project of comparable size and scope as the contract.

Additional qualifications for the Program Administrator shall include at least one of the following requirements:

1) Professional Engineer with one (1) year of airport paving experience.

2) Engineer-in-training with two (2) years of airport paving experience.

3) An individual with three (3) years of highway and/or airport paving experience, with a Bachelor of Science Degree in Civil Engineering, Civil Engineering Technology or Construction.

4) Construction materials technician certified at Level III by the National Institute for Certification in Engineering Technologies (NICET).

5) Highway materials technician certified at Level III by NICET.

6) Highway construction technician certified at Level III by NICET.

7) A NICET certified engineering technician in Civil Engineering Technology with five (5) years of highway and/or airport paving experience.

The Program Administrator shall have full authority to institute any and all actions necessary for the successful implementation of the Quality Control Program to ensure compliance with the contract plans and technical specifications. The Program Administrator shall report directly to a responsible officer of the construction firm. The Program Administrator may supervise the Quality Control Program on more than one project provided that person can be at the job site within two (2) hours after being notified of a problem.

b. Quality control technicians. A sufficient number of quality control technicians necessary to adequately implement the Quality Control Program shall be provided. These personnel shall be either Engineers, engineering technicians, or experienced craftsman with qualifications in the appropriate field equivalent to NICET Level II or higher construction materials technician or highway construction technician and shall have a minimum of two (2) years of experience in their area of expertise.

The quality control technicians shall report directly to the Program Administrator and shall perform the following functions:

1) Inspection of all materials, construction, plant, and equipment for conformance to the technical specifications, and as required by subsection 100-06.

2) Performance of all quality control tests as required by the technical specifications and subsection 100-07.

3) Performance of density tests for the Engineer when required by the technical specifications.

Certification at an equivalent level, by a state or nationally recognized organization will be acceptable in lieu of NICET certification.

c. Staffing levels. The Contractor shall provide sufficient qualified quality control personnel to monitor each work activity at all times. Where material is being produced in a plant for

incorporation into the work, separate plant and field technicians shall be provided at each plant and field placement location. The scheduling and coordinating of all inspection and testing must match the type and pace of work activity. The Quality Control Program shall state where different technicians will be required for different work elements.

100-04 Project progress schedule. The Contractor shall submit a coordinated construction schedule for all work activities. The schedule shall be prepared as a network diagram in Critical Path Method (CPM), Program Evaluation and Review Technique (PERT), or other format, or as otherwise specified in the contract. As a minimum, it shall provide information on the sequence of work activities, milestone dates, and activity duration.

The Contractor shall maintain the work schedule and provide an update and analysis of the progress schedule on a twice monthly basis, or as otherwise specified in the contract. Submission of the work schedule shall not relieve the Contractor of overall responsibility for scheduling, sequencing, and coordinating all work to comply with the requirements of the contract.

100-05 Submittals schedule. The Contractor shall submit a detailed listing of all submittals (for example, mix designs, material certifications) and shop drawings required by the technical specifications. The listing can be developed in a spreadsheet format and shall include:

a. Specification item number

b. Item description

c. Description of submittal

d. Specification paragraph requiring submittal

e. Scheduled date of submittal

100-06 Inspection requirements. Quality control inspection functions shall be organized to provide inspections for all definable features of work, as detailed below. All inspections shall be documented by the Contractor as specified by subsection 100-07.

Inspections shall be performed daily to ensure continuing compliance with contract requirements until completion of the particular feature of work. These shall include the following minimum requirements:

a. During plant operation for material production, quality control test results and periodic inspections shall be used to ensure the quality of aggregates and other mix components, and to adjust and control mix proportioning to meet the approved mix design and other requirements of the technical specifications. All equipment used in proportioning and mixing shall be inspected to ensure its proper operating condition. The Quality Control Program shall detail how these and other quality control functions will be accomplished and used.

b. During field operations, quality control test results and periodic inspections shall be used to ensure the quality of all materials and workmanship. All equipment used in placing, finishing, and compacting shall be inspected to ensure its proper operating condition and to ensure that all such operations are in conformance to the technical specifications and are within the plan dimensions, lines, grades, and tolerances specified. The Program shall document how these and other quality control functions will be accomplished and used.

100-07 Quality control testing plan. As a part of the overall Quality Control Program, the Contractor shall implement a quality control testing plan, as required by the technical specifications. The testing plan shall include the minimum tests and test frequencies required by each technical specification Item, as well as any additional quality control tests that the Contractor deems necessary to adequately control production and/or construction processes.

The testing plan can be developed in a spreadsheet fashion and shall, as a minimum, include the following:

a. Specification item number (for example, P-401)

b. Item description (for example, Plant Mix Bituminous Pavements)

c. Test type (for example, gradation, grade, asphalt content)

d. Test standard (for example, ASTM or American Association of State Highway and Transportation Officials (AASHTO) test number, as applicable)

e. Test frequency (for example, as required by technical specifications or minimum frequency when requirements are not stated)

f. Responsibility (for example, plant technician)

g. Control requirements (for example, target, permissible deviations)

The testing plan shall contain a statistically-based procedure of random sampling for acquiring test samples in accordance with ASTM D3665. The Engineer shall be provided the opportunity to witness quality control sampling and testing.

All quality control test results shall be documented by the Contractor as required by subsection 100-08.

100-08 Documentation. The Contractor shall maintain current quality control records of all inspections and tests performed. These records shall include factual evidence that the required inspections or tests have been performed, including type and number of inspections or tests involved; results of inspections or tests; nature of defects, deviations, causes for rejection, etc.; proposed remedial action; and corrective actions taken.

These records must cover both conforming and defective or deficient features, and must include a statement that all supplies and materials incorporated in the work are in full compliance with the terms of the contract. Legible copies of these records shall be furnished to the Engineer daily. The records shall cover all work placed subsequent to the previously furnished records and shall be verified and signed by the Contractor's Program Administrator.

Specific Contractor quality control records required for the contract shall include, but are not necessarily limited to, the following records:

a. Daily inspection reports. Each Contractor quality control technician shall maintain a daily log of all inspections performed for both Contractor and subcontractor operations. These technician's daily reports shall provide factual evidence that continuous quality control inspections have been performed and shall, as a minimum, include the following:

1) Technical specification item number and description

2) Compliance with approved submittals

3) Proper storage of materials and equipment

4) Proper operation of all equipment

5) Adherence to plans and technical specifications

6) Review of quality control tests

7) Safety inspection.

The daily inspection reports shall identify inspections conducted, results of inspections, location and nature of defects found, causes for rejection, and remedial or corrective actions taken or proposed.

The daily inspection reports shall be signed by the responsible quality control technician and the Program Administrator. The Engineer shall be provided at least one copy of each daily inspection report on the work day following the day of record.

b. Daily test reports. The Contractor shall be responsible for establishing a system that will record all quality control test results. Daily test reports shall document the following information:

1) Technical specification item number and description

2) Test designation

3) Location

4) Date of test

5) Control requirements

6) Test results

7) Causes for rejection

8) Recommended remedial actions

9) Retests

Test results from each day's work period shall be submitted to the Engineer prior to the start of the next day's work period. When required by the technical specifications, the Contractor shall maintain statistical quality control charts. The daily test reports shall be signed by the responsible quality control technician and the Program Administrator.

100-09 Corrective action requirements. The Quality Control Program shall indicate the appropriate action to be taken when a process is deemed, or believed, to be out of control (out of tolerance) and detail what action will be taken to bring the process into control. The requirements

for corrective action shall include both general requirements for operation of the Quality Control Program as a whole, and for individual items of work contained in the technical specifications.

The Quality Control Program shall detail how the results of quality control inspections and tests will be used for determining the need for corrective action and shall contain clear sets of rules to gauge when a process is out of control and the type of correction to be taken to regain process control.

When applicable or required by the technical specifications, the Contractor shall establish and use statistical quality control charts for individual quality control tests. The requirements for corrective action shall be linked to the control charts.

100-10 Surveillance by the Engineer. All items of material and equipment shall be subject to surveillance by the Engineer at the point of production, manufacture or shipment to determine if the Contractor, producer, manufacturer or shipper maintains an adequate quality control system in conformance with the requirements detailed here and the applicable technical specifications and plans. In addition, all items of materials, equipment and work in place shall be subject to surveillance by the Engineer at the site for the same purpose.

Surveillance by the Engineer does not relieve the Contractor of performing quality control inspections of either on-site or off-site Contractor's or subcontractor's work.

100-11 Noncompliance.

a. The Engineer will notify the Contractor of any noncompliance with any of the foregoing requirements. The Contractor shall, after receipt of such notice, immediately take corrective action. Any notice, when delivered by the Engineer or his or her authorized representative to the Contractor or his or her authorized representative at the site of the work, shall be considered sufficient notice.

b. In cases where quality control activities do not comply with either the Contractor Quality Control Program or the contract provisions, or where the Contractor fails to properly operate and maintain an effective Quality Control Program, as determined by the Engineer, the Engineer may:

1) Order the Contractor to replace ineffective or unqualified quality control personnel or subcontractors.

2) Order the Contractor to stop operations until appropriate corrective actions are taken.

END OF SECTION 100

GENERAL PROVISIONS

Section 105 Mobilization

105-1 Description. This item shall consist of work and operations, but is not limited to, work and operations necessary for the movement of personnel, equipment, material and supplies to and from the project site for work on the project except as provided in the contract as separate pay items.

105-1.1 Posted notices. Prior to commencement of construction activities the Contractor must post the following documents in a prominent and accessible place where they may be easily viewed by all employees of the prime Contractor and by all employees of subcontractors engaged by the prime Contractor: Equal Employment Opportunity (EEO) Poster "Equal Employment Opportunity is the Law" in accordance with the Office of Federal Contract Compliance Programs Executive Order 11246, as amended; Davis Bacon Wage Poster (WH 1321) - DOL "Notice to All Employees" Poster; and Applicable Davis-Bacon Wage Rate Determination. These notices must remain posted until final acceptance of the work by the Owner.

105-2 Basis of measurement and payment. Based upon the contract lump sum price for "Mobilization" partial payments will be allowed as follows:

a. With first pay request, 25%.

b. When 25% or more of the original contract is earned, an additional 25%.

c. When 50% or more of the original contract is earned, an additional 40%.

d. After Final Inspection, Staging area clean-up and delivery of all Project Closeout materials as required by 90-11, the final 10%.

END OF SECTION 105

GENERAL PROVISIONS

Section 110 Method of Estimating Percentage of Material Within Specification Limits (PWL)

110-01 General. When the specifications provide for acceptance of material based on the method of estimating percentage of material within specification limits (PWL), the PWL will be determined in accordance with this section. All test results for a lot will be analyzed statistically to determine the total estimated percent of the lot that is within specification limits. The PWL is computed using the sample average (X) and sample standard deviation (S_n) of the specified number (n) of sublots for the lot and the specification tolerance limits, L for lower and U for upper, for the particular acceptance parameter. From these values, the respective Quality index, Q_L for Lower Quality Index and/or Q_U for Upper Quality Index, is computed and the PWL for the lot for the specified n is determined from Table 1. All specification limits specified in the technical sections shall be absolute values. Test results used in the calculations shall be to the significant figure given in the test procedure.

There is some degree of uncertainty (risk) in the measurement for acceptance because only a small fraction of production material (the population) is sampled and tested. This uncertainty exists because all portions of the production material have the same probability to be randomly sampled. The Contractor's risk is the probability that material produced at the acceptable quality level is rejected or subjected to a pay adjustment. The Owner's risk is the probability that material produced at the rejectable quality level is accepted.

It is the intent of this section to inform the Contractor that, in order to consistently offset the Contractor's risk for material evaluated, production quality (using population average and population standard deviation) must be maintained at the acceptable quality specified or higher. In all cases, it is the responsibility of the Contractor to produce at quality levels that will meet the specified acceptance criteria when sampled and tested at the frequencies specified.

110-02 Method for computing PWL. The computational sequence for computing PWL is as follows:

a. Divide the lot into n sublots in accordance with the acceptance requirements of the specification.

b. Locate the random sampling position within the sublot in accordance with the requirements of the specification.

c. Make a measurement at each location, or take a test portion and make the measurement on the test portion in accordance with the testing requirements of the specification.

d. Find the sample average (X) for all sublot values within the lot by using the following formula:

$$\mathbf{X = (x_1 + x_2 + x_3 + \ldots x_n) / n}$$

Where: X = Sample average of all sublot values within a lot

x_1, x_2 = Individual sublot values

n = Number of sublots

e. Find the sample standard deviation (S_n) by use of the following formula:

$S_n = [(d_1^2 + d_2^2 + d_3^2 + . . . d_n^2)/(n-1)]^{1/2}$

Where: S_n = Sample standard deviation of the number of sublot values in the set

d_1, d_2 = Deviations of the individual sublot values x_1, x_2, … from the average value X

that is: $d_1 = (x_1 - X)$, $d_2 = (x_2 - X)$ … $d_n = (x_n - X)$

n = Number of sublots

f. For single sided specification limits (that is, L only), compute the Lower Quality Index Q_L by use of the following formula:

$Q_L = (X - L) / S_n$

Where: L = specification lower tolerance limit

Estimate the percentage of material within limits (PWL) by entering Table 1 with Q_L, using the column appropriate to the total number (n) of measurements. If the value of Q_L falls between values shown on the table, use the next higher value of PWL.

g. For double-sided specification limits (that is, L and U), compute the Quality Indexes Q_L and Q_U by use of the following formulas:

$Q_L = (X - L) / S_n$
and
$Q_U = (U - X) / S_n$

Where: L and U = specification lower and upper tolerance limits

Estimate the percentage of material between the lower (L) and upper (U) tolerance limits (PWL) by entering Table 1 separately with Q_L and Q_U, using the column appropriate to the total number (n) of measurements, and determining the percent of material above P_L and percent of material below P_U for each tolerance limit. If the values of Q_L fall between values shown on the table, use the next higher value of P_L or P_U. Determine the PWL by use of the following formula:

$PWL = (P_U + P_L) – 100$

Where: P_L = percent within lower specification limit

P_U = percent within upper specification limit

EXAMPLE OF PWL CALCULATION

Project: Example Project

Test Item: Item P-401, Lot A.

A. PWL Determination for Mat Density.

1) Density of four random cores taken from Lot A.

A-1 = 96.60

A-2 = 97.55

A-3 = 99.30

A-4 = 98.35

n = 4

2) Calculate average density for the lot.

$X = (x_1 + x_2 + x_3 + \ldots x_n) / n$

X = (96.60 + 97.55 + 99.30 + 98.35) / 4

X = 97.95% density

3) Calculate the standard deviation for the lot.

$S_n = \mathbf{[}((96.60 - 97.95)^2 + (97.55 - 97.95)^2 + (99.30 - 97.95)^2 + (98.35 - 97.95)^2)) / (4 - 1)\mathbf{]}^{1/2}$

$S_n = \mathbf{[}(1.82 + 0.16 + 1.82 + 0.16) / 3\mathbf{]}^{1/2}$

$S_n = 1.15$

4) Calculate the Lower Quality Index Q_L for the lot. (L=96.3)

$Q_L = (X - L) / S_n$

$Q_L = (97.95 - 96.30) / 1.15$

$Q_L = 1.4348$

5) Determine PWL by entering Table 1 with Q_L= 1.44 and n= 4.

PWL = 98

B. PWL Determination for Air Voids.

1) Air Voids of four random samples taken from Lot A.

A-1 = 5.00

A-2 = 3.74

A-3 = 2.30

A-4 = 3.25

2) Calculate the average air voids for the lot.

$X = (x_1 + x_2 + x_3 \ldots n) / n$

$X = (5.00 + 3.74 + 2.30 + 3.25) / 4$

$X = 3.57\%$

3) Calculate the standard deviation S_n for the lot.

$S_n = \mathbf{[}((3.57 - 5.00)^2 + (3.57 - 3.74)^2 + (3.57 - 2.30)^2 + (3.57 - 3.25)^2) / (4 - 1)\mathbf{]}^{1/2}$

$S_n = \mathbf{[}(2.04 + 0.03 + 1.62 + 0.10) / 3\mathbf{]}^{1/2}$

$S_n = 1.12$

4) Calculate the Lower Quality Index Q_L for the lot. (L= 2.0)

$Q_L = (X - L) / S_n$

$Q_L = (3.57 - 2.00) / 1.12$

$Q_L = 1.3992$

5) Determine P_L by entering Table 1 with $Q_L = 1.41$ and n = 4.

$P_L = 97$

6) Calculate the Upper Quality Index Q_U for the lot. (U= 5.0)

$Q_U = (U - X) / S_n$

$Q_U = (5.00 - 3.57) / 1.12$

$Q_U = 1.2702$

7) Determine P_U by entering Table 1 with $Q_U = 1.29$ and n = 4.

$P_U = 93$

8) Calculate Air Voids PWL

$PWL = (P_L + P_U) – 100$

$PWL = (97 + 93) - 100 = 90$

EXAMPLE OF OUTLIER CALCULATION (REFERENCE ASTM E178)

Project: Example Project

Test Item: Item P-401, Lot A.

A. Outlier Determination for Mat Density.

1) Density of four random cores taken from Lot A arranged in descending order.

A-3 = 99.30

A-4 = 98.35

A-2 = 97.55

A-1 = 96.60

2) Use n=4 and upper 5% significance level of to find the critical value for test criterion = 1.463.

3) Use average density, standard deviation, and test criterion value to evaluate density measurements.

a. For measurements greater than the average:

If (measurement - average)/(standard deviation) is less than test criterion,

then the measurement is not considered an outlier

For A-3, check if (99.30 - 97.95) / 1.15 is greater than 1.463.

Since 1.174 is less than 1.463, the value is not an outlier.

b. For measurements less than the average:

If (average - measurement)/(standard deviation) is less than test criterion,

then the measurement is not considered an outlier.

For A-1, check if (97.95 - 96.60) / 1.15 is greater than 1.463.

Since 1.435 is less than 1.463, the value is not an outlier.

Note: In this example, a measurement would be considered an outlier if the density were:

Greater than (97.95 + 1.463 × 1.15) = 99.63%

OR

less than (97.95 - 1.463 × 1.15) = 96.27%.

Table 1. Table for Estimating Percent of Lot Within Limits (PWL)

Percent Within Limits (P_L and P_U)	Positive Values of Q (Q_L and Q_U)

END OF SECTION 110

SPECIAL PROVISIONS

BID DOCUMENTS

DFS TERMINAL, HANGAR, AND APRON EXPANSION
DEFUNIAK SPRINGS AIRPORT

SPECIAL PROVISION NO. 1

UTILITIES

A. Description

The Contractor shall be responsible for the coordination and associated costs to protect existing facilities, utilities and features that may be impacted by the project.

B. General

Existing facilities, utilities and features depicted on the construction plans are not guaranteed to be accurate with respect to location, depth, condition or characteristics. Also, there may be additional facilities and features existing that could affect the construction of this project, which are not depicted or described in the construction plans. Prior to bidding, the Contractor shall make a thorough investigation of the project area to satisfy himself/herself as to the location, condition and characteristics of any and all facilities and features, which may affect the work. No additional compensation will be made for any extra expense relating to an existing facility or feature. The Contractor hereby agrees to make no claims against the Owner, the Engineer, and their representatives relating to the existence or lack thereof, location, condition and/or characteristics of any existing facilities or features

C. Protection of Existing Utilities

Airfield lighting cables; electric power lines; telephone lines; computer cables; airport power and control cables; transmission and distribution water lines; and sanitary force mains may be located in the areas of construction. Disruption of these utilities could seriously disrupt the operation of the airport. Actual locations are uncertain, and the Contractor is required to verify all locations.

Power and control cables leading to and from any Navaids and other facilities shall be protected from any possible damage, including crossing with unauthorized equipment, etc. No grading will be permitted over the cables under any conditions unless shown on the drawings or approved by the Engineer. These provisions intend to make perfectly clear the need for protection of Navaids and other facility cables by the Contractor at all times.

If damage occurs to any utilities, the Contractor may be assessed a fee of $2,000 liquidated damages per cut, which shall only represent the expense incurred by the Owner in coordinating the repair, and which shall not prevent the Owner or others from recovering from the Contractor costs or expenses of any other nature due to damages to utilities. The Contractor will also reimburse the appropriate utility owner for all material and labor costs to repair damaged utilities.

It is understood and agreed that the Owner does not guarantee the accuracy or the completeness of the location information relating to existing utility services, facilities or structures that may be shown on the exhibits or encountered in the work. Any inaccuracy or omission in such information will not relieve Contractor of his responsibility to protect such existing features from damage or unscheduled interruption of service.

It is further understood and agreed that the Contractor shall, upon execution of the contract, notify

the Owner of all utility services or other facilities of his plan of operations. Such notification shall be in writing addressed to the appropriate point-of-contact as provided herein. A copy of each notification shall be given to the Engineer.

In addition to the general written notification provided, it shall be the responsibility of the Contractor to keep such individual Owners advised of changes in his plan of operation that would affect such Owners.

Prior to commencing the work in the general vicinity of an existing utility service or facility, the Contractor shall again notify each such Owner in writing, through the Project Manager, of the plan of operations. If, in the Contractor's opinion, the Owner's assistance is needed to locate the utility service or facility or the presence of a representative of the Owner is desirable to observe the work, such advice should be included in the written notification. Such notification shall be given through the Project Manager by the most expeditious means to reach the utility Owners point-of-contact no later than two normal business days prior to the Contractor's commencement of operations in such general vicinity. The Contractor's failure to give two (2) days notice shall be cause for the Project Manager to suspend construction operations in the general vicinity of a utility service or facility.

Where the outside limits of an underground utility service have been located and staked on the ground, the Contractor shall be required to use excavation methods acceptable to the Project Manager within three (3) feet of the outside limits, at such points as may be required to insure protection from damage due to the Contractors operations. Excavation methods could include the use of hand digging tools, the use of non-ferrous hand tools and could exclude the use of long-handled metal spades.

Should the Contractor damage or interrupt the operation of a utility service or facility by accident or otherwise, he shall immediately notify the proper utility company and the Project Manager and shall take all reasonable measures to prevent further damage or interruption of service. The Contractor, in such events, shall cooperate with the utility service or facility-Owner and the Project Manager continuously until such damage has been repaired and service restored to the satisfaction of the utility or facility Owner.

The Contractor shall bear all direct and indirect costs of damage and restoration of service to any utility service or facility due to his operations, whether or not due to negligence or accident. The Owner reserves the right to deduct such costs from any monies due or which may become due the Contractor or his surety.

Airport owned facilities and properties and privately owned facilities located on airport property, including underground cables, pavements, piping, buildings, turfed areas, vehicles and other facilities/improvements, that are damaged by the Contractor shall, at the election of the Owner, (1) be replaced/repaired by the Contractor to the satisfaction of the Owner or (2) be replaced/repaired by the Owner at the Contractor's expense.

All utilities not shown in the plans and found by the Contractor shall be recorded by the Contractor and submitted to the Airport Manager or Project Manager as Record Drawings.

END OF SP-1

SPECIAL PROVISION NO. 2
AIRPORT PROJECT PROCEDURES

A. Permits
Contractor shall be required to procure and pay for all construction permits if required, and arrange for all inspections and similar procedural items as required by the code enforcement authorities having jurisdiction.

B. Airport Operations
Airport operations shall be maintained throughout this Contract. The Contractor shall in no way curtail or handicap normal operational characteristics of the airport facility except as specifically indicated and specified in these Contract Documents.

C. Limits of Construction
Any surface graded or disturbed outside the construction limits as shown on the plans will be restored and sodded or seeded and mulched as directed by the Engineer at the Contractor's expense.

D. Construction Layout and Stakes
Contractor shall furnish all lines, grades and measurements necessary for the proper prosecution and control of the work and contracted for under these specifications. The Contractor will establish horizontal and vertical control points only. Contractor is thereafter responsible to maintain these control points for use by subsequent contractors.

E. Verification of Existing Conditions
Prior to bidding and commencing with construction, the Contractor shall familiarize himself as to the existing conditions. Should the Contractor discover any inaccuracies, errors or omissions between the actual existing conditions and the Contract Documents, he shall within seven (7) calendar days prior to Bid Opening, notify the Engineer in writing. Submission of Bid by the Contractor shall be held as an acceptance of the existing conditions by the Contractor.

F. Safety and Protection
1. Safety: Inasmuch as each work area will be accessible to and used by the public, the Owner and other companies doing business at the Airport during the construction period, it is the Contractor's responsibility to maintain each work area in a safe, hazard free condition at all times. Should the Owner find the area unsafe at any time, they will notify the Contractor, and the Contractor shall take whatever steps necessary to remedy the unsafe condition. Should the Contractor not be immediately available for corrective action, the Owner will remedy the problem and the Contractor shall reimburse the Owner for the expense of such correction.

2. Protection of Property: Fixed structures, equipment, paving, landscaping and vehicles (automobiles, trucks, etc.) shall be protected with drop cloths, shielding and other appropriate measures to ensure maximum protection of all property and vehicles.

G. Pre-Construction Conference
Before beginning work at the site, the Contractor shall attend a pre-construction conference and bring with him the superintendent employed for this project. In the event the Contractor is unable to attend, he shall send a letter of introduction with the superintendent in which he advises the superintendent's full name and states that he is assigned to the project and will be in full responsible charge. This conference will be called by the Engineer, who will arrange for the Owner's representative

and other interested parties to be present. At this time, all parties will discuss the project under contract and prepare a program of procedure in keeping with requirements of the drawings and specifications. The superintendent will henceforth make every effort to expeditiously coordinate all phases of the work, including the required reporting procedure, to obtain the end result within the full purpose and intent of the drawings and specifications for the project.

H. Coordination and Progress Meetings

1. Weekly Coordination and Progress Meetings: The Contractor / Engineer will hold weekly general project coordination and progress meetings at regularly scheduled times convenient for all parties involved. These meetings are in addition to specific meetings held for other purposes, such as special project meetings and special pre-installation meetings. The Engineer will require representation at each meeting by every party currently involved in coordination or planning for the work of the entire project. Meetings will be conducted in a manner which will resolve coordination problems.

2. The Engineer will record results of the meeting and distribute copies to everyone in attendance and to others affected by decisions or actions resulting from each meeting.

I. Administrative/Supervisory Personnel

The Contractor shall provide a full-time Project Management Team consisting of a Contractor's Engineer, Project Superintendent and other supervisory personnel for the duration of the Project. The names and qualifications of this team for this work shall be submitted to the Owner as part of the Bidder Qualification Form. They shall have a minimum of five (5) years of experience on suitable projects of equal difficulty. Either the Contractor's Engineer or the Project Superintendent shall be at the construction site at all periods when work is in progress. This person shall have full authority to act in the Contractor's behalf. It is agreed and understood that, if requested in writing by the Owner, the Contractor shall replace any member of the team with another meeting the required qualifications within three (3) days of the receipt of the request.

J. Special Reports

1. Reporting Unusual Events: When an event of an unusual and significant nature occurs at the site, the Contractor shall prepare and submit a special report to the Engineer. List chain of events, persons participating, response by the Contractor's personnel, an evaluation of the results or effects and similar pertinent information. Advise the Owner and Engineer as soon as possible when such events are known.

2. Submit special reports directly to the Owner within one day of occurrence. Submit a copy of the report to the Engineer and other entities that are affected by the occurrence within one day of the occurrence.

K. Schedule of Work

1. Prepare and submit, in triplicate, for the Engineer's information, progress schedules for the work.

2. Progress schedules shall relate to the entire project to the extent required by the Contract Documents and shall provide for expeditious and practicable execution of the work.

3. Progress schedules shall be updated monthly.

4. Percent complete shall be based on actual construction in place or dollar volume of the work. If dollar volume of the work reflects the greater percent complete, the maximum percent complete shall in no case exceed 5 percent of the value of the in-place construction.

L. Progress Schedule

1. Preliminary Schedule: Within 15 days after date of Notice of Award and Acceptance or at the Pre-Construction Conference, whichever is earlier, the Contractor shall submit his preliminary network phasing diagram (Preliminary Schedule) indicating a comprehensive overview of the Project including an activity line for each of the work segments to be performed at the site.

   a. Arrange the schedule to indicate required sequencing of work and to show time allowances for submittals, inspections, and similar time margins.

   b. The submitted schedule will be reviewed by the Engineer and Owner for conformance to Critical Dates and overall project completion time criteria. Lack of this information will be cause for rejection of the schedule.

   c. Following initial submittal of the schedule to and response by the Engineer, print and distribute the Progress Schedule to entities with a need-to-know responsibility, including three (3) copies to the Engineer. Revise at intervals matching payment requests, and redistribute and repost. Provide the copies required with payment requests.

M. Maintenance of Schedule

The Contractor's Progress Schedule must be updated on a monthly basis, and a copy thereof submitted with each of the Contractor's Applications for Payment. The updated Progress Schedule shall not only indicate revisions to the Schedule for upcoming work but show "as-built" schedule progress data. The Engineer will not recommend for payment by the Owner an Application for Payment without the Contractor's submission of a Monthly Schedule Update.

1. If the Contractor's Monthly Schedule Update reflects, or the Engineer determines, that the Contractor is at least ten percent (10%) behind the original Progress Schedule or fourteen (14) or more calendar days behind the original Progress Schedule for:

   a. the work as a whole;

   b. a major Contract item;

   c. an item of work which is on the critical path; or

   d. an item of work not on the original critical path that, because of the delay or anticipated delay became a critical path item;

   then the Contractor must submit with the Monthly Schedule Update his proposed plan for bringing the work back on schedule and completing the Work within the Contract time.

2. The Progress Schedule shall be coordinated by the Owner's Project Administrator with the overall schedule for the Airport Projects. The Contractor is required to revise the Progress Schedule promptly in accordance with the conditions of the work, subject to approval by the Owner's Project Coordinator and the Engineer.

3. The Contractor shall comply fully with all time and other requirements of the Contract Documents. Recommendation of an Application of Payment by the Engineer and payment thereon by the Owner, without the submission of a Monthly Schedule Update, shall not constitute a waiver of the requirements of such updates, nor shall it relieve the Contractor from the obligation to complete the Work within the Contract Time.

4. Should a review of work indicate a critical path (milestone) item has fallen behind the approved schedule, at the option of the Engineer, funds equal to the established liquidated damages for the number of calendar days behind schedule will be withheld until that critical path item is brought back on schedule.

N. Changes in the Schedule

1. Minor Changes: Each week, prior to the weekly coordination meeting during the time of the contract, the Contractor shall notify the Engineer and Engineer of any minor changes that are anticipated in the schedule for the following week.

2. Major Changes: If for any reason a major change in the approved schedule is anticipated, the Contractor shall make the necessary changes to the schedule and resubmit the revised schedule for approval.

   Copies of the approved schedule shall be posted in the Contractor's field office with completed work identified in colored pencil.

O. Maintenance of Traffic

1. The Contractor shall not obstruct nor create a hazard to any traffic during the prosecution of the work and shall be responsible for repair of all damage to existing pavement or facilities caused by his operations.

2. Beginning date of Contractor's Responsibility: The Contractor's responsibility for maintenance of traffic shall begin on the day he starts the work and continue until Final Completion and Acceptance of the Project.

3. Sections Not Requiring Traffic Maintenance: The Contractor will not be required to maintain traffic over those portions of the Project where no work is to be accomplished or where construction operations will not affect aircraft operations. The Contractor, however, shall not obstruct nor create a hazard to any traffic during the prosecution of the work and shall be responsible for repair of any damage to existing pavement or facilities caused by his operations.

4. Traffic During Construction: All construction vehicles are required to use existing traffic routes. Normal traffic lanes are not to be used as staging areas for arriving delivery vehicles. The Contractor's employees shall utilize the designated Contractor employee parking area.

5. Contractor Signing: The Contractor may furnish and install construction traffic directional signs along the existing traffic route. The signs shall depict Contractor's logo or name, directional arrows and "deliveries". Signs shall be of sufficient size to have 6" high message and shall be located at each decision point. All signs and their locations shall be approved by the Engineer. NO OTHER SIGNS ARE PERMITTED.

6. Material Deliveries: The Contractor shall make his own material and equipment deliveries. No deliveries shall be made by vendors or suppliers without escort by a representative of the Contractor.

7. Notification: On days when construction traffic is expected to be extra heavy or when oversized pieces of equipment are to be delivered, give minimum forty-eight (48) hours notice to the Engineer.

8. All Contractor material orders for the work site shall be delivered to the areas designated as the Contractor's receiving area. All deliveries shall be made only during the Contractor's working hours.

9. Interference Request:
   a. The Contractor shall be responsible for notifying the Owner in writing and securing approval for any and all interruptions or interference with traffic (pedestrian, automobile or other necessary function of the Airport.

   b. The request shall include a traffic control plan indicating barricades, lighting and flagger where required.

   c. Such notification shall be made as soon as possible but in no case less than 48 hours prior to interference.

   d. It is suggested that the Contractor utilize a standard form addressed to the Owner with a blank space for a description of the interference, the exact area affected, the exact times and dates the interference will take place and blanks for the Owner's approval. The forms shall be submitted in duplicate. No interference will be allowed until the Contractor has received back a copy of the approved interference request form.

10. Personnel Traffic:
    a. General: All construction personnel shall be restricted to construction areas. They shall wear shirts with sleeves and long pants at all times.

    b. Use of Public Areas: The Contractor's workmen shall not utilize public areas for taking their "work breaks" or "lunch breaks." Areas for this purpose can be designated by the Owner upon request. No Public Toilets shall be used by any workmen at any time.

P. Daily Clean-Up and Trash Removal

1. Debris from this work shall be promptly removed from the site at least daily. It shall not be allowed to become a hazard to the safety of the public.

2. The Contractor shall be responsible for clean-up and trash removal. Accumulation of trash and debris will not be allowed and the Engineer may at any time direct the Contractor to immediately remove his trash and debris from the site of the work when in the opinion of the Owner such trash constitutes a nuisance or in any way hinders the work or the Airports operations. If the Contractor should fail to remove his trash and debris from the site of the work in a timely manner, the Owner may have this work performed and deduct the cost of such from Contractor's payment.

Q. Cleaning and Protection

1. General: During handling and installation of work at the project site, clean and protect work in progress and adjoining work on the basis of continuous daily maintenance. Apply protective covering on installed work to ensure freedom from damage or deterioration.

2. Clean and perform maintenance on installed work as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.

3. Limiting Exposures of Work: To the extent possible through appropriate control and protection methods, supervise performance of the work in such a manner and by such means which will ensure that none of the work, whether completed or in progress, will be subjected to harmful, dangerous, damaging or otherwise deleterious exposure during the construction period. Such exposures include, where applicable, but not by way of limitation the following:

    a. Excessive static or dynamic loading
    b. Excessive internal or external pressures
    c. Solvents
    d. Chemicals
    e. Light
    f. Puncture
    g. Abrasion
    h. Heavy Traffic
    i. Soiling
    j. Combustion
    k. High speed operation, improper lubrication, unusual wear
    l. Improper shipping or handling
    m. Theft
    n. Vandalism

4. Protection at Openings: The Contractor shall provide protection at all openings in structures and finishes to maintain the building weather and dust tight. All protection shall be of solid material and substantial so that it will not be disturbed by wind and weather normal to the area and season, and also tight fitting to prevent noise infiltration.

5. Protection of Improvements:
    a. Damage to Existing Facilities: Existing surfaces and materials of the Owner's property not requiring work by the Contract Documents that is damaged by the Contractor's operations shall be immediately repaired. Repaired surfaces and materials shall match existing adjacent undamaged surfaces and materials. Repair work shall be coordinated with the Engineer and Owner with regard to time and method.

    b. Accidental Demolition: All structures or parts thereof that may become damaged due to accident or Contractor's error shall be restored to their original condition at no cost to the Owner. Materials and equipment being used in the repair or replacement resulting from damage shall be new and shall perform at the manufacturer's published capacities. If the existing equipment or materials cannot be identified, or if unavailable, the selection of the replacement will be subject to approval by the Engineer in writing.

6. Overhead Protection

a. No cranes or other construction equipment shall cross over non-construction personnel, their travel ways or ride systems.

b. The plan of operation of cranes and other hoisting equipment shall be established in writing by the Contractor. This plan of operation shall be subject to approval by the Engineer.

R. Conservation and Salvage

General: It is a requirement for supervision and administration of the Work that construction operations be carried out with the maximum possible consideration given to conservation of energy, water and materials. In addition, maximum consideration shall be given to salvaging materials and equipment involved in performance of the work but not incorporated therein. Refer to other sections for required disposition of salvaged materials which are the Owner's property.

S. Testing Cost Borne by Owner

Unless otherwise specified herein, all initial construction "Quality Assurance" testing costs shall be borne by the Owner. An independent testing laboratory selected and responsible to the Engineer shall perform all "Quality Assurance" testing required by the technical specifications or as directed by the Owner and/or the Engineer.

T. Testing Cost Borne by Contractor

The Contractor shall bear the cost of all “Quality Control” testing to include the following conditions:

1. If substitute materials or equipment are proposed by the Contractor, he shall pay the cost of all tests which may be necessary to satisfy the Engineer that specification requirements are satisfied. The Contractor shall pay for the Engineer's time spent in review and administrating such proposed substitution.

2. If materials or workmanship are used which fail to meet specification requirements, the Contractor shall pay the cost of all re-testing, including laboratory costs, deemed necessary by the Engineer to determine the safety or suitability of the material or element. The Contractor shall make arrangements with the Owner's Testing Laboratory to have all re-testing costs billed directly to the Contractor, or deducted from amounts due to the Contractor unless otherwise directed by the Engineer in writing. The Contractor shall take prompt action to insure that all re-testing costs are paid in a reasonable time period.

3. The Contractor shall pay for all testing costs including, but not limited to, power, fuel, and equipment cost, which may be required for complete testing of all equipment and systems for proper operation.

4. The Contractor shall pay for all testing required for materials, job mix designs, equipment, structures and related items included in all shop drawings and other submittals as required by the Technical Specifications to be submitted and approved by the Engineer prior to construction.

5. The Contractor shall bear all costs necessary for the Quality Control testing as stipulated in General Provisions Section 100.

U. Project Documentation

1. Project Drawings: The successful Contractor will be furnished, at no charge, four (4) copies of drawings and specifications. Additional copies may be purchased at actual cost of reproduction.

A field set of drawings and specifications shall remain on the job site at all times and shall be available at all times to the Engineer. The field set shall be continuously updated to reflect the "as-built" condition of all work included in this Contract.

The Contractor shall immediately include plainly and conspicuously on the field set of drawings, and at appropriate paragraphs in the specifications, all changes or corrections made by addenda and change orders as they are issued.

Approved copies of all shop drawings and other submittals are to be kept on the job site at all times and shall be available at all times to the Engineer.

Changes and deviations from the existing conditions shall be submitted in writing for approval prior to installation. In no case shall any unspecified equipment or materials be installed without prior approval by the Engineer.

2. Record Documents:
   a. Definition: Record copies are defined to include those documents or copies relating directly to performance of the work, which the Contractor is required to prepare or maintain for the Owner's records, recording the work as actually performed. In particular, record copies show changes in the work in relation to the way in which work was shown and specified by the original contract documents and show additional information of value to the Owner's records but not indicated by the original Contract Documents.

      Record copies include newly-prepared drawings (if any are specified), marked-up copies of contract drawings, shop drawings, specifications, addenda and change orders, marked-up product data submittals, record samples, field records for variable and concealed conditions such as excavations and foundations, and miscellaneous record information on work which is otherwise recorded only schematically or not at all.

   b. Record Drawings: The Contractor shall maintain a set of Record Drawings at the job site. These shall be kept legible and current and shall be available for inspection at all times by the Engineer. Show all changes or work added on these Record Drawings in a contrasting color.

      (1) Mark-up Procedure: During progress of the work, maintain a white-print set (blue-line or black-line) of contract drawings and shop drawings, with mark-up of actual installations which vary substantially from the work as originally shown. Mark whatever drawing is most capable of showing actual physical condition, fully and accurately. Where shop drawings are marked up, mark cross-reference on contract drawings at corresponding location. Mark with erasable colored pencil, using separate colors where feasible to distinguish between changes for different categories of work at the same general location. Mark-up important additional information, which was either shown schematically or omitted from original drawings. Give particular attention to information on work concealed, which would be difficult to identify or measure and record at a later date. Note alternate numbers, change order numbers and similar identification. Require each person preparing the mark-up to initial and date the mark-up and indicate the name of the firm. Label each sheet "PROJECT RECORD" in 1-1/2 inch high letters.

In showing changes in the work, use the same legends as used on the original drawings. Indicate exact locations by dimensions and exact elevations by job datum. Give dimensions from a permanent point.

(2) Preparation of Transparencies: In preparation for certification of substantial completion on the last major portion of the work, review the completed mark-up of record drawings and shop drawings with the Engineer. The Engineer will then proceed with preparation of a full set of corrected transparencies for contract drawings. The Engineer will date each updated drawing and label each sheet "PROJECT RECORD" in 1-1/2 inch high letters. Printing as required herein is the responsibility of the Engineer.

(3) Copies, Distribution: Upon completion of transparency record drawings, the Engineer shall prepare three blueline or blackline prints of each drawing, regardless of whether changes and additional information were recorded thereon. The Engineer shall then organize each of the three copies into manageable sets, bind with durable paper cover sheets, and print suitable titles and dates. The mark-up set of prints maintained during the construction period shall be bound in the same manner. The Engineer will retain one copy set. At the completion of the project, the Engineer shall submit one set of mylars and one set of prints with changes noted thereon to the Owner.

c. Record Drawings shall contain the names, addresses and phone numbers of the General Contractor and the major subcontractors.

d. The Engineer shall be the sole judge of the acceptability of the Record Drawings. Receipt and acceptance of the As-Built drawings is a pre-requisite for Final Payment.

3. Record Specifications
   a. During the progress of the work, maintain one copy of specifications, including addenda, change orders and similar modifications issued in printed form during construction. Mark-up variations (of substance) in actual work in comparison with text of specifications and modifications as issued. Give particular attention to substitutions, selection of options, and similar information on work where it is concealed or cannot otherwise be readily discerned at a later date by direct observation. Note related record drawing information and product data where applicable. Upon completion of the mark-up, submit to the Engineer for the Owner's records. Label the front cover "PROJECT RECORD" in 1-1/2 inch high letters.

   b. Where the manual is printed on one side of the page only, mark variations on the blank left-hand pages of the Project Manual, facing printed right-hand pages containing original text affected by variation.

4. Record Product Data
   During progress of the work, maintain one copy of each product data submittal and mark up significant variations in the actual work in comparison with submitted information. Include both variations in product as delivered to site and variations from the manufacturer's instructions and recommendations for installation. Give particular attention to concealed products and portions of the work which cannot otherwise be readily discerned at a later date by direct observation. Note related change orders and mark-ups of record drawings and specifications. Upon completion of the mark-up, submit a complete set of product data submittals to the Engineer for the Owner's records. Label each data submittal "PROJECT RECORD" in 1-1/2 inch high letters.

5. Record Sample Submittal
   Immediately prior to the date(s) of substantial completion, the Engineer and Owner's personnel will meet with the Contractor on site and will determine if any of the submitted samples maintained by the Contractor during progress of the work are to be transmitted to the Owner for record purposes. Comply with the Engineer's instructions for packaging, identification marking and delivery to the Owner's sample storage space. Dispose of other samples in the manner specified for disposal of surplus and waste materials, unless otherwise indicated by the Engineer.

6. Miscellaneous Record Submittals
   Refer to other sections of these specifications for requirements of miscellaneous record-keeping and submittals in connection with actual performance of the work. Immediately prior to the date(s) of substantial completion, complete miscellaneous records and place in good order, properly identified and bound or filed, ready for continued use and reference. Submit to the Engineer for the Owner's records. Categories of requirements resulting in miscellaneous work records are recognized to include, but are not limited to, the following:

   a. Required field records on excavations, foundations, underground construction, wells and similar work.

   b. Accurate survey showing locations and elevations of underground lines, including invert elevations of drainage piping, valves, tanks and manholes.

   c. Surveys by a Registered Land Surveyor establishing lines and levels of finished construction.

   d. Soil treatment certification.

   e. Inspection and Test Reports: Where not processed as shop drawings or product data.

   f. Asphalt or PCC concrete pavement or structural mix design record.

   g. Concrete block certification.

7. Project Closeout
   Closeout is hereby defined to include general requirements near end of Contract Time, in preparation for final acceptance, final payment, normal termination of contract, occupancy by the Owner and similar actions evidencing completion of the work. Specific requirements for individual units of work are specified in other sections. Time of closeout is directly related to substantial completion, and therefore may be a single time period for the entire work or a series of time periods for individual parts of the work which have been certified as substantially complete at different dates. The time variation, if any, shall be applicable to other provisions of this section.

8. Prerequisites to Substantial Completion
   a. Prior to requesting the Engineer's inspection for certification of substantial completion, for either the entire work or portions thereof, complete the following and list known exceptions in request:

      (1) In the progress payment request coincident with or first following the date claimed, show 100% completion for the portion of work claimed as "substantially completed", or list incomplete items, value of incompletion, and reasons for being incomplete.

(2) Include supporting documentation for completion as indicated in the Contract Documents.

(3) Submit statement showing accounting of changes to the Contract Sum.

(4) Advise the Owner of pending insurance change-over requirements.

(5) Obtain and submit releases enabling the Owner's full and unrestricted use of the work and access to services and utilities, including, where required, occupancy permits, operating certificates, and similar releases.

(6) Deliver tools, spare parts, extra stocks of materials, and similar physical items to the Owner.

(7) Make the final change-over of locks and transmit keys to the Owner and advise Owner's personnel of change-over in security provisions.

(8) Complete start-up testing of systems and instructions of Owner's operating-maintenance personnel. Discontinue or change over and remove from the project site, temporary facilities and services, along with construction tools and facilities, mock-ups and similar elements.

b. Inspection Procedures: Upon receipt of the Contractor's request, the Engineer will proceed with inspection or advise the Contractor of prerequisites not fulfilled. Following initial inspection, the Engineer will prepare a Certificate of Substantial Completion or advise the Contractor of the work which must be performed prior to issuance of the Certificate and will perform a repeat inspection when requested and assured by the Contractor that the work has been substantially completed. Results of the completed inspection will form the initial "punchlist" for final acceptance.

9. Prerequisites to Final Acceptance
   a. Prior to requesting the Engineer's final inspection for certification of final acceptance as required by the General Provisions, the Contractor shall complete the following and list known exceptions in the request:

      (1) Submit a certified copy of the Engineer's final punchlist of itemized work to be completed or corrected, stating that each item has been completed or otherwise resolved for acceptance, endorsed and dated by the Engineer.

      (2) Submit final meter readings for utilities, measured record of stored fuel, and similar data as of time of substantial completion or when the Owner took possession of and responsibility for corresponding elements of the work.

      (3) Complete final cleaning up requirements, including touch-up of marred surfaces.

      (4) Touch up and otherwise repair and restore marred exposed finishes.

   b. Re-inspection Procedures: Following Substantial Completion, the Contractor shall correct or remedy all Punchlist items to the satisfaction of the Engineer and Owner within a two (2) week

period after the Date of Substantial Completion. If subsequent inspections are necessary after the two week period in order to eliminate all deficiencies, the cost of all subsequent inspections with respect to the Owner and Engineer's time shall be paid by the Contractor. When ready, the Contractor shall request in writing a final inspection of the work. Upon completion of re-inspection, the Engineer will prepare a Certificate of Final Acceptance or advise the Contractor of work not completed or obligations not fulfilled as required for Final Acceptance. If necessary, the procedures will be repeated.

10. Prerequisites to Final Payment
    a. Final Payment: Final Payment will be made after final acceptance of the project by the Engineer and Owner upon request by the Contractor on condition that the Contractor:

        (1) Furnish properly executed complete releases of lien from all materialmen and subcontractors who have furnished materials or labor for the Work and submit supporting documentation not previously submitted and accepted. Include certificates of insurance for products and completed operations where required.

        (2) Furnish the Contractor's Affidavit of Release of Liens (2 copies) that all materialmen and subcontractors have been paid in full. In the event they have not been paid in full, the Owner shall retain a sufficient sum to pay them in full and at his option may make direct payment as provided in Chapter 84, Florida Statutes, as amended, to obtain complete releases of lien.

        (3) Furnish Contractor's Affidavit of Debts and Claims (2 copies).

        (4) Furnish required sets of record drawings and maintenance and operating instructions of new mechanical equipment.

        (5) Furnish guarantees signed by subcontractors, material suppliers, and countersigned by the Contractor for operating equipment.

        (6) Submit specific warranties, workmanship-maintenance bonds, maintenance agreements, final certifications and similar documents.

        (7) Furnish a signed guarantee, in form acceptable to the Engineer and Owner agreeing to repair or replace as decided by the Engineer, all work and materials that prove defective within one (1) year (or more) from the date of final acceptance, including restoration of all other work damaged in making such repairs or replacements.

        (8) Furnish Consent of Surety to final payment.

        (9) Submit updated final statement, accounting for final changes to Contract Sum.

        (10) Submit evidence of final, continuing insurance coverage complying with insurance requirements.

        (11) Certify that all Social Security, Unemployment and all other taxes (City, State, Federal Government) have been paid.

(12) Provide receipt, as applicable, of affidavits certifying all labor standards of local, State, or Federal requirements have been complied with by the Contractor.

(13) Submit actual DBE participation percentages.

11. Record Document Submittals
Specific requirements for record documents are shown in the section, PROJECT RECORD DOCUMENTS. Other requirements are indicated in the General Provisions. General submittal requirements are indicated in "Submittals" sections. Do not use record documents for construction purposes; protect from deterioration and loss in a secure, fire-resistive location; provide access to record documents for the Engineer's reference during normal working hours.

a. Record Drawings: The Engineer shall organize record drawing sheets into manageable sets, bind with durable paper cover sheets and print suitable titles, dates and other identification on the cover of each set.

b. Record Specifications: Upon completion of mark-ups, submit to the Engineer for the Owner's records.

c. Record Product Data: Upon completion of mark-ups, submit complete sets to the Engineer for the Owner's records.

d. Record Sample Submittal: Comply with the Engineer's instructions for packaging, identification, marking and delivery to the Owner's sample storage space.

e. Miscellaneous Record Submittals: Complete miscellaneous records and place in good order, properly identified and bound or filed, ready for continued use and reference. Submit to the Engineer for the Owner's records.

f. Maintenance Manuals: Complete, place in order, properly identify and submit to the Engineer for the Owner's records.

12. Closeout Procedures
General Operating and Maintenance Instructions: Arrange for each installer of work requiring continuing maintenance or operation, to meet with the Owner's personnel at the project site to provide basic instructions needed for proper operation and maintenance of the entire work. Include instructions by manufacturer's representatives where installers are not expert in the required procedures. Review maintenance manuals, record documentation, tools, spare parts and materials, lubricants, fuel, identification system, control sequences, hazards, cleaning and similar procedures and facilities. For operational equipment, demonstrate start-up, shut-down, emergency operations, noise and vibration adjustments, safety, economy, efficiency adjustments, and similar operations. Review maintenance and operations in relation with applicable warranties, agreements to maintain bonds, and similar continuing commitments.

V. Final Cleaning

1. Provide final cleaning of the work, at the time indicated, consisting of cleaning each surface or unit of work to normal "clean" condition in a manner acceptable to the Engineer and Owner.

2. Removal of Protection: Remove temporary protection devices and facilities which were installed during the course of the work to protect previous completed work during the remainder of the construction period.

3. Compliances: Comply with safety standards and governing regulations for cleaning operations. Do not burn waste materials at site, bury debris or excess materials on the Owner's property. Do not discharge volatile or other harmful or dangerous materials into drainage systems. Remove waste materials from site and dispose of in a lawful manner.

Where extra materials of value remaining after the completion of the associated work have become the Owner's property, dispose of these as directed by the Owner.

END OF SP-2

SPECIAL PROVISION NO. 3
STAGING AND PHASING PROVISIONS FOR CONTRACTOR OPERATIONS

The Contractor shall prepare a written plan for his staging and phasing procedures in conformance with the Contract Drawings for all work. It shall be understood that the outline requirements presented are the minimum requirements. The Contractor is expected to provide added detailing as appropriate to fully inform the Project Manager of his/her intended method of operations and his/her schedules for proposed work.

The Engineer reserves the right to make changes to this plan to facilitate changes to the airport operations, which are in the best interest of the airport.

All costs associated with preparing the storage and staging area site shall be borne by the Contractor. This includes, but is not limited to, clearing and grading of the site, desired stabilization of the work yard surface, construction of any temporary utilities, access roads, all security fencing, etc.

END OF SP-3

SPECIAL PROVISION NO. 4

TIME OF COMPLETION AND LIQUIDATED DAMAGES

A. General

This project consists of several project elements, which are defined throughout the contract documents. The specific details pertaining to contract sequence and time are an important aspect of the project for planning of the various operational requirements of the airport. The Contractor shall be required to comply with the general intent of the phasing, scheduling and duration of the project as outlined in the contract documents or as otherwise approved by submittals allowed by the documents.

B. Construction Time

1. The construction plans and specifications set forth the time allocated to each of the elements of work required as part of this contract. The work shall be completed within the times established or as otherwise approved or liquidated damages in the amounts specified hereafter shall be assessed.

2. The Contractor must request and receive written approval from the Project Manager for acceptance of the work included in each of the phases or work prior to satisfying the requirements of being "complete."

3. The specified times for each of the project phases shall be outlined in these specifications or as otherwise agreed to in writing among the Owner, Project Manager and Contractor based upon the actual contract work awarded.

Substantial Completion contract time = **600 Calendar Days** (This is a calendar day contract);

Total contract time = **630 Calendar Days**

C. Construction Schedule

1. The Contractor shall prepare and submit a detailed schedule for his operations within the general limits and phasing restrictions included in the contract documents. This schedule shall be based upon the actual work ultimately awarded. This schedule shall be reviewed with the County, Project Manager and Contractor in order to establish the final approved schedule as it relates to this Special Provision.

D. Liquidated Damages

1. For this project, the rates for liquidated damages shall be One Thousand, Three Hundred and 00/100 dollars ($1,300.00) per calendar day.

END OF SP-4

SPECIAL PROVISION NO. 5

FEDERAL LABOR AND EEO PROVISIONS

1 LABOR PROVISIONS FOR CONTRACTS

1.1 Minimum Wages:

1.1.1. All laborers and mechanics employed or working upon the site of the work (or under the United States Housing Act of 1937 or under the Housing Act of 1949 in the construction or development of the project), will be paid unconditionally and not less often than once a week, and without subsequent deduction or rebate on any account (except such payroll deductions as are permitted by regulations issued by the Secretary of Labor under the Copeland Act (29 CFR Part 3)), the full amount of wages and bona fide fringe benefits (or cash equivalents thereof) due at time of payment computed at rates not less than those contained in the wage determination of the Secretary of Labor which is attached hereto and made a part hereof, regardless of any contractual relationship which may be alleged to exist between the Contractor and such laborers and mechanics. Contributions made or costs reasonably anticipated for bona fide fringe benefits under Section 1(b)(2) of the Davis-Bacon Act on behalf of laborers or mechanics, are considered wages paid to such laborers and mechanics, subject to the provisions of Paragraph A.(4) of this section; also, regular contributions made or costs incurred for more than a weekly period (but not less often than quarterly) under plans, funds, or programs which cover the particular weekly period, are deemed to be constructively made or incurred during such weekly period. Such laborers and mechanics shall be paid the appropriate wage rate and fringe benefits on the wage determination for the classification of work actually performed, without regard to skill, except as provided in Paragraph 1.1.4 of this Special Provision. Laborers or mechanics performing work in more than one classification may be compensated at the rate specified for each classification for the time actually worked therein: PROVIDED, that the Contractor's payroll records accurately set forth the time spent in each classification in which work is performed. The wage determination (including any additional classification and wage rates conformed under Paragraph 1.1.2 of this Special Provision) and the Davis-Bacon poster (WH-1321) shall be posted at all times by the Contractor and its Subcontractors at the site of the Work in a prominent and accessible place where it can be easily seen by the workers. (29CFR5.5(a)(1)(i))

1.1.2. The contracting officer shall require that any class of laborers or mechanics which is not listed in the wage determination and which is to be employed under the Contract shall be classified in conformance with the wage determination. The contracting officer shall approve an additional classification and wage rate and fringe benefits therefore only when the following criteria have been met:

(a) The Work to be performed by the classification requested is not performed by a classification in the wage determination; and

(b) The classification is utilized in the area by the construction industry; and

(c) The proposed wage rate, including any bona fide fringe benefits, bears a reasonable relationship to the wage rates contained in the wage determination.

1.1.3. If the Contractor and the laborers and mechanics to be employed in the classification (if known), or their representatives, and the contracting officer agree on the classification and wage rate (including the amount designated for fringe benefits where appropriate), a report of the action taken shall be sent by the contracting officer to the Administrator of the Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Washington, D.C. 30320. The Administrator, or an authorized representative, will approve, modify, or disapprove every additional classification action within 30 days of receipt and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.

1.1.4. In the event the Contractor, the laborers or mechanics to be employed in the classification or their representatives, and the contracting officer do not agree on the proposed classification and wage rate (including the amount designated for fringe benefits, where appropriate), the contracting officer shall refer the questions, including the views of all interested parties and the recommendation of the contracting officer, to the Administrator for determination. The Administrator, or an authorized representative, will issue a determination within 30 days of receipt and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.

The wage rate (including fringe benefits where appropriate) determined pursuant to Paragraphs 1.1.3 and 1.1.4 of this Special Provision, shall be paid to all workers performing work in the classification under this contract from the first day on which work is performed in the classification. (29CFR5.5(a)(1)(ii))

1.1.5. Whenever the minimum wage rate prescribed in the contract for a class of laborers or mechanics includes a fringe benefit which is not expressed as an hourly rate, the Contractor shall either pay the benefit as stated in the wage determination or shall pay another bona fide fringe benefit or an hourly cash equivalent thereof. (29CFR5.5(a)(1)(iii))

1.1.6. If the Contractor does not make payments to a trustee or other third person, the Contractor may consider as part of the wages of any laborer or mechanic the amount of any costs reasonably anticipated in providing bona fide fringe benefits under a plan or program, PROVIDED, that the Secretary of Labor has found, upon the written request of the Contractor, that the applicable standards of the Davis-Bacon Act have been met. The Secretary of Labor may require the Contractor to set aside in a separate account assets for the meeting of obligations under the plan or program. (29CFR5.5(a)(1)(iv))

1.2 Withholding:

1.2.1. The Federal Aviation Administration (FAA) shall upon its own action or upon written request of an authorized representative of the Department of Labor withhold or cause to be withheld from the Contractor under this contract or any other Federal contract with the same prime contractor, or any other Federally-assisted contractor subject to Davis-Bacon prevailing wage requirements, which is held by the same prime contractor, so much of the accrued payments or advances as may be considered necessary to pay laborers and mechanics, including apprentices, trainees, and helpers, employed by the Contractor or any Subcontractor the full amount of wages required by the contract. In the event of failure to pay any laborer or mechanic, including any apprentices, trainees and helpers, employed by the Contractor or any Subcontractor the full amount of wages required by the Contract, or in the event of failure to pay any laborer or mechanic, including any apprentice, trainee, or

helper employed or working on the site of the Work (or under the United States Housing Act of 1937 or under the Housing Act of 1949) on the construction or development of the Project), all or part of the wages required by the Contract, the FAA may, after written notice to the Contractor, sponsor, applicant or Owner, take such action as may be necessary to cause the suspension of any further payment, advance or guarantee of funds until such violations have ceased. (29CFR5.5(a)(2))

1.3 Payroll and Basic Records:

1.3.1. Payrolls and basic records relating thereto shall be maintained by the Contractor during the course of the work and preserved for a period of three years thereafter for all laborers and mechanics working at the site of the work (or under the United States Housing Act of 1937 or under the Housing Act of 1949, in the construction or development of the project). Such records shall contain the name, address and social security number of each such worker, his or her correct classification, hourly rates of wages paid (including rates of contributions or costs anticipated for bona fide fringe benefits or cash equivalents thereof of the types described in Section 1(b)(2)(B) of the Davis-Bacon Act), daily and weekly number of hours worked, deductions made and actual wages paid. Whenever the Secretary of Labor has found under 29 CFR 5.5(a)(1)(iv) that the wages of any laborer or mechanic include the amount of any costs reasonably anticipated in providing benefits under a plan or program described in Section 1(b)(2)(B) of the Davis-Bacon Act, the Contractor shall maintain records which show that the commitment to provide such benefits is enforceable, that the plan or program is financially responsible, and that the plan or program has been communicated in writing to the laborers or mechanics affected, and records which show the costs anticipated or the actual cost incurred in providing such benefits. Contractors employing apprentices or trainees under approved programs shall maintain written evidence of the registration of apprenticeship programs and certification of trainee programs, the registration of the apprentices and trainees, and the ratios and wage rates prescribed in the applicable programs. (29CFR5.5(a)(3)(i))

1.3.2. The Contractor shall submit weekly for each week in which any Contract Work is performed a copy of all payrolls to the FAA if the FAA is a party to the Contract. The Contractor will submit the payrolls to the applicant, sponsor, or owner, as the case may be, for transmission to the FAA. The payrolls submitted shall set out accurately and completely all of the information required to be contract, but if the agency is not such a party, then maintained under Paragraph 5.5(a)(3)(i) of Regulations 29 CFR Part 5. This information may be submitted in any form desired. Optional Form WH-347 is available for this purpose and may be purchased from the Superintendent of Documents (Federal Stock Number 029-005-00014-1), U.S. Government Printing Office, Washington, D.C. 20402. The prime contractor is responsible for the submission of copies of payrolls by all subcontractors.

Each payroll submitted shall be accompanied by a "Statement of Compliance," signed by the contractor or subcontractor or its agent who pays or supervises the payment of the persons employed under the contract and shall certify the following:

(a) That the payroll for the payroll period contains the information required to be maintained under Paragraph 5.5(a)(3)(i) of the Regulations, 29 CFR Part 5 and that such information is correct and complete.

(b) That each laborer or mechanic (including each helper, apprentice, and trainee) employed on the contract during the payroll period has been paid the full weekly wages earned, without rebate, either directly or indirectly, and that no deductions have been made either directly or indirectly from the full wages earned, other than permissible deductions as set forth in Regulations, 29 CFR Part 3.

(c) That each laborer or mechanic has been paid not less than the applicable wage rates and fringe benefits or cash equivalents for the classification of work performed, as specified in the applicable wage determination incorporated into the contract.

The weekly submission of a properly executed certification set forth on the reverse side of Optional Form WH-347 shall satisfy the requirement for submission of the "Statement of Compliance" required by paragraph C.(2)(b) of this section.

The falsification of any of the above certifications may subject the contractor or subcontractor to civil or criminal prosecution under Section 1001 of Title 18 and Section 231 of Title 31 of the United States Code. (29CFR5.5(a)(3)(ii))

1.3.3. The contractor or subcontractor shall make the records required under Paragraph 1.3.1 of this section available for inspection, copying, or transcription by authorized representatives of the FAA or the Department of Labor, and shall permit such representatives to interview employees during working hours on the job. If the contractor or subcontractor fails to submit the required records or to make them available, the Federal agency may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds. Furthermore, failure to submit the required records upon request or to make such records available may be grounds for debarment action pursuant to 29 CFR 5.12. (29CFR5.5(a)(3)(iii))

1.4 Apprentices and Trainees:

1.4.1. **Apprentices.** Apprentices will be permitted to work at less than the predetermined rate for the work they performed when they are employed pursuant to and individually registered in a bona fide apprenticeship program registered with the U.S. Department of Labor, Employment and Training Administration, Bureau of Apprenticeship and Training, or with a State Apprenticeship Agency recognized by the Bureau, or if a person is employed in his or her first 90 days of probationary employment as an apprentice in such an apprenticeship program, who is not individually registered in the program, but who has been certified by the Bureau of Apprenticeship and Training or a State Apprenticeship Agency (where appropriate) to be eligible for probationary employment as an apprentice. The allowable ratio of apprentices to journeymen on the job site in any craft classification shall not be greater than the ratio permitted to the contractor as to the entire work force under the registered program. Any worker listed on a payroll at an apprentice wage rate, who is not registered or otherwise employed as stated above, shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any apprentice performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. Where a contractor is performing construction on a project in a locality other than that in which its program is registered, the ratios and wage rates (expressed in percentages of the journeyman's hourly rate) specified

in the contractor's or subcontractor's registered program shall be observed. Every apprentice must be paid at not less than the rate specified in the registered program for the apprentice's level of progress, expressed as a percentage of the journeymen hourly rate specified in the applicable wage determination. Apprentices shall be paid fringe benefits in accordance with the provisions of the apprenticeship program. If the apprenticeship program does not specify fringe benefits, apprentices must be paid the full amount of fringe benefits listed on the wage determination for the applicable classification. If the Administrator determines that a different practice prevails for the applicable apprentice classification, fringe benefits shall be paid in accordance with that determination. In the event the Bureau of Apprenticeship and Training, or a State Apprenticeship Agency recognized by the Bureau, withdraws approval of an apprenticeship program, the contractor will no longer be permitted to utilize apprentices at less than the applicable predetermined rate acceptable program is approved. (29CFR5.5(a)(4)(i))

1.4.2. **Trainees.** Except as provided in 29 CFR 5.16, trainees will not be permitted to work at less than the predetermined rate for the work performed unless they are employed pursuant to and individually registered in a program which has received prior approval, evidenced by formal certification by the U. S. Department of Labor, Employment and Training Administration. The ratio of trainees to journeymen on the job site shall not be greater than permitted under the plan approved by the Employment and Training Administration. Every trainee must be paid at not less than the rate specified in the approved program for the trainee's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination. Trainees shall be paid in full benefits in accordance with the provisions of the trainee program. If the trainee program does not mention fringe benefits listed on the wage determination unless the Administrator of the Wage and Hour Division determines that there is an apprenticeship program associated with the corresponding journeyman wage rate on the wage determination which provides for less than full fringe benefits for apprentices. Any employee listed on the payroll at a trainee rate who is not registered and participating in a training plan approved by the Employment and Training Administration shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any trainee performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. In the event the Employment and Training Administration withdraws approval of a training program, the contractor will no longer be permitted to utilize trainees at less than the applicable predetermined rate for the work performed until an acceptable program is approved. (29CFR5.5(a)(4)(ii))

1.4.3. **Equal Employment Opportunity.** The utilization of apprentices, trainees and journeymen under this part shall be in conformity with the equal employment opportunity requirements of Executive Order 11246, as amended, and 29 CFR Part 30. (29CFR5.5(a)(4)(iii))

1.5 **Compliance with Copeland Act Requirements:** The contractor shall comply with the requirements of 29 CFR Part 3, which are incorporated by reference in this contract. (29CFR5.5(a)(5))

1.6 **Subcontractors:** The contractor or subcontractor shall insert in any subcontracts the clauses contained in Paragraphs 1.1 through 1.10 of this Special Provision [29CFR5.5(a)(1) through (10)] and such other clauses as the Federal Aviation Administration may by appropriate instructions require, and also a clause requiring the subcontractors to include these clauses in any lower tier

subcontracts. The prime contractor shall be responsible for the compliance by any subcontractor or lower tier subcontractor with all the contract clauses in 29 CFR 5.5. (29CFR5.5(a)(6))

1.7 Contract Termination: Debarment: A breach of the contract clauses in 29 CFR 5.5 may be grounds for termination of the contract, and for debarment as a contractor and a subcontractor as provided in 29 CFR 5.12. (29CFR5.5(a)(7))

1.8 Compliance with Davis-Bacon and Related Act Requirements: All rulings and interpretations of the Davis-Bacon and Related Acts contained in 29 CFR Parts 1,3 and 5 are herein incorporated by reference in this contract. (29CFR5.5(a)(8))

1.9 **Disputes Concerning Labor Standards:** Disputes arising out of the labor standards provisions of this contract shall not be subject to the general disputes clause of this contract. Such disputes shall be resolved in accordance with the procedures of the Department of Labor set forth in 29 CFR Parts 5, 6 and 7. Disputes within the meaning of this clause include disputes between the contractor (or any of its subcontractors) and the contracting agency, the U. S. Department of Labor, or the employees or their representatives. (29CFR5.5(a)(9))

1.10 Certification of Eligibility:

1.10.1. By entering into this contract, the contractor certifies that neither it (nor he or she) nor any person or firm who has an interest in the contractor's firm is a person or firm ineligible to be awarded Government contracts by virtue of Section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

1.10.2. No part of this contract shall be subcontracted to any person or firm ineligible for award of a Government contract by virtue of Section 3(a) of the Davis-Bacon Act CFR 5.12(a)(1).

1.10.3. The penalty for making false statements is prescribed in the U. S. Criminal Code, 18 U.S.C. 1001. (29CFR5.5(a)(10))

1.11 **Contract Work Hours and Safety Standards Act:** (29CFR5.5(b))

1.11.1. **Overtime requirements.** No contractor or subcontractor contracting for any part of the contract work which may require or involve the employment of laborers or mechanics shall require or permit any such laborer or mechanic in any workweek in which he or she is employed on such work to work in excess of forty hours in such workweek unless such laborer or mechanic receives compensation at a rate not less than one and one-half times the basic rate of pay for all hours worked in excess of forty hours in such workweek.

1.11.2. **Violation; liability for unpaid wages; liquidated damages.** In the event of any violation of the clause set forth in Paragraph 1.11.1 of this Special Provision, the contractor and any subcontractor responsible therefor shall be liable for the unpaid wages. In addition, such contractor and subcontractor shall be liable to the United States (in the case of work done under contract for the District of Columbia or a territory, to such District or to such territory), for liquidated damages. Such liquidated damages shall be computed with respect to each individual laborer or mechanic, including watchmen and guards, employed in violation of the clause set forth in subparagraph (1) of this paragraph, in the sum of $10 for each calendar day on which such individual was required or permitted to work in excess of the standard workweek of forty hours without payment of the overtime wages required by the clause set forth in Paragraph 1.11.1 of this Special Provision.

1.11.3. **Withholding for unpaid wages and liquidated damages.** The Federal Aviation Administration shall upon its own action or upon written request of an authorized representative of the Department of Labor withhold or cause to be withheld, from any moneys payable on account of work performed by the contractor or subcontractor under any such contract or any other Federal contract with the same prime contractor, or any other Federally-assisted contract subject to the Contract Work Hours and Safety Standards Act, which is held by the same prime contractor, such sums as may be determined to be necessary to satisfy any liabilities of such contractor or subcontractor for unpaid wages and liquidated damages as provided in the clauses set forth in Paragraph 1.11.2 of this Special Provision.

1.11.4. **Subcontracts.** The contractor or subcontractor shall insert in any subcontracts the clauses set forth in Paragraphs 1.11.1 through 1.11.4 of this Special Provision and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for compliance by any subcontractor or lower tier subcontractor with the clauses set forth in Paragraphs 1.11.1 through 1.11.4 of this Special Provision.

2 VETERANS PREFERENCE

2.1 In the employment of labor (except in executive, administrative and supervisory positions), the Contractor shall give preference to veterans of the Vietnam era and disabled veterans as defined in Section 515(c)(1) and (2) of the Airport and Airway Improvement Act of 1982.

3 GENERAL WAGE DECISION

3.1 A copy of the current Davis-Bacon Wage Determination applicable to the Project is provided as follows:

Davis-Bacon Wage Rates
(General Decision County Index Date)

"General Decision Number: FL20210102 01/01/2021

Superseded General Decision Number: FL20200102

State: Florida

Construction Type: Heavy

Counties: Franklin, Gulf, Liberty and Walton Counties in
Florida.

HEAVY CONSTRUCTION PROJECTS (Including Sewer and Water Lines)

Note: Under Executive Order (EO) 13658, an hourly minimum wage of $10.95 for calendar year 2021 applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2015.

If this contract is covered by the EO, the contractor must pay all workers in any classification listed on this wage determination at least $10.95 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on the contract in calendar year 2021. If this contract is covered by the EO and a classification considered necessary for performance of work on the contract does not appear on this wage determination, the contractor must pay workers in that classification at least the wage rate determined through the conformance process set forth in 29 CFR 5.5(a)(1)(ii) (or the EO minimum wage rate, if it is higher than the conformed wage rate). The EO minimum wage rate will be adjusted annually. Please note that this EO applies to the above-mentioned types of contracts entered into by the federal government that are subject to the Davis-Bacon Act itself, but it does not apply to contracts subject only to the Davis-Bacon Related Acts, including those set forth at 29 CFR 5.1(a)(2)-(60). Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts.

WELDERS - Receive rate prescribed for craft performing operation to which welding is incidental.

==========

Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide

employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts.

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (ii)).

The body of each wage determination lists the classification and wage rates that have been found to be prevailing for the cited type(s) of construction in the area covered by the wage determination. The classifications are listed in alphabetical order of ""identifiers"" that indicate whether the particular rate is a union rate (current union negotiated rate for local), a survey rate (weighted average rate) or a union average rate (weighted union average rate).

Union Rate Identifiers

A four letter classification abbreviation identifier enclosed in dotted lines beginning with characters other than ""SU"" or ""UAVG"" denotes that the union classification and rate were prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2014. PLUM is an abbreviation identifier of the union which prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. 07/01/2014 is the effective date of the most current negotiated rate, which in this example is July 1, 2014.

Union prevailing wage rates are updated to reflect all rate changes in the collective bargaining agreement (CBA) governing this classification and rate.

Survey Rate Identifiers

Classifications listed under the ""SU"" identifier indicate that no one rate prevailed for this classification in the survey and the published rate is derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As this weighted average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SULA2012-007 5/13/2014. SU indicates the rates are survey rates based on a weighted average calculation of rates and are not majority rates. LA indicates the State of Louisiana. 2012 is the year of survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. 5/13/2014 indicates the survey completion date for the classifications and rates under that identifier.

Survey wage rates are not updated and remain in effect until a new survey is conducted.

Union Average Rate Identifiers

Classification(s) listed under the UAVG identifier indicate that no single majority rate prevailed for those classifications; however, 100% of the data reported for the classifications was union data. EXAMPLE: UAVG-OH-0010 08/29/2014. UAVG indicates that the rate is a weighted union average rate. OH indicates the state. The next number, 0010 in the example, is an internal number used in producing the wage determination. 08/29/2014 indicates the survey completion date for the classifications and rates under that identifier.

A UAVG rate will be updated once a year, usually in January of each year, to reflect a weighted average of the current negotiated/CBA rate of the union locals from which the rate is based.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

* an existing published wage determination
* a survey underlying a wage determination
* a Wage and Hour Division letter setting forth a position on a wage determination matter
* a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who

is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at www.dol.gov/whd/govcontracts.

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (ii)).

The body of each wage determination lists the classification and wage rates that have been found to be prevailing for the cited type(s) of construction in the area covered by the wage determination. The classifications are listed in alphabetical order of ""identifiers"" that indicate whether the particular rate is a union rate (current union negotiated rate for local), a survey rate (weighted average rate) or a union average rate (weighted union average rate).

Union Rate Identifiers

A four letter classification abbreviation identifier enclosed in dotted lines beginning with characters other than ""SU"" or ""UAVG"" denotes that the union classification and rate were prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2014. PLUM is an abbreviation identifier of the union which prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. 07/01/2014 is the effective date of the most current negotiated rate, which in this example is July 1, 2014.

Union prevailing wage rates are updated to reflect all rate changes in the collective bargaining agreement (CBA) governing this classification and rate.

Survey Rate Identifiers

Classifications listed under the ""SU"" identifier indicate that no one rate prevailed for this classification in the survey and the published rate is derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As this weighted average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SULA2012-007 5/13/2014. SU indicates the rates are survey rates based on a weighted average calculation of rates and are not majority rates. LA indicates the State of Louisiana. 2012 is the year of survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. 5/13/2014 indicates the survey completion date for the classifications and rates under that identifier.

Survey wage rates are not updated and remain in effect until a new survey is conducted.

Union Average Rate Identifiers

Classification(s) listed under the UAVG identifier indicate that no single majority rate prevailed for those classifications; however, 100% of the data reported for the classifications was union data. EXAMPLE: UAVG-OH-0010 08/29/2014. UAVG indicates that the rate is a weighted union average rate. OH indicates the state. The next number, 0010 in the example, is an internal number used in producing the

wage determination. 08/29/2014 indicates the survey completion date for the classifications and rates under that identifier.

A UAVG rate will be updated once a year, usually in January of each year, to reflect a weighted average of the current negotiated/CBA rate of the union locals from which the rate is based.

WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can be:

* an existing published wage determination
* a survey underlying a wage determination
* a Wage and Hour Division letter setting forth a position on a wage determination matter
* a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board

U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.

==========

END OF GENERAL DECISION

4 EQUAL EMPLOYMENT REQUIREMENTS

4.1 Requirement for Certification of Nonsegregated Facilities:

4.1.1. Notice to Prospective Construction Contractors:

(a) The Certification of Non-segregated Facilities contained in the Bid Documents must be submitted with the Bid for a construction contract exceeding Ten Thousand Dollars ($10,000.00) which is not exempt from the provisions of the Equal Opportunity Clause.

(b) Contractors receiving contract awards exceeding Ten Thousand Dollars ($10,000.00) which are not exempt from the provisions of the forwarding of this notice to prospective subcontractors for supplies and construction contracts where the subcontracts exceed Ten Thousand Dollars ($10,000.00) and are not exempt from the provisions of the Equal Opportunity Clause.

4.1.2. Notice to Prospective Subcontractors of Requirement for Certification of Non-segregated Facilities:

(a) A Certification of Non-segregated Facilities must be submitted prior to the award of a subcontract exceeding Ten Thousand Dollars ($10,000.00) which is not exempt from the provisions of the Equal Opportunity Clause.

(b) The Certification of Non-segregated Facilities Form is located in the Bid Package of the Contract Documents.

4.2 Standard Federal Equal Employment Construction Contract Specifications (Executive Order 11246, as amended):

4.2.1. As used in these specifications:

(a) "Covered area" means the geographical area described in the solicitation from which this contract resulted;

(b) "Director" means Director, Office of Federal Contract Compliance Programs (OFCCP), U.S. Department of Labor, or any person to whom the Director delegates authority;

(c) "Employer identification number" means the federal social security number used on the Employer's Quarterly Federal Tax Return, U.S. Treasury Department Form 941;

(d) "Minorities" includes:

(1) Black (all persons having origins in any of the black African racial groups not of Hispanic origin);

(2) Hispanic (all persons of Mexican, Puerto Rican, Cuban, Central or South American or other Spanish culture or origin regardless of race);

(3) Asian and Pacific Islander (all persons having origins in any of the original peoples of the Far East, Southeast Asia, the Indian Subcontinent, or the Pacific Islands); and

(4) American Indian or Alaskan native (all persons having origins in any of the original peoples of North America and maintaining identifiable tribal affiliations through membership and participation or community identification).

4.2.2. Whenever the Contractor, or any subcontractor at any tier, subcontracts a portion of the work involving any construction trade, it shall physically include in each subcontract in excess of Ten Thousand Dollars ($10,000.00) the provisions of these specifications and the notice which contains the applicable goals for minority and women participation and which is set forth in the solicitations from which this contract resulted.

4.2.3. If the Contractor is participating (pursuant to 41 CFR 60-4.5) in a Hometown Plan approved by the U.S. Department of Labor in the covered area either individually or through an association, its affirmative action obligations on all work in the plan area (including goals and timetables) shall be in accordance with that plan for those trades which have unions participating in the plan. Contractors must be able to demonstrate their participation in and compliance with the provisions of any such Hometown Plan. Each contractor or subcontractor participating in an approved plan is individually required to comply with its obligations under the EEO clause and to make a good faith effort to achieve each goal under the plan in each trade which it has employees. The overall good faith performance by other contractors or subcontractors toward a goal in an approved plan does not excuse any covered contractor's or subcontractor's failure to take good faith efforts to achieve the plan goals and timetables.

4.2.4. The Contractor shall implement the specific affirmative action standards provided in Paragraphs 4.2.7.1 through 4.2.7.16 of this Special Provision. The goals set forth in the solicitation from which this contract resulted are expressed as percentages of the total hours of employment and training of minority and women utilization the Contractor should reasonably be able to achieve in each construction trade in which it has employees in the covered area. Covered construction contractors performing construction work in geographical areas where they do not have a federal or federally assisted construction contract shall apply the minority and women goals established for the geographical area where the work is being performed. Goals are published periodically in the Federal Register in notice form, and such notices may be obtained from any Federal Contract Compliance Programs office or from Federal Procurement contracting officers. The Contractor is expected to make substantially uniform progress in meeting its goals in each craft during the period specified.

4.2.5. Neither the provisions of any collective bargaining agreement nor the failure by a union with whom the Contractor has a collective bargaining agreement to refer either minorities

or women shall excuse the Contractor's obligations under these specifications, Executive Order 11246, as amended, or the regulations promulgated pursuant thereto.

4.2.6. In order for the non-working training hours of apprentices and trainees to be counted in meeting the goals, such apprentices and trainees must be employed by the Contractor during the training period and the Contractor must have made a commitment to employ the apprentices and trainees at the completion of their training, subject to the availability of employment opportunities. Trainees must be trained pursuant to training programs approved by the U.S. Department of Labor.

4.2.7. The Contractor shall take specific affirmative actions to ensure EEO. The evaluation of the Contractor's compliance with these specifications shall be based upon its efforts to achieve maximum results from its actions. The Contractor shall document these efforts fully and shall implement affirmative action steps at least as extensive as the following:

1. Ensure and maintain a working environment free of harassment, intimidation, and coercion at all sites, and in all facilities at which the Contractor's employees are assigned to work. The Contractor, where possible, will assign two or more women to each construction project. The Contractor shall specifically ensure that all foremen, superintendents and other on-site supervisory personnel are aware of and carry out the Contractor's obligation to maintain such a working environment, with specific attention to minorities or women individuals working at such sites or in such facilities.

2. Establish and maintain a current list of minority and women recruitment sources, provide written notification to minority and women recruitment sources and to community organizations when the Contractor or its unions have employment opportunities available, and maintain a record of the organization's responses.

3. Maintain a current file of the names, addresses and telephone numbers of each minority and women off-the-street applicant and minority or women referral from a union, a recruitment source, a community organization and of what action was taken with respect to each such individual. If such individual was sent to the union hiring hall for referral and was not referred back to the Contractor by the union or, if referred, not employed by the Contractor, this shall be documented in the file with the reason therefore along with whatever additional actions the Contractor may have taken.

4. Provide immediate written notification to the Director when the union or unions with which the Contractor has a collective bargaining agreement has not referred to the Contractor a minority person or woman sent by the Contractor, or when the Contractor has other information that the union referral process has impeded the Contractor's efforts to meet its obligations.

5. Develop on-the-job training opportunities and/or participate in training programs for the area which expressly includes minorities and women, including upgrading programs and apprenticeship and trainee programs relevant to the Contractor's employment needs, especially those programs funded or approved by the

Department of Labor. The Contractor shall provide notice of these programs to the sources compiled under Paragraph 4.2.7.2 of this Special Provision.

6. Disseminate the Contractor's EEO policy by providing notice of the policy to unions and training programs and requesting their cooperation in assisting the Contractor in meeting its EEO obligations; by including it in any policy manual and collective bargaining agreement; by publicizing it in the company newspaper, annual report, etc.; by specific review of the policy with all management personnel and with all minority and women employees at least once a year; and by posting the company EEO policy on bulletin boards accessible to all employees at each location where construction work is performed.

7. Review, at least annually, the company's EEO policy and affirmative action obligations under these specifications with all employees having any responsibility for hiring, assignment, layoff, termination or other employment decisions including specific review of these items with on-site supervisory personnel such as superintendents, general foremen, etc., prior to the initiation of construction work at any jobsite. A written record shall be made and maintained identifying the time and place of these meetings, persons attending, subject matter discussed, and disposition of the subject matter.

8. Disseminate the Contractor's EEO policy externally by including it in any advertising in the news media, specifically including minority and women news media, and providing written notification to and discussing the Contractor's EEO policy with other contractors and subcontractors with whom the Contractor does or anticipates doing business.

9. Direct its recruitment efforts, both oral and written, to minority, women and community organizations, to schools with minority and women students; and to minority and women recruitment and training organizations serving the Contractor's recruitment area and employment needs. Not later than one (1) month prior to the date for the acceptance of applications for apprenticeship or other training by any recruitment source, the Contractor shall send written notification to organizations, such as the above, describing the openings, screening procedures, and tests to be used in the selection process.

10. Encourage present minority and female employees to recruit other minority persons and women and, where reasonable, provide after school, summer and vacation employment to minority and women youth, both on the site and in other areas of a contractor's work force.

11. Validate all tests and other selection requirements where there is an obligation to do so under 41 CFR Part 60-3.

12. Conduct, at least annually, an inventory and evaluation, at least of all minority and women personnel, for promotional opportunities and encourage these employees to seek or to prepare for, through appropriate training, etc., such opportunities.

13. Ensure that seniority practices, job classifications, work assignments, and other personnel practices do not have a discriminatory effect by continually monitoring all personnel and employment related activities to ensure that the EEO policy and the Contractor's obligations under these specifications are being carried out.

14. Ensure that all facilities and company activities are non-segregated except that separate or single-user toilet and necessary changing facilities shall be provided to assure privacy between the sexes.

15. Document and maintain a record of all solicitations of offers for subcontractors from minority and women construction contractors and suppliers, including circulation of solicitations to minority and women contractor associations and other business associations.

16. Conduct a review, at least annually, of all supervisors' adherence to and performance under the Contractor's EEO policies and affirmative action obligations.

4.2.8. Contractors are encouraged to participate in voluntary associations which assist in fulfilling one or more of their affirmative action obligations (Paragraphs 4.2.7 through 4.2.7.16 of this Special Provision). The efforts of a contractor association, joint contractor-union, contractor-community, or other similar groups of which the Contractor is a member and participant, may be asserted as fulfilling any one or more of its obligations under Paragraphs 4.2.7 through 4.2.7.16 of this Special Provision of these specifications provided that the Contractor actively participates in the group, makes every effort to assure that the group has a positive impact on the employment of minorities and women in the industry, ensures that the concrete benefits of the program are reflected in the Contractor's minority and female work force participation, makes a good faith effort to meet its individual goals and timetables, and can provide access to documentation which demonstrates the effectiveness of actions taken on behalf of the Contractor. The obligation to comply, however, is the Contractor's--failure of such a group to fulfill an obligation shall not be a defense for the Contractor's non-compliance.

4.2.9. A single goal for minorities and a separate single goal for women have been established. The Contractor, however, is required to provide EEO and to make affirmative action for all minority groups, both male and female, and all women, both minority and non-minority. Consequently, the Contractor may be in violation of the Executive Order if a particular group is employed in a substantially disparate manner (for example, even though the Contractor has achieved its goal for women generally, the Contractor may be in violation of the Executive Order if a specific minority group of women is under-utilized).

4.2.10. The Contractor shall not use the goals and timetables or affirmative action standards to discriminate against any person because of race, color, religion, sex or national origin.

4.2.11. The Contractor shall not enter into any subcontract with any person or firm debarred from government contracts pursuant to Executive Order 11246, as amended.

4.2.12. The Contractor shall carry out such sanctions and penalties for violation of these specifications and of the Equal Opportunity Clause, including suspension, termination, and cancellation of existing subcontracts as may be imposed or ordered pursuant to Executive

Order 11246, as amended, and its implementing regulations, by the OFCCP. Any contractor who fails to carry out such sanctions and penalties shall be in violation of these specifications and Executive Order 11246, as amended.

4.2.13. The Contractor, in fulfilling its obligations under these specifications, shall implement specific affirmative action steps, at least as extensive as those standards prescribed in Paragraph 4.2.7 of this Special Provision, so as to achieve maximum results from its efforts to ensure equal employment opportunity. If the Contractor fails to comply with the requirements of the Executive Order, the implementing regulations, or these specifications, the Director shall proceed in accordance with 41 CFR 60-4.8.

4.2.14. The Contractor shall designate a responsible official to monitor all employment related activity to ensure that the company EEO policy is being carried out, to submit reports relating to the provisions hereof as may be required by the government, and to keep records. Records shall at least include for each employee, the name, address, telephone number, construction trade, union affiliation, if any, employee identification number when assigned, social security number, race, sex, status (e.g., mechanic, apprentice, trainee, helper or laborer), dates of changes in status, hours worked per week in the indicated trade, rate of pay, and locations at which the work was performed. Records shall be maintained in an easily understandable and retrievable form; however, to the degree that existing records satisfy this requirement, contractors shall not be required to maintain separate records.

4.2.15. Nothing herein provided shall be construed as a limitation upon the application of other laws which establish different standards of compliance or upon the application of requirements for the hiring of local or other area residents (e.g., those under the Public Works Employment Act of 1977 and the Community Development Grant Program).

4.3 Contractor Contractual Requirements:

During the performance of this contract, the Contractor, for itself, its assignees and successors in interest (hereinafter referred to as the "Contractor") agrees as follows:

4.3.1. Compliance with Regulations: The Contractor shall comply with the Regulations relative to non-discrimination in federally assisted programs of the Department of Transportation (hereinafter, "DOT") Title 49, Code of Federal Regulations, Part 21, as they may be amended from time-to-time (hereinafter referred to as the Regulations), which are herein incorporated by reference and made a part of this Contract.

4.3.2. Non-discrimination: The Contractor, with regard to the work performed by it during the contract, shall not discriminate on the grounds of race, color or national origin in the selection and retention of subcontractors, including procurements of materials and leases of equipment. The Contractor shall not participate either directly or indirectly in the discrimination prohibited by Section 21.5 of the Regulations, including employment practices when the contract covers a program set forth in Appendix B of the Regulations.

4.3.3. Solicitations for Subcontracts, including Procurement of Materials and Equipment: In all solicitations either by competitive bidding or negotiation made by the Contractor for work to be performed under a subcontract, including procurements of materials or leases of equipment, each potential subcontractor or supplier shall be notified by the Contractor of

the Contractor's obligation under this Contract and the Regulations relative to non-discrimination on the grounds of race, color or national origin.

4.3.4. Information and Reports: The Contractor shall provide all information and reports required by the Regulations or directives issued pursuant thereto and shall permit access to its books, records, accounts, other sources of information, and its facilities as may be determined by the sponsor or the Federal Aviation Administration (FAA) to be pertinent to ascertain compliance with such regulations, orders and instructions. Where any information required of a contractor is in the exclusive possession of another who fails or refuses to furnish this information, the Contractor shall so certify to the sponsor or the FAA, as appropriate, and shall set forth what efforts it has made to obtain the information.

4.3.5. Sanctions for Non-compliance: In the event of the Contractor's non-compliance with the non-discrimination provisions of this contract, the sponsor shall impose such contract sanctions as it or the FAA may determine to be appropriate, including but not limited to:

1. Withholding of payments to the Contractor under the Contract until the Contractor complies, and/or

2. Cancellation, termination or suspension of the Contract, in whole or in part.

4.3.6. Incorporation of Provisions: The Contractor shall include the provisions of Paragraphs 4.2 through 4.7 of this Special Provision in every subcontract, including procurements of materials and leases of equipment, unless exempt by the Regulations or directives issued pursuant thereto. The Contractor shall take such action with respect to any subcontract or procurement as the sponsor or the FAA may direct as a means of enforcing such provisions including, sanctions for non-compliance. Provided, however, that in the event a contractor becomes involved in, or is threatened with, litigation with a Subcontractor or supplier as a result of such direction, the Contractor may request the sponsor to enter into such litigation to protect the interests of the sponsor and, in addition, the Contractor may request the United States to enter into such litigation to protect the interests of the United States.

4.4 Equal Employment Opportunity Clause:

During the performance of this Contract the Contractor agrees as follows:

4.4.1. The Contractor will not discriminate against any employee or applicant for employment because of race, color, religion, sex or national origin. The Contractor will take affirmative action to ensure that applicants are employed and that employees are treated during employment without regard to their race, color, religion, sex or national origin. Such action shall include, but not be limited to the following: employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or termination, rates of pay or other forms of compensation; and selection for training, including apprenticeship. The Contractor agrees to post in conspicuous places available to employees and applicants for employment, notices (see Paragraph 15.4) setting forth the provisions of this nondiscrimination clause.

4.4.2. The Contractor will, in all solicitations or advertisements for employees placed by or on behalf of the contractor, state that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex, or national origin.

4.4.3. The contractor will send, to each labor union or representative of workers with which he had a collective bargaining agreement or other contract or understanding, a notice (see Section 4.5) advising that said labor union or workers' representatives of the contractor's commitments under this section and shall post copies of the notice in conspicuous places available to employees and applicants for employment.

4.4.4. The contractor will comply with all provisions of Executive Order 11246, as amended, of September 24, 1965, and of the rules, regulations and relevant orders of the Secretary of Labor.

4.4.5. The contractor will furnish all information and reports required by Executive Order 11246, as amended, of September 24, 1965, and by rules, regulations, and orders of the Secretary of Labor, or pursuant thereto, and will permit access to his books, records, and accounts by the FAA and the Secretary of Labor for purposes of investigation to ascertain compliance with such rules, regulations and orders.

4.4.6. In the event of the contractor's noncompliance with the nondiscrimination clauses of this contract of with any of the said rules, regulations, or orders, this contract may be canceled; terminated, or suspended in whole or in part and the contractor may be declared ineligible for further Government contracts or federally assisted construction contracts in accordance with procedures authorized in Executive Order 11246, as amended, of September 24, 1965, and such other sanctions may be imposed and remedies invoked as provided in Executive Order 11246, as amended, of September 24,.1965, or by rule, regulation, or order of the Secretary of State, or as otherwise provided by law.

4.4.7. The contractor will include the portion of the sentence immediately preceding paragraph 1 and the provisions of paragraphs 1 through 7 in every subcontract or purchase order unless exempted by rules, regulations, or orders of the Secretary of Labor issued pursuant to section 204 of Executive Order 11246, as amended, of September 24, 1965, so that such provisions will be binding upon each subcontractor or vendor. The contractor will take such action with respect to any subcontractor of purchase order as the FAA may direct as a means of enforcing such provisions, including sanctions for noncompliance: provided, however, that in the event a contractor becomes involved in, or is threatened with, litigation with a subcontractor or vendor as a result of such direction by the FAA, the contractor may request the United States to enter into such litigation to protect the interests 'of the United States.

4.5 Notices to be Posted:

The "Equal Employment Opportunity is the Law" poster is to be posted by the Contractor in a conspicuous place available to employees and applicants for employment as required by Paragraphs 4.2 and 4.4 of this Special Provision of the EEO Clause. Copies of this poster will be furnished to contractors at the pre-construction conference.

4.6 Notice of Requirement for Affirmative Action to Ensure Equal Employment Opportunity (Executive Order 11246), as Amended:

4.6.1. The Contractor's attention is called to the "Equal Opportunity Clause" and the "Standard Federal Equal Employment Opportunity Construction Contract Specifications" set forth herein.

4.6.2. The goals and timetables for minority and women participation, expressed in percentage terms for the Contractor's aggregate work force in each trade on all construction work in the covered area are as follows:

Timetables:

These goals are applicable to all the Contractor's construction work (whether or not it is federal or federally assisted) performed in the covered area. If the Contractor performs construction work in a geographical area located outside of the covered area, it shall apply the goals established for such geographical area where the work is actually performed. With regard to this second area, the Contractor also is subject to the goals for both its federally involved and non-federally involved construction.

The Contractor's compliance with the Executive Order and the regulations in 41 CFR Part 60-4 shall be based on its implementation of the Equal Opportunity Clause, specific affirmative action obligations required by the specifications set forth in 41 CFR 60-4.3(a), and its efforts to meet the goals. The hours of minority and women employment and training must be substantially uniform throughout the length of the Contract, and in each trade, and the Contractor shall make a good faith effort to employ minorities and women evenly on each of its projects. The transfer of minority or female employees or trainees from contractor-to-contractor or from project-to-project, for the sole purpose of meeting the Contractor's goals, shall be a violation of the Contract, the Executive Order, and the regulations in 41 CFR Part 60-4. Compliance with the goals will be measured against the total work hours performed.

4.6.3. The Contractor shall provide written notification to the Director, OFCCP, within ten (10) working days of award of any construction subcontract in excess of Ten Thousand Dollars ($10,000.00) at any tier of construction work under the Contract resulting from this solicitation. The notification shall list the name, address, telephone number of the Subcontractor; employer identification number of the Subcontractor; estimated dollar amount of the subcontracts; estimated starting and completion dates of the subcontract; and the geographical area in which the subcontract is to be performed.

4.7 Required Reports:

4.7.1. **Annual EEO-1 Report:** Contractors/Subcontractors working on federally assisted airport construction projects are required to file annually, on or before March 31st, complete and accurate reports on Standard Form 100 (Employee Information Report, EEO-1). The first such report is required within thirty (30) days after award unless the Contractor/Subcontractor has submitted such a report within twelve (12) months preceding the date of award (the FAA or Department of Labor OFCCP can designate other intervals). This form is normally furnished based on a mailing list, but can be obtained from the Joint Reporting Committee, 1800 G Street, N.W., Washington, D.C. 20506. This report is required if a contractor or subcontractor meets all of the following conditions:

1. Non-exempt: Contractors/subcontractors are not exempt based on 41 CFR 60-1.5, and

2. Number of Employees: Has fifty (50) or more employees, and

3. Contractor/Subcontractor: Is a prime contractor or first tier subcontractor, and

4. Dollar Level: There is a contract, subcontract or purchase order amounting to Fifty Thousand Dollars ($50,000.00) or more, or serves as a depository of government funds in any amount, or is a financial institution which is an issuing and paying agent for U.S. savings bonds and savings notes. Some subcontractors below the first tier who work at the site are required to file if they meet the requirements of 41 CFR 60-1.7.

4.7.2. **Records:** The FAA or Department of Labor OFCCP may require a contractor to keep employment or other records and to furnish, in the form requested within reasonable limits, such information as necessary.

4.8 MBE Required Statements

4.8.1. **Policy.** It is the policy of the Department of Transportation that minority business enterprises as defined in 49 CFR Part 26 shall have the maximum opportunity to participate in the performance of contracts financed in whole or in part with Federal funds under this agreement. Consequently, the MBE requirements of 49 CFR Part 26 apply to this agreement.

4.8.2. **MBE Obligation.** The recipient or its contractor agrees to ensure that minority business enterprises as defined in 49 CFR Part 26 have the maximum opportunity to participate in the performance of contracts financed in whole or in part with Federal funds provided under this agreement. In this regard all recipients or contractors shall take all necessary and reasonable steps in accordance with 49 CFR Part 26 to ensure that minority business enterprises have the maximum opportunity to compete for and perform contracts. Recipients and their contractors shall not discriminate on the basis of race, color, national origin, or sex In the award and performance of DOT-assisted contracts.

5 Contract Assurance Required by 49 CFR Part 26

The contractor or subcontractor shall not discriminate on the basis of race, color, national origin, or sex in the performance of this contract. The contractor shall carry out applicable requirements of 49 CFR Part 26 in the award and administration of DOT assisted contracts. Failure by the contractor to carry out these requirements is a material breach of this contract, which may result in the termination of this contract or such other remedy as the owner deems appropriate.

END OF SPECIAL PROVISION NO. 5

SPECIAL PROVISION NO. 6

E-VERIFY REQUIREMENTS

The Contractor and all sub-contractors shall be in compliance with Florida State Executive Order Number 11-02. The Contractor shall provide a certification to the Owner stating that they are in compliance with this order.

END OF SPECIAL PROVISION NO. 6

SPECIAL PROVISION NO. 7

MISCELLANEOUS FEDERAL AND STATE CONTRACT PROVISIONS

1.0 AGREEMENTS WITH THE UNITED STATES AND STATE OF FLORIDA

This Contract shall be subject to all restrictions of record affecting the Airport and the use thereof, all Federal and state laws and regulations affecting the same, and shall be subject and subordinate to the provisions of any existing agreement between the Owner and the United States of America or the State of Florida, their boards, members, agencies or commissions and to future agreements between the foregoing relative to the operation or maintenance of the Airport, the execution of which may be required as a condition precedent to the expenditure of Federal or state funds for the development of the Airport, or as a condition precedent to the use of the Airport, or any part thereof, by the Contractor, the Owner or otherwise. All provisions hereof shall be subordinate to the right of the United States of America to terminate the right of the Contractor, the Owner, or others, to occupy or to use the Airport, or any part thereof, during the time of war or national emergency.

2.0 COVENANTS AGAINST DISCRIMINATION

The Contractor, for itself, its successors in interest and assigns, as part of the consideration hereof, does hereby covenant and agree as a covenant running with the land that (1) no person on the grounds of race, color, religion, sex, age, physical handicap or national origin shall be excluded from participation in, denied the benefit of, or be otherwise subjected to discrimination in the use of the Airport under the provisions of this Agreement; (2) that in the construction of any improvements on, over or under the Airport and the furnishing of services thereon, no person shall be excluded from participation in, denied the benefits of, or otherwise be subjected to discrimination on the above-stated grounds; (3) that the Contractor shall use the Airport property in compliance with all other requirements imposed by or pursuant to state law or Title 49, Code of Federal Regulations, Department of Transportation - effectuation of Title VI of the Civil Rights Act of 1964, and as said Regulations may be amended. Should the Contractor authorize another person, with the Owner's prior written consent, to provide services or benefits upon the Airport property, the Contractor shall obtain from such person a written agreement pursuant to which such person shall, with respect to the services or benefits which it is authorized to provide, undertake for itself the obligations contained in this Subparagraph. The Contractor shall furnish the original of such Agreement to the Owner.

In the event of breach of any of the above non-discrimination covenants, the Owner shall have the right to terminate this Agreement. The right granted to the Owner by the foregoing sentence shall not be effective until the procedures of Title 49, Code of Federal Regulations, Part 21, if applicable, are followed and completed, including exercise or expiration of appeal rights.

The Owner may from time to time be required by the United States Government, its agencies, or the State of Florida to adopt additional or amended provisions including non-discrimination provisions, concerning the use and operation of the Airport, and the Contractor agrees that it will adopt any such requirement as a part of this Agreement.

If the Contractor shall furnish any services to the public at the Airport, it shall furnish said services on a fair, equal and not unjustly discriminatory basis to all users thereof and shall charge fair, reasonable and not unjustly discriminatory prices for each unit of service, provided that the Contractor shall be allowed to make reasonable and non-discriminatory discounts or rebates or other similar types of price reductions to volume purchasers, if any.

3.0 FAA APPROVAL REQUIRED

3.1 This Contract is subject to approval by the FAA. The Owner shall use its best efforts to obtain FAA approval. If the FAA requires any modifications to the Contract Documents as a condition of granting approval, and the Contractor fails to consent to the required modifications, then the Contract shall be void and the Owner shall have no liability to the Contractor.

3.2 If after initial approval by the FAA has been obtained, the FAA or its successor requires any modifications in this Contract as a condition of granting funds for the improvement of the Airport, the Contractor hereby consents to those modifications, which shall be accomplished in accordance with the General Provisions, Section 40-02, Alteration of Work and Quantities.

4.0 FEDERAL AND STATE AID PARTICIPATION

4.1 For AIP (Federal Aid) contracts, the United States Government has agreed to reimburse the Owner for some portion of the contract costs. Such reimbursement is made from time to time upon the Owner's request to the FAA. In consideration of the United States Government's (FAA's) agreement with the Owner, the Owner has included provisions in this Contract pursuant to the requirements of the Airport and Airway Improvement Act of 1982 (96 Stat. 671), as amended, and the Rules and Regulations of the FAA that pertain to the Work.

4.2 As required by the Act, the Work is subject to inspection and approval of duly authorized representatives of the Administrator of the FAA and is further subject to those provisions of the rules and regulations that are cited in the Contract Documents.

4.3 No requirements of the Act, the rules and regulations implementing the Act, or this Contract shall be construed as making the Federal Government a party to the Contract nor will any such requirement interfere, in any way, with the rights of either party to the Contract.

5.0 INSPECTION BY OTHERS

Pursuant to a Joint Participation Agreement between the State of Florida Department of Transportation and the Owner, the State of Florida may pay a portion of the costs of this improvement. The construction work and labor shall be done in accordance with the laws affecting and regulations of the State of Florida Department of Transportation. The construction work and materials, therefore, will be subject to inspection by the State of Florida Department of Transportation or its agents as it or they may deem necessary; provided, however, that such inspections shall not be construed so as to make the State of Florida Department of Transportation a party to this Contract and shall not interfere with the performance of the obligations of any party to this Contract.

6.0 ENVIRONMENTAL PROTECTION

6.1 For all construction contracts and subcontracts exceeding One Hundred Thousand Dollars ($100,000.00) where Federal Aid is involved, the Contractor and its subcontractors represent and covenant that:

6.1.1 Any facility to be used in the performance of the Contract or to benefit from the Contract is not listed on the Environmental Protection Agency (EPA) List of Violating Facilities.

6.1.2 They comply and will comply with all requirements of Section 306 of the Clean Air Act (42 USC 1857(h)), Section 508 of the Clean Water Act (33 USC 1368), Executive Order 11738, environmental protection regulations (40 CFR Part 15) and all regulations issued thereunder.

6.1.3 As a condition for award of a contract, it will notify the awarding official of the receipt of any communication from the EPA indicating that a facility to be utilized for performance of or benefit from the contract is under consideration to be listed on the EPA List of Violating Facilities.

6.1.4 They will include or cause to be included in any contract or subcontract which exceeds One Hundred Thousand Dollars ($100,000.00) the aforementioned criteria and requirements.

7.0 ARCHAEOLOGICAL AND HISTORICAL FINDINGS

Unless otherwise specified in the Contract Documents, the Contractor is advised that the site of the work is not within any property, district or site, and does not contain any building, structure or object listed in the current National Register of Historic Places published by the United States Department of the Interior.

Should the Contractor encounter, during its operations, any building, part of a building, structure, or object which is incongruous with its surroundings, the Contractor shall immediately cease operations in that location and notify the Engineer. The Engineer will investigate the Contractor's finding and will direct the Contractor to either resume or suspend operations.

8.0 RESTRICTIONS ON USE OF FOREIGN FIRMS AND PRODUCTS

8.1 The Contractor or Subcontractor, by submission of an offer and/or execution of a contract, certifies that it:

8.1.1 is not owned or controlled by one or more citizens or nationals of a foreign country included in the list of countries that discriminate against U.S. firms published by the Office of the United States Trade Representative (USTR);

8.1.2 has not knowingly entered into any contract or subcontract for this project with a contractor that is a citizen or national of a foreign country on said list, or is owned or is controlled directly or indirectly by one or more citizens or nationals of a foreign country on said list;

8.1.3 has not procured any product nor subcontracted for the supply of any product for use on the project that is produced in a foreign country on said list.

8.2 Unless the restrictions of this clause are waived by the Secretary of Transportation in accordance with 49 CFR 30.17, no contract shall be awarded to a contractor or subcontractor who is unable to certify to the above. If the contractor knowingly procures or subcontracts for the supply of any product or service of a foreign country on the said list for use on the project, the Federal Aviation Administration may direct, through the sponsor, cancellation of the contract at no cost to the Government.

8.3 Further, the Contractor agrees that, if awarded a contract resulting from this solicitation, it will incorporate this provision for certification without modification in each contract and in all lower tier subcontracts. The Contractor may rely upon the certification of a prospective subcontractor unless it has knowledge that the certification is erroneous.

8.4 The Contractor shall provide immediate written notice to the sponsor if the Contractor learns that its certification or that of a Subcontractor was erroneous when submitted or has become erroneous by reason of changed circumstances. The Subcontractor agrees to provide immediate written notice to the Contractor, if at any time it learns that its certification was erroneous by reason of changed circumstances.

8.5 This certification is a material representation of fact upon which reliance was placed when making the award. If it is later determined that the contractor or subcontractor knowingly rendered an erroneous certification, the Federal Aviation Administration may direct, through the sponsor, cancellation of the contract or subcontract for default at no cost to the Government.

8.6 Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by this provision. The knowledge and information of a contractor is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

8.7 This certification concerns a matter within the jurisdiction of an agency of the United States of America and the making of a false, fictitious, or fraudulent certification may render the maker subject to prosecution under Title 18, United States Code, Section 1001.

8.8 The following countries are listed by the Office of the United States Trade Representative as countries which discriminate against U.S. firms: None

9.0 CERTIFICATION REGARDING DEBARMENT, SUSPENSION, INELIGIBILITY AND VOLUNTARY EXCLUSION

The Contractor certifies, by acceptance and execution of this contract, that neither it nor its principals is presently debarred, suspended, proposed for debarment, declared in eligible or voluntarily excluded from participation in this transaction by any Federal department or agency. It further agrees by executing and accepting this contract that it will include this clause without modification in all lower tier transactions, solicitations, proposals, contracts and subcontracts. Where the contractor or any lower tier participants is unable to certify to this statement, it shall provide the Owner with an explanation prior to the execution of this contract or the contractor's contracts and subcontracts with lower tier participants.

10.0 BUY AMERICAN REQUIREMENTS: STEEL & MANUFACTURED PRODUCTS

10.1 The Contractor agrees that only domestic steel and manufactured products will be used by the Contractor, Subcontractors, materialmen and Suppliers in the performance of this Contract, as defined in Paragraph 10.2 below:

10.2 The following terms apply to this clause:

1. Steel and manufactured products. As used in this clause, steel and manufactured products include (1) those produced in the United States or (2) a manufactured product produced in the United States, if the cost of its components mined, produced or manufactured in the United States exceeds 60 percent of the cost of all its components and final assembly has taken place in the United States.

2. Components. As used in this clause, “components” means those articles, materials and supplies incorporated directly into the steel and manufactured products.

3. Cost of Components. This means the cost for production of the components, exclusive of final assembly costs.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION (Not Applicable)

END OF SECTION 01070

SECTION 01090 - REGULATIONS AND DEFINITIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Special Provisions and other Division 1 Specification Sections, apply to this Section.

B. If there is a discrepancy between the requirements of this section and related sections, the more restrictive interpretation shall apply.

1.2 DESCRIPTION OF REQUIREMENTS:

A. General: This section specifies procedural and administrative requirements for compliance with governing regulations, codes and standards imposed upon the work. These requirements include obtaining permits, licenses, inspections, releases and similar documentation, as well as payments, statements and similar requirements associated with regulations, codes and standards.

B. The term "Regulations" is defined to include laws, statutes, ordinances and lawful orders issued by governing authorities, as well as those rules, conventions and agreements within the construction industry which effectively control the performance of the work regardless of whether they are lawfully imposed by governing authority or not.

C. Governing Regulations: Refer to General Provisions, Special Provisions, and General Requirements for requirements related to compliance with governing regulations.

1.3 DEFINITIONS:

A. General Explanation: Certain terms used in contract documents are defined in this article. Definitions and explanations contained in this section are not necessarily complete, but are general for the work to the extent that they are not stated more explicitly in another element of the contract documents.

B. General Requirements: Provisions and requirements of Division 1 sections apply to the entire work of the contract and, where so indicated, to other elements which are included in the project.

C. Indicated: The term "indicated" is a cross-reference to graphic representations, notes or schedules on the drawings, to other paragraphs or schedules in the specifications, and to similar means of recording requirements in contract documents. Where terms such as "shown", "noted", "scheduled", and "specified" are in lieu of "indicated", it is for the purpose of helping the reader locate the cross-reference, and no limitation of locations is intended except as specifically noted.

D. Directed, Requested, etc.: Terms such as "directed", "requested", "authorized", "selected", "approved", "required", "accepted", and "permitted" mean "directed by the Engineer", "requested by the Engineer", and similar phrases. However, no such implied meaning will be interpreted to extend the Engineer's responsibility into the Contractor's area of construction supervision.

E. Approved: Where used in conjunction with the Engineer's response to submittals, requests, applications, inquiries, reports and claims by the Contractor, the term "approved" will be held to limitations of the Engineer's responsibilities and duties as specified in General Provisions and Supplementary Conditions. In no case will the Engineer's approval be interpreted as a release of the Contractor from responsibilities to fulfill requirements of contract documents or acceptance of the work, unless otherwise provided by requirements of the contract documents.

F. Project Site: The term "project site" means the space available to the Contractor for performance of the work, either exclusively or in conjunction with others performing other construction as part of the project. The extent of the project site is shown on the drawings.

G. Furnish: The term "furnish" is used to mean "supply and deliver to the project site, ready for unloading, unpacking, assembly, installation, and similar operations."

H. Install: The term "install" is used to describe operations at project site including the actual "unloading, unpacking, assembly, erection, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning and similar operations."

I. Provide: The term “provides" means "to furnish and install, complete and ready for the intended use."

J. Installer: The "installer" is the "the entity" (person or firm) engaged by the Contractor, its subcontractor or sub-subcontractor for performance of a particular element of construction at the project site, including installation, erection, application and similar required operations. It is a requirement that installers are experienced in the operations they are engaged to perform.

K. Engineer: The A/E firm contracted by the City of Defuniak Springs to prepare the Design Documents.

L. Design or Contract Documents: The drawings, specifications and Instruction to Bidders that indicate the project requirements and the Contractor’s contractual obligations for the construction of the proposed project.

M. Owner: Shall mean City of Defuniak Springs and Airport.

N. Owner’s designated representative: Shall mean Airport Staff, Airport Staff, or consultants contracted by the City of Defuniak Springs or designated by the Airport Director to act as representatives of the Owner.

O. “Contractor” – Shall mean the entity or corporation contracted by the City of Defuniak Springs to perform the scope of work.

P. AHJ: “Authority Having Jurisdiction” – Shall mean the local Building Department or other regulatory agency having jurisdiction for reviewing the scope of work and verifying compliance with governmental regulations (and monitoring compliance where applicable).

Q. A/E of Record: The term of “A/E of Record” (Architect or Engineer of Record), “Architect,” “Engineer,” “Landscape Architect,” “Structural Engineer,” shall mean the Architect or Engineer(s) or Landscape Architect responsible for generating the permit documents required for construction of the facility.

R. RPR: “Resident Project Representative,” Shall mean the Owner’s representative (Airport Staff or Consultant) employed or contracted by the City of Defuniak Springs to review and monitor the general quality of the work, the general compliance with the Contract Documents, the progress of work and construction activities performed by the Contractor. This representative shall not alleviate or supplant the Contractor’s required inspection and supervision of the construction activities.

1.4 SUBMITTALS: For the Owner's records, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, and similar documents, correspondence and records established in conjunction with compliance with standards and regulations bearing upon performance of the work.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION (Not Applicable)

END OF SECTION 01090

(INTENTIONALLY LEFT BLANK)

SECTION 01095 - NPDES PERMIT CONFORMANCE

PART 1 - GENERAL INFORMATION

A. A National Discharge Elimination System (NPDES) General Permit for Storm Water Discharges from construction activities shall be obtained from The United States Environmental Protection Agency (EPA).

B. The NPDES permit program requires a Construction General Permit if the construction activity will disturb five acres or greater, or will disturb less than five acres but is part of a larger common plan of development or sale whose total land disturbing activities total five acres or greater (or is designated by the NPDES permitting authority); and will discharge storm water runoff from the construction site into a municipal separate storm water sewer system (MS4) or waters of the United States.

C. For this contract, the preparer of the design package has determined that a NPDES Construction General Permit is required to be submitted by the Contractor. It is therefore required that the Contractor read the permit requirements in the Construction General Permit cited in paragraph C, develop and implement a Storm Water Pollution Prevention Plan (SWPPP), and submit a NPDES Notice of Intent (NOI) to The Florida Department of Environmental Protection (FDEP). It will be the responsibility of the Contractor to complete and submit a Notice of Termination (NOT).

D. Detailed guidance on the development of the SWPPP is contained in EPA Publication EPA 832-R-92-005 dated September 1992, titled Storm Water Management for Construction Activities – Developing Pollution Prevention Plans and Best Management Practices.

PART 2 - SPECIFIC REQUIREMENTS

A. The Contractor shall design, develop, implement and comply with a Stormwater Pollution Prevention Plan (SWPPP) specifically for this construction site and including Best Management Practices (BMPs) and controls which prevent the pollution of storm water discharges.

B. The Contractor shall incorporate into the SWPPP all applicable requirements specified in state or local sediment and erosion control plans or permits or storm water management plans or permits. The Contractor shall submit a certification that the SWPPP reflects these requirements and that these requirements will be complied with during the term of the contract.

C. Prior to commencement of construction, the SWPPP must be prepared and certified by the Contractor. Notice of Intent (NOI) must be forwarded to the Environmental Protection Agency (with an information copy to the Owner) at least 48 hours prior to any land clearing.

D. Recordkeeping: The Contractor shall maintain the Plan and the associated records and reports, including documentation of the required inspections. These documents shall be

maintained at the job site until the site is finally stabilized. Thereafter, the Contractor (Permittee) shall keep the SWPPP and all reports for at least three years.

E. Report Submittal: The Contractor shall include with each payment request two (2) sets of information copies of all required inspection reports, certifications and notifications. Inspection reports to be submitted shall include both weekly reports and special reports required after rainfall events in excess of 0.5”. The regulations specifically require an onsite rain gauge. It is recommended that the Contractor record rainfall amount daily. Payment requests will not be processed in the absence of these submittals.

F. When the construction activity has ceased and all areas affected by the work are stabilized, the Contractor shall prepare, certify and submit the required Notice of Termination to the Environmental Protection Agency and the Owner. Final payment application will not be processed in the absence of these submissions.

PART 4 - EXECUTION (Not Applicable)

END OF SECTION 01095

SECTION 01100 - SUMMARY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Special Provisions and other Division 1 Specification Sections, apply to this Section.

B. Related Sections include the following:

1) General Provision Section 50, “Control of Work”
2) General Provision Section 70, “Legal Regulations and Responsibility to Public”
3) General Provision Section 80, “Execution and Progress”
4) Section 01143, “Airport Project Work Procedures”.
5) Section 01500, “Temporary Facilities and Controls”

C. If there is a discrepancy between the requirements of this section and related sections, the more restrictive interpretation shall apply.

1.2 SUMMARY

A. This Section includes the following:

1) Project information.
2) Work covered by the contract.
3) Work under separate contracts.
4) Owner-furnished products
5) Use of premises.
6) Coordination with Airport and Tenants.
7) Work restrictions.
8) Specification and drawing conventions.

1.3 PROJECT INFORMATION

1.4 WORK COVERED BY CONTRACT DOCUMENTS

A. The Work of Project is defined by the Contract Documents, and the Contract and consists of the following:

1) New construction of a General Aviation Facility, including new GA Terminal building, a future storage hangar, all sitework, site lighting, landscaping, parking lot improvements, apron improvements, security gates and fencing, garbage bin enclosure, tie-in to existing infrastructure and utilities, permitting fees, impact or utility connection fees, in order to provide a complete and operational facility as generally defined by the Contract Documents and the 2020 Florida Building Code, for a complete and functional facility.
2) Select demolition and related/select site work elements as required for the new GA Facility and related site improvements.

B. Type of Contract:

1) Project will be constructed under a Unit Price Contract, for the GA Facility.

1.5 WORK UNDER SEPARATE CONTRACTS

A. General: Cooperate fully with separate contractors so work on those contracts may be carried out smoothly, without interfering with or delaying work under this Contract. Coordinate the Work of this Contract with work performed under separate contracts.

B. Concurrent Work: Owner has awarded separate contract(s) for the following construction operations at Project site. Those operations are scheduled to be occurring concurrently to work under this Contract.

1) None.

C. Concurrent Work – Owner Performed: Owner may perform work using his own forces at Project site. Those operations may be conducted simultaneously with work under this Contract, beyond the GA Facility site.

1) None.

1.6 USE OF PREMISES

A. General: Contractor shall have limited use of premises for construction operations as indicated on the Drawings.

B. Use of Site: Limit use of premises to work in areas indicated on the Drawings. Do not disturb portions of Project site beyond areas in which the Work is indicated or required for the proposed project.

1) Owner Occupancy: Allow for Owner occupancy of the Project site and use by the public
2) Driveways and Entrances: Keep driveways and entrances serving premises clear and available to Owner, Owner's employees, and emergency vehicles at all times. Do not use these areas for parking or storage of materials.

a. Schedule deliveries to minimize use of roads, apron and driveways, and of security gates and entrances.
b. Schedule deliveries to minimize space and time requirements for storage of materials and equipment on-site.

1.7 OWNER'S OCCUPANCY REQUIREMENTS

A. Full Owner Occupancy: Owner or, the Owner's tenants or FAA personnel will occupy the airport and adjoining facilities to the project site during entire construction period. Cooperate with Owner during construction operations to minimize conflicts and facilitate Owner usage. Perform the Work so as not to interfere with Owner's day-to-day operations.

1) Maintain access to existing roadways, driveways, taxiways, runways and other adjacent occupied or used facilities. Do not close or obstruct roadways, taxiways

runways, parking lots or other occupied or used facilities without written permission from Owner and Authorities Having Jurisdiction.
2) Provide not less than seven days' notice to Owner of activities that will affect Owner's or Airport's operations.

B. Owner Occupancy of Completed Areas of Construction: Owner reserves the right to occupy and to place and install equipment in completed areas of building, before Substantial Completion, provided such occupancy does not interfere with completion of the Work. Such placement of equipment and partial occupancy shall not constitute acceptance of the total Work.

1) The Architect of Record will prepare a Certificate of Substantial Completion for each specific portion of the Work to be occupied before Owner occupancy.
2) Obtain a Certificate of Occupancy from Authorities Having Jurisdiction before Owner occupancy.
3) Before partial Owner occupancy, life safety, mechanical and electrical systems shall be fully operational, and required tests and inspections shall be successfully completed. Upon occupancy, Owner will operate and maintain mechanical and electrical systems serving occupied portions of building.
4) Upon occupancy, Owner will assume responsibility for maintenance and custodial service for occupied portions of building.

1.8 OWNER-FURNISHED PRODUCTS

A. Owner will furnish products indicated. The Work includes receiving, unloading, handling, storing, protecting, and installing Owner-furnished products and making building services connections. These items may be procured through State contracts and turned over to the Contractor for installation and coordination with the new work.

B. Owner-Furnished Products:

1) Refer to Appendix "B" – Owner Furnished items for additional items or building elements.

1.9 DRAWING AND SPECIFICATION FORMATS AND CONVENTIONS

A. Drawings and Specifications: The Drawings illustrate the general design intent, space requirements, and the minimum-base line-design requirements of the facility. These drawings are not intended to show a complete design; The Contractor shall be responsible for completing the delegated design for specific project elements requiring certification, further design refinement, and preparing the engineering (signed and sealed documents) for key delegated design elements required for construction of the facility as part of the FBC NOA requirements or as outlined in the Contract Documents.

B. Specification Format: Specifications are based on the Federal Aviation Administration (FAA) Standard Specifications for Specifying Construction of Airports as found in FAA Advisory Circular 150/5370-10H, The CSI Master Format 2016, FDOT Standard Specifications for Road and Bridge Construction – July 2019 edition and non-standard specifications developed specifically for this project. The CSI Specifications are

organized into Divisions and Sections using the 16-division format and CSI/CSC's "MasterFormat" numbering system.

C. Specification Content: The Specifications use certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. These conventions are as follows:

1) Abbreviated Language: Language used in the Specifications and other Contract Documents is abbreviated. Words and meanings shall be interpreted as appropriate. Words implied, but not stated, shall be inferred as the sense requires. Singular words shall be interpreted as plural and plural words shall be interpreted as singular where applicable as the context of the Contract Documents indicates.
2) Imperative mood and streamlined language are generally used in the Specifications. Requirements expressed in the imperative mood are to be performed by Contractor. Occasionally, the indicative or subjunctive mood may be used in the Section Text for clarity to describe responsibilities that must be fulfilled indirectly by Contractor or by others when so noted.

a. The words "shall," "shall be," or "shall comply with," depending on the context, are implied where a colon (:) is used within a sentence or phrase.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01100

(INTENTIONALLY LEFT BLANK)

SECTION 01135 – WEATHER DELAYS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Special Provisions and other Division 1 Specification Sections, apply to this Section.

B. If there is a discrepancy between the requirements of this section and related sections, the more restrictive interpretation shall apply.

1.2 EXTENSIONS OF CONTRACT TIME:

A. If the basis exists for an extension of time in accordance with General Conditions, Article 8, an extension of time on the basis of weather may be granted only for the number of Weather Delay Days in excess of the number of days listed as the Standard Baseline for the entire construction duration of each phase as a whole.

1.3 STANDARD BASELINE FOR AVERAGE CLIMATIC RANGE:

A. The Owner has reviewed weather data available from the National Oceanic and Atmospheric Administration (NOAA) and determined a Standard Baseline of average climatic range for – Defuniak Springs Airport.

B. Standard Baseline shall be regarded as the normal and anticipatory number of calendar days for each month during which construction activity shall be expected to be prevented and suspended by cause of precipitation in excess of one-tenth inch (0.10”) liquid measure. Suspension of construction activity for the number of days each month as listed in the Standard Baseline is included in the Work and is not eligible for extension of Contract Time.

C. Standard Baseline (based upon precipitation in excess of one-tenth inch (0.10”) liquid measure) established for this contract is as follows:

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sept	Oct	Nov	Dec
9.5	9	8	7	8	12	14.5	13	9	6.5	7.5	9

The Contractor shall include, at a minimal, the above noted rain delays within the construction schedule.

1.4 ADVERSE WEATHER AND WEATHER DELAY DAYS:

A. Adverse Weather is defined as the occurrence of one or more of the following conditions which prevents exterior construction activity or access to the site within twenty-four (24) hours:

1) precipitation (rain, snow, or ice) in excess of one inch (1") liquid measure;
2) temperatures which do not rise above 32 degrees F by 10:00 a.m.;
3) temperatures which do not rise above that specified for the day's construction activity by 10:00 a.m., if any is specified;
4) sustained wind in excess of twenty-five (25) m.p.h.;
5) any day that the Owner has requested no work to be performed.

B. A Weather Delay Day may be counted if adverse weather prevents work on the project for fifty percent (50%) or more of the Contractor's scheduled work day, including a weekend day or holiday if Contractor has scheduled construction activity that day.

Adverse Weather may include “dry-out” or “mud” days, as determined by the Architect such as:

1) For rain days above the standard baseline.
2) Only if there is a hindrance to site access or sitework, such as excavation, embankment, backfill, footings, etc. (see 4. & 5. below).
3) At a rate no greater than one (1) make-up day for each day or consecutive days of rain beyond the standard baseline that total 0.1 inch or more, liquid measure, if no substantial work is possible (see 4. & 5. below), unless specifically recommended otherwise by the Construction Manager/Architect.
4) If the Contractor’s activity is limited to approximately 50% of the Contractor’s activity before the Adverse Weather occurrence, then one-half (½) a weather delay day will be counted. For example if the Contractor is disking excavation and embankment areas to dry in situ moisture in the soils or hauling and placing unclassified excavation or borrow material to the embankment before an Adverse Weather occurrence, but is able to continue disking excavation and embankment areas or placing unclassified excavation or borrow material, one-half (½) a Weather Delay Day will be allowed.
5) If the Contractor’s activity is limited to minor activity when compared to the Contractor’s activity before the Adverse Weather occurrence, then one (1) weather delay day will be counted. For example if the Contractor is disking excavation and embankment areas to dry in situ soils, hauling borrow material to embankment before an Adverse Weather occurrence, but is only able to disk excavation and embankment areas to dry them due to the Adverse Weather occurrence, one (1) Weather Delay Day will be allowed.

C. If the Contractor is able to only perform disking operations to dry excavation and embankment areas due to in situ moisture in the soil, this is not considered an Adverse Weather occurrence or a Weather Delay Day and is considered to be a part of normal construction activities whether any other work can be performed or not.

D. The Owner will utilize monthly weather data from the Local National Weather Station or from on site observations to evaluate weather related delays; the determination of Contractor’s entitlement for any Weather Delay days, as defined hereinabove, will be based on the entire construction duration of the phase in lieu of a month-by-month consideration. The entitlements will consider those months that conditions are better or worse than the Standard Baseline established for this contract.

For example:

1) If the total number of standard baseline days for a Phase is forty one (41) days and there are thirty six (36) days with precipitation in excess of one tenth inch (0.10") liquid measure and ten (10) weather delay days, giving a total of forty six (46) rain and weather delay days. This would amount to five (5) days in excess of the total baseline days for that Phase. Five (5) additional days will be added to the time for that Phase.
2) If the total standard baseline for a Phase is forty one (41) days and there are twenty (28) days with precipitation in excess of one tenth inch (0.10") liquid measure and nine (9) weather delay days, giving a total of thirty seven (37) rain and weather delay days. This would amount to four (4) days better than the total baseline days for that Phase. Four (4) days will be deducted from the time for that Phase.

E. Baseline days will be prorated when partial months are a part of a phase/stage or the overall contract time. For example:

1) If the contract or a phase begins on April 11, including April 11, there are twenty (20) calendar days remaining in April. Twenty (20) remaining calendar days divided by thirty (30) total calendar days in April equals 0.6667. Six (6) total baseline days established for April multiplied times 0.6667 equals four (4) baseline days for the remaining twenty calendar days in April.

F. Paragraph 1.3.C above establishes a standard baseline of anticipated number of days of lost construction time for each month.

1) To calculate any liquidated damages for a phase/stage that is not completed on time, the number of baseline days for the actual total construction time for that phase/stage will be calculated from the standard baseline.
2) The number of weather delay days for the actual total construction time for that phase/stage will be calculated.
3) The difference in weather delay days and baseline days will then be calculated. Months that have less weather delay days than baseline days will result in a negative number.
4) The resulting difference will then be added to the contract time for the phase/stage.
5) The difference in the actual total construction time and the contract time plus weather delay days in excess of the baseline for that phase/stage will determine if and what the actual amount of liquidated damages for that phase/stage will be.

G. Weather Delay Calculation Example:

Using a **hypothetical** Phase 1 for example if:

FROM	TO	BASELINE DAYS	ACTUAL WEATHER DELAY DAYS	NUMBER OF DAYS IN EXCESS OF BASELINE
July 10, 2020	July 31, 2020	5	3	-2
Aug. 1, 2020	Aug. 31, 2020	7	11	+4
Sept. 1, 2020	Sept. 8, 2020	1	4	+3
		13	18	+5
Phase 1 Contract Time				60
Phase 1 Contract Time + Number Of Weather Delay Days In Excess Of Baseline				65
Phase 1 Actual Construction Time				67
Phase 1 Days Of Liquidated Damages				2

H. Contractor Reporting (Monthly Basis). Throughout the duration of the contract, the Contractor and the Owner shall reconcile impacts due to weather on a monthly basis. The Contractor shall submit monthly with the pay request an itemized list of; days impacted by weather, scheduled activity that was impacted and the impact which caused the delay (temperature, mud, snow, etc.).

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01135

SECTION 01140 – WORK RESTRICTIONS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Special Provisions and other Division 1 Specification Sections, apply to this Section.

B. Related Sections include the following:

1) General Provision Section 50, “Control of Work”
2) General Provision Section 70, “Legal Regulations and Responsibility to Public”
3) General Provision Section 80, “Execution and Progress”
4) Section 01100, “Summary”
5) Section 01143, “Airport Project Work Procedures”.

C. If there is a discrepancy between the requirements of this section and related sections, the more restrictive interpretation shall apply.

1.2 SEQUENCING:

A. The Contractor shall schedule his work activities in accordance with requirements of the Safety and Work Area Plans, and these Specifications unless otherwise approved by the Owner.

1.3 USE OF PREMISES

A. Use of Site: Limit use of premises to work in areas indicated. Do not disturb portions of site beyond areas in which the Work is indicated.

B. Limits: Confine construction operations to areas indicated in the documents and necessary to the progress of the Work.

C. Owner Occupancy: Allow for Owner occupancy of site and use by the public. The Owner will endeavor to cooperate with the Contractor's operations when the Contractor has notified the Owner in advance of need for changes in operations in order to accommodate construction operations. Conduct the work so as to cause the least interference with the Owner's operations.

D. Driveways and Entrances: Keep aprons, driveways, roadways and entrances serving premises clear and available to Owner, Owner's employees, and emergency vehicles at all times. Do not use these areas for parking or storage of materials.

E. Schedule deliveries to minimize use of driveways, roadways and entrances.

F. Schedule deliveries to minimize space and time requirements for storage of materials and equipment on-site.

G. Delivery vehicles, construction vehicles and other construction related hauling vehicles are restricted to the hauling/travel routes identified on the Site Plan, unless otherwise authorized, in writing, by the Owner.

H. Storage areas will be available on site; limited staging and storage areas will be available adjacent to new building.

1.4 OCCUPANCY REQUIREMENTS

A. Full Owner Occupancy: Owner will occupy the existing aprons, parking lots and airport facilities during entire construction period. Cooperate with Owner during construction operations to minimize conflicts and facilitate Owner usage. Perform the Work so as not to interfere with Owner's operations.

B. Existing Utilities: Disruption of utility services to the existing airport facilities will not be acceptable. The Contractor shall schedule all utility tie-ins with local utility service providers, and with the Owner a minimum of seven (7) calendar days before service interruption is scheduled to occur. The Contractor shall schedule utility tie-ins during off-peak hours to minimize disruption of airport operations, unless otherwise noted. Utility service shall not be disrupted for more than four (4) hours. Off-peak hours are defined as 8:00 p.m. to 7:00 a.m.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 COORDINATION WITH OCCUPANTS

A. Occupied areas include all areas in which the Owner's regular operations will be going on or to which the Owner requires access during the construction period, whether conducted by the Owner or his tenants, clientele, or the public.

B. Construction related activities, in general, may proceed during normal working hours, unless the work will interfere with operating procedures of the Airport. When this interference occurs, the Contractor shall arrange the required activities and work schedule to be performed during non-operating hours of the area of the Airport affected. The existing facilities are generally in operation during daytime hours, seven days per week. The Contractor shall have the option of working areas which are not in operation when the construction activities cause neither interference nor safety or security problems to the users of the Airport.

C. Limit access through occupied site areas to those days and times, which the Owner approves.

D. The Contractor shall review the plans and shall submit an updated layout plan for providing safe and secure passageway for users of the Airport during construction

activities. Any access or egress routes, which are required exits in accordance with the code, shall be maintained at all times during the construction of any given area.

E. When the following must be modified, provide alternate facilities acceptable to the Owner:

1) Site entrances and parking lots which must remain open.
2) Perimeter fencing and gates which are part of the Airport's Air Operations Area (AOA) demarcation shall remain secured at all times.
3) Utilities which must remain in operation.
4) Informational signage to direct the movement of airport patrons, tenants, clientele, or the public.

3.2 UTILITIES

A. Utilities are located within the construction area. Contractor shall coordinate with the Owner, the Contractor's surveyor, utility locate services, and Engineer to identify all utilities. Contractor shall be responsible for contacting utility owners and locating all existing utilities within the work area. Contractor shall be responsible for costs associated with utility location, protection, and for required repairs due to failure to comply with these requirements.

B. Information concerning underground utilities and service lines may be obtained from the utility companies, Owner and the FAA. The Owner does not guarantee their accuracy of information provided regarding existing conditions and utilities. The Contractor is advised to determine the exact locations from the available sources of information, or provide his own means of detection.

C. Contractor shall notify Airport personnel, Airport Tenants, utility companies, FAA personnel, and local utility agencies personnel before excavating in any area.

D. Agencies / utility companies with service on the Airport are listed in Subsection 70-15 of the General Provisions.

E. In all construction areas, all FAA cables shall be marked by the Contractor prior to construction. Contractor is to protect cables during construction. Contractor shall notify FAA supervisor in advance of construction activity to avoid unscheduled facility outages. Any FAA equipment/cable that is damaged by the Contractor shall be repaired as approved by the FAA supervisor / representative. All cable splice/repairs shall meet FAA specifications and be accomplished to the satisfaction of the FAA representative. Qualified workmen regularly engaged in that type of work shall perform all cable work. If an existing cable cannot be repaired to the satisfaction of the FAA, new cable of like kind shall be installed.

F. Maintain existing surface and pipe storm drainage, unless otherwise noted.

3.3 USE OF SITE

A. The Contractor shall at all times conduct his work so as to create no hindrance, hazard, or obstacle to vehicular or aircraft traffic using the Airport.

B. The Contractor shall control his or her operations and the operations of his or her subcontractors and all suppliers so as to provide for the free and unobstructed movement of aircraft in the aircraft operations areas of the airport. This area shall be accessible to the Contractor on a limited basis.

C. Aircraft always have right of way in operating areas.

D. Access to the work: access to the work will be via the access routes shown on the plans or as directed by the Owner. The Contractor shall identify access routes with suitable signs, barricades and similar equipments.

E. All construction traffic shall enter and exit the project area through access points directed by the Owner. Contractor will be responsible for security of construction access gates in accordance with the airport's security plan.

F. Haul Route: All existing roads and parking lot areas that will be used as part of the haul road will be restored to their original condition. After completion of the project the Contractor will be responsible for daily clean up operations of debris that may be on the haul road.

G. The existing airport pavements, access roads, and haul routes may not be capable of supporting certain types of construction equipment. Prior to bidding, the Contractor shall fully satisfy himself as to the ability of the existing airport pavements to satisfactorily sustain the type of equipment he plans to use. Contractor shall size the equipment used for construction accordingly. The Contractor at no additional cost to the Owner shall repair any damage caused by hauling or any other construction activity to existing pavement.

H. It is of specific importance that all aircraft operating areas, parking lots, and landscaped areas be kept free of construction related debris due to potential aircraft damage. The Contractor shall police the construction and adjacent site area regularly to assure that no debris creates an endangerment to aircraft. Contractor shall maintain these pavements clean throughout the project.

I. Project access, staging area, waste area, stockpile area and all haul roads shall be restored to original condition including topsoil and seeding at job completion at no additional cost to owner.

J. The location (and size) of the Contractor's staging area will be determined at the pre-construction conference.

K. All construction material and equipment shall be located and stored in the designated staging area(s) only.

L. The Contractor will be responsible for the cleanup and disposal of all trash and debris created by his work or personnel within the Project Work Area and adjoining Public Areas. All trash and debris must be disposed of offsite.

M. The Contractor will be responsible for the storage and security of his material and equipment and shall erect storage facilities and fencing as necessary. The Contractor's storage and staging area shall be in the general location(s) shown on drawing.

N. Contractor shall control dust at an acceptable level. The Contractor shall be required to keep a water supply at the project site during heavy equipment usage areas.

O. Burning of debris will not be allowed on the Airport property.

P. All vehicles operated on existing pavements to remain shall be rubber tired.

Q. The Contractor shall not enter or encroach upon an aircraft parking area or operational taxiway without first obtaining permission from the Owner or FAA.

R. Damage to aircraft, ground equipment, or facilities on the ground, resulting from hauling or storage of material or other activities in connection with the execution of the contract work, shall be repaired or replaced by the Contractor in as good or better condition as originally found.

S. Stock-piled material shall be constrained in a manner to prevent movement resulting from aircraft engine blast or wind.

T. All vehicles of the Contractor's forces shall be parked in designated areas only. Contractor to provide temporary gate and fencing at perimeter and is to be responsible for security, maintenance, and restoration of areas.

U. In the event the Contractor services his equipment on Airport property, all oil and fluids removed from the equipment must be collected and disposed of in accordance with the local, state and federal environmental laws. If a hazardous, or regulated material is spilled, it must be promptly reported to the airport and cleaned up by the Contractor at Contractor’s expense.

V. Temporary fencing and vehicle barricades shall not be secured to the pavement and these items shall be self-supporting without the need to core the pavements or the use of anchor bolts.

3.4 PHASING AND SEQUENCING

A. Existing easements to other properties shall be maintained at all times. Areas outside the project limits are designated as restricted areas. The Contractor's forces are prohibited from entering restricted areas at any time, unless specifically authorized by the Airport operations department.

B. The Contractor shall be responsible for visiting the site to become familiar with the existing conditions. The Design Documents shall serve to aid the Contractor in the evaluation of the sequences and extents of construction; but shall not be held to be all-inclusive. Any conflicts or apparent deficiencies must be submitted in writing prior submission of the RFP response.

C. Portions of the Airport shall be occupied during construction. The Contractor shall comply with the following life safety issues. Failure to list all life safety issues does not

relieve the Contractor from complying with federal, state and local codes, the contractual agreement between the Contractor and Owner, and other governing bodies which have jurisdiction on this project. The following are interim life safety code issues which are specific to this project and must be addressed:

1) Insure all tenant facilities, fire hydrant access, building entrances and exits provide free and unobstructed ingress and egress.
2) Insure access to AOA areas are secured at all times.

D. Smoking shall only be allowed in designated areas outside of the buildings.

E. Develop and enforce storage, housekeeping and debris removal procedures that reduce the flammable and combustible fire load to the lowest level necessary for daily operations.

F. Secure all tools and construction materials during breaks and non-construction hours.

END OF SECTION 01140

SECTION 01143 – AIRPORT PROJECT WORK PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Special Provisions and other Division 1 Specification Sections, apply to this Section.

B. Related Sections include the following:

1) General Provision Section 50, “Control of Work”
2) General Provision Section 70, “Legal Regulations and Responsibility to Public”
3) General Provision Section 80, “Execution and Progress”
4) Section 01100, “Summary”
5) Section 01140, “Work Restrictions”.
6) Section 01320, “Construction Progress Documentation”

C. If there is a discrepancy between the requirements of this section and related sections, the more restrictive interpretation shall apply.

1.2 INTRODUCTION – AIRPORT OPERATIONS

A. The safety of the Airport patrons and personnel and of the Contractor’s personnel is paramount throughout construction. Except where stricter requirements are indicated, the Contractor shall follow the safety guidelines outlined in the CSPP.

B. This project may include Contractor operations within active Air Operations Areas (AOA), which is demarcated by the airfield security fencing. The Airport will conduct normal aircraft operations during the course of this project, subject to certain restrictions called out in this section or elsewhere in the specifications. Therefore, to provide for the security and safety of Airport users and the Contractor’s forces, as well as to minimize interruptions to aircraft operations, the Contractor shall limit his work within the areas designated and conduct his operations as specified.

C. Unauthorized crossing of the AOA is prohibited.

1) Any fines or assessments levied against the Sponsor (Owner) as a result of intrusions in the AOA or other violations by the Contractor’s personnel or those of his subcontractors and suppliers will be passed on to the Contractor and assessed against the Contract Amount on the next Application for Payment.
2) In addition to any fines assessed to the individual and the Sponsor, the Contractor will be subject to a fine per incident, assessed by the Sponsor.

a. For the first incident, the individual and firm will be fined $2,500.
b. For the second incident, the individual and firm will be fined $5,000.
c. For the third incident, the individual, and possibly the associated firm, may be prohibited from the Secured Area, from the Work area, or from the Airport property, at the sole discretion of the Airport.

D. Construction Scheduling and Coordination: The Work will be conducted so as to provide the least possible interference with the Owner's, tenants, and FAA daily operations. Prior to commencing Work on-site, the Contractor shall submit, and secure approval from the Owner, a complete schedule for the project, identifying any expected periods of potential conflict.

E. Coordinate Construction Activities with Airport Operations and Security Plan:

1) Provide and/or secure the following:

a. Safety Plan Report
b. Quality Assurance Plan Report
c. Security badges/training (Where AOA access is required)

2) Reports under this heading shall be prepared in compliance with Airport Operations Department requirements.

F. Contractor may contact Airport Operations OR Designated Representative for requirements and clarifications related to this topic.

1.3 AIRPORT SAFETY

A. Contractor shall obtain, have knowledge of, and incorporate the following safety provisions into the construction project:

1) Operational Safety on Airports During Construction – AC-150/5370-2G, latest edition, (attached as Appendix A).
2) Airport Safety Self-Inspection – AC-150/5200-18C, latest edition.
3) Painting, Marking, and Lighting of Vehicles Used on an Airport – AC 150/5210-5D, latest edition.
4) Consideration of Improvement of Airport Safety – FAR, PART 139.

B. Contractor shall comply with all Airport rules and regulations and security requirements that may be established to protect airport operations.

1) Additional notes on the Drawings and in the general requirements sections of these Documents provide a level of safety and security requirements and guidelines.
2) The Contractor shall incorporate the CSPP and Airport guidelines and requirements into his Safety Plan Compliance Document (SPCD), and attain Owner's approval in advance of mobilizing Contractor's forces on the Airport premises.
3) Failure to comply with the SPCD, or violation of any Airport safety and security regulations and protocols, will result in disciplinary action. At a minimum, violations will result in temporary restriction of an individual's access to secure areas of the Airport. Disciplinary actions may, as relates to the type and nature of the violation, and is at the Airport's sole discretion, disciplinary actions may include:

a. Verbal reprimand and temporary revocation of access privileges
b. Temporary revocation of access privileges and mandatory re-training in Security Class and Airport Safety and Security procedures
c. Permanent restriction of access privileges
d. Permanent loss of access privileges
e. Restriction from worksite

f. Restriction and removal from Airport property(ies)
g. Fines, as defined elsewhere in this document or in the security plan

C. All actions of the Contractor's employees, subcontractors and suppliers are the sole responsibility of the Contractor. All employees, subcontractors and suppliers must be educated regarding related work and the safety requirements of the aircraft operations area and public safety adjacent to the construction area.

D. Observe and/or follow all safety related instructions by any Federal Aviation Administration (FAA), Transportation Security Administration, and Airport personnel at all times.

1) In case of emergency, the Contractor shall make every effort to remove the equipment and personnel from affected area(s) and abide by decisions made by the Owner or his/her representative.

a. To the best of his ability, the Contractor shall immediately comply with directives from representatives of the FAA and Transportation Security Administration. Contractor will then promptly notify first the designated Airport Operations representative and second the Owner's project representative of the incident.
b. See General Conditions and other parts of this Section for additional information in case of emergencies and other unforeseeable conditions beyond the Control of the Contractor or the Owner, which may include acts of God or the public enemy, acts of government, hurricanes, fires, floods, or safety and security incidences and changes in national transportation safety and security procedures.

E. The Contractor shall cooperate with the Airport users and tenants, through the Owner, in scheduling of all work operations.

F. Vehicular Markings: Contractor vehicles and equipment shall be marked with checkered flags and lighted with flashing beacons to comply with requirements of FAA AC 150/5210-5D, latest edition, when operated within the airfield or SIDA.

G. Obstructions to Navigation:

1) Violation of Safety Zone Surfaces: Penetration of equipment, vehicles, materials, or men into the safety zones and approach surfaces requires the preparation and distribution of Notices of Airmen (NOTAMs) in advance to the actual penetration.
2) Scheduling: When part of the work in this project is in violation of FAR Part 77, the clearance distance requirements from runway and taxiway edges shall be incorporated into the construction sequence schedule. At no time shall the construction limits of the area under construction violate the safety zones without prior notification to and approval by the Engineer.

H. Coordination and Communication: Work within and adjacent to active AOAs shall be coordinated with the Owner prior to commencement of the activity. Work crews in these areas shall be accompanied by the construction superintendent who shall be in constant radio contact with ATC.

I. Safety and security can be discussed with the Contractor or the Contractor's safety representative at the Pre-Construction Conference and at progress meetings at the job site.

1.4 AIRPORT SECURITY

A. Secured Area Requirements: As part of the Airport Security Plan, the Contractor will be required to adhere to all FAA and TSA security requirements and all construction personnel working in, or having access to, secure areas (AOA) will be required to obtain and wear badges issued by the Owner and comply with provisions of the Airport Security Plan and Airport Rules and Regulations:

1) Badges will be required for most construction personnel. The Contractor's superintendent and supervisors, all approved equipment escort personnel, and other select personnel shall be trained, certified and badged for operations within the Secured Area as defined with the current approved Airport Security Plan.

2) Obtain necessary clearances and identification badges for construction personnel through the Airport Operations Department (See Special Conditions, "Airport Security Provisions"). The badges shall be returned at project completion.

3) Applications for clearance check and other required forms should be turned into Airport Operations. A photo identification badge will be issued for each approved application.

a. The badge remains property of the Owner. There is no charge for the initial badge itself.
b. A non-refundable fee of Seventy-Five Dollars ($75.00) fee will be assessed if a badge holder loses the badge or does not return the badge at the completion of the project, or upon request of Airport Operations, or if a badge holder fails to report a lost badge in a timely manner.

4) Each badge holder will be required to comply with the security rules and regulations of the Punta Gorda Airport.

a. The Airport could suffer severe fines or penalties as a result of security violations.
b. The Contractor will be responsible for these fines or penalties for any security violations that are his responsibility.
c. In addition to fines assessed by the Federal Regulatory Agencies for security violations, the Contractor, and the responsible individual, will be assessed a fine for each violation, as described elsewhere in this Section.

B. The Contractor shall provide security within the construction area and shall keep all unauthorized personnel out.

C. Contractor should confine all construction personnel to within the construction limits during each phase of the work.

D. Contractor security measures will be discussed and reviewed at the Pre-Construction Conference.

1.5 CONSTRUCTION SAFETY REQUIREMENTS:

A. General Safety and Accident Prevention: The Contractor shall comply with all applicable federal, state, and local laws, ordinances, and regulations governing safety, health, and sanitation; shall provide barricades; and shall take any other needed actions, on the Contractor's own responsibility, that are reasonably necessary to protect the life and health of employees on the job, the safety of airport users, and the safety of moving and parked aircraft, and other property during the performance of the work.

1) Safety Officer: The Contractor is required to designate a Safety Officer who will be the liaison between the Contractor and the Owner in all safety related matters for the duration of the project. The Safety Officer shall be on call 24 hours per day for emergency maintenance of airport hazard lighting, barricades, and other safety features.

a. The Safety Officer's duties shall include accident prevention.

B. Portions of the Airport shall be occupied during construction. The Contractor shall comply with the following life safety issues. Failure to list all life safety issues does not relieve the Contractor from complying with federal, state and local codes, the contractual agreement between the Contractor and Owner, and other governing bodies which have jurisdiction on this project. The following are interim life safety code issues which are specific to this project and must be addressed:

1) Insure all tenant facilities, fire hydrant access, building entrances and exits provide free and unobstructed ingress and egress.
2) Insure access to AOA areas are secured at all times.

C. Smoking shall only be allowed in designated areas outside of the buildings.

D. Develop and enforce storage, housekeeping and debris removal procedures that reduce the flammable and combustible fire load to the lowest level necessary for daily operations.

E. Protection of Utilities: The Contractor shall be responsible for field marking and protecting all utilities within the construction limits.

F. Storage of Equipment, Vehicles, and Materials: All equipment, vehicles, and materials must be stored in the designated storage or staging area or in areas acceptable to the Airport during breaks and non-construction hours.

G. Limitations on Construction Methods:

1) No open flames or burning will be allowed on Airport property. Burning of debris will not be allowed on airport property
2) Stockpiled material shall be constrained in a manner to prevent displacement by jet blast, propeller blast, or wind.

H. Prior to commencing the work, Contractor shall obtain all necessary permits and approvals, including building construction permits, required for the project.

I. Contractor to submit a SPCD for approval within ten days of receipt of the Notice to Proceed, but in no case later than the Pre-Construction Conference.

1.6 PHASING AND SEQUENCING

A. The Contractor shall schedule all work activities in accordance with requirements of the Owner approved work sequence and phasing prepared by the Contractor and these Specifications unless otherwise approved by the Owner.

B. Existing easements to other properties shall be maintained at all times. Areas outside the project limits are designated as restricted areas. The Contractor's forces are prohibited from entering restricted areas at any time, unless specifically authorized by the Airport.

1) Construction stakeout shall be performed by Contractor in accordance with Subsection 50-07 of the General Provisions. It shall be the responsibility of the Contractor to provide all measurements that may be required to lay out the construction.

C. Contractor shall be responsible for visiting the site to become familiar with the existing conditions. The Design Documents shall serve to aid the Contractor in his evaluation of the sequences and extents of construction; but shall not be held to be all-inclusive. Any apparent conflicts or deficiencies must be submitted in writing, prior to Submission of the RFQ Response.

1.7 USE OF PREMISES

A. Use of Site: Limit use of premises to work in areas indicated. Do not disturb portions of Project site beyond areas in which the Work is indicated.

1) Limits: Confine construction operations to staging areas, and areas identified for each phase of construction elsewhere in the Construction Documents.

a. Restricted Areas: Secure Identification Display Areas, Secured Area, and Aircraft Operations Area:

1) Access to some areas of the Project Work Area is restricted to cleared personnel. Contractor shall be responsible for the performance of the Contractor's own forces, of all subcontractors and subcontractors' forces, and suppliers.
2) Contractor is responsible for making all Contractor and subcontractor or other construction related forces on site aware of the Airport Security Program as it relates to access to the Airport Operations Area.
3) Perform work in a manner so as to limit construction activities in restricted areas of the Airport. Contractor's approved Superintendent shall be present for any construction activity that is expected to occur in the Secured Area.

2) The Owner will endeavor to cooperate with the Contractor's operations when the Contractor has notified Airport Operations or designated representative in advance of need for changes in operations in order to accommodate construction operations.

Conduct the work so as to cause the least interference with the Owner's and tenant's/FAA tower operations.

3) Driveways and Entrances: Keep driveways and entrances serving premises clear and available to Owner, Owner's employees, tenants, patrons, and emergency vehicles at all times. Do not use these areas for parking or storage of materials.

   a. Schedule deliveries to minimize use of driveways and entrances.
   b. Schedule deliveries to minimize space and time requirements for storage of materials and equipment on-site.
   c. Delivery vehicles, construction vehicles and other construction related hauling vehicles are restricted to the hauling/travel routes shall be identified on the Contractor's layout Plan approved by the Airport, unless otherwise authorized, in writing, by the Airport or designated representative.
   d. The area immediately adjacent to the Area of Work is limited. Coordinate transportation of workers and equipment from the Staging Area to this area in order to limit the number of vehicles present. Limit total number of vehicles in this area to the space available, and as approved in advance by Airport Operations or designated representative. Only authorized work vehicles, as described elsewhere in this document, will be allowed access to the Secured Area. No personal vehicles will be allowed in the staging areas within the Secured Area.
   e. Storage areas will be available on site.

4) Signs: Provide signs adequate to direct visitors, tenants, and airport patrons. Do not install, or allow to be installed, signs other than specified sign(s) and signs identifying the principal entities involved in the project.

B. Emergency Preparedness / Special Event Conditions: The Contractor shall fully participate with the City of Defuniak Springs in reasonable measures to protect the general public, the City of Defuniak Springs and the Airport, their employees, the Contractor and his employees, and his forces, equipment, and materials from damages from unforeseeable causes beyond the control of the Owner or the Contractor, including but not limited to: unusual weather events, acts of God, acts of public enemies, acts of government, fires, floods, discovery of pre-existing hazardous materials or hazardous conditions, epidemics, quarantine or public-health regulations, and strikes or lockouts.

1) In the event of an emergency affecting the safety or security of the public, Airport tenants, Airport employees, Contractor or subcontractor employees, the Project, other property or individuals, then the Contractor, without special instruction or authorization, shall act to prevent and reduce injury, damage, or loss.

   a. Upon observation of conditions, acts or events indicating risk to safety or security anywhere on Airport property, Contractor shall immediately notify Airport Operations, RPR and/or designated representative.

2) The Contractor and representatives of primary subcontractors, to include at a minimum the Superintendent, Safety Coordinator, and Security Coordinator, shall attend and take part in emergency preparedness planning meetings organized by the Airport.

3) In the event of foreseeable (at least 24-hours advance warning) uncontrollable conditions that may impact the Airport (e.g., approaching hurricane), the Contractor is responsible for securing the Project Area to reduce risk of damage to persons or property, to the satisfaction of the Owner. Upon notice from Airport Operations or designated representative or other authority having jurisdiction of impending hazardous conditions, the Contractor shall:

    a. Enclose any in-progress openings in the building envelope with weather-proof temporary partitions.
    b. Cover exposed substrates or incomplete exterior finishes securely with anchored water-resistant coverings.
    c. Secure unused materials in containers and/or trailers and remove from areas in, on, or adjacent to construction or existing buildings.
    d. Remove all equipment or materials that are likely to become air- or water-borne, to include staging materials and temporary facilities, from, on or adjacent to the AOA.
    e. Remove cranes, hoists, and other mobile equipment over ten feet tall from the site, or to covered storage, if allowed by Airport Operations or designated representative.
    f. Remove all non-essential vehicles from the Site, and secure off-site under Contractor's care and control.
    g. When practical, completely demobilize any staging areas on the Airside (AOA) of permanent fences and relocate to other staging areas on the non-secure side of the security fence.
    h. When practical, remove equipment and materials to secured storage off-site, approved per other parts of these specifications.
    i. Cover, secure, and anchor any equipment and materials in the non-secure staging area that cannot practically be relocated to secured storage off-site.
    j. Secure the Work and Site as is most practicable, and in the best interests of the public, the Project, the Owner, and Contractor.
    k. Provide Airport Operations or designated representative with emergency contact information for key personnel.
    l. Evacuate non-essential personnel to safer locations.

4) Contractor is fully responsible for the safety and security of the Project throughout Construction. In any special event, should the Contractor fail to remove forces, equipment, and materials under his control from the Owner property, or to secure the same and the Work to the satisfaction of Airport Operations or designated representative, and in the opinion of Airport Operations or designated representative those forces equipment, or materials shall be at risk of injury, damage or loss, or of causing injury, damage, or loss to the Owner or others; then the Owner may, or may not, choose to remove, relocate, or secure the Work by whatever means the Owner deems in the best interest of the Owner and the Project.

    a. The Contractor agrees in a special event that he has abandoned any property not secured to the satisfaction of Airport Operations, RPR or designated representative.
    b. Should the Owner be required to secure items under the control of the Contractor, the Contractor shall reimburse the Owner for actual costs incurred in securing the Work, to include, but not limited to, labor, oversight, use of

equipment, rental of equipment, cost of fuels, storage fees, material, utilities, and incidentals.

c. The Owner assumes no responsibility for damage or loss of Contractor property, equipment, materials or parts of the Work not secured by the Contractor, or necessitated to be secured or relocated in the interests of public safety or security.

C. Cleanliness of Site: Contractor shall be responsible for keeping aircraft operations areas, movement areas, ground service routes, work open to or visible from public areas, tenant operations areas, work areas used or accessed by others, haul route, parking lots, landscaped areas/grounds, and staging areas in an orderly and clean condition.

1) Areas on or adjacent to aircraft operations shall be kept clean and free of loose debris that may pose a hindrance to airport operations. Contractor shall police area on a regular basis, provide adequate containers for anticipated debris, and remove loose debris and containers to storage away from aircraft operations area and security fence on a more-than-daily basis. Further requirements are noted elsewhere in the contract documents, the drawings and project manual.
2) The Contractor shall clean up construction debris on a regular basis and as directed by the Owner. Debris and materials scheduled for recycling shall be secured or removed from the building site.

1.8 OCCUPANCY REQUIREMENTS

A. Owner Occupancy: Allow for Owner occupancy of the site and use by the public.

B. Full Owner Occupancy: Owner will occupy site and the temporary rental car offices and the FAA tower during entire construction period. Cooperate with Owner during construction operations to minimize conflicts and facilitate Owner usage. Perform the Work so as not to interfere with Owner's operations.

C. Partial Owner Occupancy: Owner reserves the right to occupy and to place and install equipment in completed areas of building, before Substantial Completion, provided such occupancy does not interfere with completion of the Work. Such placement of equipment and partial occupancy shall not constitute acceptance of the total Work.

1) Architect will prepare a Certificate of Substantial Completion for each specific portion of the Work that may be occupied before Owner occupancy.
2) Obtain a Certificate of Occupancy from Authorities Having Jurisdiction before Owner occupancy.
3) Before partial Owner occupancy, life safety, mechanical and electrical systems shall be fully operational, and required tests and inspections shall be successfully completed. On occupancy, Owner will provide, operate, and maintain mechanical and electrical systems serving occupied portions of building.
4) On occupancy, Owner will assume responsibility for maintenance and custodial service for occupied portions of building.

1.9 COORDINATION WITH DAILY OPERATIONS

A. Occupied areas include all areas in which the Owner's regular operations will be going on or to which the Owner or the Airport's tenants requires access during the construction period, whether conducted by the Owner or his tenants, clientele, or the public.

B. On-Site Work Hours: **Construction related activities, in general, shall proceed during normal working hours, unless the work will interfere with operating procedures of the Airport. When this interference occurs,** the **Contractor shall arrange the required activities and work schedule to be performed during non-operating hours of the area of the Airport affected**. Some areas of the Airport are in operation for fewer hours each day than the overall operating hours, and the Contractor shall have the option of working those areas which are not in operation when the construction activities cause neither interference nor safety or security problems to the users of the Airport. Contractor may, upon approval of the Owner, choose to conduct construction activities during off hours. Work in public areas, and work impacting airport or tenant operations areas and utility connections, shall be coordinated with the Airport and respective tenants not less than thirty (30) calendar days in advance of anticipated work in those areas. Provide an updated schedule seven (7) days in advance of anticipated work in the above-noted areas.

1) Normal Operating Hours: The existing facilities generally in operation between the hours of 7:00 am and 8:00 p.m., seven days per week. Precise work hours shall be coordinated with Airport at Pre-Construction Conference, and may be adjusted, if needed, at monthly meetings thereafter.
2) Off-Hours: Off hours are generally defined between as being between 8:00 p.m. and 7:00 am in most areas.

    a. Contractor shall limit and restrict Work during off-hours. Contractor shall coordinate with Airport not less than fifteen days in advance of performing any off-hours work and shall be responsible for reimbursing the Owner for additional costs incurred to provide staff during non-normal hours.

C. Coordination with Aircraft Operations: Contractor shall coordinate all construction activities and work to minimize impacts to the Airport, and tenant operations.

D. When the following must be modified, provide alternate facilities acceptable to Airport Operations or designated representative:

1) Entrances and driveways which must remain open.
2) Utilities which must remain in operation.
3) Informational signage to direct airport users and patrons.

E. Scheduling: Contractor shall review and coordinate the Construction Schedule with RPR.

1) Submit a comprehensive preliminary construction schedule for review fourteen (14) calendar days in advance of the Pre-Construction Conference. Refer to other sections of the General Provisions and these general requirements for additional information.

2) Changes to the approved construction schedule will not be allowed unless approved by Airport Operations or designated representative in writing. A construction schedule with project sequencing and coordination timetables for construction adjacent to or within aircraft operation areas must be approved before any work commences.
3) Changes to Security Operations: Notify Airport Operations in writing at least fourteen calendar days in advance of any proposed changes affecting the Secured Area, including any changes to the security fence, any gates opening to the Secured Area, access control devices at gates on the line of demarcation, modifications to staging areas in the Secured Area, modifications to Security Operations such as using a guard at a gate rather than existing access control. Proposed changes, including temporary changes, to the Airport Security Plan must be approved and filed with the authorizing agencies not less than thirty days prior to the change taking affect. Contractor shall be liable for any delays in prosecuting the Contractor's work resulting from failure to provide sufficient notice.
4) Notify Airport Operations at least seven (7) days in advance of any proposed changes to the construction schedule for approval.
5) Notify Airport Operations at least ten (10) calendar days in advance of mobilizing to the project staging area.
6) Notify Airport Operations at least thirty (30) days in advance of any demolition activities and coordinate the relocation of any Airport tenants within the existing facilities.
7) At times and days to be determined at the Pre-Construction Conference, bi-monthly meetings shall be held involving the Contractor's superintendent, the Architect/Engineer and Airport Operations or designated representative; weekly meetings may be held involving the construction superintendent and the Owner's designated representative.
8) The Contractor shall be responsible for informing in writing the Airport of the construction schedule for the approaching two weeks' construction activity.
9) All subcontractors shall supply the above information to the Contractor for inclusion in their report. Any storage of materials, access or egress problems, traffic flow or normal airport operations which are to be affected must be protected and/or agreed upon by Airport Operations or designated representative. All costs shall be incurred by the Contractor.

1.10 UTILITIES

A. Utilities are located adjacent to and within the construction area. Contractor shall coordinate with the Engineer and the Airport to identify utilities. Contractor shall be responsible for contacting utility owners and locating all existing utilities within the work area. Contractor shall be responsible for costs associated with utility location, protection, and for required repairs due to failure to comply with these requirements.

B. Information concerning underground utilities and service lines may be obtained from the utility companies, Owner, and the FAA. The Owner does not guarantee the accuracy of any information provided regarding existing conditions and utilities. The Contractor is advised to determine the exact locations from the available sources of information or provide his own means of detection.

1) Agencies / utility companies with service on the Airport are identified in subsection 70-15 of the General Provisions.

C. Contractor shall notify Airport personnel, utility companies, and FAA personnel, before excavating in any area.

D. In all construction areas, all FAA cables shall be marked by the Contractor prior to construction. Contractor is to protect cables during construction. Contractor shall notify FAA supervisor in advance of construction activity to avoid unscheduled facility outages. Any FAA equipment/cable that is damaged by the Contractor shall be repaired as approved by the FAA supervisor / representative. All cable splice/repairs shall meet FAA specifications and be accomplished to the satisfaction of the FAA representative. Qualified workmen regularly engaged in that type of work shall perform all cable work. If an existing cable cannot be repaired to the satisfaction of the FAA, new cable of like kind shall be installed.

E. Maintain existing surface and pipe storm drainage, unless otherwise noted.

PART 2 - PRODUCTS

2.1 BARRICADES

A. Barricades shall be constructed and installed as described in other sections of the specifications and as shown on the drawings, and in accordance with the CSPP.

B. Maintain barricades throughout construction.

1) Inspect barricades in place at least twice daily to ensure correct placement and functional flags and light.
2) Immediately correct any damage or disrepair, or replace barricade.

C. Furnish and maintain all barricades lights.

1) Supply all batteries and lamps for barricade lights necessary for Project.

D. Remove and relocate barricades as directed by Airport Operations or designated representative during construction in accordance with referenced guidelines.

PART 3 - EXECUTION

3.1 COORDINATION

A. The Contractor shall have a general supervisor on the job at all times during construction activity.

B. The Owner will designate a representative who will issue all Notices to Airmen (NOTAMs) with the Federal Aviation Administration.

C. The Contractor shall furnish the Owner with the necessary information on construction conditions (apron closure, tie-ins to existing movement areas, etc.) so that the Airport can advise flight control to issue NOTAMs in accordance with established criteria.

D. The Contractor shall make reasonable effort to coordinate with separate Contractors working in the same area or adjacent areas. Specific overlap areas are noted elsewhere in the contract documents, the drawings and project manual.

3.2 CONTRACTOR OPERATIONS ON SITE

A. The Contractor shall at all times conduct the Contractor's work so as to create no hindrance, hazard, or obstacle to vehicular or aircraft traffic using the airport.

1) The Contractor shall control his operations and the operations of his subcontractors and all suppliers so as to provide for the free and unobstructed movement of aircraft in the aircraft operations areas of the airport. This area shall be accessible to the Contractor on a limited basis.
2) Aircraft always have right of way in operating areas.
3) The Contractor shall not enter or encroach upon an aircraft parking area or operational taxiway without first obtaining permission from the Owner or FAA, as allowed under the Security Plan.

B. Damage to aircraft, ground equipment, or facilities resulting from hauling or storage of material or other activities in connection with the execution of the contract work, shall be repaired or replaced by the Contractor in as good or better condition as originally found.

C. All construction traffic shall enter and exit the project area through the Airport approved access points, as shown on the Contractor's phasing and work sequence drawings approved and as directed by Airport Operations or representative. Access to the work: will be via the access routes shown on the plans or as directed by Airport Operations or designated representative.

1) The Contractor shall identify access routes with suitable signs, barricades and similar equipment.
2) Contractor will be responsible for security of construction access gates in accordance with the Airport Security Plan.
3) Contractor to provide temporary gate and fencing at perimeter of project areas as needed, and is to be responsible for security, maintenance, and restoration of areas.
4) Gates to the AOA or Security Identification Display Areas (SIDA) must be locked at all times or manned at all times by badged employees of the Contractor.

D. Use of Contractor Vehicles on airport property:

1) Contractor's vehicles used on the Airside portion of the premises must be clearly marked.
2) All vehicles operated on existing pavements to remain shall be rubber tired.
3) All vehicles of the Contractor's forces shall be parked in designated areas only.
4) In the event the Contractor must service his equipment on airport property, all oil and fluids removed from the equipment must be collected and disposed of in accordance with local, state and federal environmental laws. If a hazardous or regulated material is spilled, it must be cleaned up by the Contractor and promptly reported to the Airport.

E. Haul Route: Existing roads used as part of the haul road shall be restored to their original condition after completion of the project, unless noted otherwise. The Contractor will be responsible for daily clean up operations of debris that may be on the haul road.

1) The existing airport pavements, access roads, and haul routes may not be capable of supporting certain types of construction equipment. Prior to submission of the RFQ response, the Contractor shall fully satisfy himself as to the ability of the existing airport pavements to satisfactorily sustain the type of equipment he plans to use. Contractor shall size the equipment used for construction accordingly. As part of the Work, the Contractor shall repair any damage caused by hauling or any other construction activity to existing pavement.
2) It is of specific importance that all aircraft operating areas be kept free of debris due to potential aircraft damage. The Contractor shall police the construction and adjacent site area regularly to assure that no debris creates an endangerment to aircraft. Contractor shall maintain these pavements clean throughout the project.
3) Except where designated on plans or as authorized by Airport Operations or designated representative, Contractor will not be allowed to use any of the existing runways, taxiways, or apron as part of the haul road.
4) The Contractor shall restore any project access route, staging area, waste area, stockpile area and all haul roads to the original condition, including topsoil and seeding, at job completion.

F. The Contractor’s staging area has been preliminarily shown on the drawings for information purposes only. The actual size and location will be determined at the Pre-Construction Conference.

1) All construction material and equipment shall be located and stored in the designated staging area(s) only.
2) The Contractor will be responsible for the daily cleanup and regular disposal of trash and debris created by his work or personnel. Trash and debris must be disposed of offsite.
3) The Contractor will be responsible for the storage and security of his material and equipment and shall erect storage facilities and fencing as necessary. The Contractor’s storage and staging area shall be in the general location(s) shown on the site plan drawing within the Design Documents.

G. Contractor shall control dust at an acceptable level. The Contractor may be required to keep a water supply at the project site during heavy equipment usage areas.

H. Stockpiled material shall be constrained in a manner to prevent movement resulting from aircraft engine blast or wind.

3.3 COMMUNICATIONS AND CONTROLS

A. Contractor shall maintain communication with Airport Operations at all times during construction activity or access in the Aircraft Operations Area (AOA).

1) All access to or through Aircraft Movement Areas shall be by appropriate badged escorting individuals and shall be coordinated in advance with Airport Operations, Airport Operations or designated representative. Vehicles in the Movement Areas shall maintain open communication with the Superintendent and Airport Operations.

2) Approaching, intruding upon, or crossing the taxiways and runways is strictly prohibited.

B. Contractor shall protect existing runway and taxiway lights, signs, and NAVAIDS.

1) Any unplanned, unapproved, or accidental shutdown or interruption of service to any lighting circuit or navigational aid requires immediate notification to Airport Operations and shall be repaired immediately by the Contractor. The cost of materials and labor required to repair the lighting circuit shall be borne by the Contractor.

C. Safety Devices and Barricades: Existing aprons, roadways and parking lots, taxiways and runways outside the limits of construction shall be separated from construction areas with barricades as shown on the Contractor's phasing and work sequence drawings and as directed by Airport Operations or designated representative.

1) Place all barricades and temporary markings at locations as directed by Airport Operations or designated representative. Exact locations will vary depending on aircraft operations, construction schedule and construction operations.
2) Mark and light all open trenches in accordance with FAA AC 150/5270-2, latest edition.
3) Contractors shall locate and maintain all airfield safety devices. Contractor should provide for daily check of required lights and replacement of batteries to ensure correct operations.

D. When the Contract requires the maintenance of vehicular traffic on an existing road, street, or highway during the Contractor's performance of work that is otherwise provided for in the contract, plans, and specifications, the Contractor shall keep such road, street, or highway open to all traffic and shall provide such maintenance as may be required to accommodate traffic. The Contractor shall furnish, erect and maintain barricades, warning signs, flagmen, and other traffic control devices in reasonable conformity with the *Manual of Uniform Traffic Control Devices* for streets and highways unless otherwise specified herein.

E. If the Contractor is given approval to work at night, temporary lighting shall be provided by the Contractor at the work site. Type, direction, number and location of lights shall be submitted not less than ten days in advance for review and approval by Airport Operations or designated representative. Where lighting affects the aircraft apron, it shall be accomplished in a manner to create no hindrance to aircraft, aircraft operations, or the aircraft control tower. Upon notification of any conflict, contractor shall adjust lighting in the field as directed by Airport Operations or designated representative or the Engineer/Architect.

F. Appropriately mark or light all equipment to be operated on the airside area in accordance with FAA AC 150/5210-5D, latest edition. Maximum height of equipment shall be 35 feet depending on the location within Contractor's work limits shown on safety and sequencing plans unless approved by the FAA, and Airport Operations or designated representative. Use of any equipment exceeding this height at any time, will only be during daylight VFR conditions.

G. All vehicles used on the airfield shall meet airport requirements for marking and lighting all equipment. Vehicles shall be marked with rotating yellow beacons or 3 by 3 orange and white flags (if daylight operation only) in accordance with FAA AC 150/5210-5D, latest edition, in addition to company logos and markings identifying each piece of equipment. Advisory Circular may be obtained from the FAA (www.faa.gov).

3.4 SECURITY GATES AND FENCING:

A. Responsibility for Security: The Contractor has the responsibility for maintaining control of the access gates or any other entrance to the AOA within the project work area.

1) The Contractor's method of maintaining security shall be set forth in the Contractor's Security Plan. Deviations or variations from the Contractor's Security Plan must be approved by the Owner, in advance, in writing.
2) Any change, including temporary changes, in operation of existing gates or doors requires advance coordination with Airport Operations or designated representative.
3) The Contractor shall maintain existing gates and access routes in current operation, unless specifically noted otherwise in other parts of the contract documents, drawings, and specifications; or as authorized in writing by Airport Operations or designated representative.
4) The Contractor may utilize a gate guard or install an automatic operated gate controller with limited access with numeric keypad. The Contractor may also use an interlocking pad lock, and the Airport will be provided with a key.

END OF SECTION 01143

SECTION 01210 - ALLOWANCES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Special Provisions and other Division 1 Specification Sections, apply to this Section.

B. Related Sections include the following:

1) Section 01250, "Contract Modification Procedures"
2) Section 01270, “Unit Prices”
3) Section 01400, “Quality Requirements and Testing Laboratory Services”
4) Item C-100, “Contractor Quality Control Program (CQCP)”
5) Divisions 2 through 16, FAA and FDOT Sections for Items of Work covered by allowances

C. If there is a discrepancy between the requirements of this section and related sections, the more restrictive interpretation shall apply.

1.2 SUMMARY

A. This Section includes administrative and procedural requirements governing allowances.

1) Certain items are specified in the Contract Documents by allowances. Allowances have been established in lieu of additional requirements and to defer selection of actual materials and equipment to a later date when additional information is available for evaluation. If necessary, additional requirements will be issued by Change Order.

B. Types of allowances include the following:

1) Lump-sum allowances.
2) Unit-cost allowances.
3) Equipment and furnishing allowances.

1.3 SELECTION AND PURCHASE

A. At the earliest practical date after award of the Contract, advise the Owners or the Owner’s designated representative of the date when final selection and purchase of each product or system described by an allowance must be completed to avoid delaying the Work.

B. At the Owner’s or the Owner’s designated representative request, obtain proposals for each allowance for use in making final selections. Include recommendations that are relevant to performing the Work.

C. Purchase products and systems selected by the Owner or the Owner’s designated representative from the designated supplier.

1.4 SUBMITTALS

A. Submit proposals for purchase of products or systems included in allowances, in the form specified for Change Orders.

B. Submit invoices or delivery slips to show actual quantities of materials delivered to the site for use in fulfillment of each allowance.

C. Coordinate and process submittals for allowance items in same manner as for other portions of the Work.

1.5 COORDINATION

A. Coordinate allowance items with other portions of the Work. Furnish templates as required to coordinate installation.

1.6 LUMP-SUM AND UNIT-COST ALLOWANCES

A. Allowance shall include cost to Contractor of specific products and materials ordered by Owner under allowance and shall include taxes, freight, and delivery to Project site.

B. Contractor's costs for receiving and handling at Project site, labor, installation, general conditions, overhead and profit, and similar costs related to products and materials ordered by Owner under allowance shall be included as part of the Contract Sum and not part of the allowance. Labor costs shall be excluded from allowances where noted within the allowance description.

C. Unused Materials: Return unused materials purchased under an allowance to manufacturer or supplier for credit to Owner, after installation has been completed and accepted.

1.7 ADJUSTMENT OF ALLOWANCES

A. Allowance Adjustment: To adjust allowance amounts, prepare a Change Order proposal based on the difference between purchase amount and the allowance, multiplied by final measurement of work-in-place where applicable. If applicable, include reasonable allowances for cutting losses, tolerances, mixing wastes, normal product imperfections, and similar margins.

1) Include installation costs in purchase amount only where indicated as part of the allowance.
2) If requested, prepare explanation and documentation to substantiate distribution of overhead costs and other margins claimed.
3) Submit substantiation of a change in scope of work, if any, claimed in Change Orders related to unit-cost allowances.
4) Owner reserves the right to establish the quantity of work-in-place by independent quantity survey, measure, or count.

B. Submit claims for increased costs because of a change in scope or nature of the allowance described in the Contract Documents, whether for the purchase order amount or Contractor's handling, labor, installation, overhead, and profit.

1) Do not include Contractor's or subcontractor's indirect expense in the Change Order cost amount unless it is clearly shown that the nature or extent of work has changed from what could have been foreseen from information in the Contract Documents.

2) No change to Contractor's indirect expense is permitted for selection of higher- or lower-priced materials or systems of the same scope and nature as originally indicated.

C. At Project closeout, credit to Owner as a Change Order any remaining unused allowance amounts, including the Contractor's costs for general conditions.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine products covered by an allowance promptly on delivery for damage or defects. Return damaged or defective products to manufacturer for replacement.

3.2 PREPARATION

A. Coordinate materials and their installation for each allowance with related materials and installations to ensure that each allowance item is completely integrated and interfaced with related work.

3.3 SCHEDULE OF ALLOWANCES

B. Allowance No. 1: Lobby Seating, Conference Room Seating and Palm Trees – Lump Sum - $140,000.00 Furnish and install passenger and lounge chair seating, powered side tables with charging stations and decorative – preserved palm trees; Manufacturer to be SYNK2 collection (with arms) for the lounge chair seating and side tables with USB/power outlets for charging portable devices. Conference Room Table and chairs to be determined.

C. Allowance No. 2: Permitting and Connection Impact Fees. Lump Sum $85,000.00 – Furnish and provide and procure the permitting fees and connection/impact fees (if any) for the new GA Terminal.

D. Allowance No 3: Gulf Power Allowance – Lump Sum - $20,000.00.

E. Allowance No. 4: Telecommunications Allowance – Lump Sum - $10,000.

END OF SECTION 01210

SECTION 01230 - ALTERNATES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Special Provisions and other Division 1 Specification Sections, apply to this Section.

B. If there is a discrepancy between the requirements of this section and related sections, the more restrictive interpretation shall apply.

1.2 SUMMARY

A. This Section includes administrative and procedural requirements for alternates.

B. The Owner may select any, all, any combination of the alternates, or none of the alternates in the evaluation of the low bidder and award of the contract.

1.3 DEFINITIONS

A. Alternate: An amount proposed by bidders and stated on the Bid Form for certain work defined in the Bidding Requirements that may be added to or deducted from the Base Bid amount if Owner decides to accept a corresponding change either in the amount of construction to be completed or in the products, materials, equipment, systems, or installation methods described in the Contract Documents.

1) The cost or credit for each alternate is the net addition to, or deduction from, the Contract Sum to incorporate Alternate into the Work. No other adjustments are made to the Contract Sum.

1.4 PROCEDURES

A. Coordination: Modify or adjust affected adjacent work as necessary to completely integrate work of the Alternate into Project.

1) Include as part of each alternate, miscellaneous devices, accessory objects, and similar items incidental to or required for a complete installation whether or not indicated as part of alternate.

B. Notification: Immediately following award of the Contract, notify each party involved, in writing, of the status of each Alternate. Indicate if alternates have been accepted, rejected, or deferred for later consideration. Include a complete description of negotiated modifications to alternates.

C. Execute accepted alternates under the same conditions as other work of the Contract.

D. Schedule: A Schedule of Alternates is included at the end of this Section. Specification Sections referenced in schedule contain requirements for materials necessary to achieve the work described under each alternate.

E. Bid Form: For “Add or Deduct Alternates” either the word “Added” or “Deduct” must be circled on the bid form.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 SCHEDULE OF ALTERNATES

A. ALTERNATE No. 1 – (Additive)

Airside Apron Components – Furnish and install all work including select demolition, new GA Terminal Airside Apron improvements that are not contiguous to the new GA Terminal, tie-in to existing infrastructure and utilities, permitting fees and other items located on the secure side of the proposed Airport Security fence. This alternate includes the ability to award this scope of work on or before the end of the GA Terminal construction, as funding is available.

B. ALTERNATE No. 2 – (Additive)

Main Entry Covered Canopy at Drop-off – Furnish and install all work including the covered canopy spanning over the vehicular drop-off at the main entry (land side) of the new GA terminal.

C. ALTERNATE No. 3 – (Additive)

Courtyard Enclosure Elements – Furnish and install all work of the Courtyard Enclosure Elements including the screen wall, pavers, tree grates and trellis. The landscaping/ Irrigation, a concrete pad at the entrances and the palm trees shall remain in the base bid if this alternate is not accepted.

D. ALTERNATE No. 4 – (Additive)

Aircraft Hangar - Pre-engineered steel framed aircraft hangar, including site work, foundations, hydraulic hangar door, horizontal ribbed siding, utility tie-in, adjoining site work and all work required for a complete weather tight assembly /hangar. This alternate includes the ability to award this scope of work on or before the end of the GA Terminal construction, as funding is available, and site grading and sodding for the future installation of the hangar if this Alternate is not accepted. The metal siding shall be a four (4) inch ribbed metal siding to match the Terminal Building.

E. ALTERNATE No. 5 – (Additive)

Barn Door in Lieu of Glass Door and Wall – In lieu of the pivot hinge glass door and but glazed fixed glass windows shown at the Meeting Room, furnish and install the custom fabricated barn door with overhead roller as shown on the drawings. The barn door shall have temp glass windows and all required door hardware and support for the overhead track as required to support the door. One door panel will be fixed, and the second door panel will be operable, however the overhead track will be continuous over both doors.

END OF SECTION 01230

SECTION 01250 – CONTRACT MODIFICATION PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Special Provisions and other Division 1 Specification Sections, apply to this Section.

B. Related Sections include the following:

1) General Provision Section 40, “Scope of Work”
2) General Provision Section 50, “Control of Work”
3) General Provision Section 80, “Execution and Progress”
4) General Provision Section 90, “Measurement and Payment”
5) Section 01135, "Weather Delays"
6) Section 01201, “Allowances”

C. If there is a discrepancy between the requirements of this section and related sections, the more restrictive interpretation shall apply.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements for handling and processing Contract modifications.

1.3 MINOR CHANGES IN THE WORK

A. Architect will issue supplemental instructions authorizing and documenting Minor Changes in the Work, not involving adjustment to the Contract Sum or the Contract Time, on AIA Document G710, "Architect's Supplemental Instructions."

1.4 PROPOSAL REQUESTS

A. Owner-Initiated Proposal Requests: The Owner or Owner’s designated representative will issue a detailed description of proposed changes in the Work that may require adjustment to the Contract Sum or the Contract Time. If necessary, the description will include supplemental or revised Drawings and Specifications.

1) Proposal Requests issued by the Owner or designated representative are for information only. Do not consider them instructions either to stop work in progress or to execute the proposed change.
2) Within **15 days** after receipt of Proposal Request, submit a quotation estimating cost adjustments to the Contract Sum and the Contract Time necessary to execute the change.

a. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
b. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
c. Include costs of labor and supervision directly attributable to the change.
d. Include an updated Contractor's Construction Schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.

B. Contractor-Initiated Proposals: If latent or unforeseen conditions require modifications to the Contract, Contractor may propose changes by submitting a request for a change to Architect.

1) Include a statement outlining reasons for the change and the effect of the change on the Work. Provide a complete description of the proposed change. Indicate the effect of the proposed change on the Contract Sum and the Contract Time.
2) Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
3) Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
4) Include costs of labor and supervision directly attributable to the change.
5) Include an updated Contractor's Construction Schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.
6) Comply with requirements in Division 1 Section "Product Requirements" if the proposed change requires substitution of one product or system for product or system specified.

C. Proposal Request Form: Use AIA Document G709 for Proposal Requests or forms provided by Owner.

1.5 ALLOWANCES

A. Allowance Adjustment: To adjust allowance amounts, base each Change Order proposal on the difference between purchase amount and the allowance, multiplied by final measurement of work-in-place. If applicable, include reasonable allowances for cutting losses, tolerances, mixing wastes, normal product imperfections, and similar margins.

1) Include installation costs in purchase amount only where indicated as part of the allowance.
2) If requested, prepare explanation and documentation to substantiate distribution of overhead costs and other margins claimed.
3) Submit substantiation of a change in scope of work, if any, claimed in Change Orders related to unit-cost allowances.

4) Owner reserves the right to establish the quantity of work-in-place by independent quantity survey, measure, or count.

B. Submit claims for increased costs because of a change in scope or nature of the allowance described in the Contract Documents, whether for the Purchase Order amount or Contractor's handling, labor, installation, overhead, and profit. Submit claims within **15 days** of receipt of the Change Order or Construction Change Directive authorizing work to proceed. Owner will reject claims submitted later than 15 days after such authorization.

1) Do not include Contractor's or subcontractor's indirect expense in the Change Order cost amount unless it is clearly shown that the nature or extent of work has changed from what could have been foreseen from information in the Contract Documents.
2) No change to Contractor's indirect expense is permitted for selection of higher- or lower-priced materials or systems of the same scope and nature as originally indicated.

1.6 CHANGE ORDER PROCEDURES

A. On Owner's approval of a Proposal Request, Architect will issue a Change Order for signatures of Owner and Contractor on the form to be provided by the Owner.

1.7 CONSTRUCTION CHANGE DIRECTIVE / FIELD DIRECTIVE

A. Construction Change Directive: Upon approval of the Owner, the Architect may issue a Construction Change Directive on AIA Document G714 or form provided by the Owner to expedite the work and alleviate delays. Construction Change Directive instructs Contractor to proceed with a change in the Work immediately for subsequent inclusion in a Change Order.

1) Construction Change Directive contains a complete description of change in the Work. It also designates method to be followed to determine change in the Contract Sum or the Contract Time.

B. Documentation: Maintain detailed records on a time and material basis of work required by the Construction Change Directive.

1) After completion of change, submit an itemized account and supporting data necessary to substantiate cost and time adjustments to the Contract.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

A. Forms: Sample forms, as listed in articles above, are attached following this Part.

B. Forms are samples only and may be modified by agreement during or after the pre-Construction Conference.

SECTION 01290 - PAYMENT PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Special Provisions and other Division 1 Specification Sections, apply to this Section.

B. Related Sections include the following:

1) General Provision Section 40, “Scope of Work”
2) General Provision Section 50, “Control of Work”
3) General Provision Section 80, “Execution and Progress”
4) General Provision Section 90, “Measurement and Payment”
5) Section 01210, “Allowances”
6) Section 01230, “Alternates”
7) Section 01250, “Contract Modifications”
8) Section 01320, “Construction Progress Documentation”

C. If there is a discrepancy between the requirements of this section and related sections, the more restrictive interpretation shall apply.

1.2 SUMMARY

A. This Section specifies administrative and procedural requirements necessary to prepare and process Applications for Payment.

1.3 DEFINITIONS

A. Schedule of Values: A statement furnished by Contractor allocating portions of the Contract Sum to various portions of the Work and used as the basis for reviewing Contractor's Applications for Payment.

1.4 SCHEDULE OF VALUES

A. Coordination: Coordinate preparation of the Schedule of Values with preparation of Contractor's Construction Schedule.

1) Correlate line items in the Schedule of Values with other required administrative forms and schedules, including the following:

a. Application for Payment forms with Continuation Sheets.
b. Submittals Schedule.
c. Contractor's Construction Schedule.

2) Submit the Schedule of Values to the Owner at earliest possible date but no later than 21 days before the date scheduled for submittal of initial Applications for Payment.

3) Sub schedules: Where the Work is separated into phases requiring separately phased payments, provide sub schedules showing values correlated with each phase of payment.

B. Format and Content: Use the Project Manual table of contents as a guide to establish line items for the Schedule of Values. Provide at least one line item for each Specification Section. Provide labor and material breakdowns, and list all allowances and Owner-accepted alternates on as separate line items.

1) Identification: Include the following Project identification on the Schedule of Values:

a. Project name and location and Owner’s name.
b. Name of Architect.
c. Architect's project number.
d. Contractor's name and address.
e. Date of submittal.

2) Submit draft of AIA Document G703 Continuation Sheets.

a. Related Specification Section or Division.
b. Description of the Work.
c. Name of subcontractor.
d. Name of manufacturer or fabricator.
e. Name of supplier.
f. Change Orders (numbers) that affect value.
g. Dollar value.

1) Percentage of the Contract Sum to nearest one-hundredth percent, adjusted to total 100 percent.

3) Provide a breakdown of the Contract Sum in enough detail to facilitate continued evaluation of Applications for Payment and progress reports. Coordinate with the Project Manual table of contents. Provide several line items for principal subcontract amounts, where appropriate. Include separate line items under required principal subcontracts for operation and maintenance manuals, punch list activities, Project Record Documents, and demonstration and training in the Contract Sum.
4) Round amounts to nearest whole dollar; total shall equal the Contract Sum.
5) Retain first subparagraph and associated subparagraph below. Strengthen provisions below to protect against undue front-end loading if required.
6) Provide a separate line item in the Schedule of Values for each part of the Work where Applications for Payment may include materials or equipment purchased or fabricated and stored, but not yet installed.

a. Differentiate between items stored on-site and items stored off-site. If specified, include evidence of insurance or bonded warehousing.

7) Provide separate line items in the Schedule of Values for initial cost of materials, for each subsequent stage of completion, and for total installed value of that part of the Work.

8) Delete subparagraph below if Specifications do not include unit-cost allowances. Do not confuse unit-cost allowances with unit prices. See Evaluations in Division 1 Section "Allowances" for discussion on unit-cost allowances, including potential differences that can occur in dollar amounts between bidders as a result of different procedures in estimating quantities.

9) Allowances and Alternates: Provide a separate line item in the Schedule of Values for each allowance. Show line-item value of unit-cost allowances, as a product of the unit cost, multiplied by measured quantity. Use information indicated in the Contract Documents to determine quantities. List Owner-accepted alternates as separate line items within the Schedule of Values.

10) Each item in the Schedule of Values and Applications for Payment shall be complete. Include total cost and proportionate share of general overhead and profit for each item.

    a. Mobilization, Demobilization, Temporary Facilities and other major cost items that are not direct cost of actual work-in-place shall be shown as separate line items in the Schedule of Values.

11) Schedule Updating: Update and resubmit the Schedule of Values before the next Applications for Payment when Change Orders or Construction Change Directives result in a change in the Contract Sum.

1.5 APPLICATIONS FOR PAYMENT

A. Each Application for Payment shall be consistent with previous applications and payments as certified by Architect, and recommended for approval by the DCP authorized/approved and paid for by Owner.

    1) Initial Application for Payment, Application for Payment at time of Substantial Completion, and final Application for Payment involve additional requirements.

B. Payment Application Times: The date for each progress payment is indicated in the Agreement between Owner and Contractor. The period of design or construction Work covered by each Application for Payment is the period indicated in the Agreement.

C. Payment Application Forms: Use AIA Document G702 and AIA Document G703 Continuation Sheets as form for Applications for Payment.

D. Application Preparation: Complete every entry on form. Notarize and execute by a person authorized to sign legal documents on behalf of Contractor. Architect will return incomplete applications without action.

    1) Entries shall match data on the Schedule of Values and Contractor's Construction Schedule. Use updated schedules if revisions were made.

2) Include amounts of Change Orders and Construction Change Directives issued before last day of construction period covered by application.
3) Submit pencil copy of draft pay application to the Architect for initial review and concurrence with amounts being requested seven (7) days before submittal of notarized originals for processing.
4) Confirm all mathematical calculations and that values on the cover page match the values within pay application back-up.

E. Transmittal: Submit **1 (one)** signed and notarized original copy of each Application for Payment to Architect by a method ensuring receipt. One copy shall include waivers of lien, certified payroll, MBE/SBE certifications of payment amounts, stored material receipts and similar attachments if required.

1) Transmit each copy with a transmittal form listing attachments and recording appropriate information about application.

F. Waivers of Mechanic's Lien: With each Application for Payment, submit waivers of mechanic's liens from subcontractors, sub-subcontractors, and suppliers for construction period covered by the previous application.

1) Submit partial waivers on each item for amount requested in previous application, after deduction for retainage, on each item.
2) When an application shows completion of an item, submit final or full waivers.
3) Owner reserves the right to designate which entities involved in the Work must submit waivers.
4) Submit final Application for Payment with or proceeded by final waivers from every entity involved with performance of the Work covered by the application that is lawfully entitled to a lien.
5) Delete subparagraph below and insert a specific form or special requirements where predetermined. See Evaluations.
6) Waiver Forms: Submit waivers of lien on forms, executed in a manner acceptable to Owner.

G. Initial Application for Payment: Administrative actions and submittals that must precede or coincide with submittal of first Application for Payment include the following:

1) Revise list below to suit Project.
2) List of subcontractors.
3) Schedule of Values.
4) Contractor's Construction Schedule (preliminary if not final).
5) Products list.
6) Schedule of unit prices.
7) Submittals Schedule (preliminary if not final).
8) List of Contractor's staff assignments.
9) List of Contractor's principal consultants.
10) Copies of building permits.
11) Copies of authorizations and licenses from authorities having jurisdiction for performance of the Work.
12) Initial progress report.
13) Report of preconstruction conference.
14) Certificates of insurance and insurance policies.

H. Application for Payment at Substantial Completion: After issuing the Certificate of Substantial Completion, submit an Application for Payment showing 100 percent completion for portion of the Work claimed as substantially complete.

1) Include documentation supporting claim that the Work is substantially complete and a statement showing an accounting of changes to the Contract Sum.
2) This application shall reflect Certificates of Partial Substantial Completion issued previously for Owner occupancy of designated portions of the Work.

I. Final Payment Application: Submit final Application for Payment with releases and supporting documentation not previously submitted and accepted, including, but not limited, to the following:

1) Evidence of completion of Project closeout requirements.
2) Insurance certificates for products and completed operations where required and proof that taxes, fees, and similar obligations were paid.
3) Updated final statement, accounting for final changes to the Contract Sum.
4) AIA Document G706, "Contractor's Affidavit of Payment of Debts and Claims."
5) AIA Document G706A, "Contractor's Affidavit of Release of Liens."
6) Delete first subparagraph below if a surety is not involved.
7) AIA Document G707, "Consent of Surety to Final Payment."
8) Evidence that claims have been settled.
9) Final meter readings for utilities, a measured record of stored fuel, and similar data as of date of Substantial Completion or when Owner took possession of and assumed responsibility for corresponding elements of the Work.
10) Final, liquidated damages settlement statement.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01290

(INTENTIONALLY LEFT BLANK)

SECTION 01310 - PROJECT MANAGEMENT AND COORDINATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Special Provisions and other Division 1 Specification Sections, apply to this Section.

B. Related Sections include the following:

1) General Provision Section 30, “Award and Execution of Contract”
2) General Provision Section 40, “Scope of Work”
3) General Provision Section 50, “Control of Work”
4) General Provision Section 80, “Execution and Progress”
5) General Provision Section 90, “Measurement and Payment”
6) Section 01100, “Summary”
7) Section 01210, “Allowances”
8) Section 01320, “Construction Progress Documentation”
9) Section 01700, “Execution Requirements”
10) Section 01770, “Closeout Procedures”

C. If there is a discrepancy between the requirements of this section and related sections, the more restrictive interpretation shall apply.

1.2 SUMMARY

A. This Section includes administrative provisions for coordinating construction operations on Project including, but not limited to, the following:

1) Coordination Drawings.
2) Administrative and supervisory personnel.
3) Project meetings.
4) Requests for Interpretation (RFIs).

1.3 DEFINITIONS

A. RFI: Request from Contractor seeking interpretation or clarification of the Contract Documents.

1.4 COORDINATION

A. Coordination: Coordinate construction operations included in different Sections of the Specifications to ensure efficient and orderly installation of each part of the Work. Coordinate construction operations, included in different Sections that depend on each other for proper installation, connection, and operation.

1) Schedule construction operations in sequence required to obtain the best results where installation of one part of the Work depends on installation of other components, before or after its own installation.
2) Coordinate installation of different components with other contractors to ensure maximum accessibility for required maintenance, service, and repair.
3) Make adequate provisions to accommodate items scheduled for later installation.
4) Where availability of space is limited, coordinate installation of different components to ensure maximum performance and accessibility for required maintenance, service, and repair of all components, including mechanical and electrical.

B. Prepare memoranda for distribution to each party involved, outlining special procedures required for coordination. Include such items as required notices, reports, and list of attendees at meetings.

1) Prepare similar memoranda for Owner and separate contractors if coordination of their Work is required.

C. Administrative Procedures: Coordinate scheduling and timing of required administrative procedures with other construction activities and activities of other contractors to avoid conflicts and to ensure orderly progress of the Work. Such administrative activities include, but are not limited to, the following:

1) Preparation of Contractor's Construction Schedule.
2) Preparation of the Schedule of Values.
3) Installation and removal of temporary facilities and controls.
4) Delivery and processing of submittals.
5) Progress meetings.
6) Pre-installation conferences.
7) Project closeout activities.
8) Startup and adjustment of systems.
9) Project closeout activities.

1.5 SUBMITTALS

A. Coordination Drawings: Prepare Coordination Drawings including all components where limited space availability necessitates maximum utilization of space for efficient installation of different components and where coordination is required for installation of products and materials fabricated by separate entities.

1) Content: Project-specific information, drawn accurately to scale. Do not base Coordination Drawings on reproductions of the Contract Documents or standard printed data. Include the following information, as applicable:

a. Indicate functional and spatial relationships of components of architectural, structural, civil, mechanical, and electrical systems.
b. Indicate required installation sequences.
c. Indicate dimensions shown on the Contract Drawings and make specific note of dimensions that appear to be in conflict with submitted equipment and minimum clearance requirements. Provide alternate sketches to A/E for resolution of such

conflicts. Minor dimension changes and difficult installations will not be considered changes to the Contract.

2) Sheet Size: At least 11 by 17 inches but no larger than 30 by 42 inches.
3) Number of Copies: Submit three (3) opaque copies and one (1) digital/PDF copy of each submittal. A/E will return one (1) copy.

   a. Submit three (3) copies where Coordination Drawings are required for operation and maintenance manuals. A/E and Owner will retain one (1) copy; remainder will be returned. Mark up and retain one (1) returned copy as a Project Record Drawing, along with a scanned digital PDF copy on a labeled disk
   b. Submit only Contractor-approved and reviewed submittals. Submittals may be stamped on a cover sheet when all pages are sequentially numbered (1 of…, 2 of…, 3 of …, etc.), and labeled within an index.
   c. All submittals and reports shall be submitted to the Owner and RPR concurrently with the A/E submittals.

4) Refer to individual Sections for additional Shop Drawing, Submittals, and Coordination Drawing requirements outlined in those Sections.

B. Key Personnel Names: At least fifteen (15) calendar days to starting construction operations, submit a list of key personnel assignments, including superintendent and other personnel in attendance at Project site. Identify individuals and their duties and responsibilities; list addresses and telephone numbers, including home, cell, and office telephone numbers. Provide names, addresses, and all telephone numbers of individuals assigned as standbys in the absence of individuals assigned to Project.

1) Post copies of list in Project meeting room, in temporary field office, and by each temporary telephone. Keep list current at all times.

1.6 PROJECT MEETINGS

A. General: Schedule and conduct meetings and conferences at Project site, unless otherwise indicated.

1) Attendees: Inform participants and others involved, and individuals whose presence is required, of date and time of each meeting. Notify Owner and A/E of scheduled meeting dates and times.
2) Agenda: Prepare the meeting agenda. Distribute the agenda to all invited attendees.
3) Minutes: Record significant discussions and agreements achieved. Distribute the meeting minutes to everyone concerned, including Owner and A/E, within three business days of the meeting.

B. Preconstruction Conference: Schedule a preconstruction conference before starting construction, at a time convenient to Owner and A/E, but no later than 15 days after execution of the Agreement. Hold the conference at Project site or another convenient location. Conduct the meeting to review responsibilities and personnel assignments.

1) Attendees: Authorized representatives of Owner, A/E, and their consultants; Contractor and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the conference. All participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
2) Agenda: Discuss items of significance that could affect progress, including the following:

    a. Tentative construction schedule.
    b. Phasing.
    c. Critical work sequencing and long-lead items.
    d. Designation of key personnel and their duties; Contractor to submit a list of proposed Subcontractors and contact information.
    e. Procedures for processing field decisions and Change Orders.
    f. Procedures for RFIs.
    g. Procedures for testing and inspecting.
    h. Procedures for processing Applications for Payment.
    i. Distribution of the Contract Documents.
    j. Submittal procedures.
    k. Preparation of Record Documents.
    l. Use of the premises and existing building.
    m. Work restrictions.
    n. FAA Requirements.
    o. Owner's occupancy requirements.
    p. Responsibility for temporary facilities and controls.
    q. Construction waste management and recycling.
    r. Parking availability.
    s. Office, work, and storage areas.
    t. Equipment deliveries and priorities.
    u. First aid.
    v. Security.
    w. Progress cleaning.
    x. Working hours.
    y. The Contractor shall submit a Product Schedule per Section 01330 – submittal Procedures.

3) Minutes: The Contractor, RPR or A/E will record and distribute meeting minutes.

C. Pre-installation Conferences: Conduct a pre-installation conference at Project site before each construction activity that requires coordination with other construction.

1) Attendees: Installer and representatives of manufacturers and fabricators involved in or affected by the installation and its coordination or integration with other materials and installations that have preceded or will follow, shall attend the meeting. Advise A/E of scheduled meeting dates a minimum of fourteen (14) calendar days of the meeting.
2) Agenda: Review progress of other construction activities and preparations for the particular activity under consideration, including requirements for the following:

    a. The Contract Documents.
    b. Options.
    c. Related RFIs.

d. Related Change Orders.
e. Purchases.
f. Deliveries.
g. Submittals.
h. Review of mockups.
i. Possible conflicts.
j. Compatibility problems.
k. Time schedules.
l. Weather limitations.
m. Manufacturer's written recommendations.
n. Warranty requirements.
o. Compatibility of materials.
p. Acceptability of substrates.
q. Temporary facilities and controls.
r. Space and access limitations.
s. Regulations of authorities having jurisdiction.
t. Testing and inspecting requirements.
u. Installation procedures.
v. Coordination with other work.
w. Required performance results.
x. Protection of adjacent work.
y. Protection of construction and personnel.

3) Record significant conference discussions, agreements, and disagreements, including required corrective measures and actions.
4) Reporting: The Contractor will distribute minutes of the meeting to each party present and to parties who should have been present.
5) Do not proceed with installation if the conference cannot be successfully concluded. Initiate whatever actions are necessary to resolve impediments to performance of the Work and reconvene the conference at earliest feasible date.

D. Progress Meetings: Conduct progress meetings at weekly intervals or as directed by the Owner. Coordinate dates of meetings with preparation of payment requests.

1) Attendees: In addition to the RPR, Owner’s representatives and A/E, each contractor, subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
2) Agenda: Review and correct or approve minutes of previous progress meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.

a. Contractor's Construction Schedule: Review progress since the last meeting. Determine whether each activity is on time, ahead of schedule, or behind schedule, in relation to Contractor's Construction Schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.

1) Review schedule for next period.

2) In advance of the meeting, Contractor shall prepare a narrative two-week look-ahead outline of the work to be completed and the work completed the previous two (2) weeks.

b. Review present and future needs of each entity present, including the following:

1) Interface requirements.
2) Sequence of operations.
3) Status of submittals.
4) Deliveries.
5) Off-site fabrication.
6) Access.
7) Site utilization.
8) Temporary facilities and controls.
9) Work hours.
10) Hazards and risks.
11) Progress cleaning.
12) Quality and work standards.
13) Status of correction of deficient items.
14) Field observations.
15) RFIs.
16) Status of proposal requests.
17) Pending changes.
18) Status of Change Orders.
19) Pending claims and disputes.
20) Documentation of information for payment requests.

3) Minutes: The Contractor or the A/E will record and distribute the meeting minutes to the Contractor and all attendees.
4) Reporting: Distribute minutes of the meeting to each party present and to parties who should have been present.

a. Schedule Updating: Revise Contractor's Construction Schedule after each progress meeting where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with the report of each meeting.

E. Coordination Meetings: Conduct Project coordination meetings at monthly intervals. Project coordination meetings are in addition to specific meetings held for other purposes, such as progress meetings and pre-installation conferences.

1) Attendees: In addition to representatives of Owner, A/E and the Contractor, each subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
2) Agenda: Review and correct or approve minutes of the previous coordination meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.

a. Combined Contractor's Construction Schedule: Review progress since the last coordination meeting. Determine whether each contract is on time, ahead of

schedule, or behind schedule, in relation to Combined Contractor's Construction Schedule. Determine how construction activities that are behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.

b. Schedule Updating: Revise Combined Contractor's Construction Schedule after each coordination meeting where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with report of each meeting.

c. Review present and future needs of each contractor present, including the following:

1) Interface requirements.
2) Sequence of operations.
3) Status of submittals.
4) Deliveries.
5) Off-site fabrication.
6) Access.
7) Site utilization.
8) Temporary facilities and controls.
9) Work hours.
10) Hazards and risks.
11) Progress cleaning.
12) Quality and work standards.
13) Change Orders.

3) Reporting: The Contractor will record meeting results and distribute copies to everyone in attendance and to others affected by decisions or actions resulting from each meeting.

1.7 REQUESTS FOR INTERPRETATION (RFIs)

A. Procedure: Immediately on discovery of the need for interpretation of the Contract Documents, and if not possible to request interpretation at Project meeting, prepare and submit an RFI in the form specified.

1) RFIs shall originate with Contractor. RFIs submitted by entities other than Contractor will be returned with no response.
2) Coordinate and submit RFIs in a prompt manner so as to avoid delays in Contractor's work or work of subcontractors.

B. Content of the RFI: Include a detailed, legible description of item needing interpretation and the following:

1) Project name.
2) Project identification and tracking numbers.
3) Date.
4) Name of Contractor.
5) Name of A/E.
6) RFI number, numbered sequentially.
7) Specification Section number and title and related paragraphs, as appropriate.

8) Drawing number and detail references, as appropriate.
9) Field dimensions and conditions, as appropriate.
10) Contractor's suggested solution(s). If Contractor's solution(s) impact the Contract Time or the Contract Sum, Contractor shall state impact in the RFI.
11) Contractor's signature.
12) Attachments: Include drawings, descriptions, measurements, photos, Product Data, Shop Drawings, and other information necessary to fully describe items needing interpretation.

    a. Supplementary drawings prepared by Contractor shall include dimensions, thicknesses, structural grid references, and details of affected materials, assemblies, and attachments.

C. Hard-Copy RFIs: CSI Form 13.2A, or other industry-standard form approved as equal by A/E.

1) Identify each page of attachments with the RFI number and sequential page number.
2) Electronic copies are encouraged to minimize paper usage.

D. Software-Generated or Digital RFIs: Scanned software-generated form with substantially the same content as indicated above.

1) Attachments shall be electronic files in Adobe Acrobat PDF format; all documents shall be combined into a single file. Files over 9 megs may be sub-divided and transmitted in multiple emails labeled 1 of 2, 2 of 2, etc.

E. A/E's (or Owner’s when applicable) Action: A/E (or the Owner or Owner’s designated representative when applicable) will review each RFI, determine action required, and return it. Allow ten working days for A/E's response for each RFI. RFIs received after 1:00 p.m. will be considered as received the following working day.

1) The following RFIs will be returned without action:

    a. Requests for approval of submittals.
    b. Requests for approval of substitutions.
    c. Requests for coordination information already indicated in the Contract Documents.
    d. Requests for adjustments in the Contract Time or the Contract Sum.
    e. Requests for interpretation of A/E's actions on submittals.
    f. Incomplete RFIs or RFIs with numerous errors.

2) A/E's (or Owner’s where applicable) action may include a request for additional information, in which case A/E's time for response will start again.
3) A/E's (or Owner’s where applicable) action on RFIs that may result in a change to the Contract Time or the Contract Sum may be eligible for Contractor to submit Change Proposal according to Division 1 Section "Contract Modification Procedures."

    a. If Contractor believes the RFI response warrants change in the Contract Time or the Contract Sum, notify A/E and the Owner in writing within ten (10) days of receipt of the RFI response.

F. On receipt of A/E's or the Owner’s action, update the RFI log and immediately distribute the RFI response to affected parties. Review response and notify A/E and the Owner within three (3) days if Contractor disagrees with response.

G. RFI Log: Prepare, maintain, and submit a tabular log of RFIs organized by the RFI number. Submit log weekly. Software log with not less than the following:

1) Project name.
2) Project identification numbers.
3) Name and address of Contractor.
4) Name and address of A/E.
5) RFI number including RFIs that were dropped and not submitted.
6) RFI description.
7) Date the RFI was submitted.
8) Date A/E's response was received.
9) Retain one of two subparagraphs below. First is for use with AIA Document A201; second is for use with EJCDC Document 1910-8.
10) Identification of related Minor Change in the Work, Construction Change Directive, and Change Proposal Request, as appropriate.

SECTION 01320 – CONSTRUCTION PROGRESS DOCUMENTATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Special Provisions and other Division 1 Specification Sections, apply to this Section.

B. Related Sections include the following:

1) General Provision Section 30, “Award and Execution of Contract”
2) General Provision Section 40, “Scope of Work”
3) General Provision Section 50, “Control of Work”
4) General Provision Section 80, “Execution and Progress”
5) General Provision Section 90, “Measurement and Payment”
6) Section 01100, “Summary”
7) Section 01290, “Payment Procedures”
8) Section 01310, “Project Management”
9) Section 01322, “Photographic Documentation”
10) Section 01330, “Submittal Procedures”
11) Section 01400, “Quality Requirements”
12) Section 01700, “Execution Requirements”
13) Section 01770, “Closeout Procedures”
14) Section 01781, “Project Record Documents”
15) Item C-100, “Contractor Quality Control Program (CQCP)”

C. If there is a discrepancy between the requirements of this section and related sections, the more restrictive interpretation shall apply.

1.2 SUMMARY

A. This Section includes administrative and procedural requirements for documenting the progress of construction during performance of the Work, including the following:

1) Preliminary Construction Schedule.
2) Contractor's Construction Schedule.
3) Submittals Schedule.
4) Daily construction reports.
5) Material location reports.
6) Field condition reports.
7) Special reports.

1.3 DEFINITIONS

A. Activity: A discrete part of a project that can be identified for planning, scheduling, monitoring, and controlling the construction project. Activities included in a construction schedule consume time and resources.

1) Critical activities are activities on the critical path. They must start and finish on the planned early start and finish times.
2) Predecessor Activity: An activity that precedes another activity in the network.
3) Successor Activity: An activity that follows another activity in the network.

B. Cost Loading: The allocation of the Schedule of Values for the completion of an activity as scheduled. The sum of costs for all activities must equal the total Contract Sum, unless otherwise approved by the Owner or the Owner's designated representative.

C. Critical Path: The longest connected chain of interdependent activities through the network schedule that establishes the minimum overall Project duration and contains no float.

D. Event: The starting or ending point of an activity.

E. Float: The measure of leeway in starting and completing an activity.

1) Float time is not for the exclusive use or benefit of either Owner or Contractor, but is a jointly owned, expiring Project resource available to both parties as needed to meet schedule milestones and Contract completion date.

2) Free float is the amount of time an activity can be delayed without adversely affecting the early start of the successor activity.

3) Total float is the measure of leeway in starting or completing an activity without adversely affecting the planned Project completion date.

F. Major Area: A story of construction, a separate building, or a similar significant construction element.

G. Milestone: A key or critical point in time for reference or measurement.

H. Resource Loading: The allocation of manpower and equipment necessary for the completion of an activity as scheduled.

1.4 SUBMITTALS

A. Qualification Data: For scheduling consultant.

B. Submittals Schedule: Submit **three (3)** copies and one digital (pdf.) of schedule. Arrange the following information in a tabular format:

1) Scheduled date for first submittal.
2) Specification Section number and title.

3) Submittal category (action or informational).
4) Name of subcontractor.
5) Description of the Work covered.
6) Scheduled date for A/E's final release or approval.

C. Preliminary Construction Schedule: Submit three (3) opaque copies and one digital (pdf.).

1) Approval of cost-loaded preliminary construction schedule will not constitute approval of Schedule of Values for cost-loaded activities.

D. Contractor's Construction Schedule: Submit three opaque copies of updated schedule, large enough to show entire schedule for entire construction period. Submit update schedule at each progress meeting and with each pay application.

E. Daily Construction Reports: Submit two (2) copies at monthly intervals.

F. Material Location Reports: Submit two (2) copies at monthly intervals.

G. Field Condition Reports: Submit two (2) copies at time of discovery of differing conditions.

H. Special Reports: Submit two (2) copies at time of unusual event; one (1) copy shall be sent directly to the Owner.

1.5 COORDINATION

A. Coordinate preparation and processing of schedules and reports with performance of construction activities and with scheduling and reporting of separate contractors.

B. Coordinate Contractor's Construction Schedule with the Schedule of Values, list of subcontracts, Submittals Schedule, progress reports, payment requests, and other required schedules and reports.

1) Secure time commitments for performing critical elements of the Work from parties involved.
2) Coordinate each construction activity in the network with other activities and schedule them in proper sequence.

PART 2 - PRODUCTS

2.1 SUBMITTALS SCHEDULE

A. Preparation: Submit a schedule of submittals, arranged in chronological order by dates required by construction schedule. Include time required for review, re-submittal, ordering, manufacturing, fabrication, and delivery when establishing dates.
1) Coordinate Submittals Schedule with list of subcontracts, the Schedule of Values, and Contractor's Construction Schedule.

2) Initial Submittal: Submit concurrently with preliminary bar-chart schedule. Include submittals required during the first 60 days of construction. List those required to maintain orderly progress of the Work and those required early because of long lead time for manufacture or fabrication.

   a. At Contractor's option, show submittals on the Preliminary Construction Schedule, instead of tabulating them separately.

3) Final Submittal: Submit concurrently with the first complete submittal of Contractor's Construction Schedule.
4) Update the submittal schedule as required or requested by the Owner to reflect updates in the schedule of work.

2.2 CONTRACTOR'S CONSTRUCTION SCHEDULE, GENERAL

A. Time Frame: Extend schedule from date established for the Notice to Proceed to date of Final Completion.

   1) Contract completion date shall not be changed by submission of a schedule that shows an early completion date, unless specifically authorized by Change Order.

B. Activities: Treat each story or separate area as a separate numbered activity for each principal element of the Work. Comply with the following:

   1) Activity Duration: Define activities so no activity is longer than 30 days, unless specifically allowed by the Owner or the Owner’s designated representative.
   2) Procurement Activities: Include procurement process activities for the following long lead items and major items, requiring a cycle of more than 30 days, as separate activities in schedule. Procurement cycle activities include, but are not limited to, submittals, approvals, purchasing, fabrication, and delivery.

      a. Door Hardware and Access Control Devices
      b. Roofing Accessories
      c. Wall Coverings
      d. Long lead delivery items or equipment
      e. Lighting Fixtures
      f. Fire and Smoke Detection, Alarm, and Annunciation Systems

   3) Submittal Review Time: Include review and re-submittal times indicated in Division 1 Section "Submittal Procedures" in schedule. Coordinate submittal review times in Contractor's Construction Schedule with Submittals Schedule.
   4) Startup and Testing Time: Include not less than seven days for startup and testing.
   5) Substantial Completion: Indicate completion in advance of date established for Substantial Completion and allow time for A/E's administrative procedures necessary for certification of Substantial Completion.

C. Constraints: Include constraints and work restrictions indicated in the Contract Documents and as follows in schedule and show how the sequence of the Work is affected.

1) Work by Owner: Include a separate activity for each portion of the Work performed by Owner.
2) Work Restrictions: Show the effect of the following items on the schedule:

    a. Coordination with existing construction.
    b. Limitations of continued occupancies.
    c. Uninterruptible services.
    d. Partial occupancy before Substantial Completion.
    e. Use of premises restrictions.
    f. Provisions for future construction.
    g. Seasonal variations.
    h. Environmental control.

3) Work Stages: Indicate important stages of construction for each major portion of the Work, including, but not limited to, the following:

    a. Subcontract awards.
    b. Submittals.
    c. Purchases.
    d. Mockups.
    e. Fabrication.
    f. Sample testing.
    g. Deliveries.
    h. Installation.
    i. Commissioning.
    j. Tests and inspections.
    k. Adjusting.
    l. Curing.
    m. Startup and placement into final use and operation.

4) Other Constraints: Separate and Identify Work by project elements and areas within the Terminal Area.

    a. Project elements are headings of work described in the Bid Submittal Form and Instructions to Bidders.

D. Milestones: Include milestones indicated in the Contract Documents in schedule, including, but not limited to, the Notice to Proceed, Substantial Completion, and Final Completion, and the following interim milestones:

1) Begin and end dates for phases of work within named work areas
2) Erection and removal of temporary fencing and temporary partitions in public areas
3) Limiting access to public entrances
4) Begin and end dates for any work in public areas

E. Contract Modifications: For each proposed contract modification and concurrent with its submission, prepare a time-impact analysis using fragments to demonstrate the effect of the proposed change on the overall project schedule.

2.3 PRELIMINARY CONSTRUCTION SCHEDULE

A. Bar-Chart Schedule: Submit preliminary horizontal bar-chart-type construction schedule at least **fourteen days (14) prior** to date established for the Pre-Construction Conference.

B. Preparation: Indicate each significant construction activity separately. Identify first workday of each week with a continuous vertical line. Outline significant construction activities for first **90** days of construction. Include skeleton diagram for the remainder of the Work and a cash requirement prediction based on indicated activities.

2.4 CONTRACTOR'S CONSTRUCTION SCHEDULE (GANTT CHART)

A. Gantt-Chart Schedule: Submit a comprehensive, fully developed, horizontal Gantt-chart-type, Contractor's Construction Schedule within ten (10) days of receiving comments from the A/E. Base schedule on the Preliminary Construction Schedule and whatever updating and feedback was received since the start of Project.

B. Preparation: Indicate each significant construction activity separately. Identify first workday of each week with a continuous vertical line.

1) For construction activities that require (3) three months or longer to complete, indicate an estimated completion percentage in five percent increments within time bar.

2.5 REPORTS

A. Daily Construction Reports: Prepare a daily construction report recording the following information concerning events at Project site:

1) Revise list below to suit Project.
2) List of subcontractors at Project site.
3) List of separate contractors at Project site.
4) Approximate count of personnel at Project site.
5) Equipment at Project site.
6) Material deliveries.
7) High and low temperatures and general weather conditions, including rainfall.
8) Accidents.
9) Meetings and significant decisions.
10) Unusual events (refer to special reports).
11) Stoppages, delays, shortages, and losses.
12) Meter readings and similar recordings.
13) Emergency procedures.
14) Orders and requests of authorities having jurisdiction.
15) Change Orders received and implemented.
16) Construction Change Directives are used by AIA Document A201. EJCDC Document 1910-8 uses Work Change Directives.
17) Construction Change Directives received and implemented.
18) Services connected and disconnected.

19) Equipment or system tests and startups.
20) Partial Completions and occupancies.
21) Substantial Completions authorized.

B. Material Location Reports: At monthly intervals, prepare and submit a comprehensive list of materials delivered to and stored at Project site. List shall be cumulative, showing materials previously reported plus items recently delivered. Include with list a statement of progress on and delivery dates for materials or items of equipment fabricated or stored away from Project site.

C. Field Condition Reports: Immediately on discovery of a difference between field conditions and the Contract Documents, prepare and submit a detailed report. Submit with a request for interpretation. Include a detailed description of the differing conditions, together with recommendations for changing the Contract Documents.

2.6 SPECIAL REPORTS

A. General: Submit special reports directly to RPR and Owner within (24) twenty-four hours of an occurrence. Distribute copies of report to parties affected by the occurrence. Distribute copy of special reports to the A/E.

B. Reporting Unusual Events: When an event of an unusual and significant nature occurs at Project site, whether or not related directly to the Work, prepare and submit a special report. List chain of events, persons participating, and response by Contractor's personnel, evaluation of results or effects, and similar pertinent information. Advise Owner in advance when these events are known or predictable.

PART 3 - EXECUTION

3.1 CONTRACTOR'S CONSTRUCTION SCHEDULE

A. Contractor's Construction Schedule Updating: At monthly intervals, update schedule to reflect actual construction progress and activities. Issue schedule one week before each regularly scheduled progress meeting.

1) Revise schedule immediately after each meeting or other activity where revisions have been recognized or made. Issue updated schedule concurrently with the report of each such meeting.
2) Include a report with updated schedule that indicates every change, including, but not limited to, changes in logic, durations, actual starts and finishes, and activity durations.
3) As the Work progresses, indicate Actual Completion percentage for each activity.

B. Distribution: Distribute copies of approved schedule to A/E, Owner, separate contractors, testing and inspecting agencies, and other parties identified by Contractor with a need-to-know schedule responsibility.

1) Post copies in Project meeting rooms and temporary field offices.
2) When revisions are made, distribute updated schedules to the same parties and post in the same locations. Delete parties from distribution when they have completed their assigned portion of the Work and are no longer involved in performance of construction activities.

END OF SECTION 01320

SECTION 01322 - PHOTOGRAPHIC DOCUMENTATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Special Provisions and other Division 1 Specification Sections, apply to this Section.

B. Related Sections include the following:

1) General Provision Section 40, “Scope of Work”
2) General Provision Section 50, “Control of Work”
3) General Provision Section 80, “Execution and Progress”
4) Section 01320, “Construction Progress Documentation”
5) Section 01330, “Submittal Procedures”
6) Section 01770, “Closeout Procedures”

C. If there is a discrepancy between the requirements of this section and related sections, the more restrictive interpretation shall apply.

1.2 SUMMARY

A. This Section includes administrative and procedural requirements for the following:

1) Preconstruction photographs.
2) Periodic construction photographs.
3) Final Completion construction photographs.

1.3 SUBMITTALS

A. Key Plan: Submit key plan of Project site and building with notation of vantage points marked for location and direction of each photograph. Include same label information as corresponding set of photographs.

B. Construction Photographs: Submit digital copies, or three prints at Contractor’s option, of each photographic view **within five (5) days** of taking photographs.

1) Digital Images: Submit a complete set of digital image electronic files on CD-ROM. Identify electronic media with date photographs were taken. Submit images that have same aspect ratio as the sensor, un-cropped.
2) Optional Format for Printed Submittals: 8-by-10-inch smooth-surface matte prints on single-weight commercial-grade photographic paper, enclosed back to back in clear plastic sleeves that are punched for standard 3-ring binder.
3) Identification: Include digital information ‘tag’ linked to each image, or on back of each print provide an applied label or rubber-stamped impression with the following information:

a. Name of Project.
b. Name and address of photographer.
c. Name of A/E.
d. Name of Contractor.
e. Date photograph was taken if not date stamped by camera.
f. Description of vantage point, indicating location, direction (by compass point), and elevation or story of construction.
g. Unique sequential identifier.

1.4 COORDINATION

A. Auxiliary Services: Cooperate with photographer and provide auxiliary services requested, including access to Project site and use of temporary facilities, including temporary lighting required to produce clear, well-lit photographs without obscuring shadows.

1.5 USAGE RIGHTS

A. Obtain and transfer copyright usage rights from photographer to Owner for unlimited reproduction of photographic documentation.

PART 2 - PRODUCTS

2.1 PHOTOGRAPHIC MEDIA

A. Optional Photographic Film: 35 mm, medium speed (ISO 100-200).

B. Digital Images: Provide images in uncompressed TIFF format, produced by a digital camera with minimum sensor size of 4.0 megapixels, and at an image resolution of not less than 1024 by 768 pixels.

PART 3 - EXECUTION

3.1 CONSTRUCTION PHOTOGRAPHS

A. General: Take photographs using the maximum range of depth of field, and that are in focus, to clearly show the Work. Photographs with blurry or out-of-focus areas will not be accepted.

1) Maintain key plan with each set of construction photographs that identifies each photographic location.

B. Optional Film Images:

1) Date Stamp: Date and time stamp each photograph as it is being taken so stamp is integral to photograph.

2) Field Office Prints: Retain one set of prints of progress photographs in the field office at Project site, available at all times for reference. Identify photographs same as for those submitted to A/E.

C. Digital Images: Submit digital images exactly as originally recorded in the digital camera, without alteration, manipulation, editing, or modifications using image-editing software.

1) Date and Time: Include date and time in filename for each image.
2) Field Office Images: Maintain one set of images on CD-ROM in the field office at Project site, available at all times for reference. Identify images same as for those submitted to A/E.

D. Preconstruction Photographs: Before starting construction, take color, digital photographs of Project site and surrounding areas, including existing items to remain during construction, from different vantage points, as directed by A/E.

1) Flag construction limits before taking construction photographs.

E. Periodic Construction Photographs: Take twelve (12) color, digital date stamped photographs weekly, with timing each month adjusted to coincide with the cutoff date associated with each Application for Payment. Select vantage points to show status of construction and progress since last photographs were taken. Submit two (2) digital copies of all photographs on a labeled CD with each pay application.

F. Final Completion Construction Photographs: Take 24 color, digital photographs after date of Substantial Completion for submission as Project Record Documents. The A/E and the Owner will direct photographer for desired vantage points.

END OF SECTION 01322

(INTENTIONALLY LEFT BLANK)

SECTION 01330 - SUBMITTAL PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Special Provisions and other Division 1 Specification Sections, apply to this Section.

B. Related Sections include the following:

1) General Provision Section 30, “Award and Execution of Contract”
2) General Provision Section 40, “Scope of Work”
3) General Provision Section 50, “Control of Work”
4) General Provision Section 80, “Execution and Progress”
5) General Provision Section 90, “Measurement and Payment”
6) Section 01100, “Summary”
7) Section 01290, “Payment Procedures”
8) Section 01310, “Project Management and Coordination”
9) Section 01320, “Construction Progress Documentation”
10) Section 01322, “Photographic Documentation”
11) Section 01400, “Quality Requirements”
12) Section 01770, “Closeout Procedures”
13) Section 01781, “Project Record Documents”
14) Section 01782, “Operation and Maintenance”
15) Section 01820, “Demonstration and Training”
16) Item C-100, “Contractor Quality Control Program (CQCP)”
17) Divisions 2 through 16, FAA and FDOT Sections for specific requirements for submittals in those Sections.

C. If there is a discrepancy between the requirements of this section and related sections, the more restrictive interpretation shall apply.

1.2 SUMMARY

A. This Section includes administrative and procedural requirements for submitting Shop Drawings, Product Data, Samples, and other submittals.

1.3 DEFINITIONS

A. Action Submittals: Written and graphic information that requires A/E's responsive action.

B. Informational Submittals: Written information that does not require A/E's responsive action. Submittals may be rejected for not complying with requirements.

1.4 SUBMITTAL PROCEDURES

A. General: Electronic copies of CAD Drawings of the Contract Drawings will **not** be provided by the Owner or the A/E for Contractor's use in preparing submittals, without the Contractor's signed release.

B. Coordination: Coordinate preparation and processing of submittals with performance of construction activities,

1) Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
2) Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.

a. A/E and the Owner reserves the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

3) All submittals (drawings and samples) shall be submitted by the Contractor to the A/E, RPR and the Owner or Owner's designated representative concurrently. The Architect/Engineer of Record will be responsible for incorporating the Owner's submittal review comments prior to returning the submittal to the Contractor.

a. All finishes and mock ups shall be submitted to the Owner (or Owner's designated representative) for review and acceptance prior to ordering materials and starting the work.
b. All substitution requests shall be submitted to the Owner (or Owner's designated representative) for approval prior to ordering materials and starting the work.

C. Submittals Schedule: Comply with requirements in Division 1 Section "Construction Progress Documentation" for list of submittals and time requirements for scheduled performance of related construction activities.

D. Processing Time: Allow enough time for submittal review, including time for re-submittals, as follows. Time for review shall commence on A/E's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including re-submittals.

1) Initial Review: Allow twenty-one (**21)** days for initial review of each submittal. Allow additional time if coordination with subsequent submittals is required. A/E or the Owner will advise Contractor when a submittal being processed must be delayed for coordination.
2) Intermediate Review: If intermediate submittal is necessary, process it in same manner as initial submittal.
3) Resubmitted Review: Allow fifteen (15) days for review of each resubmitted.
4) Sequential Review: Where sequential review of submittals by A/E's consultants, Owner, or other parties is indicated, allow twenty-eight (28) days for initial review of each submittal.

a. Safety and Security Plans
b. Phasing and Staging Plans

c. Door Hardware and Access Control Devices
d. Lighting Fixtures
e. Data and Communication – wiring and conduits
f. Fire Sprinklers
g. Mechanical Systems
h. Plumbing Systems

E. Identification: Place a permanent label or title block on each submittal for identification.

1) Indicate name of firm or entity that prepared each submittal on label or title block.
2) Provide a space approximately **6 by 4 inches** on label or beside title block to record Contractor's review and approval markings and action taken by Architect or Engineer.
3) Include the following information on label for processing and recording action taken:

a. Project name.
b. Project Identification Numbers – To include project numbers assigned by the FAA, FDOT, Owner and A/E
c. Date.
d. Name and address of A/E.
e. Name and address of Contractor.
f. Name and address of subcontractor.
g. Name and address of supplier.
h. Name of manufacturer.
i. Submittal number or other unique identifier, including revision identifier.

1) Submittal number shall use Specification Section number followed by a decimal point and then a sequential number (e.g., 06100.01). Re-submittals shall include an alphabetic suffix after another decimal point (e.g., 06100.01.A).

j. Number and full title of appropriate Specification Section.
k. Drawing number and detail references, as appropriate.
l. Drawing Index on the cover page.
m. Location(s) where product is to be installed, as appropriate.
n. Other necessary identification.

F. Deviations: Highlight, encircle, or otherwise specifically identify deviations from the Contract Documents on submittals.

G. Additional Copies: Unless additional copies are required for final submittal, and unless A/E observes noncompliance with provisions in the Contract Documents, initial submittal may serve as final submittal.

1) Additional copies submitted for maintenance manuals will not be marked with action taken and will be returned.

H. Transmittal: Package each submittal individually and appropriately for transmittal and handling. Transmit each submittal using a transmittal form. A/E will return submittals, without review, received from sources other than Contractor.

1) Transmittal Form: Provide locations on form for the following information:

   a. Project name.
   b. Date.
   c. Destination (To:).
   d. Source (From:).
   e. Names of subcontractor, manufacturer, and supplier.
   f. Category and type of submittal.
   g. Submittal purpose and description.
   h. Specification Section number and title.
   i. Drawing number and detail references, as appropriate.
   j. Number of pages included with each submittal item.
   k. Transmittal number.
   l. Submittal and transmittal distribution record.
   m. Remarks.
   n. Signature of transmitter.

2) On an attached separate sheet, prepared on Contractor's letterhead, record relevant information, requests for data, revisions other than those requested by A/E on previous submittals, and deviations from requirements in the Contract Documents, including minor variations and limitations. Include same label information as related submittal.

I. Re-submittals: Make re-submittals in same form and number of copies as initial submittal.

1) Note date and content of previous submittal.
2) Note date and content of revision in label or title block and clearly indicate extent of revision.
3) Resubmit submittals until they are marked "No Exceptions," “Approved,” or “Approved as Noted.”

J. Distribution: Furnish copies of final submittals to manufacturers, subcontractors, suppliers, fabricators, and installers, authorities having jurisdiction, and others as necessary for performance of construction activities. Show distribution on transmittal forms.

K. Use for Construction: Use only final submittals with mark indicating "No Exceptions," “Approved,” or “Approved as Noted” by the A/E.

1.5 CONTRACTOR'S USE OF OWNER’S OR A/E’S CAD FILES

A. General: Electronic copies of CAD Drawings of the Contract Drawings will **not** be provided by the Owner or A/E for Contractor's use in preparing submittals.

PART 2 - PRODUCTS

2.1 ACTION SUBMITTALS

A. General: Prepare and submit Action Submittals required by individual Specification Sections. All submittals shall be reviewed, approved, and stamped by the Contractor prior to submittal to the A/E and Owner for review. All page numbers shall be sequentially numbered. DO NOT SUBMIT PRODUCT SAFETY DATA SHEETS. THESE WILL NOT BE REVIEWED AND SHALL BE RETURNED TO THE CONTRACTOR.

B. Product Data: Collect information into a single submittal for each element of construction and type of product or equipment.

1) If information must be specially prepared for submittal because standard printed data are not suitable for use, submit as Shop Drawings, not as Product Data.
2) Mark each copy of each submittal to show which products and options are applicable.
3) Include the following information, as applicable:

a. Manufacturer's written recommendations.
b. Manufacturer's product specifications.
c. Manufacturer's installation instructions.
d. Standard color charts.
e. Manufacturer's catalog cuts.
f. Wiring diagrams showing factory-installed wiring.
g. Printed performance curves.
h. Operational range diagrams.
i. Mill reports.
j. Standard product operation and maintenance manuals.
k. Compliance with specified referenced standards.
l. Testing by recognized testing agency.
m. Application of testing agency labels and seals.
n. Notation of coordination requirements.

4) Submit Product Data before or concurrent with Samples.
5) Number of Copies: Submit not less than three (3) copies and one (1) digital pdf. of Shop Drawings and Product Data, unless otherwise indicated, submit four (4) copies and one (1) digital pdf. File for submittals involving consulting engineering or design professionals The A/E and the Owner will keep the submitted copies, for most submittals, and will return one digital (PDF) copy with comments. The A/E shall incorporate the Owner’s review comments into a composite submittal and return the composite submittal to the Contractor. The Contractor shall mark up and retain the returned copy of the Shop Drawings and samples with the Contractor’s Shop Drawing Log as a Project Record Document, to be submitted to the Owner at project closeout. The A/E shall coordinate with the Owner or the Owner’s designated representative on any review comments prior to returning the submittal to the Contractor.

C. Shop Drawings: Prepare Project-specific information, drawn accurately to scale. Do not base Shop Drawings on reproductions of the Contract Documents or standard printed data.

1) Preparation: Fully illustrate requirements in the Contract Documents. Include the following information, as applicable:

a. Dimensions.
b. Identification of products.
c. Fabrication and installation drawings.
d. Roughing-in and setting diagrams.
e. Wiring diagrams showing field-installed wiring, including power, signal, and control wiring.
f. Shop work manufacturing instructions.
g. Templates and patterns.
h. Schedules.
i. Design calculations.
j. Compliance with specified standards.
k. Notation of coordination requirements.
l. Notation of dimensions established by field measurement.
m. Relationship to adjoining construction clearly indicated.
n. Seal and signature of professional engineer if specified.
o. Wiring Diagrams: Differentiate between manufacturer-installed and field-installed wiring.
p. Page number and total page count.

2) Sheet Size: Except for templates, patterns, and similar full-size drawings, submit Shop Drawings on sheets at least 8-1/2 by 11 inches but no larger than 30 by 42 inches.
3) Number of Copies: Submit one (1) opaque (bond) copy of each submittal and one (1) digital pdf file. A/E will return one digital copy of the composite shop drawings with the A/E's and Owner's review comments to the Contractor.

D. Samples: Submit Samples for review of kind, color, pattern, and texture for a check of these characteristics with other elements and for a comparison of these characteristics between submittal and actual component as delivered and installed.

1) Transmit Samples that contain multiple, related components such as accessories together in one submittal package.
2) Identification: Attach label on unexposed side of Samples that includes the following:

a. Generic description of Sample.
b. Product name and name of manufacturer.
c. Sample source.
d. Number and title of appropriate Specification Section.
e. Project name.
f. Proposed location, or use, in project.
g. Contractor's approval stamp and room for A/E's stamp.

3) Disposition: Maintain sets of approved Samples at Project site, available for quality-control comparisons throughout the course of construction activity. Sample sets may be used to determine final acceptance of construction associated with each set.

a. Samples not incorporated into the Work, or otherwise designated as Owner's property, are the property of Contractor.

4) Samples for Initial Selection: Submit manufacturer's color charts consisting of units or sections of units showing the full range of colors, textures, and patterns available.

a. Number of Samples: Submit two (2) full set(s) of available choices where color, pattern, texture, or similar characteristics are required to be selected from manufacturer's product line. A/E will return submittal with options selected and accepted by the Owner.

1) Submit one full set to the office of the A/E.
2) Submit one full set on-site to the Owner or Designated Representative.

5) Samples for Verification: Submit full-size units or Samples of size indicated, prepared from same material to be used for the Work, cured and finished in manner specified, and physically identical with material or product proposed for use, and that show full range of color and texture variations expected. Samples include, but are not limited to, the following: partial sections of manufactured or fabricated components; small cuts or containers of materials; complete units of repetitively used materials; swatches showing color, texture, and pattern; color range sets; and components used for independent testing and inspection.

a. Number of Samples: Submit not less than **three (3)** sets of Samples. A/E will retain **two** (2) Sample sets; remainder will be returned.

1) Submit a single Sample where assembly details, workmanship, fabrication techniques, connections, operation, and other similar characteristics are to be demonstrated.
2) If variation in color, pattern, texture, or other characteristic is inherent in material or product represented by a Sample, submit at least three sets of paired units that show approximate limits of variations.

E. Product Schedule or List: As required in individual Specification Sections, prepare a written summary spread sheet and supporting documentation indicating types of products required for the Work and their intended location. Include the following information in tabular form:

1) Type of product. Include unique identifier for each product.
2) Number and name of room or space.
3) Location within room or space.
4) Number of Copies: Submit three (3) copies of product schedule or list, unless otherwise indicated. A/E will return one (1) copy.
5) Product Manufacturer’s distance from project site.
6) Products percentage (%) of recycled material content.

F. Contractor's Construction Schedule: Comply with requirements specified in Division 1 Section "Construction Progress Documentation" for Contractor’s action.

G. Submittals Schedule: Comply with requirements specified in Division 1 Section "Construction Progress Documentation."

H. Application for Payment: Comply with requirements specified in Division 1 Section "Payment Procedures."

I. Schedule of Values: Comply with requirements specified in Division 1 Section "Payment Procedures."

J. Subcontract List: Prepare a written summary identifying individuals or firms proposed for each portion of the Work, including those who are to furnish products or equipment fabricated to a special design. Include the following information in tabular form:

1) Name, address, and telephone number of entity performing subcontract or supplying products.
2) Number and title of related Specification Section(s) covered by subcontract.
3) Drawing number and detail references, as appropriate, covered by subcontract.
4) Number of Copies: Submit two (2) copies of subcontractor list, unless otherwise indicated. A/E will return one (2) copy.

a. Mark up and retain one returned copy as a Project Record Document.

2.2 INFORMATIONAL SUBMITTALS

A. General: Prepare and submit Informational Submittals required by other Specification Sections.

1) Number of Copies: Submit three (3) copies of each submittal, unless otherwise indicated. A/E will not return copies.
2) Certificates and Certifications: Provide a notarized statement that includes signature of entity responsible for preparing certification. Certificates and certifications shall be signed by an officer or other individual authorized to sign documents on behalf of that entity.
3) Test and Inspection Reports: Comply with requirements specified in Division 1 Section "Quality Requirements."

B. Coordination Drawings: Comply with requirements specified in Division 1 Section "Project Management and Coordination."

C. Contractor's Construction Schedule: Comply with requirements specified in Division 1 Section "Construction Progress Documentation."

D. Qualification Data: Prepare written information that demonstrates capabilities and experience of firm or person. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

E. Welding Certificates: Prepare written certification that welding procedures and personnel comply with requirements in the Contract Documents. Submit record of Welding Procedure Specification (WPS) and Procedure Qualification Record (PQR) on AWS forms. Include names of firms and personnel certified.

F. Installer Certificates: Prepare written statements on manufacturer's letterhead certifying that Installer complies with requirements in the Contract Documents and, where required, is authorized by manufacturer for this specific Project.

G. Manufacturer Certificates: Prepare written statements on manufacturer's letterhead certifying that manufacturer complies with requirements in the Contract Documents. Include evidence of manufacturing experience where required.

H. Product Certificates: Prepare written statements on manufacturer's letterhead certifying that product complies with requirements in the Contract Documents.

I. Material Certificates: Prepare written statements on manufacturer's letterhead certifying that material complies with requirements in the Contract Documents.

J. Material Test Reports: Prepare reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting test results of material for compliance with requirements in the Contract Documents.

K. Product Test Reports: Prepare written reports indicating current product produced by manufacturer complies with requirements in the Contract Documents. Base reports on evaluation of tests performed by manufacturer and witnessed by a qualified testing agency, or on comprehensive tests performed by a qualified testing agency.

L. Research/Evaluation Reports: Prepare written evidence, from a model code organization acceptable to authorities having jurisdiction, that product complies with building code in effect for Project. Include the following information:

1) Name of evaluation organization.
2) Date of evaluation.
3) Time period when report is in effect.
4) Product and manufacturers' names.
5) Description of product.
6) Test procedures and results.
7) Limitations of use.

M. Schedule of Tests and Inspections: Comply with requirements specified in Division 1 Section "Quality Requirements."

N. Preconstruction Test Reports: Prepare reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of tests performed before installation of product, for compliance with performance requirements in the Contract Documents.

O. Compatibility Test Reports: Prepare reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of compatibility tests performed before installation of product. Include written recommendations for primers and substrate preparation needed for adhesion.

P. Field Test Reports: Prepare reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of field tests performed either

during installation of product or after product is installed in its final location, for compliance with requirements in the Contract Documents.

Q. Maintenance Data: Prepare written and graphic instructions and procedures for operation and normal maintenance of products and equipment. Comply with requirements specified in Division 1 Section "Operation and Maintenance Data."

R. Design Data: Prepare written and graphic information, including, but not limited to, performance and design criteria, list of applicable codes and regulations, and calculations. Include list of assumptions and other performance and design criteria and a summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Include page numbers.

S. Manufacturer's Instructions: Prepare written or published information that documents manufacturer's recommendations, guidelines, and procedures for installing or operating a product or equipment. Include name of product and name, address, and telephone number of manufacturer. Include the following, as applicable:

1) Preparation of substrates.
2) Required substrate tolerances.
3) Sequence of installation or erection.
4) Required installation tolerances.
5) Required adjustments.
6) Recommendations for cleaning and protection.

T. Manufacturer's Field Reports: Prepare written information documenting factory-authorized service representative's tests and inspections. Include the following, as applicable:

1) Name, address, and telephone number of factory-authorized service representative making report.
2) Statement on condition of substrates and their acceptability for installation of product.
3) Statement that products at Project site comply with requirements.
4) Summary of installation procedures being followed, whether they comply with requirements and, if not, what corrective action was taken.
5) Results of operational and other tests and a statement of whether observed performance complies with requirements.
6) Statement whether conditions, products, and installation will affect warranty.
7) Other required items indicated in individual Specification Sections.

U. Insurance Certificates and Bonds: Prepare written information indicating current status of insurance or bonding coverage. Include name of entity covered by insurance or bond, limits of coverage, amounts of deductibles, if any, and term of the coverage.

V. Construction Photographs: Comply with requirements specified in Division 1 Section “Photographic Documentation."

W. Material Safety Data Sheets (MSDSs): Submit information directly to Owner; do not submit to A/E.

1) A/E will not review submittals that include MSDSs and will return the entire submittal without comment.

2.3 DELEGATED DESIGN

A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.

1) If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to A/E.

2) Where submittals require “sign and sealed” engineered documents; the submittal shall be “signed and sealed” by an engineer licensed within the State of the project location.

B. Delegated-Design Submittal: In addition to Shop Drawings, Product Data, and other required submittals, submit three (3) copies of a statement, signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional licensed in the State where the work is to be performed.

1) Indicate that products and systems comply with performance and design criteria in the Contract Documents. Include list of codes, loads, and other factors used in performing these services.

PART 3 - EXECUTION

3.1 CONTRACTOR'S REVIEW AND APPROVAL

A. Review each submittal and check for coordination with other Work of the Contract and for compliance with the Contract Documents. Note corrections and field dimensions. Mark with approval stamp before submitting to A/E and the Owner.

B. Approval Stamp: Stamp each submittal with a uniform, approval stamp. Include Project name and location, submittal number, Specification Section title and number, name of reviewer, date of Contractor's approval, and statement certifying that submittal has been reviewed, checked, and approved for compliance with the Contract Documents.

3.2 ARCHITECT/ENGINEER'S ACTION

A. General: A/E and Owner will not review submittals that have not been reviewed by the Contractor and do not bear Contractor's approval stamp and will return them without action.

B. Action Submittals: A/E will review each submittal, make marks to indicate corrections or modifications required, noted coordinate any Owner review comments and return the submittal to the Contractor. A/E will stamp each submittal with an action stamp and will mark stamp appropriately to indicate action taken, as follows:

1) "No Exceptions" – A/E has reviewed the submittal and approved that it generally conforms to the referenced specification(s) and drawings.
2) "Exceptions Noted" – A/E has reviewed the submittal and observed discrepancies in conformance to the referenced specification(s) and drawings; A/E's comments shall be incorporated prior to fabrication. Contractor shall modify and re-submit number of corrected copies requested as record documents.
3) "Revise and Resubmit" –The submittal was found to be unacceptable, and the A/E has noted discrepancies with the Contract Documents. The Contractor shall respond to the noted discrepancies and shall revise the submittal to conform to the specification(s) and drawings before proceeding further.
4) "Rejected" – The submittal is unacceptable. Contractor shall review the Contract Documents and prepare a submittal that conforms to the specifications and drawings.

C. Informational Submittals: A/E will review each submittal and will not return it or will return it if it does not comply with requirements. A/E will forward each submittal to appropriate party.

D. Partial submittals are not acceptable, will be considered nonresponsive, and will be returned without review.

E. Submittals not required by the Contract Documents may not be reviewed and may be discarded.

END OF SECTION 01330

SECTION 01400 - QUALITY REQUIREMENTS AND TESTING LABORATORY SERVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Special Provisions and other Division 1 Specification Sections, apply to this Section.

B. Related Sections include the following:

1) Section 01320, “Construction Progress Documentation”
2) Item C-100, “Contractor Quality Control Program (CQCP)”
3) Divisions 2 through 16, FAA and FDOT Sections for specific test and inspection requirements, for descriptions of respective certificates of products, and for lists describing tests and standards.

C. If there is a discrepancy between the requirements of this section and related sections, the more restrictive interpretation shall apply.

1.2 SUMMARY

A. This Section includes administrative and procedural requirements for quality assurance and quality control.

B. Testing and inspecting services are required to verify compliance with requirements specified or indicated. These services do not relieve Contractor of responsibility for compliance with the Contract Document requirements.

1) Specific quality-assurance and -control requirements for individual construction activities are specified in the Sections that specify those activities. Requirements in those Sections may also cover production of standard products.
2) Specified tests, inspections, and related actions do not limit Contractor's other quality-assurance and -control procedures that facilitate compliance with the Contract Document requirements.
3) Requirements for Contractor to provide quality-assurance and -control services required by A/E, Owner, or Authorities Having Jurisdiction are not limited by provisions of this Section.

1.3 DEFINITIONS

A. Quality-Assurance Services: Activities, actions, and procedures performed before and during execution of the Work to guard against defects and deficiencies and substantiate that proposed construction will comply with requirements.

B. Quality-Control Services: Tests, inspections, procedures, and related actions during and after execution of the Work to evaluate that actual products incorporated into the Work and completed construction comply with requirements. Services do not include contract enforcement activities performed by A/E or the Owner or Owner's designated representative.

C. Mockups: Full-size, physical assemblies that are constructed on-site. Mockups are used to verify selections made under sample submittals, to demonstrate aesthetic effects and, where indicated, qualities of materials and execution, and to review construction, coordination, testing, or operation; they are not Samples. Approved mockups establish the standard by which the Work will be judged.

D. Preconstruction Testing: Tests and inspections that are performed specifically for the Project before products and materials are incorporated into the Work to verify performance or compliance with specified criteria.

E. Product Testing: Tests and inspections that are performed by a NRTL, an NVLAP, or a testing agency qualified to conduct product testing and acceptable to authorities having jurisdiction, to establish product performance and compliance with industry standards.

F. Source Quality-Control Testing: Tests and inspections that are performed at the source, i.e., plant, mill, factory, or shop.

G. Field Quality-Control Testing: Tests and inspections that are performed on-site for installation of the Work and for completed Work.

H. Testing Agency: An entity engaged to perform specific tests, inspections, or both. Testing laboratory shall mean the same as testing agency.

I. Installer/Applicator/Erector: Contractor or another entity engaged by Contractor as an employee, Subcontractor, or Sub-subcontractor, to perform a particular construction operation, including installation, erection, application, and similar operations.

1) Using a term such as "carpentry" does not imply that certain construction activities must be performed by accredited or unionized individuals of a corresponding generic name, such as "carpenter." It also does not imply that requirements specified apply exclusively to tradespeople of the corresponding generic name.

J. Experienced: When used with an entity, "experienced" means having successfully completed a minimum of (3) **three** previous projects similar in size and scope to this Project; being familiar with special requirements indicated; and having complied with requirements of authorities having jurisdiction.

1.4 DELEGATED DESIGN

A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.

1) If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to A/E.

1.5 CONFLICTING REQUIREMENTS

A. General: If compliance with two or more standards is specified and the standards establish different or conflicting requirements for minimum quantities or quality levels, comply with the **most stringent** requirement. Refer uncertainties and requirements that are different, but apparently equal, to A/E for a decision before proceeding.

B. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of requirements. Refer uncertainties to A/E for a decision before proceeding.

1.6 SUBMITTALS

A. Qualification Data: For testing agencies specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include proof of qualifications in the form of a recent report on the inspection of the testing agency by a recognized authority.

B. Schedule of Tests and Inspections: Prepare in tabular form and include the following:

1) Specification Section number and title.
2) Description of test and inspection.
3) Identification of applicable standards.
4) Identification of test and inspection methods.
5) Number of tests and inspections required.
6) Time schedule or time span for tests and inspections.
7) Entity responsible for performing tests and inspections.
8) Requirements for obtaining samples.
9) Unique characteristics of each quality-control service.

C. Reports: Prepare and submit five (5) certified written reports that include the following:

1) Date of issue.
2) Project title and number.
3) Name, address, and telephone number of testing agency.
4) Dates and locations of samples and tests or inspections.
5) Names of individuals making tests and inspections.
6) Description of the Work and test and inspection method.
7) Identification of product and Specification Section.
8) Complete test or inspection data, including type.
9) Test and inspection results and an interpretation of test results.
10) Record of temperature and weather conditions at time of sample taking and testing and inspecting.

11) Comments or professional opinion on whether tested or inspected Work complies with the Contract Document requirements.
12) Name and signature of laboratory inspector.
13) Recommendations on retesting and reinspecting.

D. Testing Laboratory: Prepare and submit 5 copies of the following to be included with the Reports indicated above:

1) Certificate(s) of Calibration, made by accredited calibration agency.

2) Written reports on irregularities, deficiencies and/or re-tests (color-coded as per Article 1.8 following).

3) Reports on inspections and tests.

4) Copy of report of inspection of facilities made by Materials Reference Laboratory of National Bureau of Standards during most recent tour of inspection; with memorandum of remedies of any deficiencies reported by inspection.

E. Permits, Licenses, and Certificates: For Owner's records, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, correspondence, records, and similar documents, established for compliance with standards and regulations bearing on performance of the Work.

F. Delegated-Design Submittal: In addition to Shop Drawings, Product Data, and other required submittals, submit a statement, signed and sealed by the responsible Design Professional, for each product and system specifically assigned to Contractor to be designed or certified by a Design Professional, indicating that the products and systems are in compliance with performance and design criteria indicated. Include list of codes, loads, and other factors used in performing these services.

1.7 QUALITY ASSURANCE

A. General: Qualifications paragraphs in this Article establish the minimum qualification levels required; individual Specification Sections specify additional requirements.

B. Installer Qualifications: A firm or individual experienced in installing, erecting, or assembling work similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance.

C. Manufacturer Qualifications: A firm experienced in manufacturing products or systems similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

D. Fabricator Qualifications: A firm experienced in producing products similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

E. Professional Engineer Qualifications: A Professional Engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing

engineering services of the kind indicated. Engineering services are defined as those performed for installations of the system, assembly, or product that are similar to those indicated for this Project in material, design, and extent.

F. Specialists: Certain sections of the Specifications require that specific construction activities shall be performed by entities who are recognized experts in those operations. Specialists shall satisfy qualification requirements indicated and shall be engaged for the activities indicated.

1) Requirement for specialists shall not supersede building codes and regulations governing the Work.

G. Testing Agency Qualifications: Meet “Recommended Requirements for Independent Laboratory Qualification”, latest edition, published by American Council of Independent Laboratories.

1) Testing Equipment:

a. Calibrated at maximum twelve (12) month intervals by devices of accuracy traceable to either:

1) National Bureau of Standards.
2) Accepted values of natural physical constants.

H. Factory-Authorized Service Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.

I. Mockups: Before installing portions of the Work requiring mockups, build mockups for each form of construction and finish required to comply with the following requirements, using materials indicated for the completed Work:

1) Build mockups in location and of size indicated or, if not indicated, as directed by A/E.
2) Notify A/E and Owner twenty-one (21) days in advance of dates and times when mockups will be constructed.
3) Demonstrate the proposed range of aesthetic effects and workmanship.
4) Obtain A/E's and Owner’s approval of mockups before starting work, fabrication, or construction.
   a. Allow twenty-one (21) days for initial review and fifteen (15) days for each re-review of each mockup.
5) Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
6) Demolish and remove mockups when directed, unless otherwise indicated.

1.8 QUALITY CONTROL

A. Contractor Responsibilities: Contractor is responsible for quality control testing and inspection to insure the quality of his means and methods of construction will produce

the specified quality of work, and for any tests and inspections required by regulatory agencies. Costs for these services shall be included in the contract sum.

B. Tests and inspections not explicitly assigned to Owner are Contractor's responsibility. Unless otherwise indicated, provide quality-control services specified and those required by authorities having jurisdiction. Perform quality-control services required of Contractor by authorities having jurisdiction, whether specified or not.

7) Retain subparagraph below if some Sections require an independent testing agency to perform certain tests and inspections.

a. Contractor shall not employ same entity engaged by Owner, unless agreed to in writing by Owner.

8) The Contractor shall submit for Engineer’s and Owner’s acceptance a Quality Control (QC) Plan delineating his methods for each item requiring inspections, tests, and similar services.
9) Notify testing agencies at least 72 hours in advance of time when Work that requires testing or inspecting will be performed.
10) Where quality-control services are indicated as Contractor's responsibility, submit a certified written report, in duplicate, of each quality-control service.
11) Testing and inspecting requested by Contractor and not required by the Contract Documents are Contractor's responsibility.
12) Submit additional copies of each written report directly to authorities having jurisdiction, when they so direct.

C. Manufacturer's Field Services: Where indicated, engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including service connections. Report results in writing as specified in Division 1 Section "Submittal Procedures."

D. Retesting/Reinspecting:

1) Regardless of whether original tests or inspections were Contractor's responsibility, provide quality-control services, including retesting and reinspecting, for construction that replaced Work that failed to comply with the Contract Documents.
2) Retest Responsibility: Where results of required inspections, tests, or similar services prove unsatisfactory and do not indicate compliance with the requirements of the Contract Documents, then retests are the responsibility of the Contractor, and shall be deducted from monies due the Contractor on his monthly pay request, regardless of whether the original test was the Contractor's responsibility. Retesting of work revised or replaced by the Contractor is the Contractor's responsibility, where required tests were performed on original work.

E. Testing Agency Responsibilities: Cooperate with A/E, Owner, and Contractor in performance of duties. On notice, provide qualified personnel to perform required tests and inspections.

1) Perform specified inspections, sampling and testing of materials.

a. Comply with specified standards.

b. Ascertain compliance with requirements of Contract Documents.

2) Promptly notify A/E and Contractor of irregularities or deficiencies observed in the Work during performance of its services.

a. Deficient work shall be reported and printed on Yellow paper.
b. Re-tests shall be reported and printed on Blue paper.

3) Determine the location from which test samples will be taken and in which in-situ tests are conducted.
4) Conduct and interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from requirements.
5) Submit a certified written report, in duplicate, of each test, inspection, and similar quality-control service through Contractor.
6) Do not release, revoke, alter, or increase the Contract Document requirements or approve or accept any portion of the Work.
7) Do not perform any duties of Contractor.
8) Perform additional services requested by A/E.

F. Associated Services: Cooperate with agencies performing required tests, inspections, and similar quality-control services, and provide reasonable auxiliary services as requested. Notify agency sufficiently in advance of operations to permit assignment of personnel and scheduling of tests. Provide the following:

1) Access to the Work.
2) Incidental labor and facilities necessary to facilitate tests and inspections.
3) Required quantities of representative samples of materials that require testing and inspecting. Assist agency in obtaining samples.
4) Furnish copies of all test reports as called for by the Specifications.
5) Furnish labor and facilities:

a. To provide access to work to be tested.
b. To obtain and handle samples at the site.
c. To facilitate inspections and tests.
d. Test cylinder cure box for laboratory’s exclusive use for storage and curing of test samples.

6) Arrange with Laboratory and pay for additional samples and tests required for Contractor’s convenience.
7) Employ and pay for services of a separate, equally qualified independent testing laboratory to perform additional inspections, sampling and testing required when initial tests indicate work does not comply with Contract Documents. See Article above for additional requirements regarding re-testing and/or re-inspection.
8) Facilities for storage and field curing of test samples.
9) Delete first subparagraph below if not required or common practice in Project vicinity.
10) Delivery of samples to testing agencies.
11) Preliminary design mix proposed for use for material mixes that require control by testing agency.
12) Security and protection for samples and for testing and inspecting equipment at Project site.

G. Coordination: Coordinate sequence of activities to accommodate required quality-assurance and -control services with a minimum of delay and to avoid necessity of removing and replacing construction to accommodate testing and inspecting.

1) Schedule times for tests, inspections, obtaining samples, and similar activities.

H. Schedule of Tests and Inspections: Prepare a schedule of tests, inspections, and similar quality-control services required by the Contract Documents. Submit schedule within 45 days of date established for the Notice to Proceed.

1) Distribution: Distribute schedule to Owner, A/E, testing agencies, and each party involved in performance of portions of the Work where tests and inspections are required.

1.9 SPECIAL TESTS AND INSPECTIONS

A. Special Tests and Inspections: Owner will engage a qualified special inspector to conduct special tests and inspections required by Authorities Having Jurisdiction as the responsibility of Owner, and as follows:

1) Verifying that manufacturer maintains detailed fabrication and quality-control procedures and reviewing the completeness and adequacy of those procedures to perform the Work.
2) Notifying A/E and Contractor promptly of irregularities and deficiencies observed in the Work during performance of its services.
3) Submitting a certified written report of each test, inspection, and similar quality-control service to A/E with copy to Contractor and to authorities having jurisdiction.
4) Submitting a final report of special tests and inspections at Substantial Completion, which includes a list of unresolved deficiencies.
5) Interpreting tests and inspections and stating in each report whether tested and inspected work complies with or deviates from the Contract Documents.
6) Retesting and reinspecting corrected work.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 TEST AND INSPECTION LOG

A. Prepare a record of tests and inspections. Include the following:

1) Date test or inspection was conducted.
2) Description of the Work tested or inspected.
3) Date test or inspection results were transmitted to A/E.
4) Identification of testing agency or special inspector conducting test or inspection.

B. Maintain log at Project site. Post changes and modifications as they occur. Provide access to test and inspection log for A/E's reference during normal working hours.

END OF SECTION 01400

(INTENTIONALLY LEFT BLANK)

SECTION 01500 - TEMPORARY FACILITIES AND CONTROLS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Special Provisions and other Division 1 Specification Sections, apply to this Section.

B. Related Sections include the following:

1) General Provision Section 50, “Control of Work”
2) General Provision Section 70, “Legal Regulations and Responsibility to Public”
3) General Provision Section 80, “Execution and Progress”
4) Section 01100, “Summary”
5) Section 01143, “Airport Project Work Procedures”
6) Item C-105, “Mobilization”

C. If there is a discrepancy between the requirements of this section and related sections, the more restrictive interpretation shall apply.

1.2 SUMMARY

A. This Section includes requirements for temporary facilities and controls, including temporary utilities, support facilities and security and protection facilities.

1.3 USE CHARGES

A. General: Cost or use charges for temporary facilities shall be included in the Contract Lump Sum for Mobilization. Allow other entities to use temporary services and facilities without cost, including, but not limited to, A/E, testing agencies, and Authorities Having Jurisdiction.

B. Sewer Service: Pay sewer service use charges for sewer usage by all entities for construction operations.

C. Water Service: Pay water service use charges for water used by all entities for construction operations.

D. Electric Power Service: Pay electric power service use charges for electricity used by all entities for construction operations. Provide connections and extensions of services as required for construction operations.

E. Telephone, Data, and Fiber Services: Pay telephone, data and fiber service use charges for telephone, data and fiber used by all entities for construction operations. Provide connections and extensions of services as required for construction operations.

1.4 SUBMITTALS

A. Temporary Utility Reports: Submit reports of tests, inspections, meter readings, and similar procedures performed on temporary utilities.

B. Site Plan: Show temporary facilities, utility hookups, staging areas, parking areas for construction personnel, and parking facilities to remain operational.

C. Erosion and Sedimentation-Control Plan: Show compliance with requirements of NPDES and SWPPP or authorities having jurisdiction, whichever is more stringent.

D. Moisture-Protection Plan: Describe procedures and controls for protecting materials and construction from water absorption and damage.

1) Describe delivery, handling, and storage provisions for materials subject to water absorption or water damage.
2) Indicate procedures for discarding water-damaged materials, protocols for mitigating water intrusion into completed Work, and replacing water-damaged Work.
3) Indicate sequencing of work that requires water, such as sprayed fire-resistive materials or plastering, and/or concrete and describe plans for dealing with water from these operations. Show procedures for verifying that wet construction has dried sufficiently to permit installation of finish materials.

E. Dust- and HVAC-Control Plan: Submit coordination drawing and narrative that indicates the dust- and HVAC-control measures proposed for use, proposed locations, and proposed time frame for their operation. Identify further options if proposed measures are later determined to be inadequate. Include the following:

1) Locations of dust-control partitions at each phase of work.
2) HVAC system isolation schematic drawing.
3) Location of proposed air-filtration system discharge.
4) Waste handling procedures.
5) Other dust-control measures.

1.5 QUALITY ASSURANCE

A. Standards: Comply with ANSI A10.6, NECA's "Temporary Electrical Facilities," and NFPA 241.

1) Trade Jurisdictions: Assigned responsibilities for installation and operation of temporary utilities are not intended to interfere with trade regulations and union jurisdictions.
2) Electric Service: Comply with NECA, NEMA, and UL standards and regulations for temporary electric service. Install service to comply with NFPA 70.

B. Tests and Inspections: Arrange for Authorities Having Jurisdiction to test and inspect each temporary utility before use. Obtain required certifications and permits.

1.6 PROJECT CONDITIONS

A. Temporary Utilities: At earliest feasible time, when approved in writing from the A/E, change over from use of temporary service to use of permanent service.

1) Temporary Use of Permanent Facilities: Installer of each permanent service shall assume responsibility for operation, maintenance, and protection of each permanent service during its use as a construction facility before Owner's acceptance, regardless of previously assigned responsibilities.

B. Conditions of Use: The following conditions apply to use of temporary services and facilities by all parties engaged in the Work:

1) Keep temporary services and facilities clean and neat.
2) Relocate temporary services and facilities as required by progress of the Work.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General: Provide new materials. Undamaged, previously used materials in serviceable condition may be used if approved by A/E. Provide materials suitable for use intended.

2.2 TEMPORARY FACILITIES

A. General Contractor Field Offices, General: Prefabricated of mobile units with serviceable finishes, temperature controls, and foundations adequate for normal loading.

B. Provide new materials. Undamaged, previously used materials in serviceable condition may be used if approved by RPR. Provide materials suitable for use intended.

2.3 EQUIPMENT

A. Field Secure Storage Trailer: Mobile units with lockable entrances located as directed by Owner for storage of materials, equipment, and tools.

B. Fire Extinguishers: Hand carried, portable, UL rated. Provide class and extinguishing agent as indicated or a combination of extinguishers of NFPA-recommended classes for exposures.

1) Comply with NFPA 10 and NFPA 241 for classification, extinguishing agent, and size required by location and class of fire exposure.

C. Self-Contained Toilet Units – For Contractor forces: Single-occupant units of chemical, aerated recirculation or combustion type; vented; fully enclosed with a glass-fiber-reinforced polyester shell or similar nonabsorbent material.

D. Drinking-Water Fixtures: Containerized, tap-dispenser, bottled-water drinking-water units, including paper cup supply.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Locate facilities where they will serve Project adequately and result in minimum interference with performance of the Work only in locations designated in drawings. Relocate and modify facilities as required.

B. Provide each facility ready for use when needed to avoid delay. Maintain and modify as required. Do not remove until facilities are no longer needed or are replaced by authorized use of completed permanent facilities.

3.2 TEMPORARY UTILITY INSTALLATION

A. Temporary electrical power consumption and utilities shall be provided by General Contractor. Temporary sewer connections will be required for modular offices for this project. Any costs for providing temporary utilities and removal of the temporary connection and restoring the site to pre-connection condition, will solely be the General Contractor's/Bidder's responsibility.

B. Water Service: Temporary water service shall be provided by General Contractor and maintained in a condition acceptable to permitting agencies and the owner. At Substantial Completion, restore these facilities to condition existing before initial use.

1) Provide rubber hoses as necessary to serve Project site.

C. Sanitary Facilities: Provide temporary toilets, wash facilities, and drinking-water fixtures. Comply with regulations and health codes for type, number, location, operation, and maintenance of fixtures and facilities.

1) Disposable Supplies: Provide toilet tissue, paper towels, paper cups, and similar disposable materials for each facility. Maintain adequate supply. Provide covered waste containers for disposal of used material.

2) Construction Personnel Toilets: Install self-contained toilet units. Shield toilets to ensure privacy. Provide separate facilities for male and female personnel.

3) Drinking-Water Facilities: Provide bottled-water drinking-water units.

a. Where power is accessible, provide electric water coolers to maintain dispensed water temperature at 45 to 55 deg F.

D. Electric Power Service: Provide weatherproof, grounded electric power service and distribution system of sufficient size, capacity, and power characteristics during construction period. Include

meters, transformers, overload-protected disconnecting means, automatic ground-fault interrupters, and main distribution switchgear.

E. Telephone and Data Service: Provide temporary telephone and data service in common-use facilities for use by all construction personnel and RPR facilities. Install at least one telephone and data line for each field office.

1) Provide additional telephone lines for the following:

a. Provide a dedicated telephone line for each computer in each field office.

2) At each telephone, post a list of important telephone numbers including:

a. Police and fire departments.
b. Ambulance service.
c. Contractor's Safety Officer mobile phone or pager.
d. Superintendent's mobile phone.
e. Contractor's home office.
f. Architect's office.
g. Engineer's office.
h. Owner's Representative Office.
i. Principal subcontractors' field and home offices.

3) Provide a voice-mail service on superintendent's telephone.
4) Provide superintendent with cellular telephone and portable two-way radio for use when away from field office.

3.3 SUPPORT FACILITIES INSTALLATION

A. General: Comply with the following:

1) Locate storage sheds, sanitary facilities, and other temporary construction and support facilities for easy access only in areas designated in drawings.
2) Provide incombustible construction for offices, shops, and sheds located within construction area or within 30 feet of building lines. Comply with NFPA 241.
3) Review first subparagraph below with Owner's insurance carrier. Revise to suit Project.
4) Maintain support facilities until near Substantial Completion. Remove before Substantial Completion. Personnel remaining after Substantial Completion will be permitted to use permanent facilities under conditions acceptable to Owner.

B. Traffic Controls: Comply with requirements of authorities having jurisdiction.

1) Protect existing site improvements to remain including fence, pavement, and utilities.
2) Maintain access for fire-fighting equipment and access to fire hydrants.
3) Coordinate with Owner during progress of construction to coordinate with roadway improvement projects adjacent to temporary facilities and staging areas.
4) Refer to other sections of these specifications for additional requirements for aircraft and vehicular traffic control requirements.

C. Parking: Use areas designated by Owner for construction personnel parking.

D. Project Identification and Temporary Signs: Provide Project identification and other signs. Install signs where directed by RPR, Owner or A/E to inform public and individuals seeking entrance to Project. See Phasing and Staging drawings for additional information. Do not permit installation of unauthorized signs.

1) Provide temporary, directional signs for construction personnel and visitors.
2) Engage an experienced sign painter or fabricator to apply graphics.
3) Signs shall be sized appropriate for required message and intended audience (i.e., vehicular or pedestrian traffic). Location identification (Parking, Deliveries Entrance, etc.) and vehicular signage text shall use sans serif text with minimal character height of at least 3-inch.
4) Maintain and touchup signs so they are legible at all times.
5) Exterior signs:

a. Construct of exterior-type Grade B-B plywood at least ½" thick.
b. Support on posts or framing of preservative-treated wood or steel.
c. For signs to remain more than 90 days, mount posts in poured concrete footings, where directed by Owner.
d. Paint sign panels and applied graphics with exterior-grade alkyd gloss enamel over exterior primer. Allow for up to three colors for signs.

6) Project Identification Sign

a. Message shall be as directed by the Owner and shall include a rendering of the Terminal.
b. Allow for sign up to 8' x 8' (2440 mm x 2440 mm), securely anchor on not less than three posts.
c. Allow for up to three colors for Project Identification sign.
d. As requested by A/E or the Owner, provide company logos and identification information for Contractor and major subcontractors and suppliers for incorporation into Project Sign.

E. Waste Disposal Facilities: Provide waste-collection containers in sizes adequate to handle waste from construction operations. Comply with requirements of authorities having jurisdiction.

1) Comply with Division 1 Section "Airport Project Work Procedures" for policing of debris, hourly, and daily removal of loose material, waste, and potential debris.
2) Comply with Division 1 Section "Execution Requirements" for progress cleaning requirements.

F. Lifts and Hoists: Provide facilities for hoisting materials and personnel. Truck cranes and similar devices used for hoisting materials are considered "tools and equipment" and not temporary facilities.

3.4 SECURITY AND PROTECTION FACILITIES INSTALLATION

A. Environmental Protection: Provide protection, operate temporary facilities, and conduct construction in ways and by methods that comply with environmental regulations and that minimize possible air, waterway, and subsoil contamination or pollution or other undesirable effects. Avoid using tools and equipment that produce harmful noise. Restrict use of noisemaking tools and equipment to hours that will minimize complaints from persons or firms near Project site.

B. Site Enclosure Fence: Before construction operations begin, furnish and install site enclosure fence in a manner that will prevent people and animals from easily entering site except by entrance gates.

1) Extent of Fence: As required to enclose portion of Project site determined sufficient to accommodate construction operations, roughly in areas indicated on Phasing and Staging Drawings for each phase.
2) Maintain security by limiting number of keys and restricting distribution to authorized personnel. Provide Owner with two sets of keys.
3) Set fence posts at eight feet on center maximum.
4) Provide gates in sizes and at locations necessary to accommodate delivery vehicles and other construction operations.
5) Cost of Site Enclosure Fence shall be paid for under Item C-105, “Mobilization.”

C. Security Enclosure and Lockup: Install substantial temporary enclosure around partially completed areas of construction. Provide lockable entrances to prevent unauthorized entrance, vandalism, theft, and similar violations of security.

D. Barricades, Warning Signs, and Lights: Comply with requirements of authorities having jurisdiction for erecting structurally adequate barricades, including warning signs and lighting.

1) Comply with Division 1 Section “Airport Project Work Procedures”.

E. Temporary Fire Protection: Install and maintain temporary fire-protection facilities of types needed to protect against reasonably predictable and controllable fire losses. Comply with NFPA 241.

1) Provide fire extinguishers, installed on walls on mounting brackets, visible and accessible from space being served, with sign mounted above.

a. Class ABC dry-chemical extinguishers or a combination of extinguishers of NFPA-recommended classes for exposures.

2) Store combustible materials in containers in fire-safe locations.
3) Maintain unobstructed access to fire extinguishers, fire hydrants, temporary fire-protection facilities, stairways, and other access routes for firefighting.
4) Prohibit smoking in hazardous fire-exposure areas. Prohibit smoking in construction areas. Smoking is prohibited at all times inside the within and a perimeter of 100 ft of the construction area of the new building; in covered areas under and around the existing terminal building, at all times and all locations on the airside and in the aircraft operations area.

5) Supervise welding operations, combustion-type temporary heating units, and similar sources of fire ignition according to requirements of authorities having jurisdiction.
6) Develop and supervise an overall fire-prevention and -protection program for personnel at Project site. Review needs with local fire department and establish procedures to be followed. Instruct personnel in methods and procedures. Post warnings and information.
7) Comply with requirements of Division 1 Section “Airport Project Work Procedures”.

3.5 OPERATION, TERMINATION, AND REMOVAL

A. Supervision: Enforce strict discipline in use of temporary facilities. To minimize waste and abuse, limit availability of temporary facilities to essential and intended uses.

B. Maintenance: Maintain facilities in good operating condition until removal. Protect from damage caused by freezing temperatures and similar elements.

1) Maintain operation of temporary enclosures, heating, cooling, humidity control, ventilation, and similar facilities on a 24-hour basis where required to achieve indicated results and to avoid possibility of damage.
2) Prevent water-filled piping from freezing. Maintain markers for underground lines. Protect from damage during excavation operations.

C. Termination and Removal: Remove each temporary facility when need for its service has ended, when it has been replaced by authorized use of a permanent facility, or no later than Substantial Completion. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with temporary facility. Repair damaged Work, clean exposed surfaces, and replace construction that cannot be satisfactorily repaired.

1) At Substantial Completion, clean and renovate permanent facilities used during construction period.

END OF SECTION 01500

SECTION 01560 - TEMPORARY BARRIERS AND ENCLOSURES

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Special Provisions and other Division 1 Specification Sections, apply to this Section.

B. Related Sections include the following:

1) Section 01100, “Summary”
2) Section 01143, “Airport Project Work Procedures”
3) Section 01500, “Temporary Facilities and Controls”
4) Item C-105, “Mobilization”

C. If there is a discrepancy between the requirements of this section and related sections, the more restrictive interpretation shall apply.

1.2 SECTION INCLUDES

A. Temporary construction barriers, enclosures, and fencing.

1) Security barriers

B. Protection of completed Work.

C. Removal of construction facilities and temporary controls

1.4 CODES AND REGULATIONS

A. Florida Building Code (FBC): Comply with Florida Building Code (FBC)

B. Fire Regulations: Comply with requirements of fire Authorities Having Jurisdiction, including Florida Fire Prevention Code (FFPC).

C. Safety Regulations: Comply with requirements of all applicable Federal, State and Local safety rules and regulations. The Contractor shall be solely responsible for jobsite safety.

D. Barricades and Barriers: As required by governing Authorities Having Jurisdiction, provide temporary barriers, guardrails and enclosures around Work areas and adjacent to embankments and excavations for protection of workers and the public.

1.5 PROTECTION OF EXISTING CONDITIONS

A. Protection of Adjacent Facilities: The Contractor shall restrict Work to limits or areas indicated on the Drawings and as specified in Section 01100 – Summary of the Work: Protect existing, adjacent facilities and existing finishes from damage, including soiling and debris accumulation.

1.6 MAINTENANCE OF CONSTRUCTION FACILITIES AND TEMPORARY CONTROLS

A. Maintenance: Use all means necessary to maintain temporary barriers and enclosures in proper and safe condition throughout progress of the Work, and in a condition acceptable to the owner and authorities. This shall include all life safety systems within occupied areas of the building.

B. Replacement: In the event of loss or damage, promptly restore temporary barriers and enclosures by repair or replacement at no change in the Contract Sum or Contract Time.

1.7 TEMPORARY BARRIERS, AND ENCLOSURES

A. Temporary Barriers, General: Provide temporary fencing, barriers and guardrails as necessary to provide for public safety, to prevent unauthorized entry to construction areas and to protect existing facilities from damage from construction operations and the elements where finished areas temporarily are exposed to the exterior or non-conditioned space.

1) Note the requirements for continued occupancy and use of existing buildings and site areas (T-Hangars) during construction as outlined by the scope of work; the airfield will remain active.
2) Comply with applicable requirements of Florida Building Code (FBC) and Authorities Having Jurisdiction, FAA, including industrial and construction safety regulations.
3) Maintain unobstructed access to fire extinguishers, fire hydrants, temporary fire-protection facilities and access routes for firefighting.
4) Where appropriate and necessary, provide traffic control and lighting, including flashing red or amber lights as warning devices.

C. Tarpaulins: Fire-resistive labeled with flame-spread rating of 15 or less.

D. Barricades, Warning Signs and Lights, General: Comply with standards and code requirements for erection of structurally adequate barricades. Paint barricades with appropriate colors, graphics and warning signs to inform personnel and the public when protecting the public and personnel against a hazard. Where appropriate and needed provide lighting, including flashing red or amber lights as warning devices.

E. Security Closures and Lockup: Provide substantial temporary closures of openings in exterior surfaces and interior areas as appropriate to prevent unauthorized entrance, vandalism, theft and similar violations of security. Provide doors with self-closing hardware and locks, keyed to the building master keying system, and provide card reader and key pad access control and electrical locks to separate secured and non-secured areas of the Airport and AOA. Coordinate with Airport Operations for temporary tie-in’s to the Airport security system and network.

1) Storage: Where materials and equipment must be stored, and are of value or attractive for theft, provide a secure lockup. Enforce discipline in connection with the installation and release of material to minimize the opportunity for theft and vandalism.

F. Weather Closures: Provide temporary weather-tight closures at exterior openings to prevent intrusion of water, to create acceptable working conditions, to protect completed Work and to maintain temporary heating, cooling and ventilation. Provide access doors with self-closing hardware and locks.

PART 2 – PRODUCTS

Not applicable to this Section.

PART 3 – EXECUTION

3.1 PROTECTION OF INSTALLED WORK

A. Protection of Installed Work, General: Provide temporary protection for installed products. Control traffic in immediate area to minimize damage.

B. Protective Coverings: Provide protective coverings at walls, projections, jambs, sills, and soffits of openings as necessary to prevent damage from construction activities, such as coatings applications finishes new work, and as necessary to prevent other than normal atmospheric soiling.

C. Traffic Protection:

1) Protect finished floors and other surfaces from traffic, soiling, wearing and marring.
2) Provide temporary covers of plywood, reinforced kraft paper or temporary rugs and mats, as necessary. Temporary covers shall not slip or tear under normal use.
3) Protect newly fine graded, areas with barriers and flags to designate such areas as closed to pedestrian and vehicular traffic.

3.2 REMOVAL OF TEMPORARY BARRIERS AND ENCLOSURES

A. Removal of Temporary Barriers and Enclosures: Unless otherwise mutually agreed by Owner or Owner’s designated representative and the Contractor, remove temporary materials, equipment, services, and construction prior to Project Completion. Coordinate removal with requirements specified in Section 01500 – Temporary Facilities and Controls, and this Section 01560 – Temporary Barriers and Enclosures.

B. Cleaning and Repairs: Clean and repair damage, soiling and marring caused to new construction by use of temporary barriers and enclosures or due to exposure to water intrusion from the exterior elements.

END OF SECTION 01560

(INTENTIONALLY LEFT BLANK)

SECTION 01600 - MATERIALS AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Special Provisions and other Division 1 Specification Sections, apply to this Section.

B. Related Sections include the following:

1) General Provision Section 90, “Measurement and Payment”
2) Section 01210, “Allowances”
3) Section 01230, “Alternates”
4) Section 01770, “Closeout Procedures”
5) Divisions 2 through 16, FAA and FDOT Sections for specific requirements for warranties on products and installations specified to be warrantied.

C. If there is a discrepancy between the requirements of this section and related sections, the more restrictive interpretation shall apply.

1.2 SUMMARY

A. This Section includes administrative and procedural requirements for selection of products for use in Project; product delivery, storage, and handling; manufacturers' standard warranties on products; special warranties; product substitutions; and comparable products.

1.3 DEFINITIONS

A. Products: Items purchased for incorporating into the Work, whether purchased for Project or taken from previously purchased stock. The term "product" includes the terms "material," "equipment," "system," and terms of similar intent.

1) Named Products: Items identified by manufacturer's product name, including make or model number or other designation shown or listed in manufacturer's published product literature that is current as of date of the Contract Documents.
2) New Products: Items that have not previously been incorporated into another project or facility, except that products consisting of recycled-content materials are allowed, unless explicitly stated otherwise. Products salvaged or recycled from other projects are not considered new products.
3) Comparable Product: Product that is demonstrated and approved through submittal process, or where indicated as a product substitution, to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.

B. Substitutions: Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents and proposed by Contractor.

C. Basis-of-Design Product Specification: Where a specific manufacturer's product is named and accompanied by the words "basis of design," including make or model number or other designation, to establish the significant qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics for purposes of evaluating comparable products of other named manufacturers.

1.4 REQUIREMENTS:

A. Material, Equipment, and Products Incorporated in to the Work shall conform to applicable specifications and standards; shall comply with size, make, type and quality specified, or as specifically approved in writing by the Architect; and shall not be used for any purpose other than that for which it is designed or is specified.

B. Manufactured and Fabricated Products shall be designed, fabricated and assembled in accordance with the best engineering and shop practices. Like parts of duplicate units shall be manufactured to standard sizes and gages, to be interchangeable. Products shall be suitable for service conditions. Equipment capacities, sizes and dimensions shown or specified shall be adhered to unless Architect specifically approves variations in writing.

C. Standardization: Unless otherwise approved by the Architect, items and equipment of a similar type and function shall be furnished by one manufacturer to standardize on replacement parts, service calls, operation and maintenance matters, and to avoid a division of responsibility among several manufacturers.

D. A single supplier shall be used on principal items of equipment and systems where one or more components are not manufactured by the principal supplier; this is required to place performance and service responsibilities for the entire unit or system with only one supplier or manufacturer.

1.5 SUBMITTALS

A. Product List: Submit a list, in tabular from, showing specified products. Include generic names of products required. Include manufacturer's name and proprietary product names for each product.

1) Coordinate product list with Contractor's Construction Schedule and the Submittals Schedule.
2) Form: Tabulate information for each product under the following column headings:

a. Specification Section number and title.
b. Generic name used in the Contract Documents.
c. Proprietary name, model number, and similar designations.
d. Manufacturer's name and address.

e. Supplier's name and address.
f. Installer's name and address.
g. Projected delivery date or time span of delivery period.
h. Identification of items that require early submittal approval for scheduled delivery date.

3) Completed List: Within thirty (30) days after date of Pre-Construction Conference, submit five copies of completed product list. Include a written explanation for omissions of data and for variations from Contract requirements.
4) Owner's Action: The Owner or Owner's designated representative will respond in writing to Contractor within 15 days of receipt of completed product list. The Owner's or Owner's designated representative's response will include a list of unacceptable product selections and a brief explanation of reasons for this action. The Owner's or Owner's designated representative's response, or lack of response, does not constitute a waiver of requirement to comply with the Contract Documents.

B. Product Substitutions: Contractor shall submit all requests for product substitutions. No requests for substitutions will be accepted from manufacturers or suppliers.

Submit a separate written request for each product, supported with complete data, with drawings and samples as appropriate, including:

1) Substitution Request Form: Use form enclosed in the specifications; included at end of this section.
2) Documentation: Show compliance with requirements for substitutions and the following, as applicable:

a. Statement indicating why specified material or product cannot be provided.
b. Coordination information, including a list of changes or modifications needed to other parts of the Work and to construction performed by Owner and separate contractors that will be necessary to accommodate proposed substitution.
c. Detailed comparison of significant qualities of proposed substitution with those of the Work specified. Significant qualities may include attributes such as performance, weight, size, durability, visual effect, and specific features and requirements indicated.
d. Product Data, including drawings and descriptions of products and fabrication and installation procedures.
e. Samples, where applicable or requested.
f. List of similar installations for completed projects with project names and addresses and names and addresses of architects and owners.
g. Material test reports from a qualified testing agency indicating and interpreting test results for compliance with requirements indicated.
h. Research/evaluation reports evidencing compliance with building code in effect for Project, from a model code organization acceptable to authorities having jurisdiction.
i. Detailed comparison of Contractor's Construction Schedule using proposed substitution with products specified for the Work, including effect on the overall Contract Time. If specified product or method of construction cannot be provided within the Contract Time, include letter from manufacturer, on manufacturer's letterhead, stating lack of availability or delays in delivery.
j. Cost information, including a proposal of change, if any, in the Contract Sum.

1) Include cost data comparing the proposed substitution with the product specified.

k. Contractor's certification that proposed substitution complies with requirements in the Contract Documents and is appropriate for applications indicated.
l. Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of failure of proposed substitution to produce indicated results.
m. Any required license fees or royalties.
n. Availability of maintenance service, and source of replacement materials.
o. The Substitution request shall be signed by the Contractor and the subcontractor.

The Owner and the NE shall be the judge of the equality and acceptability of the proposed substitution. If the Owner or the A/E, determines the proposed substitute product is not "equal" to the specified product, the Contractor must provide the specified product, subject to Architect's/ Engineer's shop drawing review and acceptance.

No further requests for substitutions will be considered after Preconstruction Conference.

C. Contractor's Representation: A request for a substitution constitutes a representation that Contractor:

1) Has investigated the proposed product and determined that it is equal to or superior in all respects to that specified.
2) Will provide the same warranties or bonds for the substitution as for the product specified.
3) Will coordinate the installation of an accepted substitution into the work, and make such other changes as may be required to make the work complete in all respects.
4) Waives all claims for additional costs, under his responsibility, which may subsequently

D. The Owner's and the A/E's Review: Owner and the A/E will review requests for substitutions with reasonable promptness and notify Contractor, in writing, of the decision to accept or reject the requested substitution.

E. Comparable Product Requests: Submit three copies of each request for consideration. Identify product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.

1) Owner's Action: If necessary, the Owner or the A/E may request additional information or documentation for evaluation within ten days of receipt of a comparable product request. The A/E will notify Contractor of approval or rejection of proposed comparable product request within fifteen (15) days of receipt of request, or seven (7) days of receipt of additional information or documentation, whichever is later.

a. Form of Acceptance: As specified in Division 1 Section "Submittal Procedures."
b. Use product specified if the Owner or A/E does not make a decision on use of a comparable product request within time allocated.

F. Basis-of-Design Product Specification Submittal: Comply with requirements in Division 1 Section "Submittal Procedures." Show compliance with requirements.

1.6 QUALITY ASSURANCE

A. Compatibility of Options: If Contractor is given option of selecting between two or more products for use on Project, product selected shall be compatible with products previously selected, even if previously selected products were also options.

1.7 MANUFACTURER'S INSTRUCTIONS:

A. Printed Instructions: When Contract Documents require that installation of work shall comply with manufacturer's printed instructions, Contractor shall obtain and distribute copies of such instructions to parties involved in the installation, including copies to the Architect. Maintain one set of complete instructions at the job site during installation and until completion and acceptance.

B. Strict Compliance: Handle, install, connect, clean, condition, and adjust products in strict accord with such instructions and in conformity with specified requirements. Should job conditions or specified requirements conflict with manufacturer's instruction, consult with Architect for further instructions. Do not proceed with work without clear instructions.

C. Complete Compliance: Perform work in accord with manufacturer's instructions. Do no omit any preparatory step or installation procedure unless specifically modified or exempted by Contract Documents.

1.8 TRANSPORTATION AND HANDLING:

A. Deliver and handle products using means and methods that will prevent damage, deterioration, and loss, including theft. Comply with manufacturer's written instructions.

B. Deliveries: Contractor shall arrange deliveries of products in accord with construction schedules; coordinate to avoid conflict with work and conditions at the site. Deliver products in undamaged condition, in manufacturer's original containers or packaging, with identifying labels intact and legible, and complete with instructions for handling, storing, unpacking, protecting, and installing. Immediately on delivery, inspect shipments to assure compliance with requirements of contract documents and approved submittals, and that products are properly protected and undamaged.

1) Schedule delivery to minimize long-term storage at Project site and to prevent overcrowding of construction spaces.
2) Coordinate delivery with installation time to ensure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other losses.

C. Handling: Provide equipment and personnel to handle products by methods to prevent soiling or damage of products or packaging.

1.9 STORAGE AND PROTECTION:

A. Store products using means and methods that will prevent damage, deterioration, and loss, including theft. Comply with manufacturer's written instructions.

B. Storage: Store products in accord with manufacturer's instructions, with seals and labels intact and legible. Store products subject to damage by the elements in weather tight enclosures. Maintain temperature and humidity within the ranges required by manufacturer's instructions. Comply with product manufacturer's written instructions for ventilation and weather-protection requirements for storage.

C. Exterior Storage: Store fabricated products above the ground, on blocking or skids; prevent soiling or staining. Cover products, which are subject to deterioration with impervious sheet coverings; provide adequate ventilation to avoid condensation.

   Store loose granular materials in a well-drained area on solid surfaces to prevent mixing with foreign matter.

D. Storage Inspection: Arrange storage in a manner to provide easy access for inspection and measurement of quantity or counting of units. Make periodic inspections of stored products to assure that products are maintained under specified conditions, and free from damage or deterioration.

E. Protection After Installations: Provide substantial coverings as necessary to protect installed products from damage from traffic and subsequent construction operations. Remove when no longer needed.

F. Store products in a manner that will not endanger Project structure.

G. Store cementitious products and materials on elevated platforms.

H. Store foam plastic from exposure to sunlight, except to extent necessary for period of installation and concealment.

I. Protect stored products from damage and liquids from freezing.

1.10 PRODUCT WARRANTIES

A. Warranties specified in other Sections shall be in addition to, and run concurrent with, other warranties required by the Contract Documents. Manufacturer's disclaimers and limitations on product warranties do not relieve Contractor of obligations under requirements of the Contract Documents.

   1. Manufacturer's Warranty: Preprinted written warranty published by individual manufacturer for a particular product and specifically endorsed by manufacturer to Owner.
   2. Special Warranty: Written warranty required by or incorporated into the Contract Documents, either to extend time limit provided by manufacturer's warranty or to provide more rights for Owner.

B. Special Warranties: Prepare a written document that contains appropriate terms and identification, ready for execution. Submit a draft for approval before final execution.

1. Manufacturer's Standard Form: Modified to include Project-specific information and properly executed.
2. Specified Form: When specified forms are included with the Specifications, prepare a written document using appropriate form properly executed.
3. Refer to Divisions 2 through 16 Sections for specific content requirements and particular requirements for submitting special warranties.

C. Submittal Time: Comply with requirements in Division 1 Section "Closeout Procedures."

PART 2 - PRODUCTS

2.1 PRODUCT SELECTION PROCEDURES

A. General Product Requirements: Provide products that comply with the Contract Documents, that are undamaged and, unless otherwise indicated, that are new at time of installation.

1. Provide products complete with accessories, trim, finish, fasteners, and other items needed for a complete installation and indicated use and effect.
2. Standard Products: If available, and unless custom products or nonstandard options are specified, provide standard products of types that have been produced and used successfully in similar situations on other projects.
3. Owner reserves the right to limit selection to products with warranties not in conflict with requirements of the Contract Documents.
4. Where products are accompanied by the term "as selected," Architect will coordinate selection with Owner.
5. Where products are accompanied by the term "match sample," sample to be matched is Architect's.
6. Descriptive, performance, and reference standard requirements in the Specifications establish "salient characteristics" of products.

B. Product Selection Procedures:

1. Product: Where Specifications name a single product and manufacturer, provide the named product that complies with requirements.

    a. Where Work is to match existing products or installations, Architect has endeavored to identify requirements in other Sections of the Specifications or on the Drawings. Contractor shall identify and highlight any deviation or modifications from named products or manufacturers in Completed Product List.

2. Manufacturer/Source: Where Specifications name a single manufacturer or source, provide a product by the named manufacturer or source that complies with requirements.
3. Products: Where Specifications include a list of names of both products and manufacturers, provide one of the products listed that complies with requirements.

4. Manufacturers: Where Specifications include a list of manufacturers' names, provide a product by one of the manufacturers listed that complies with requirements.
5. Available Products: Where Specifications include a list of names of both products and manufacturers, provide one of the products listed, or an unnamed product, that complies with requirements. Comply with provisions in Part 2 "Comparable Products" Article for consideration of an unnamed product.
6. Available Manufacturers: Where Specifications include a list of manufacturers, provide a product by one of the manufacturers listed, or an unnamed manufacturer, that complies with requirements. Comply with provisions in Part 2 "Comparable Products" Article for consideration of an unnamed product.
7. Product Options: Where Specifications indicate that sizes, profiles, and dimensional requirements on Drawings are based on a specific product or system, provide the specified product or system. Comply with provisions in Part 2 "Product Substitutions" Article for consideration of an unnamed product or system.
8. Basis-of-Design Product: Where Specifications name a product and include a list of manufacturers, provide the specified product or a comparable product by one of the other named manufacturers. Drawings and Specifications indicate sizes, profiles, dimensions, and other characteristics that are based on the product named. Comply with provisions in Part 2 "Comparable Products" Article for consideration of an unnamed product by the other named manufacturers.
9. Visual Matching Specification: Where Specifications require matching an established Sample, select a product that complies with requirements and matches Architect's or Owner’s sample. Architect's and the Owner’s decision will be final on whether a proposed product matches.

    a. If no product available within specified category matches and complies with other specified requirements, comply with provisions in Part 2 "Product Substitutions" Article for proposal of product.

10. Visual Selection Specification: Where Specifications include the phrase "as selected from manufacturer's colors, patterns, and textures" or a similar phrase, select a product that complies with other specified requirements.

    a. Standard Range: Where Specifications include the phrase "standard range of colors, patterns, textures" or similar phrase, Architect will select color, pattern, density, or texture from manufacturer's product line that does not include premium items.
    b. Full Range: Where Specifications include the phrase "full range of colors, patterns, textures" or similar phrase, Architect and Owner will select color, pattern, density, or texture from manufacturer's product line that includes both standard and premium items.

11. Airport lighting equipment covered by FAA specifications require certification under the Airport Lighting Equipment Certification Program described in Advisory Circular 150/5345-53D, latest edition. Select equipment from the Certified Airport Lighting Equipment list appended to the Advisory Circular. An updated list is published biannually.

2.2 PRODUCT SUBSTITUTIONS

A. Timing: The Owner or the Owner's designated representative will consider requests for substitution if received within 30 days after the Notice to Proceed with Construction. Requests received after that time may be considered or rejected at discretion of the Owner or the Owner's designated representative .

B. Conditions: The Owner or the Owner's designated representative will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, the Owner or the Owner's designated representative will return requests without action, except to record noncompliance with these requirements:

1. Requested substitution offers the Owner with a substantial advantage in cost, time, energy conservation, or other considerations, after deducting additional responsibilities that the Owner must assume. Owner's additional responsibilities may include compensation to Architect for redesign and evaluation services, increased cost of other construction by Owner, and similar considerations.
2. Requested substitution does not require extensive revisions to the Contract Documents.
3. Requested substitution is consistent with the Contract Documents and will produce indicated results.
4. Substitution request is fully documented and properly submitted.
5. Requested substitution will not adversely affect Contractor's Construction Schedule.
6. Requested substitution has received necessary approvals of Authorities Having Jurisdiction.
7. Requested substitution is compatible with other portions of the Work.
8. Requested substitution has been coordinated with other portions of the Work.
9. Requested substitution provides specified warranty.
10. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

2.3 COMPARABLE PRODUCTS

A. Conditions: The A/E and the Owner will consider Contractor's request for comparable product when the following conditions are satisfied. If the following conditions are not satisfied, the A/E and the Owner will return requests without action, except to record noncompliance with these requirements:

1. Evidence that the proposed product is consistent with the Contract Documents and will produce the indicated results, and that it is compatible with other portions of the Work.
2. Detailed comparison of significant qualities of proposed product with those named in the Specifications. Significant qualities include attributes such as performance, weight, size, durability, visual effect, and specific features and requirements indicated.
3. Evidence that proposed product provides specified warranty.

4. List of similar installations for completed projects with project names and addresses and names and addresses of Architects and Owners, if requested.
5. Samples, if requested.

PART 3 - EXECUTION (Not Applicable)

END OF SECTION 01600

SUBSTITUTION REQUEST FORM

Substitution Request Number: _____ Date: / /

General Contractor: _____

Project Name: _____

Project Location: _____

A/E's Project No.: _____

Specification Section: _____

Paragraph Number: _____

Original Product Specified: _____

Proposed Product Substitution: _____

General reason for not giving priority to Specified Items: _____

Answer the following questions:	***Circle One***	
• Are extensive revisions to contract documents required?	Yes	No
• Proposed changes are in keeping with general intent of Contract Documents?	Yes	No
• Substitution affects other materials or systems? (If yes, attach complete data)	Yes	No
• Substitution requires dimensional revision or redesign of structure or MEP work? (If yes, attach complete data)	Yes	No
• Comparison of two products is attached to demonstrate equality of products? (Original specified item versus proposed substitution)	Yes	No
• The following data is furnished herewith for evaluation of the substitution: ❑ Catalog Data Sheets ❑ Drawings ❑ Reports ❑ Samples ❑ Test Data ❑ Other _____		
• Are there any schedule impacts if the original product specified is used? (If yes, please indicate the number of calendar days: _____)	Yes	No
• Scheduled delivery date of original product: ____/____/_____.		
• Scheduled delivery date of proposed substitution: ____/____/_____. Days saved ____)		
• Is the original product acceptable to local building officials? (If no, please fill in data below) Contact at Building Department: _____ Phone: ( ) - Ext. Fax: ( ) - -	Yes	No
• Are there any savings that will accrue to the Owner for use of the proposed substitution? (If yes, please indicate amount: $_____)	Yes	No
• Are there any life cycle costs savings that will accrue to the Owner for use of the proposed substitution? (If yes, please indicate amount: $_____)	Yes	No
• Are there any additional costs that will be incurred by the Owner? (If yes, identify cost impact: $_____)	Yes	No
• Are there any additional costs that will be incurred by other trade contractors? (If yes, identify total cost impact: $_____)	Yes	No
• Is the specified product or material compatible with other products or materials scheduled or specified to be installed?	Yes	No
• Is the proposed substitution compatible with other materials scheduled or specified to be installed?	Yes	No

- Can the specified product or material be installed and coordinated with the installation of other products or materials specified to be installed? Yes No
- What is the warranty period for the originally specified product? Labor ____(Yrs) Material ____(Yrs)
- What is the warranty period for the proposed substitution? Labor ____(Yrs) Years ____(Yrs)

By signature below the Contractor and/or Subcontractor proposing the material or product substitution hereby certify that the above noted information is true and accurate. The Contractor and/or subcontractor further certify that each of them waiver their rights to additional payment or time, that may subsequently become necessary because of failure of the substitution to perform adequately. **THE CONTRACTOR AND SUB-CONTRACTOR HEREBY FURTHER CERTIFY THAT THIS SUBMISSION HAS BEEN FULLY CHECKED AND COORDINATED WITH THE CONTRACT DOCUMENTS.**

SECTION 01631 – PLANS AND SPECIFICATIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Special Provisions and other Division 1 Specification Sections, apply to this Section.

1.2 GENERAL

A. The Contract Documents, Drawings and Specifications referred to in the Bid Documents shall bear the general title of the project in a title block entitled DEFUNIAK SPRINGS AIRPORT – GENERAL AVIATION CENTER.

B. The title block of the Permit Documents prepared by the Architect or Engineer of Record (A/E) shall indicate the project name, date, job number, registration number of the Architect or Engineer of Record, sheet number and the name and address of the A/E.

1.3 COPIES FURNISHED TO THE CONTRACTOR

A. After the Notice to Proceed has been issued, the Contractor will be furnished one digital (pdf) set of the Conformed Documents and a license to reproduce the Permit Documents and Contract Documents, including the Drawings and Specifications as necessary to complete the work of this project. The cost of all reproduction under this license shall be paid for by the Contractor.

B. The Contractor shall furnish each of the subcontractors, manufacturers, and materials suppliers such copies of the Final Conformed and Permit Documents as may be required for the work.

1.4 SUPPLEMENTARY DRAWINGS

A. When, in the opinion of the Owner or the A/E, it becomes necessary to explain more fully the work to be done or to illustrate the work further, or to show any changes, which may be required, drawings shown as Supplementary Drawings, with specifications pertaining thereto, will be prepared and the prints thereof will be given to the Contractor.

B. The Supplementary Drawings shall be binding upon the Contractor with the same force as the plans. Where such Supplementary Drawings require either more or less than the estimated quantities of work, credit to the Owner or compensation therefore to the Contractor shall be subject to the terms of the agreement and the appropriate change order, for the values involved, executed.

C. The Contractor shall verify all dimensions and quantities, and details shown on the plans. Supplementary Drawings, Schedules, or other data supplied to the Contractor through the office of the A/E shall notify the A/E of all errors, omissions, conflicts, and

discrepancies found therein. Failure to discover or correct errors, conflicts, or discrepancies shall not relieve the Contractor of full responsibility for unsatisfactory work, faulty construction, or improper operation resulting there from nor from rectifying such conditions at the Contractors own expense. The Contractor will not be allowed to take advantage of any error or omission, as full instructions will be furnished by the Architect, should such error or omission be discovered. All schedules are given for the convenience of the Architect and Contractor and are not guaranteed to be complete. The Contractor shall assume responsibility for the making of estimates of the size, kind, and quantity of materials and equipment included in work to be done under the contract.

1.5 CONTRACT DOCUMENTS

A. Should the Drawings disagree in themselves or with the Specifications, the Contractor shall provide the better quality or greater quantity of work or materials unless further review of evidence by the RPR or Owner clarifies the intent.

B. Any conflicts between drawings or specifications and codes shall be brought to the attention of the A/E in writing before installation. Specific code and paragraph shall be cited and in the case of local codes, the appropriate excerpt of code shall be included. No extra compensation will be allowed for code compliance. Where drawings and specifications indicate more stringent requirements or higher quality than code requires, the Drawings and Specifications shall prevail.

C. The A/E shall affirm that to the best of the A/E's knowledge at the time of final design, the applicable codes and ordinances constitute all legally adopted requirements governing the work described by these Final design and Permit Documents (plans and specifications).

1) That to the best of the A/E's knowledge the work described within the Final design and Permit Documents has been designed in full compliance with applicable codes and ordinances and with interpretations historically rendered by the governing agency indicated.
2) That it is the responsibility of said governing authority to fully review these Drawings and Specifications for code compliance prior to permitting construction of this Work in accordance with state statutes.
3) The A/E do not accept any responsibility or liability for changes in the Work required for compliance with codes and/or ordinances as a result of changes in interpretation rendered by said governing authority, either of which occurring after issuance of permit for construction of this work.

PART 2 – PRODUCTS (Refer to PART 1 above)

PART 3 – EXECUTION (Refer to PART 1 above.)

END OF SECTION 01631

SECTION 01700 - EXECUTION REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Special Provisions and other Division 1 Specification Sections, apply to this Section.

B. Related Sections include the following:

1) General Provision Section 50, “Control of Work”
2) General Provision Section 70, “Legal Regulations and Responsibility to Public”
3) General Provision Section 80, “Execution and Progress”
4) Section 01100, “Summary”
5) Section 01330, “Submittals”
6) Section 01710, “Cleaning and Disposal”
7) Section 01770, “Closeout Procedures”
8) Section 01781, “Project Record Documents”

C. If there is a discrepancy between the requirements of this section and related sections, the more restrictive interpretation shall apply.

1.2 SUMMARY

A. Section includes general administrative and procedural requirements governing execution of the Work including, but not limited to, the following:

1) Construction layout.
2) Installation of the Work.
3) Coordination of Owner-installed products.
4) Progress cleaning.
5) Starting and adjusting.
6) Protection of installed construction.
7) Correction of the Work.

1.3 INFORMATIONAL SUBMITTALS

A. Landfill Receipts: Submit copy of receipts issued by a landfill facility, licensed to accept hazardous materials, for hazardous waste disposal.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General: Comply with requirements specified in other Sections.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Existing Conditions: The existence and location of underground and other utilities and construction indicated as existing are not guaranteed. Before beginning work, investigate and verify the existence and location of utility systems and other construction affecting the Work.

1) Furnish location data for work related to Project that must be performed by public utilities serving Project site.

B. Examination and Acceptance of Conditions: Before proceeding with each component of the Work, examine substrates, areas, and conditions, with Installer or Applicator present where indicated, for compliance with requirements for installation tolerances and other conditions affecting performance. Record observations.

1) Examine roughing-in for mechanical and electrical systems to verify actual locations of connections before equipment and fixture installation.
2) Examine walls, floors, and roofs for suitable conditions where products and systems are to be installed.

C. Written Report: Where a written report listing conditions detrimental to performance of the Work is required by other Sections, include the following:

1) Description of the Work.
2) List of detrimental conditions, including substrates.
3) List of unacceptable installation tolerances.
4) Recommended corrections.

D. Proceed with installation only after unsatisfactory conditions have been corrected. Proceeding with the Work indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Existing Utility Information: Furnish information to Owner that is necessary to adjust, move, or relocate existing utility structures, utility poles, lines, services, or other utility appurtenances located in or affected by construction. Coordinate with authorities having jurisdiction.

B. Field Measurements: Take field measurements as required to fit the Work properly. Recheck measurements before installing each product. Where portions of the Work are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

C. Space Requirements: Verify space requirements and dimensions of items shown diagrammatically on Drawings.

D. Review of Contract Documents and Field Conditions: Immediately on discovery of the need for clarification of the Contract Documents caused by differing field conditions outside the control of Contractor, submit a request for information to A/E according to requirements in Division 1 Section "Project Management and Coordination."

E. Surface and Substrate Preparation: Comply with manufacturer's written recommendations for preparation of substrates to receive subsequent work.

3.3 CONSTRUCTION LAYOUT

A. Verification: Before proceeding to lay out the Work, verify layout information shown on Drawings, in relation to existing benchmarks. If discrepancies are discovered, notify A/E promptly.

1) Establish benchmarks and control points to set lines and levels as needed to locate each element of Project.
2) Establish dimensions within tolerances indicated. Do not scale Drawings to obtain required dimensions.
3) Inform installers of lines and levels to which they must comply.
4) Check the location, level and plumb, of every major element as the Work progresses.
5) Notify RPR when deviations from required lines and levels exceed allowable tolerances.

B. Record Log: Maintain a log of layout control work. Record deviations from required lines and levels. Make the log available for reference by the RPR, A/E and the Owner.

3.4 INSTALLATION

A. General: Locate the Work and components of the Work accurately, in correct alignment and elevation, as indicated.

1) Make vertical work plumb and make horizontal work level.
2) Where space is limited, install components to maximize space available for maintenance and ease of removal for replacement.
3) Conceal pipes, ducts, and wiring in finished areas unless otherwise indicated.
4) Maintain minimum headroom clearance of 96 inches in occupied spaces.

B. Comply with manufacturer's written instructions and recommendations for installing products in applications indicated.

C. Install products at the time and under conditions that will ensure the best possible results. Maintain conditions required for product performance until Substantial Completion.

D. Conduct construction operations so no part of the Work is subjected to damaging operations or loading in excess of that expected during normal conditions of occupancy.

E. Sequence the Work and allow adequate clearances to accommodate movement of construction items on site and placement in permanent locations.

F. Tools and Equipment: Do not use tools or equipment that produces harmful noise levels.

G. Templates: Obtain and distribute to the parties involved templates for work specified to be factory prepared and field installed. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing products to comply with indicated requirements.

H. Attachment: Provide blocking and attachment plates and anchors and fasteners of adequate size and number to securely anchor each component in place, accurately located and aligned with other portions of the Work. Where size and type of attachments are not indicated, verify size and type required for load conditions.

1) Mounting Heights: Where mounting heights are not indicated, mount components at heights directed by A/E.
2) Allow for building movement, including thermal expansion and contraction.
3) Coordinate installation of anchorages. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

I. Joints: Make joints of uniform width. Where joint locations in exposed work are not indicated, arrange joints for the best visual effect. Fit exposed connections together to form hairline joints.

J. Hazardous Materials: Use products, cleaners, and installation materials that are not considered hazardous.

3.5 OWNER-INSTALLED PRODUCTS

A. Site Access: Provide access to Project site for Owner's construction personnel.

B. Coordination: Coordinate construction and operations of the Work with work performed by Owner's construction personnel.

1) Construction Schedule: Inform Owner of Contractor's preferred construction schedule for Owner's portion of the Work. Adjust construction schedule based on a mutually agreeable timetable. Notify Owner if changes to schedule are required due to differences in actual construction progress.
2) Pre-installation Conferences: Include Owner's construction personnel at pre-installation conferences covering portions of the Work that are to receive Owner's work. Attend pre-installation conferences conducted by Owner's construction personnel if portions of the Work depend on Owner's construction.

3.6 PROGRESS CLEANING

A. General: Clean Project site and work areas as required, including public and occupied site areas adjacent to the Contractor’s work area. Enforce requirements strictly. Dispose of materials lawfully.

1) Comply with requirements in NFPA 241 for removal of combustible waste materials and debris.
2) Do not hold waste materials more than seven days during normal weather or three days if the temperature is expected to rise above 80 deg F.
3) Containerize hazardous and unsanitary waste materials separately from other waste. Mark containers appropriately and dispose of legally, according to regulations.

    a. Use containers intended for holding waste materials of type to be stored.

4) Coordinate progress cleaning for joint-use areas where Contractor and other contractors are working concurrently.

B. Site: Maintain Project site free of waste materials and debris.

C. Work Areas: Clean areas where work is in progress to the level of cleanliness necessary for proper execution of the Work.

1) Remove liquid spills promptly.
2) Where dust would impair proper execution of the Work, broom-clean or vacuum the entire work area, as appropriate.

D. Installed Work: Keep installed work clean. Clean installed surfaces according to written instructions of manufacturer or fabricator of product installed, using only cleaning materials specifically recommended. If specific cleaning materials are not recommended, use cleaning materials that are not hazardous to health or property and that will not damage exposed surfaces.

E. Concealed Spaces: Remove debris from concealed spaces before enclosing the space.

F. Exposed Surfaces in Finished Areas: Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of Substantial Completion.

G. Waste Disposal: Do not bury or burn waste materials on-site. Do not wash waste materials down sewers or into waterways. Comply with waste disposal requirements in Division 1 Section "Temporary Facilities and Controls."

H. During handling and installation, clean and protect construction in progress and adjoining materials already in place. Apply protective covering where required to ensure protection from damage or deterioration at Substantial Completion.

I. Clean and provide maintenance on completed construction as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.

J. Limiting Exposures: Supervise construction operations to assure that no part of the construction completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period.

3.7 STARTING AND ADJUSTING

A. Coordinate startup and adjusting of equipment and operating components with requirements in Division 1 Section "General Commissioning Requirements."

B. Start equipment and operating components to confirm proper operation. Remove malfunctioning units, replace with new units, and retest.

C. Adjust equipment for proper operation. Adjust operating components for proper operation without binding.

D. Test each piece of equipment to verify proper operation. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

E. Manufacturer's Field Service: Comply with qualification requirements in Division 1 Section "Quality Requirements."

3.8 PROTECTION OF INSTALLED CONSTRUCTION

A. Provide final protection and maintain conditions that ensure installed Work is without damage or deterioration at time of Substantial Completion.

B. Comply with manufacturer's written instructions for temperature and relative humidity.

3.9 CORRECTION OF THE WORK

A. Repair or remove and replace defective construction. Restore damaged substrates and finishes.

1) Repairing includes replacing defective parts, refinishing damaged surfaces, touching up with matching materials, and properly adjusting operating equipment.

B. Restore permanent facilities used during construction to their specified condition.

C. Remove and replace damaged surfaces that are exposed to view if surfaces cannot be repaired without visible evidence of repair.

D. Repair components that do not operate properly. Remove and replace operating components that cannot be repaired.

E. Remove and replace chipped, scratched, and broken glass or reflective surfaces.

END OF SECTION 01700

SECTION 01710 - CLEANING AND DISPOSAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes general administrative and procedural requirements governing execution of the Work including, but not limited to, the following:

1) Cleaning during progress of the Work and at completion of the Work.
2) Disposal operations.

B. Related Requirements including the following:

1) Section 01770 Closeout Procedures for final cleaning.

1.3 DISPOSAL REQUIREMENTS:

A. Conduct cleaning and disposal operations to comply with all local, state and federal codes, ordinances, regulations, and anti-pollution laws; and with airport and construction safety requirements.

B. All disposals of waste materials shall be off airport property at locations approved by the Architect or Engineer and the Owner.

C. Contractor shall be responsible for arranging for and obtaining off-site disposal areas, including payment for all costs associated with such disposal.

1.4 SUBMITTALS:

A. Prior to beginning work, submit a Disposal Plan for the satisfactory disposal of all waste materials and debris.

B. Submit two (2) copies of the disposal site Owner’s written permission for such disposal with Disposal Plan.

PART 2 - PRODUCTS

2.1 MATERIALS:

A. Use only those cleaning materials which will not create hazards to health or property and which will not damage surfaces.

B. Use only those cleaning materials and methods recommended by manufacturer of the surface material to be cleaned.

C. Use cleaning materials only on surfaces recommended by cleaning material manufacturer.

PART 3 - EXECUTION

3.1 CLEANING: Execute periodic cleaning to keep the work, site and adjacent properties free from accumulations of waste materials, rubbish, windblown debris, and dust resulting from construction operations. Provide on-site containers for the collection of waste materials, debris and rubbish. Remove waste materials, debris and rubbish from the site periodically and dispose of at approved locations.

3.2 BARRIERS AND PROTECTION: Protect existing structures and vegetation from cleaning and disposal operations as required.

3.3 DUST CONTROL: Schedule cleaning and other operations so that dust and other contaminants resulting there from will not fall on wet or newly coated surfaces, will not damage or contaminate aircraft, and will not unduly affect the work of other airport tenants.

3.4 DISPOSAL OF DEBRIS AND WASTE MATERIALS:

A. Contractor may not dispose of combustible materials on-site by burning.

3.5 PAYMENT**:** No separate payment will be made under this section for work described or specified herein.

END OF SECTION 01710

SECTION 01740 - WARRANTIES AND BONDS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 GENERAL REQUIREMENTS:

A. Contractor shall:

1) Compile specified warranties and bonds.
2) Compile specified service and maintenance contracts.
3) Co-execute submittals to verify compliance with Contract Documents.
4) Review submittals to verify compliance with Contract Documents.
5) Submit to Engineer for review and transmittal to Owner.

B. Related requirements in other parts of the Project Manual:

1) Bid Bonds: Instructions to bidders.
2) Performance Bond and Payment Bond: Conditions of the contract.
3) General warranty of construction: Conditions of the contract.

C. Related requirements specified in other sections:

1) Warranties and Bonds required for specific products: Each respective section of specifications.
2) Provisions and duration of Warranties and Bonds: The respective section of specifications, which specifies the product.
3) Contract closeout: Section 01700
4) Operation and Maintenance Manuals: Section 01782

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 SUBMITTAL REQUIREMENTS:

A. Assemble warranties, bonds, and service and maintenance contracts, executed by each of the respective manufacturers, suppliers, and subcontractors.

B. Number of original signed copies required: Two (2) each.

C. Table of Contents: Neatly typed, in orderly sequence. Provide complete information for each item.

1) Product or work item.
2) Firm, with name of principal, address and telephone number.
3) Scope.
4) Date of beginning of warranty, bond, or service and maintenance contract.
5) Duration of warranty, bond, or service and maintenance contract.
6) Provide information for Owner's personnel:

    a. Proper procedure in case of failure.
    b. Instances, which might affect the validity of warranty or bond.

7) Contractor, name of responsible principal, address and telephone number.

3.2 FORM OF SUBMITTALS:

A. Prepare in duplicate packets.

B. Format:

1) Size 8 1/2 inches x 11 inches. Punch sheets for 3-ring binder. Fold larger sheets to fit into binders.
2) Cover: Identify each packet with typed or printed title "WARRANTIES AND BONDS". List:

    a. Project title and number.
    b. Owner's name.
    c. Contractor's name and address.

C. Binders: Commercial quality, 3-ring, with durable and cleanable plastic covers.

3.3 TIME OF SUBMITTALS:

A. Submit within ten (10) days after date of substantial completion, and prior to final request for payment.

B. For items of work where acceptance is delayed materially beyond the date of substantial completion, provide updated submittal within ten (10) days after acceptance, listing the date of acceptance as the start of the warranty period.

3.4 SUBMITTALS REQUIRED: Submit warranties, bonds, and service and maintenance contracts as specified in the respective sections of specifications.

3.5 PAYMENT: No separate payment will be made under this section for work described or specified herein.

END OF SECTION 01740

SECTION 01770 - CLOSEOUT PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Special Provisions and other Division 1 Specification Sections, apply to this Section.

B. Related Sections include the following:

1) General Provision Section 30, “Award and Execution of Contract”
2) General Provision Section 40, “Scope of Work”
3) General Provision Section 50, “Control of Work”
4) General Provision Section 80, “Execution and Progress”
5) General Provision Section 90, “Measurement and Payment”
6) Section 01290, “Payment Procedures”
7) Section 01322, “Photographic Documentation”
8) Section 01700, “Execution Requirements”
9) Section 01781, “Project Record Documents”
10) Section 01782, “Operation and Maintenance Data”
11) Section 01820, “Demonstration and Training”
12) Divisions 2 through 16, FAA and FDOT Sections for specific closeout and special cleaning requirements for the Work in those Sections.

C. If there is a discrepancy between the requirements of this section and related sections, the more restrictive interpretation shall apply

1.2 SUMMARY

A. This Section includes administrative and procedural requirements for contract closeout, including, but not limited to, the following:

1) Inspection procedures.
2) Warranties.
3) Final cleaning.

1.3 SUBSTANTIAL COMPLETION

A. Preliminary Procedures: Before requesting inspection for determining date of Substantial Completion, complete the following. List items below that are incomplete in request.

1) Prepare a list of items to be completed and corrected (punch list), the value of items on the list, and reasons why the Work is not complete.
2) Advise Owner of pending insurance changeover requirements.

3) Submit specific warranties, workmanship bonds, maintenance service agreements, final certifications, and similar documents.
4) Obtain and submit releases permitting Owner unrestricted use of the Work and access to services and utilities. Include occupancy permits, operating certificates, and similar releases.
5) Deliver tools, spare parts, extra materials, and similar items to location designated by Owner. Label with manufacturer's name and model number where applicable.
6) Make final changeover of permanent locks and deliver keys to Owner. Advise Owner's personnel of changeover in security provisions.
7) Complete startup testing of systems.
8) Submit test/adjust/balance records.
9) Terminate and remove temporary facilities from Project site, along with mockups, construction tools, and similar elements.
10) Submit changeover information related to Owner's occupancy, use, operation, and maintenance.
11) Complete final cleaning requirements, including touchup painting.
12) Touch up and otherwise repair and restore marred exposed finishes to eliminate visual defects.

B. Inspection: Submit a written request for inspection for Substantial Completion. On receipt of request, A/E and the Owner will either proceed with inspection or notify Contractor of unfulfilled requirements. A/E and the Owner will prepare the Certificate of Substantial Completion after inspection or will notify Contractor of items, either on Contractor's list or additional items identified by A/E and the Owner, that must be completed or corrected before certificate will be issued.

1) Re-inspection: Request re-inspection when the Work identified in previous inspections as incomplete is completed or corrected.
2) Results of completed inspection will form the basis of requirements for Final Completion.

1.4 FINAL COMPLETION

A. Preliminary Procedures: Before requesting final inspection for determining date of Final Completion, complete the following:

1) Submit a final Application for Payment according to Division 1 Section "Payment Procedures."
2) Submit certified copy of A/E's and the Owner’s Substantial Completion inspection list of items to be completed or corrected (punch list), endorsed and dated by A/E. The certified copy of the list shall state that each item has been completed or otherwise resolved for acceptance.
3) Submit evidence of final, continuing insurance coverage complying with insurance requirements.
4) Instruct Owner's personnel in operation, adjustment, and maintenance of products, equipment, and systems. Submit demonstration and training videotapes.

B. Inspection: Submit a written request for final inspection for acceptance. On receipt of request, A/E and the Owner will either proceed with inspection or notify Contractor of unfulfilled requirements. A/E will prepare a final Certificate for Payment after inspection or will notify Contractor of construction that must be completed or corrected before certificate will be issued.

1) Re-inspection: Request re-inspection when the Work identified in previous inspections as incomplete is completed or corrected.

1.5 LIST OF INCOMPLETE ITEMS (PUNCH LIST)

A. Preparation: Submit three (3) copies of Contractor's list and one excel file. Include name and identification of each space and area affected by construction operations for incomplete items and items needing correction including, if necessary, areas disturbed by Contractor that are outside the limits of construction.

1) Organize list of spaces in sequential order, starting with exterior areas first and proceeding from lowest floor to highest floor.
2) Organize items applying to each space by major element, including categories for ceiling, individual walls, floors, equipment, and building systems.
3) Include the following information at the top of each page:

a. Project name.
b. Project identifying numbers.
c. Date.
d. Name of Architect/Engineer.
e. Name of Contractor.
f. Page number.

1.6 WARRANTIES

A. Submittal Time: Submit written warranties on request of A/E and Owner for designated portions of the Work where commencement of warranties other than date of Substantial Completion is indicated.

B. Partial Occupancy: Submit properly executed warranties within 15 days of completion of designated portions of the Work that are completed and occupied or used by Owner during construction period by separate agreement with Contractor.

C. Organize warranty documents into an orderly sequence based on the table of contents of the Project Manual.

1) Bind warranties and bonds in heavy-duty, 3-ring, vinyl-covered, loose-leaf binders, thickness as necessary to accommodate contents, and sized to receive 8-1/2-by-11-inch paper.
2) Provide heavy paper dividers with plastic-covered tabs for each separate warranty. Mark tab to identify the product or installation. Provide a typed description of the product or installation, including the name of the product and the name, address, and telephone number of Installer.

3) Identify each binder on the front and spine with the typed or printed title "WARRANTIES," Project name, and name of Contractor.

D. Provide additional copies of each warranty to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Cleaning Agents: Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.

PART 3 - EXECUTION

3.1 FINAL CLEANING

A. General: Provide final cleaning. Conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal and local environmental and antipollution regulations.

B. Cleaning: Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit to condition expected in an average commercial building cleaning and maintenance program. Comply with manufacturer's written instructions.

1) Complete the following cleaning operations before requesting inspection for certification of Substantial Completion for entire Project or for a portion of Project:

a. Clean Project site, yard, and grounds, in areas disturbed by construction activities, including landscape development areas, of rubbish, waste material, litter, and other foreign substances.
b. Sweep paved areas broom clean. Remove petrochemical spills, stains, and other foreign deposits.
c. Remove tools, construction equipment, machinery, and surplus material from Project site.
d. Clean exposed exterior and interior hard-surfaced finishes to a dirt-free condition, free of stains, films, and similar foreign substances. Avoid disturbing natural weathering of exterior surfaces. Restore reflective surfaces to their original condition.
e. Remove debris and surface dust from limited access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics, and similar spaces.
f. Sweep concrete floors broom clean in unoccupied spaces.
g. Vacuum carpet and similar soft surfaces, removing debris and excess nap; shampoo if visible soil or stains remain.

h. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compounds and other noticeable, vision-obscuring materials. Replace chipped or broken glass and other damaged transparent materials. Polish mirrors and glass, taking care not to scratch surfaces.
i. Remove labels that are not permanent.
j. Touch up and otherwise repair and restore marred, exposed finishes and surfaces. Replace finishes and surfaces that cannot be satisfactorily repaired or restored or that already show evidence of repair or restoration.

1) Do not paint over "UL" and similar labels, including mechanical and electrical nameplates.

k. Wipe surfaces of mechanical and electrical equipment, elevator equipment, and similar equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.
l. Replace parts subject to unusual operating conditions.
m. Replace disposable air filters and clean permanent air filters. Clean exposed surfaces of diffusers, registers, and grills.
n. Clean light fixtures, lamps, globes, and reflectors to function with full efficiency. Replace burned-out bulbs, and those noticeably dimmed by hours of use, and defective and noisy starters in fluorescent and mercury vapor fixtures to comply with requirements for new fixtures.
o. Leave Project clean and ready for occupancy.

C. Comply with safety standards for cleaning. Do not burn waste materials. Do not bury debris or excess materials on Owner's property. Do not discharge volatile, harmful, or dangerous materials into drainage systems. Remove waste materials from Project site and dispose of lawfully.

END OF SECTION 01770

(INTENTIONALLY LEFT BLANK)

SECTION 01781 - PROJECT RECORD DOCUMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Special Provisions and other Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes administrative and procedural requirements for Project Record Documents, including the following:

1) Record Drawings.
2) Record Product Data.

1.3 SUBMITTALS

A. Record Drawings: Comply with the following:

1) Number of Copies: Submit one set of marked-up Record Prints.

B. Record Product Data: Submit one copy of each Product Data submittal.

1) Where Record Product Data is required as part of operation and maintenance manuals, submit marked-up Product Data as an insert in the manual instead of submittal as Record Product Data.

PART 2 - PRODUCTS

2.1 RECORD DRAWINGS

A. Record Prints: Maintain one set of black-line white prints of the Contract Drawings and Shop Drawings.

1) Preparation: Mark Record Prints to show the actual installation where installation varies from that shown originally. Require individual or entity who obtained record data, whether individual or entity is Installer, subcontractor, or similar entity, to prepare the marked-up Record Prints.

a. Give particular attention to information on concealed elements that would be difficult to identify or measure and record later.
b. Accurately record information in an understandable drawing technique.
c. Record data as soon as possible after obtaining it. Record and check the markup before enclosing concealed installations.

2) Content: Types of items requiring marking include, but are not limited to, the following:

   a. Dimensional changes to Drawings.
   b. Revisions to details shown on Drawings.
   c. Depths of foundations below first floor.
   d. Locations and depths of underground utilities.
   e. Revisions to routing of piping and conduits.
   f. Revisions to electrical circuitry.
   g. Actual equipment locations.
   h. Duct size and routing.
   i. Locations of concealed internal utilities.
   j. Changes made by Change Order or Construction Change Directive.
   k. Changes made following Architect's and or Owner’s written orders.
   l. Details not on the original Contract Drawings.
   m. Field records for variable and concealed conditions.
   n. Record information on the Work that is shown only schematically.

3) Mark the Contract Drawings or Shop Drawings, whichever is most capable of showing actual physical conditions, completely and accurately. If Shop Drawings are marked, show cross-reference on the Contract Drawings.
4) Mark record sets with erasable, red-colored pencil. Use other colors to distinguish between changes for different categories of the Work at the same location.
5) Mark important additional information that was either shown schematically or omitted from original Drawings.
6) Note Construction Change Directive numbers, alternate numbers, Change Order numbers, and similar identification, where applicable.

B. Format: Identify and date each Record Drawing; include the designation "PROJECT RECORD DRAWING" in a prominent location.

1) Record Prints: Organize Record Prints and newly prepared Record Drawings into manageable sets. Bind each set with durable paper cover sheets. Include identification on cover sheets. Scan and provide searchable pdf copies of all Record Drawings on a CD (or a thumb drive) along with one paper copy of the Project Record Drawings, include a table of contents and description of contents within the CD (or a thumb drive) or CD’s (or thumb drives) date and label CD’s 1 of 5, 2 of 5, 3 of 5, etc.
2) Identification: As follows:

   a. Project name.
   b. Date.
   c. Designation "PROJECT RECORD DRAWINGS."
   d. Name of Contractor.

3) Furnish one Record set of all shop drawings and approved sample for the Owner’s use. Box all shop drawings and file by specification division and include the shop drawing log. Label boxes with 1 of 5, 2 of 5, 3 of 5, etc., date and name of project.

2.2 RECORD PRODUCT DATA

A. Preparation: Mark Product Data to indicate the actual product installation where installation varies substantially from that indicated in Product Data submittal.

1) Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
2) Include significant changes in the product delivered to Project site and changes in manufacturer's written instructions for installation.
3) Note related Change Orders, Record Drawings, and Product Data where applicable.

2.3 MISCELLANEOUS RECORD SUBMITTALS

A. Assemble miscellaneous records required by other Specification Sections for miscellaneous record keeping and submittal in connection with actual performance of the Work. Bind or file miscellaneous records and identify each, ready for continued use and reference.

PART 3 - EXECUTION

3.1 RECORDING AND MAINTENANCE

A. Recording: Maintain one copy of each submittal during the construction period for Project Record Document purposes. Post changes and modifications to Project Record Documents as they occur; do not wait until the end of Project.

B. Maintenance of Record Documents and Samples: Store Record Documents and Samples in the field office apart from the Contract Documents used for construction. Do not use Project Record Documents for construction purposes. Maintain Record Documents in good order and in a clean, dry, legible condition, protected from deterioration and loss. Provide access to Project Record Documents for Architect's or the Owner’s or Owner’s designated representative’s reference during normal working hours.

END OF SECTION 01781

(INTENTIONALLY LEFT BLANK)

SECTION 01782 - OPERATION AND MAINTENANCE DATA

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Special Provisions and other Division 1 Specification Sections, apply to this Section.

B. Related Sections include the following:

1) General Provision Section 40, “Scope of Work”
2) General Provision Section 50, “Control of Work”
3) General Provision Section 80, “Execution and Progress”
4) General Provision Section 90, “Measurement and Payment”
5) Section 01740, “Warranties and Bonds”
6) Section 01770, “Closeout Procedures”
7) Section 01781, “Project Record Documents”
8) Divisions 2 through 16, FAA and FDOT Sections for specific operation and maintenance manual requirements for products

C. If there is a discrepancy between the requirements of this section and related sections, the more restrictive interpretation shall apply.

1.2 SUMMARY

A. This Section includes administrative and procedural requirements for preparing operation and maintenance manuals, including the following:

1) Operation and maintenance documentation directory.
2) Emergency manuals.
3) Operation manuals for systems, subsystems, and equipment.
4) Maintenance manuals for the care and maintenance of materials, systems and equipment.

1.3 DEFINITIONS

A. System: An organized collection of parts, equipment, or subsystems united by regular interaction.

B. Subsystem: A portion of a system with characteristics similar to a system.

1.4 SUBMITTALS

A. Initial Submittal: Submit two (2) draft copies of each manual at least fifteen (15) days before requesting inspection for Substantial Completion. Include a complete operation and

maintenance directory. Architect and Owner will return one (1) copy of draft and mark whether general scope and content of manual are acceptable.

B. Final Submittal: Submit one (1) copy of each manual in final form at least fifteen (15) days before final inspection. Architect and Owner will return copy with comments within fifteen (15) days after final inspection.

1) Correct or modify each manual to comply with Architect's and Owner's comments. Submit **three (3)** copies of each corrected manual within fifteen (15) days of receipt of Architect's and Owner's comments.
2) Provide searchable CD (or thumb drive) with all operation and maintenance data, in addition to the paper copy, date and label CD's (or thumb drives) 1 of 5, 2 of 5, 3 of 5, etc., if multiple CDs are needed. Provide a table of contents with description of the documents on the CD (or thumb drive).

1.5 COORDINATION

A. Where operation and maintenance documentation includes information on installations by more than one factory-authorized service representative, assemble and coordinate information furnished by representatives and prepare manuals.

PART 2 - PRODUCTS

2.1 OPERATION AND MAINTENANCE DOCUMENTATION DIRECTORY

A. Organization: Include a section in the directory for each of the following:

1) List of documents.
2) List of systems.
3) List of equipment.
4) Table of contents.

B. List of Systems and Subsystems: List systems alphabetically. Include references to operation and maintenance manuals that contain information about each system.

C. List of Equipment: List equipment for each system, organized alphabetically by system. For pieces of equipment not part of system, list alphabetically in separate list.

D. Tables of Contents: Include a table of contents for each emergency, operation, and maintenance manual.

E. Identification: In the documentation directory and in each operation and maintenance manual, identify each system, subsystem, and piece of equipment with the same designation used in the Contract Documents. If no designation exists, assign a designation according to ASHRAE Guideline 4, "Preparation of Operating and Maintenance Documentation for Building Systems."

2.2 MANUALS, GENERAL

A. Organization: Unless otherwise indicated, organize each manual into a separate section for each system and subsystem, and a separate section for each piece of equipment not part of a system. Each manual shall contain the following materials, in the order listed:

1) Title page.
2) Table of contents.
3) Manual contents.

B. Title Page: Enclose title page in transparent plastic sleeve. Include the following information:

1) Subject matter included in manual.
2) Name and address of Project.
3) Name and address of Owner.
4) Date of submittal.
5) Name, address, and telephone number of Contractor.
6) Name and address of Architect.
7) Cross-reference to related systems in other operation and maintenance manuals.

C. Table of Contents: List each product included in manual, identified by product name, indexed to the content of the volume, and cross-referenced to Specification Section number in Project Manual.

1) If operation or maintenance documentation requires more than one volume to accommodate data, include comprehensive table of contents for all volumes in each volume of the set.

D. Manual Contents: Organize into sets of manageable size. Arrange contents alphabetically by system, subsystem, and equipment. If possible, assemble instructions for subsystems, equipment, and components of one system into a single binder.

1) Binders: Heavy-duty, 3-ring, vinyl-covered, loose-leaf binders, in thickness necessary to accommodate contents, sized to hold 8-1/2-by-11-inch paper; with clear plastic sleeve on spine to hold label describing contents and with pockets inside covers to hold folded oversize sheets.

a. If two or more binders are necessary to accommodate data of a system, organize data in each binder into groupings by subsystem and related components. Cross-reference other binders if necessary to provide essential information for proper operation or maintenance of equipment or system.
b. Identify each binder on front and spine, with printed title "OPERATION AND MAINTENANCE MANUAL," Project title or name, and subject matter of contents. Indicate volume number for multiple-volume sets.

2) Dividers: Heavy-paper dividers with plastic-covered tabs for each section. Mark each tab to indicate contents. Include typed list of products and major components of equipment included in the section on each divider, cross-referenced to Specification Section number and title of Project Manual.

3) Protective Plastic Sleeves: Transparent plastic sleeves designed to enclose diagnostic software diskettes for computerized electronic equipment.
4) Supplementary Text: Prepared on 8-1/2-by-11-inch, 20-lb/sq. ft. white bond paper.
5) Drawings: Attach reinforced, punched binder tabs on drawings and bind with text.

    a. If oversize drawings are necessary, fold drawings to same size as text pages and use as foldouts.
    b. If drawings are too large to be used as foldouts, fold and place drawings in labeled envelopes and bind envelopes in rear of manual. At appropriate locations in manual, insert typewritten pages indicating drawing titles, descriptions of contents, and drawing locations.

2.3 EMERGENCY MANUALS

A. Content: Organize manual into a separate section for each of the following:

    1) Type of emergency.
    2) Emergency instructions.
    3) Emergency procedures.

B. Type of Emergency: Where applicable for each type of emergency indicated below, include instructions and procedures for each system, subsystem, piece of equipment, and component:

    1) Fire.

C. Emergency Instructions: Describe and explain warnings, trouble indications, error messages, and similar codes and signals. Include responsibilities of Owner's operating personnel for notification of Installer, supplier, and manufacturer to maintain warranties.

D. Emergency Procedures: Include the following, as applicable:

    1) Instructions on stopping.
    2) Shutdown instructions for each type of emergency.
    3) Operating instructions for conditions outside normal operating limits.
    4) Required sequences for electric or electronic systems.
    5) Special operating instructions and procedures.

2.4 OPERATION MANUALS

A. Content: In addition to requirements in this Section, include operation data required in individual Specification Sections and the following information:

    1) System, subsystem, and equipment descriptions.
    2) Operating standards.
    3) Operating procedures.
    4) Operating logs.
    5) Wiring diagrams.
    6) Control diagrams.

7) Piped system diagrams.
8) Precautions against improper use.
9) License requirements including inspection and renewal dates.

B. Descriptions: Include the following:

1) Product name and model number.
2) Manufacturer's name.
3) Equipment identification with serial number of each component.
4) Equipment function.
5) Operating characteristics.
6) Limiting conditions.
7) Performance curves.
8) Engineering data and tests.
9) Complete nomenclature and number of replacement parts.

C. Operating Procedures: Include the following, as applicable:

1) Startup procedures.
2) Equipment or system break-in procedures.
3) Routine and normal operating instructions.
4) Regulation and control procedures.
5) Instructions on stopping.
6) Normal shutdown instructions.
7) Seasonal and weekend operating instructions.
8) Required sequences for electric or electronic systems.
9) Special operating instructions and procedures.

D. Systems and Equipment Controls: Describe the sequence of operation, and diagram controls as installed.

E. Piped Systems: Diagram piping as installed, and identify color-coding where required for identification.

2.5 PRODUCT MAINTENANCE MANUAL

A. Content: Organize manual into a separate section for each product, material, and finish. Include source information, product information, maintenance procedures, repair materials and sources, and warranties and bonds, as described below.

B. Source Information: List each product included in manual identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual.

C. Product Information: Include the following, as applicable:

1) Product name and model number.
2) Manufacturer's name.
3) Color, pattern, and texture.

4) Material and chemical composition.
5) Reordering information for specially manufactured products.

D. Maintenance Procedures: Include manufacturer's written recommendations and the following:

1) Inspection procedures.
2) Types of cleaning agents to be used and methods of cleaning.
3) List of cleaning agents and methods of cleaning detrimental to product.
4) Schedule for routine cleaning and maintenance.
5) Repair instructions.

E. Repair Materials and Sources: Include lists of materials and local sources of materials and related services.

F. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.

1) Include procedures to follow and required notifications for warranty claims.

2.6 SYSTEMS AND EQUIPMENT MAINTENANCE MANUAL

A. Content: For each system, subsystem, and piece of equipment not part of a system, include source information, manufacturers' maintenance documentation, maintenance procedures, maintenance and service schedules, spare parts list and source information, maintenance service contracts, and warranty and bond information, as described below.

B. Source Information: List each system, subsystem, and piece of equipment included in the manual identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual.

C. Manufacturers' Maintenance Documentation: Manufacturers' maintenance documentation including the following information for each component part or piece of equipment:

1) Standard printed maintenance instructions and bulletins.
2) Drawings, diagrams, and instructions required for maintenance, including disassembly and component removal, replacement, and assembly.
3) Identification and nomenclature of parts and components.
4) List of items recommended to be stocked as spare parts.

D. Maintenance Procedures: Include the following information and items that detail essential maintenance procedures:

1) Test and inspection instructions.
2) Troubleshooting guide.
3) Precautions against improper maintenance.

4) Disassembly; component removal, repair, and replacement; and reassembly instructions.
5) Aligning, adjusting, and checking instructions.

E. Maintenance and Service Schedules: Include service and lubrication requirements, list of required lubricants for equipment, and separate schedules for preventive and routine maintenance and service with standard time allotment.

1) Scheduled Maintenance and Service: Tabulate actions for daily, weekly, monthly, quarterly, semiannual, and annual frequencies.
2) Maintenance and Service Record: Include manufacturers' forms for recording maintenance.

F. Spare Parts List and Source Information: Include lists of replacement and repair parts, with parts identified and cross-referenced to manufacturers' maintenance documentation and local sources of maintenance materials and related services.

G. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.

1) Include procedures to follow and required notifications for warranty claims.

PART 3 - EXECUTION

3.1 MANUAL PREPARATION

A. Emergency Manual: Assemble a complete set of emergency information indicating procedures for use by emergency personnel and by Owner's operating personnel for types of emergencies indicated.

B. Product Maintenance Manual: Assemble a complete set of maintenance data indicating care and maintenance of each product, material, and finish incorporated into the Work.

C. Operation and Maintenance Manuals: Assemble a complete set of operation and maintenance data indicating operation and maintenance of each system, subsystem, and piece of equipment not part of a system.

1) Engage a factory-authorized service representative to assemble and prepare information for each system, subsystem, and piece of equipment not part of a system.
2) Prepare a separate manual for each system and subsystem, in the form of an instructional manual for use by Owner's operating personnel.

D. Manufacturers' Data: Where manuals contain manufacturers' standard printed data, include only sheets pertinent to product or component installed. Mark each sheet to identify each product or component incorporated into the Work. If data include more than one item in a tabular format, identify each item using appropriate references from the Contract Documents. Identify data applicable to the Work and delete references to information not applicable.

1) Prepare supplementary text if manufacturers' standard printed data are not available and where the information is necessary for proper operation and maintenance of equipment or systems.

E. Drawings: Prepare drawings supplementing manufacturers' printed data to illustrate the relationship of component parts of equipment and systems and to illustrate control sequence and flow diagrams. Coordinate these drawings with information contained in Record Drawings to ensure correct illustration of completed installation.

1) Do not use original Project Record Documents as part of operation and maintenance manuals.

F. Comply with Division 1 Section "Closeout Procedures" for the schedule for submitting operation and maintenance documentation.

END OF SECTION 01782

SECTION 01820 - DEMONSTRATION AND TRAINING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes administrative and procedural requirements for instructing Owner's personnel, including the following:

1) Demonstration of operation of systems, subsystems, and equipment.
2) Training in operation and maintenance of systems, subsystems, and equipment.
3) Demonstration and training videos. (narrated)

1.3 SUBMITTALS

A. Instruction Program: Submit two copies of outline of instructional program for demonstration and training, including a schedule of proposed dates, times, length of instruction time, and instructors' names for each training module. Include three (3) learning objectives and outline for each training module.

1) At completion of training, submit three (3) complete training manuals for Owner's use.

B. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

C. Attendance Record: For each training module, submit list of participants and length of instruction time.

D. Evaluations: For each participant and for each training module, submit results and documentation of performance-based test.

E. Demonstration and Training Videos: Submit two copies within fifteen (15) days of end of each training module.

1) Identification: On each copy, provide an applied label with the following information:

a. Name of Project.
b. Project identifying numbers.
c. Name and address of video producer.
d. Name of Architect.

e. Name of Contractor.
f. Date videotape was recorded.

1.4 QUALITY ASSURANCE

A. Facilitator Qualifications: A firm or individual experienced in training or educating maintenance personnel in a training program similar in content and extent to that indicated for this Project, and whose work has resulted in training or education with a record of successful learning performance.

B. Instructor Qualifications: A factory-authorized service representative, complying with requirements in Division 1 Section "Quality Requirements," experienced in operation and maintenance procedures and training.

1.5 COORDINATION

A. Coordinate instruction schedule with Owner's operations. Adjust schedule as required to minimize disrupting Owner's operations.

B. Coordinate instructors, including providing notification of dates, times, length of instruction time, and course content.

C. Coordinate content of training modules with content of approved emergency, operation, and maintenance manuals. Do not submit instruction program until operation and maintenance data has been reviewed and approved by the Architect and the Owner.

PART 2 - PRODUCTS

2.1 INSTRUCTION PROGRAM

A. Program Structure: Develop an instruction program that includes individual training modules for each system and equipment not part of a system, as required by individual Specification Sections, and as follows:

1) HVAC System and Security Controls

B. Training Modules: Develop a learning objective and teaching outline for each module. For each module, include instruction for the following:

1) Basis of System Design, Operational Requirements, and Criteria: Include the following:

a. System, subsystem, and equipment descriptions
b. Operating standards
c. Regulatory requirements
d. Equipment function
e. Operating characteristics

f. Limiting conditions
g. Performance curves

2) Documentation: Review the following items in detail:

a. Emergency manuals.
b. Operations manuals.
c. Maintenance manuals.
d. Identification systems.
e. Warranties and bonds.
f. Maintenance service agreements and similar continuing commitments.

3) Emergencies: Include the following, as applicable:

a. Instructions on meaning of warnings, trouble indications, and error messages.
b. Instructions on stopping.
c. Shutdown instructions for each type of emergency.
d. Operating instructions for conditions outside of normal operating limits.
e. Sequences for electric or electronic systems.
f. Special operating instructions and procedures.

4) Operations: Include the following, as applicable:

a. Startup procedures.
b. Equipment or system break-in procedures.
c. Routine and normal operating instructions.
d. Regulation and control procedures.
e. Control sequences.
f. Safety procedures.
g. Instructions on stopping.
h. Normal shutdown instructions.
i. Operating procedures for emergencies.
j. Operating procedures for system, subsystem, or equipment failure.
k. Seasonal and weekend operating instructions.
l. Required sequences for electric or electronic systems.
m. Special operating instructions and procedures.

5) Adjustments: Include the following:

a. Alignments.
b. Checking adjustments.
c. Noise and vibration adjustments.
d. Economy and efficiency adjustments.

6) Troubleshooting: Include the following:

a. Diagnostic instructions.
b. Test and inspection procedures.

7) Maintenance: Include the following:

a. Inspection procedures.
b. Types of cleaning agents to be used and methods of cleaning.
c. List of cleaning agents and methods of cleaning detrimental to product.
d. Procedures for routine cleaning
e. Procedures for preventive maintenance.
f. Procedures for routine maintenance.
g. Instruction on use of special tools.

8) Repairs: Include the following:

a. Diagnosis instructions.
b. Repair instructions.
c. Disassembly; component removal, repair, and replacement; and reassembly instructions.
d. Instructions for identifying parts and components.
e. Review of spare parts needed for operation and maintenance.

PART 3 - EXECUTION

3.1 PREPARATION

A. Assemble educational materials necessary for instruction, including documentation and training module. Assemble training modules into a combined training manual.

B. Set up instructional equipment at instruction location.

3.2 INSTRUCTION

A. Facilitator: Engage a qualified facilitator to prepare instruction program and training modules, to coordinate instructors, and to coordinate between Contractor and Owner for number of participants, instruction times, and location.

B. Engage qualified instructors to instruct Owner's personnel to adjust, operate, and maintain systems, subsystems, and equipment not part of a system.

1) Owner will furnish Contractor with names and positions of participants.

C. Scheduling: Provide instruction at mutually agreed on times. For equipment that requires seasonal operation, provide similar instruction at start of each season.

1) Schedule training with Owner, through RPR OR A/E, with at least 21 days' advance notice.

D. Evaluation: At conclusion of each training module, assess and document each participant's mastery of module by use of a written or demonstration performance-based test.

E. Cleanup: Collect used and leftover educational materials and give to Owner. Remove instructional equipment. Restore systems and equipment to condition existing before initial training use.

3.3 DEMONSTRATION AND TRAINING VIDEOS

A. General: Engage a qualified commercial videographer to record demonstration and training videos. If available, manufacturer's standard training video is acceptable where systems are substantially similar to those installed. Where pre-recorded video is not readily available, site-specific training shall be video recorded and given to Owner for use in their ongoing training program.

B. Site-specific training: Record each training module separately. As appropriate, include classroom instructions and demonstrations, board diagrams, and other visual aids, but not student practice.

1) At beginning of each training module, record each chart containing learning objective and lesson outline.

C. Video Format: Provide high-quality auto-play DVD in industry-standard format, for replay on either personal computer or DVD player to television display.

D. Recording: Mount camera on tripod before starting recording, unless otherwise necessary to show area of demonstration and training.

E. Narration: Describe scenes on video by dubbing audio narration off-site after recording. Include description of items being viewed.

END OF SECTION 01820

(INTENTIONALLY LEFT BLANK)

SECTION 02361 – TERMITE CONTROL

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Furnish and apply soil treatment with termiticide as indicated on the Drawings and specified herein.

B. Provide soil treatment at all new slab-on-grade areas within the interior of building.

1.3 QUALIFICATIONS

A. This Contractor shall be a licensed termite control operator and shall have as part of his organization a professional entomologist.

1.4 DELIVERY

A. Chemicals shall be delivered to the Project site in a transport equipped with a gauge capable of indicating the correct number of gallons being applied to required areas.

1.5 SUBMITTALS

A. Submittals shall comply with Section 01330 – Submittal Procedures.

B. Submit certifications for applicator qualifications and gauge readings of applications.

C. Submit product data including the following:

1. Working solution to be used and manufacturer's printed data.
2. The color of dye to be used.
3. Working solution to be mixed in accordance with Bureau of Entomology, State of Florida Board of Health and EPA.

D. Submit sample form of warranty per Article 1.6 of this Section.

E. Furnish an applicator’s “Certificate of Protective Treatment for Prevention of Termites” upon completion of all required FBC treatments and prior to slab-on-grade placement and provide a second copy with the project closeout documents.

1.6 WARRANTY

A. Upon completion of the work, and as a condition of Final Acceptance, Owner shall be furnished with a written warranty stipulating that termiticide treatment shall prevent subterranean termites from attacking and damaging the building or its contents for a period of not less than 5 years, starting from date of Substantial Completion of the building.

B. If subterranean termite activity exists in or under the building during the warranty period, the Contractor promptly, and without expense to the Owner, shall:

1. Retreat the soil to prevent subterranean termites from attacking the building or its contents, using means acceptable to the Owner.
2. Make good all damage caused by subterranean termite activity, up to Ten Thousand Dollars ($10,000.00).
3. The warranty shall be written in favor of the Owner. A specimen of the form of warranty shall be submitted to the Architect for review prior to commencement of work.

PART 2 – PRODUCTS

2.1 MATERIALS

A. Working solutions shall be based on any of the following termiticides in the strength indicated and meeting approval of all Federal, State and Local Regulatory agencies:

1. “Altriset”; Syngenta.

B. Dye, of any type, such as Blazon by Milliken Chemicals, not chemically harmful to termiticide emulsions and red or blue in color shall be added to solution before application.

C. Solution shall be mixed in strict accordance with spray solution chart as prepared by the Bureau of Entomology, State of Florida Board of Health and EPA.

PART 3 – EXECUTION

3.1 INSTALLATION, GENERAL

A. Termiticides shall be applied by experienced skilled mechanics and in the best workmanlike manner of this trade.

B. Termite control shall not begin until all the subgrade soil preparation work has been completed and made ready for the vapor barrier installation.

C. Termiticides shall not be applied when soil is excessively wet as determined by the Owner’s Testing Laboratory.

3.2 APPLICATION

A. Application for emulsion shall be applied as follows, but in NO CASE less than the manufacturer's printed directions for use for preconstruction treatment.

B. Horizontal Barriers: Termiticides shall be applied uniformly to all areas that will be covered by concrete slabs, including beneath sidewalks and entrance platforms adjacent to the building.

1. To produce a horizontal barrier, apply the emulsion at the rate of 1 gallon per 10 square feet of backfill.
2. If the backfill is washed gravel or other course material, apply at 1-1/2 gallons per 10 square feet.
3. At critical areas such as along the inside of foundation walls, around plumbing, utility services, and other features that will penetrate the concrete slab(s), apply emulsion at 2 gallons of solution per 5 linear feet to soil.
4. Applications shall be made with pressures less than 50 psi at the nozzle, using a course spray nozzle.
5. If concrete slabs cannot be poured over soil the same day it has been treated, a waterproof cover shall be placed over the soil to prevent erosion.

C. Vertical Barriers: Vertical barriers shall be established in soil which will be under the perimeters of floating or supported slabs, around utilities and in other critical areas which will be covered by concrete. After the final exterior grading is completed, vertical barriers shall be created in backfilled soil against foundation walls or against the outside of monolithic slab.

1. To produce a vertical barrier, apply the emulsion at the rate of 4 gallons per 10 linear feet of depth from grade to the top of the footing.
2. In hollow concrete masonry unit voids, apply emulsion at the rate of 2 gallons per 10 linear feet.

D. Reapply soil treatment solution to areas disturbed by subsequent excavation, grading, landscaping, or other construction activities.

END OF SECTION 02361

APPENDIX A

APPENDIX “B”

OWNER FURNISHED FURNITURE, FIXTURES AND EQUIPMENT (FF&E)

All other equipment shown or schedule in the Contract Documents shall be furnished and installed by the GC unless noted below:

OWNER FURNISHED FF&E ITEMS

1. Office Furniture [Desks (Non millwork or cabinetry), Free Standing Credenzas, Chairs, File Cabinets, Shelving Units (Non Millwork or cabinetry), etc.] Shown Dashed within the Architectural Floor Plans.

2. AV equipment (projectors) Televisions Sets/Flat Screen Displays [Power, AV & TV Cable Pull/Junction Boxes and Cover Plates, Installation & Blocking, Concealed Overhead Screens, Wall Brackets (Overhead or Wall Mounted) for Mounting TV’s by GC]

3. TV Cable Wiring [Pull Boxes and Plates by GC]

4. FBO COMMUNICATION Receiver Antenna & Receiver Devices. [Pull/Junction Boxes and Cover Plates by GC]

5. Airport or Tenant Computers and Computer Screens and Keyboards

6. Security/Cameras. Card Readers, and access control devices and security system elements including wiring [Door Hardware/Electrical Locks, Pull Boxes, Chase ways coordination and interface verification for automatic doors and electrical locks and Power Supply, Pull/Junction Boxes and Cover Plates by GC]

7. Free Standing Trash Receptacles [Not Scheduled]

8. Cleaning Equipment & Mop Sink Cleaning Chemical Dispensers

9. Hand Sanitizers (Installed by GC to meet ADA requirements)

10. AED Equipment (Storage Cabinet by GC)

11. AED equipment and AED training provided by Owner.

12. Tenant Equipment and FF& E items
13. Pull Down Map
14. Graphic Images for Restroom & Lobby Glassed-Murals
15. Artwork
16. Coffee Maker

END OF APPENDIX B

APPENDIX C

SECTION 02361 – TERMITE CONTROL

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Furnish and apply soil treatment with termiticide as indicated on the Drawings and specified herein.

B. Provide soil treatment at all new slab-on-grade areas within the interior of building.

1.3 QUALIFICATIONS

A. This Contractor shall be a licensed termite control operator and shall have as part of his organization a professional entomologist.

1.4 DELIVERY

A. Chemicals shall be delivered to the Project site in a transport equipped with a gauge capable of indicating the correct number of gallons being applied to required areas.

1.5 SUBMITTALS

A. Submittals shall comply with Section 01330 – Submittal Procedures.

B. Submit certifications for applicator qualifications and gauge readings of applications.

C. Submit product data including the following:

1. Working solution to be used and manufacturer's printed data.
2. The color of dye to be used.
3. Working solution to be mixed in accordance with Bureau of Entomology, State of Florida Board of Health and EPA.

D. Submit sample form of warranty per Article 1.6 of this Section.

E. Furnish an applicator’s “Certificate of Protective Treatment for Prevention of Termites” upon completion of all required FBC treatments and prior to slab-on-grade placement and provide a second copy with the project closeout documents.

1.6 WARRANTY

A. Upon completion of the work, and as a condition of Final Acceptance, Owner shall be furnished with a written warranty stipulating that termiticide treatment shall prevent subterranean termites from attacking and damaging the building or its contents for a period of not less than 5 years, starting from date of Substantial Completion of the building.

B. If subterranean termite activity exists in or under the building during the warranty period, the Contractor promptly, and without expense to the Owner, shall:

1. Retreat the soil to prevent subterranean termites from attacking the building or its contents, using means acceptable to the Owner.
2. Make good all damage caused by subterranean termite activity, up to Ten Thousand Dollars ($10,000.00).
3. The warranty shall be written in favor of the Owner. A specimen of the form of warranty shall be submitted to the Architect for review prior to commencement of work.

PART 2 – PRODUCTS

2.1 MATERIALS

A. Working solutions shall be based on any of the following termiticides in the strength indicated and meeting approval of all Federal, State and Local Regulatory agencies:

1. “Altriset”; Syngenta.

B. Dye, of any type, such as Blazon by Milliken Chemicals, not chemically harmful to termiticide emulsions and red or blue in color shall be added to solution before application.

C. Solution shall be mixed in strict accordance with spray solution chart as prepared by the Bureau of Entomology, State of Florida Board of Health and EPA.

PART 3 – EXECUTION

3.1 INSTALLATION, GENERAL

A. Termiticides shall be applied by experienced skilled mechanics and in the best workmanlike manner of this trade.

B. Termite control shall not begin until all the subgrade soil preparation work has been completed and made ready for the vapor barrier installation.

C. Termiticides shall not be applied when soil is excessively wet as determined by the Owner’s Testing Laboratory.

3.2 APPLICATION

A. Application for emulsion shall be applied as follows, but in NO CASE less than the manufacturer's printed directions for use for preconstruction treatment.

B. Horizontal Barriers: Termiticides shall be applied uniformly to all areas that will be covered by concrete slabs, including beneath sidewalks and entrance platforms adjacent to the building.

1. To produce a horizontal barrier, apply the emulsion at the rate of 1 gallon per 10 square feet of backfill.
2. If the backfill is washed gravel or other course material, apply at 1-1/2 gallons per 10 square feet.
3. At critical areas such as along the inside of foundation walls, around plumbing, utility services, and other features that will penetrate the concrete slab(s), apply emulsion at 2 gallons of solution per 5 linear feet to soil.
4. Applications shall be made with pressures less than 50 psi at the nozzle, using a course spray nozzle.
5. If concrete slabs cannot be poured over soil the same day it has been treated, a waterproof cover shall be placed over the soil to prevent erosion.

C. Vertical Barriers: Vertical barriers shall be established in soil which will be under the perimeters of floating or supported slabs, around utilities and in other critical areas which will be covered by concrete. After the final exterior grading is completed, vertical barriers shall be created in backfilled soil against foundation walls or against the outside of monolithic slab.

1. To produce a vertical barrier, apply the emulsion at the rate of 4 gallons per 10 linear feet of depth from grade to the top of the footing.
2. In hollow concrete masonry unit voids, apply emulsion at the rate of 2 gallons per 10 linear feet.

D. Reapply soil treatment solution to areas disturbed by subsequent excavation, grading, landscaping, or other construction activities.

END OF SECTION 02361

SECTION 03360 – MECHANICALLY GROUND AND POLISHED CONCRETE

PART 1 - GENERAL

1.1 SUMMARY

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 1 Specification sections, apply to Work of this Section.

B. Section Includes:
   1. Curing of interior polished concrete slabs.
   2. Finishing of polished concrete slabs.
   3. Densified & Mechanically Polished concrete.
   4. Broad cast aggregates

C. Related Sections:
   1. Division 3 Section “Cast-In-Place Concrete” for general applications of concrete and coordination of sample submittal.
   2. Division 3 Section “Dye Stain Polished Concrete”
   3. Division 7 Section “Caulking and Sealants” for colored sealant for joints.

1.2 REFERENCES

E. National Floor Safety Institute (NFSI) – Floor Friction Standards

1.3 SUBMITTALS

A. Product Data: Submit manufacturer's complete technical data sheets for the following:
   1. Liquid Lithium Silicate Densifier
   2. Wet Curing Blanket.
   3. Protective Blanket for finished concrete floors
   4. Sealant
   5. Sealer

B. Design Mixes: For each type of polished concrete.

C. Qualification Data: For firms indicated in "Quality Assurance" Article, including list of completed projects.

D. Submit the following in accordance with Division 1 Section 01330 "Submittal Procedures."

E. Product data for each grinding machine, including all types of grinding heads, dust extraction system, joint filler, concrete densifying impregnator, penetrating sealer, and any other chemicals used in the process.

F. Applicators qualification data.
   1. Southland Concrete Creations (941-721-4900) is pre-approved for this project.
   2. Applicators must have a minimum of (5) five years experience in this field. Applicator must show names and addresses of (3) three similar jobs.
   3. Applicators must show experience in pouring concrete, broadcasting aggregate, and polishing exposed broadcast aggregate concrete floors.
   4. Include written certification from LM Scofield showing they are qualified to perform this work.

G. Polished concrete samples: Size 24"x 24" , for each Polished Concrete finish required. Field test area of placed concrete – 10'-0" x 10'-10".

I. Product Data: Provide data on all products, including information on compatibility of different products and limitations

J. Field Quality Control – Static Coefficient of Friction Test Reports: Reports of testing specified in PART 3 "Field Quality Control" Article.

1.4 QUALITY ASSURANCE

A. Manufacturer Qualifications: Manufacturer with experience in the production of specified products.

B. Installer Qualifications: An installer with 5 years experience with work of similar scope and quality, and approved in writing by the manufacturer.

C. Comply with the requirements of ACI 301.

D. Obtain each specified material from same source and maintain high degree of consistency in workmanship throughout Project.

E. Notification of manufacturer's authorized representative shall be given at least 1-week before start of Work.

F. Pre-installation Conference: Conduct conference at project site to comply with requirements in Division 1, Section 01310 “Project Management and Coordination.”

G. Provide project names, addresses, contact names, phone numbers of at least three (3) projects of similar scope completed by the installer.

H. Installer/Applicator shall be certified by concrete finish equipment and chemical manufacturer and shall provide adequate number of skilled workmen who are thoroughly trained and experienced in the necessary craft.

I. Manufacturer’s Certification: Provide a letter of acknowledgement from both the equipment and chemical manufacturer stating that the installer is a trained applicator and is familiar with proper procedures and installation requirements recommended by the manufacturer.

J. Ground and Polished Concrete Mockups:
   1. Provide under provisions of Division 1 Section “Quality Control.”
   2. At location on Project selected by Architect, place and finish 10 ft. by 20 ft.area.
   3. Construct mockup using processes and techniques intended for use on permanent work, including curing procedures. Include samples of control, construction, and expansion joints in sample panels. Mockup shall be produced by the individual workers who will perform the work for the Project.
   4. Retain samples of cements, sands, aggregates and used in mockup for comparison with materials used in remaining work.
   5. Aggregate selected must be tested to ensure it will accept polish.
   6. Refer to subparagraph 3.5 of this Section for Scheduled polished concrete cut and shine level and finish coat.
   7. Edges should be included in mockup.
   8. Accepted mockup provides visual standard for work of Section.
   9. Mockup shall remain through completion of work for use as a quality standard for finished work. Protect mock-ups from elements with weather resistant covering and maintain approved field mock ups during construction in an undisturbed condition as a standard for judging completed work.
   10. Remove mockup when directed.
   11. Provide test area that shall be concealed from public view for confirmation of grinding operations.

K. Environmental Limitations:
   1. Comply with manufacturer’s written instructions for substrate temperature and moisture content, ambient temperature and humidity, ventilation and other conditions affecting chemical performance.

2. Application of finish system shall take place a minimum of 21 days prior to fixture and trim installation and/or substantial completion.
3. Finish concrete area shall be closed to traffic during finish floor application and after application for the time as recommended by the manufacturer.

L. Walkway Auditor: Certified by NFSI to test polished floors for static coefficient of friction according to NFSI 101-A.

M. Static Coefficient of Friction: Achieve not less than 0.5 for level floor surfaces as determined by quality control testing according to NFSI 101-A.

1.5 DELIVERY, STORAGE AND HANDLING

A. Comply with manufacturer's instructions. Deliver liquid densifier in original, unopened packaging. Store in dry conditions.

1.6 PROJECT CONDITIONS

A. Polished Concrete Environmental Requirements:
1. Schedule placement to minimize exposure to wind and hot sun before curing materials are applied.
2. Avoid placing concrete if rain, snow, or frost is forecast within 24-hours. Protect fresh concrete from moisture and freezing.
3. Comply with professional practices described in ACI 305R and ACI 306R.

B. Schedule delivery of concrete to provide consistent mix times from batching until discharge. Mix times shall meet manufacturer’s written recommendations.

1.7 PRE-JOB CONFERENCE

A. Two weeks prior to placement of concrete a pre-installation meeting will be held to discuss the Project and application of materials.

B. The Architect, General Contractor, Subcontractor, Testing Agency, Ready-Mix Concrete Representative, and a Manufacturer's Representative shall be present.

C. Proposed Agenda:
1. Environmental requirements.
2. Scheduling and phasing of work.
3. Coordinating with other work and personnel.
4. Protection of adjacent surfaces.
5. Surface preparation.
6. Repair of defects and defective work prior to installation.
7. Cleaning.
8. Application of liquid hardener, densifier.
9. Importance of un-reacted silicate rinse.
10. Installation of polished non-film forming floor finishes

11. Protection of finished surfaces after installation.
12. Sustainable design issues
13. Storage and Disposal of unused materials

D. Reports: Record discussions, including decisions and agreements reached, and furnish copy of record to each party attending.

E. Damage and Stain Prevention: Take precautions to prevent damage and staining of concrete surfaces to be polished.
1. Prohibit vehicle parking over concrete surfaces to be polished.
2. Prohibit pipe cutting operations over concrete surfaces to be polished.
3. Prohibit storage of any items over concrete surfaces to be polished for not less than 28 days after concrete placement.
4. Prohibit ferrous metals storage over concrete surfaces to be polished.
5. Protect from petroleum, oil, hydraulic fluid, or other liquid dripping from equipment working over concrete surfaces to be polished.
6. Protect from acids and acidic detergents contacting concrete surfaces to be polished.
7. Protect from painting activities over concrete surfaces to be polished.

F. Environmental Limitations: Comply with manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting liquid applied product application.

1.8 WARRANTY

A. Provide year manufacturer's standard (10) ten year material warranty commencing at date of building substantial completion. Manufacturer shall warrant to the owner that polished surface will remain water repellent, dustproof, hardened and abrasion resistant.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURER

A. Basis of Design: L.M. SCOFIELD COMPANY, Douglasville, Georgia (800) 800-9900 or the appropriate local contact: Eastern Division – 201-672-9050; Florida Representative, Steve Rissi – 727-515-1849

B. Other acceptable and qualified manufactures approved by the Architect and that meet or exceed the specified requirements. Substitutions shall be submitted in accordance with Division 1, Section 01600 - Materials and Equipment.

2.2 MATERIALS & EQUIPMENT

A. Liquid Densifier: Odorless, non-hazardous, silicate that penetrates concrete to react with free lime and calcium hydroxide to produce permanent chemical reaction that hardens and densifies concrete surface.

B. Dyes: Extremely fine molecules of color solvent or dye for mixing with water or acetone that is designed to penetrate and color concrete surface. Refer to specification Section 03361 “Dye Stained Colored Polished Concrete” for additional requirements.

C. Pigmented Microstains: Extremely fine pigment particles in a water-based silicate solution that penetrates concrete and reacts with calcium hydroxide to lock in color particles.

D. Polish Guard: Non-film forming, stain resistant, food resistant, chemical stain resistant, impregnating sealant designed to be used on concrete surfaces previously densified

E. Curing Compound for Dye Stained Concrete:
   a. MC Tech UltraCure NCF (866)-913-8363

F. Chemical Hardener/Densifiers Manufactured by L.M. SCOFIELD COMPANY:
   a. SCOFIELD® Formula One™-MP is a high performing hardening and dust proofing compound that is chemically reactive and permanently bonds to concrete formulated to be used in conjunction with integrally colored concrete as well as uncolored concrete. (No substitutions – unless approved in writing by the Architect)
   b. SCOFIELD® Guard-W

G. 3-head or 4-head counter rotating variable speed floor grinding machine with at least 600 pounds down pressure.

H. Dust extraction system, pre-separator, and squeegee attachments with minimum flow rating of 322 cubic feet per minute.

I. Protective Blanket for Finished Floor: Dura Cover by Pro Guard 888-977-6482

J. Substitutions: The use of products other than those specified will be considered providing that the Contractor requests its use in writing aspect Section 1600 Materials and Equipment prior to bid date. This request shall be accompanied by the following:
   1. A certificate of compliance from material manufacturer stating that proposed products meet or exceed requirements of this Section, including standards ACI 303.1, ASTM C979, ASTM C494 and AASHTO M194.
   2. Documented proof that proposed materials have a 10-year proven record of performance, confirmed by at least 5 local projects that Architect can examine.

2.3 ACCESSORIES

A. Patching Compound: Compound composed of 40 percent portland cement, 45 percent limestone, and 15 percent vinyl acetate copolymer, when mixed with dust salvaged from grinding process forms a paste that hardens when surface imperfections are filled.

B. Grout Material: REQUIRED Clear modified silicate sealant, containing no pore clogging latex, when mixed with dust salvaged from grinding process forms a paste that reacts with calcium hydroxide in concrete that hardens when surface imperfections are filled.

C. Protective Cover: Non-woven, puncture and tear resistant, polypropylene fibers laminated with a multi-ply, textured membrane, not less than 18 mils in thickness.

2.4 POLISHING EQUIPMENT

A. Field Grinding and Polishing Equipment:
   1. Variable speed, multiple head, counter-rotating, walk-behind machine with not less than 600 pounds of down pressure on grinding or diamond polishing pads.
   2. If dry grinding, honing, or polishing, use dust extraction equipment with flow rate suitable for dust generated, with squeegee attachments.

B. Edge Grinding and Polishing Equipment: Hand-held or walk-behind machines which produces same results, without noticeable differences, as field grinding and polishing equipment.

C. Burnishing Equipment: High speed walk-behind or ride-on machines capable of generating 2400 revolutions per minute and with sufficient head pressure of not less than 20 pounds to raise floor temperature by 20 degrees F.

D. Metal Bonded Pads: Grinding pads with embedded industrial grade diamonds of varying grits fabricated for mounting on equipment.

E. Resin Bonded Pads: Polishing pads with embedded industrial grade diamonds of varying grits fabricated for mounting on equipment.

F. Burnishing Pads: Maintenance pads for use with high speed burnishing equipment.

2.5 CONCRETE MIX DESIGN

A. Refer to concrete specifications.

B. Do not add calcium chloride to mix as it causes mottling and surface discoloration.

C. Supplemental admixtures shall not be used unless approved by manufacturer. Mix design is to include high range water reducer and ¾# of Propex 150 fiber (stealth) or Architect/Engineer approved equal.

.

2.6 BROAD CAST AGGREGATES

1. Blue Glass: match Architect's sample #3 sized aggregate with broadcast spread at rate of 0.50lbs/SF

2. Black Aggregate/Glass: #2 sized black aggregate or black glass with broadcast rate of 0.20lbs/SF.

3. Black Beauty Aggregate integral to the concrete mix, rate of 10% of the cement mix design, or less based on the architect approved sample.

PART 3 - EXECUTION

3.1 CONCRETE INSTALLATION

A. Install concrete according to requirements of Division 3 Section “Cast-In-Place Concrete.”

B. Do not add water to concrete mix in the field.

C. Surfaces shall be finished uniformly with the following finish:
1. Broad Cast Aggregate: TO BE PERFORMED BY POLISHING CONTRACTOR WORKING ALONG SIDE CONCRETE FINISHING CONTRACTOR. Field broadcast aggregate to top layer of concrete to achieve variegated colored finish and aggregate color aggregate should be applied at a consistent rate to provide a relative uniform appearance of the aggregate application to match mock up sample.
2. Trowel: Precautions should be taken to ensure that the surface is uniformly troweled so that it will not be slippery. Do not over-trowel or burnish the surface.
3. Finish concrete shall have a minimum Floor Flatness rating of at least 50.
4. Finish concrete shall be cured a minimum of 7 days or at which point equipment can be put on the slab and provided the initial grinding does not displace aggregate. Initial grind may be performed as soon as grinders will cut the concrete without tearing surface of concrete pending test area results. A grinding test area shall be established that is not visible to public or that will be concealed to confirm acceptability of proceeding with grinding operations. Final polish may not be performed until concrete is cured a minimum of 28 days old
5. Ground and Polished Concrete Surface: Precautions should be taken to insure the surface is within in tolerance to perform this function.

3.2 CURING

A. Concrete: Apply wet curing blanket for concrete according to manufacturer's instructions using manufacturer’s recommended application techniques. Cured Concrete floor shall be wet cleaned with an Auto Scrubber as the wet blankets are removed to remove any surface laitance.

B. Precautions shall be taken in hot weather to prevent plastic cracking resulting from excessively rapid drying at surface as described in CIP 5 *Plastic Shrinkage Cracking* published by the National Ready Mixed Concrete Association.

3.3 EXAMINATION

A. Acceptance of Surfaces and Conditions:
   1. Examine substrates to be polished for compliance with requirements and other conditions affecting performance.
   2. Proceed only when unsatisfactory conditions have been corrected in a manner complying with Contract Documents.
   3. Starting work within a particular area will be construed as acceptance of surface conditions.

3.4 PREPARATION

A. Cleaning New Concrete Surfaces:
   1. Prepare and clean concrete surfaces.
   2. Provide sound concrete surfaces free of laitance, glaze, and efflorescence, curing contaminants incompatible with liquid applied products and polishing.

3.5 MECHANICALLY POLISHED CONCRETE CUT AND SHINE LEVELS

A. Cut Level (Depth of cut)

   1. Grade 3 – heavy exposure of course aggregate; remove no more than 1/3” of concrete surface by grinding and polishing resulting in a majority of exposure displaying medium aggregate with small amount of large aggregate at random locations in accordance with Concrete Polishing Association of America standards

B. Shine Level

   1. Class 3 – 1500 grit polish high gloss
   2. Procedure: Not less than 6 steps with full refinement of each diamond pad up to 1500 grit resin bonded pad with one application of densifier.
   3. Gloss Reading: Not less than 60 according to ASTM E 430 before polish guard application.

C. Polished concrete finish coat
   1. At a distance of 100 feet, the floor will reflect images from side lighting. Sheen shall be as measured by Horiba IG-620 Gloss checker – 60 degree film gloss valve = 80 minimum or ASTM E430.
   2. Apply two applications of SCOFIELD® Finish Coat. Guard W

D. Specified for project
   Grade: 3 heavy exposure of course aggregate
   Class: 3 grit polish high gloss
   Guard-W Finish Coat applications: (2) two coats minimum.

3.6 MECHANICALLY POLISHED CONCRETE APPLICATION

A. Applicator shall examine the areas and conditions under which work of this section will be provided and the General Contractor shall correct conditions detrimental to the timely and proper completion of the work and the Applicator shall not proceed until unsatisfactory conditions are resolved.

B. Installer and manufacturer's representative will examine surfaces receiving concrete finish and polishing system.
   a. Verify that surfaces conform to product manufacturer's requirements for substrate conditions.
   b. Verify floor is free of curing membrane, bond-breaker, concrete laitance, and will absorb water per water absorbency test.

C. Sequence of Polishing: Perform initial grind before interior walls are framed and constructed. Perform final grinding and polishing after partition studs are erected, but before gypsum board is installed.

D. Treating Surface Imperfections:

1. Mix patching compound and grout material with dust created by grinding operations to match color of adjacent concrete surface.
2. Fill surface imperfections including, but not limited to, holes, surface damage, small and micro cracks, air holes, pop-outs, and voids.
3. Work compound and treatment until color differences between concrete surface and filled surface imperfections are not reasonably noticeable when viewed from (10) ten feet away under lighting conditions that will be present after construction.

E. Grout Grinding:

1. Use grinding equipment and appropriate grit grinding pads.
2. While applying fresh grout material prior to, grind concrete in direction perpendicular to initial grinding to remove scratches.
3. Vacuum floor using squeegee vacuum attachment after each pass.

F. Honing:

1. Use grinding equipment with resin bonded grinding pads.
2. Grind concrete in one direction starting with 50 grit pad and make as many sequential passes required to remove scratches, each pass perpendicular to previous pass, up to 400 grit pad reaching maximum refinement with each pass before proceeding to finer grit pads.
3. Auto scrub or vacuum floor using squeegee vacuum attachment after each pass.

G. Grind the concrete floor to within (2) two inches of walls up to 150 grit metal bond diamond pads removing construction debris, floor slab imperfections. The starting grinding pad grit will be determined by condition of concrete slab and Grade finish specified.

1. Use polishing equipment with resin bonded polishing and burnishing pads.
2. Begin polishing in one direction starting with 150 grit pad.
3. Make sequential passes with each pass perpendicular to previous pass using finer grit pad with each pass, up to 1500 grit.
4. Achieve maximum refinement with each pass before proceeding to finer grit pads.
5. Auto scrub or vacuum floor using squeegee vacuum attachment after each pass.

6. Continue polishing until gloss appearance, as measured according to ASTM E 430, matches approved field mock-ups, and reflectance meets or exceeds the provisions outlined in the specifications, or as approved by the Architect.

H. (If specified) Grind the edges up to 150 grit grinding pads removing all the scratches from the previous grit. Vacuum the floor thoroughly after each grind using a squeegee vacuum attachment.

I. Apply densifying impregnator undiluted at approximately 200-400 square feet per gallon using a stiff, long bristled broom. Cover the entire area liberally. Using a broom, work the densifier into the substrate for 30 minutes. During this 30-minute period, continually keep the substrate wet with densifier. Squeegee excess material off the floor. Remove all residue by scrubbing and flushing surface with clean water. Allow 12 to 24 hours for full cure.

J. Polish the floor, to the specified sheen level, with phenolic resin bonded diamond grits, first polishing the edges (if specified) with pads of the same grit and then the field of the floor removing all scratches from the previous grit. After each polish, clean the floor thoroughly using clean water and an auto scrubber or a mop and a wet vacuum.

K. Apply Guard-W Finish coat at 1000 square feet per gallon. Allow to dry 1-2 hours.

L. Using a high speed (2400 rpm) burnishing machine equipped with [1500] grit diamond impregnated pads, buff the surface to a high shine.

M. Apply second application of Guard-W Finish Coat at 1000 sq. per gallon. Allow to dry 1-2 hours.

N. Using a high speed (2400 rpm) burnishing machine equipped with [1500] grit diamond impregnated pads, buff the surface to a high shine.

O. Upon completion, the work shall be ready for final inspection and acceptance by the Architect.

P. Change in gloss to 80 as measured using a gloss meter in accordance with Horiba IG-320 Glass Checker or 60 ASTM E 430 before polish guard application.

3.7 JOINT FILLER

A. Prime and fill with manufacturer's approved polyurea shore 55 or 65 semi rigid joint filler epoxy joint sealant those joints that require the application of joint sealant after the application of the finishing system or as directed by the manufacturer or Architect.

3.8 TOLERANCES

A. Minor variations in appearance of polished colored concrete, which are similar to natural variations in color and appearance of unpolished concrete, are acceptable.

3.9 CLEANING

A. The work area shall be kept clean and free of debris at all times.

B. Remove slurry and dust from adjoining surfaces as necessary.

C. Dispose of material containers in accordance with local regulations and sustainable guide lines.

D. Protect finished work until fully cured per manufacturer’s recommendations.

3.10 PROTECTION

A. Protect concrete floors prior to as well as after the polishing process with ProGuard Dura Cover Protective Blankets (877-977-6482)

3.11 FIELD QUALITY CONTROL

A. Field Testing: Engage a qualified walkway auditor to perform field testing according to NFSI 101-A to determine if polished concrete floor finish complies with specified static coefficient of friction.

B. Confirming gloss level as per specified requirements.

3.12 CLOSEOUT ACTIVITIES

A. Maintenance Training: CPAA Master Craftsman shall train Owner's designated personnel in proper procedures for maintaining polished concrete floor.

END OF SECTION 03360

SECTION 03481 – PRECAST CONCRETE BOLLARDS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes:

1. Precast concrete bollards.

B. Related Requirements:

1. 03300 Cast-In-Place Concrete.
2. 05500 Metal Fabrications.

1.3 REFERENCE STANDARDS

A. ASTM C666 – Standard Test Method for Resistance of Concrete to Rapid Freezing and Thawing.

B. ASTM C825 – Standard Specifications for Precast Concrete Barriers.

C. ASTM C979 – Standard Specification for Pigments for Integrally Colored Concrete.

1.4 SUBMITTALS

A. Comply with Section 01330- Submittal Procedures.

B. Product Data: Provide for each type of bollard specified, including shop drawing showing reinforcing & bollard setting method.

C. Color & Finish Samples: Submit specified colors and finishes for selection and approval by the Architect.

D. Maintenance Data: Submit manufacturer’s field touch-up, cleaning and maintenance instructions

E. Warranty Documentation: Submit sample of manufacturer’s warranty

1.5 QUALITY ASSURANCE

A. Comply with Section 01400 – Quality Requirements and Tasting Laboratory Services.

1.6 DELIVERY, STORAGE AND HANDLING

A. Comply with Section 016600 – Materials and Equipment

B. Protect bollards and accessories during delivery, storage, and handling.

1.7 WARRANTY

A. Comply with Section 01740 – Warranties and Bonds and 01770 Closeout Procedures.

B. Provide manufacturer's standard warranty against defects in materials and workmanship.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design/Manufacturer: Precast Keystone 4610 Enterprise Ave Naples, Florida 34104, phone (239) 435-3575, website https://precastkeystone.com/, email info@precastkeystone.com

B. Substitutions Comply with provisions of Section 01600 Materials and Equipment for substitution procedures. Alternate manufacturers that meet the requirements of the Contract Documents and approval of the Architect will be considered.

2.2 PRECAST CONCRETE BOLLARDS

A. Materials:

1. Concrete: Precast concrete with 5000 psi minimum compressive strength.
   a. Components: ASTM C150, Type I or III cement, Shell Black Beauty & Lite Gray Limestone and Shell aggregate to match the concrete columns exposed aggregate.
   b. Pigments: ASTM C979, natural mineral oxide pigments, temperature-stable and non-fading.
2. Reinforcing: ASTM A 615/A 615M, Grade 60 (Grade 420), deformed or 6x6x10 gauge wire mesh (where needed), with minimum of 1" concrete cover.
3. Steel Pipe: ASTM A 500, Grade B.
4. Cement- Very light gray color or white- 7-7½ bag per cubic yard; color to be selected by Architect.

5. Chemically entrained air (6-8%) for salt and chloride resistant.
6. Cured indoors under plastic cover before exposure to outside air.
7. Finish- Exposed aggregate – Light to medium sand blasted finish
8. Sealer – Manufacturers standard non-gloss-clear-penetrating sealer, minimum of two (2) coats.
9. Lifting ring – Integral lifting ring

B. Installation: Sleeve over galvanized metal pipe bollard.

2.3 ACCESSORIES

A. Installation Materials:

1. Grout: Non-shrink, non-ferrous grout.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine paving of other substrates for compliance with manufacturer's requirements for placement and location of embedded items, condition of substrate, and other conditions affecting installation of bollards.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Comply with manufacturer's installation instructions and setting drawings.

B. Damaged, cracked, chipped, deformed or marred bollards are not acceptable. Field touch-up minor imperfections in accordance with manufacturer's instructions.

C. Precast Concrete Bollards: Install according to manufacturer's instructions:

1. Sleeved for steel substrates: Support bollard during placement and grout cure.

3.3 CLEANING & PROTECTION

A. Protect bollards against damage.

B. Immediately prior to Substantial Completion, clean bollards in accordance with manufacturer's instructions to remove dust, dirt, adhesives, and other foreign materials.

C. Touch up damaged finishes according to manufacturer's instructions.

3.4 CLOSEOUT ACTITIVIES

A. Provide executed warranty.

END OF SECTION 03481

SECTION 04412 – THIN SET STONE VENEER

PART 1 – GENERAL

A. Drawings and general provisions of the Contract, including General Provisions and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.1 SECTION INCLUDES

A. Stone cladding, siding and veneer of interior and exterior walls as indicated on the Drawings.

B. Stone accent trim and shapes.

1.2 RELATED SECTIONS

A. Section 04810 - Unit Masonry Assemblies (Concrete Unit Masonry): Masonry supporting walls.

B. Section 05500 - Metal Fabrications: Galvanized shelf angles, structural supports, anchors and other built-in components for building into natural thin veneer stone.

C. Section 07900 - Caulking and Sealants: Sealant and joint filler for perimeter and control joints.

D. Section 09180 - Cement Plaster Stucco: Metal lath and scratch coat back-up over supporting walls.

1.3 REFERENCES

A. American National Standards Institute (ANSI):

1. ANSI A118.4 – Specifications for Latex-Portland Cement Mortar.

B. American Society for Testing and Materials (ASTM):

1. ASTM C 39 – Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens.
2. ASTM C 67 – Standard Test Methods for Sampling and Testing Brick and Structural Clay Tile.
3. ASTM C 144 – Standard Specification for Aggregate for Masonry Mortar.
4. ASTM C 177 – Standard Test Method for Steady-State Head Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus.
5. ASTM C 207 – Standard Specification for Hydrated Lime for Masonry Purposes.
6. ASTM C 270 – Standard Specification for Mortar for Unit Masonry.
7. ASTM C 482 – Standard Test Method for Bond Strength of Ceramic Tile to Portland Cement.

8. ASTM C 567 – Standard Test Method for Determining Density of Structural Lightweight Concrete.
9. ASTM C 847 – Standard Specification for Metal Lath.
10. ASTM C 932 – Standard Specification for Surface-Applied Bonding Compounds for Exterior Plastering.
11. ASTM C 979 – Standard Specification for Pigments for Integrally Colored Concrete.
12. ASTM C 1032 – Standard Specification for Woven Wire Plaster Base.
13. ASTM C 1059 – Standard Specification for Latex Agents for Bonding Fresh To Hardened Concrete.
14. ASTM D 226 – Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing.
15. ASTM C1063 – Standard Specification for Installation of Lathing and Furring to Receive Interior and Exterior Portland Cement-Based Plaster
16. ASTM C1329 – Standard specification for Portland cement
17. ASTM C578 – Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation
18. ASTM C1289 – Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board
19. ASTM E2556/E2556M – Standard Specification for Vapor Permeable Flexible Sheet Water-Resistive Barriers Intended for Mechanical Attachment

C. Other Standards:

1. UBC Standard No. 14-1, Kraft Waterproof Building Paper
2. ICC AC38 Acceptance Criteria for Water Resistive Barriers
3. UU-B-790 Building Paper, Vegetable Based, Kraft, waterproofed, water repellent and fireproof

1.4 SUBMITTALS

A. Submit under provisions of Section 01330 Submittal Procedures.

B. Product Data:

1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.
4. Sealers as per manufacturer’s requirements.

C. Selection Samples: Submit mortar color samples.

D. Verification Samples: Submit 2 manufacturer’s full-size samples of natural veneer stone for each pattern specified, and sealer when applicable

E. Verification Samples: Following initial sample selection submit “laid-up” sample board using the selected stone and mortar materials and showing the full range of colors expected in the finished Work; minimum sample size: 3 by 3 feet (1 by 1 m).

F. Quality Assurance/Control Submittals:

1. Qualifications:

a) Proof of manufacturer qualifications.
b) Proof of installer qualifications.

2. Regulatory Requirements: Evaluation reports.
3. Veneer manufacturer's installation instructions.
4. Installation instructions for other materials.

1.5 QUALITY ASSURANCE

A. Stone Producer Qualifications: Company specializing in manufacturing products specified in this section with minimum five years documented experience.

B. Stone Installer Qualifications: Company specializing in performing Work of this section with minimum five years documented experience.

C. Mock-Up: Provide a mock-up for evaluation of stone, mortar color and application workmanship.

1. Finish areas designated by Architect and Owner.
2. Do not proceed with remaining work until Architect approves workmanship, color, and sheen.
3. Refinish mock-up area as required to produce acceptable work.

D. Expansion Joints: Provide expansions joints in accordance with details and as recommended by manufacturer. Confirm locations and frequency with Architect before beginning work.

E. Pre-install Meeting.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Store stone on pallets or wooden crates. Pallet shall be shrink-wrapped.

1.7 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install natural stone veneer under environmental conditions outside manufacturer's limits.

B. Hot and Cold Weather Requirements: ACI 530.1/ASCE 6/TMS 602.

C. Air Temperature: 40 degrees F or above during installation.

D. Mortar Mixing Water: Heat mortar mixing water when air temperature falls below 50 degrees F.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturer: Eldorado Stone or Architect and Owner approved equal.

B. Requests for substitutions will be considered in accordance with provisions of Section 01600.

2.2 VENEER STONE

A. Veneer Unit properties: Precast veneer units consisting of portland cement, lightweight aggregates, and mineral oxide pigments.

1. Compressive Strength: ASTM C 192 and ASTM C 39, 5 sample average: greater than 1,800 psi (12.4MPa).
2. Shear Bond: ASTM C 482: 50 psi (345kPa), minimum.
3. Freeze-Thaw Test: ASTM C 67: Less than 3 percent weight loss and no disintegration.
4. Thermal Resistance: ASTM C 177: 0.473 at 1.387 inches thick
5. Weight per square foot: 2014 FBC, ASTM C1670, 15 pounds, saturated.

B. Sizes and Shapes:

1. Stone Veneer. Broad range of colors including brown, tan, gray, buff, pink, yellow, white and black.
2. Split faces. Commonly used as an architectural stone siding for interior and exterior veneer applications.
3. Adhered Thin Veneer - 1.5 inch thick (plus or minus 0.25 inches). Lightweight (less than 15 lbs per square foot), precast stone that does not require a supporting masonry shelf. Used for interior or exterior applications such as siding, interior veneer and fireplaces:

    a) Flats.
    b) Pre-Cut Corners for the appearance of full depth stone
    c) Trim & Caps
    d) Mantels

2.3 ACCESSORIES

A. Expanded Metal Lath Paper Backed: ASTM C847; galvanized, self-furring mesh minimum 2.5 lb, backed with paper.

B. Expanded Metal Lath: ASTM C847, galvanized, self-furring, minimum 2.5 lb or 18 gauge.

C. Lath Anchorage: Tie wire, nails, screws and other metal supports, galvanized, of type and size to suit application and to rigidly secure materials in place.

D. Setting buttons or shims: Lead or plastic.

E. Joint Sealants and Joint Fillers: As specified in Section 07900.

2.4 ADHERED MASONRY VENEER INSTALLATION MATERIALS AND ACCESSORIES

A. Air and Water Barrier Membrane: LATICRETE® Air & Water Barrier ** to be thin, cold applied, single component liquid and load bearing. Waterproofing Membrane to be non-toxic, non-flammable, and non-hazardous during storage, mixing, application and when cured or approved equal:

1. Air Barrier Test (AC 212): Pass
2. Air Permeance (ASTM E2178): Pass
3. Elongation @ break (ASTM D751): 20-30%
4. 7 day Tensile Strength (ANSI A118.10): >265 psi (1.8 MPa)
5. 7 day Shear Bond Strength (ANSI A118.10): >200 psi (1.4 MPa)
6. 28 Day Shear Bond Strength (ANSI A118.4): >214 psi (1.48 – 2.4 MPa)
7. Service Rating (TCA/ASTM C627): Extra Heavy
8. Total VOC Content: < 0.05 mg/m3

B. Epoxy Waterproofing Flashing Mortar: LATAPOXY® Waterproof Flashing Mortar to be 3 component epoxy, trowel applied specifically designed for use under adhered masonry veneer:

1. Breaking Strength (ANSI A118.10): 450-530 psi (3.1-3.6 MPa)
2. Waterproofness (ANSI A118.10): No Water penetration
3. 7 day Shear Bond Strength (ANSI A118.10): 110-150 psi (0.8-1 MPa)
4. 28 Day Shear Bond Strength (ANSI A118.10): 90-120 psi (0.6–0.83 MPa)
5. 12 Week Shear Bond Strength (ANSI A118.10): 110-130 psi (0.8-0.9 MPa)
6. Total VOC Content: <3.4 g/L
7. Color to match stone.

C. Cementitious backer board units: size, thickness and installation as specified by cement backer board manufacturer, complying with ANSI A118.9 at interior walls.

D. Latex-Portland Cement Mortar for leveling beds and scratch/plaster coats: LATICRETE MVIS Premium Mortar Bed or approved equal to meet the following physical requirements:

1. Compressive Strength (ANSI A118.4 Modified): >4000 psi (27.6 MPa)
2. Water Absorption (ANSI A118.6): ≤ 5%
3. Service Rating (TCA/ASTM C627): Extra Heavy
4. Smoke & Flame Contribution (ASTM E84 Modified): 0
5. Total VOC Content: < 0.05 mg/m^3

6. Color to match stone

E. Latex Portland Cement Mortar: MVIS Hi Bond Veneer Mortar ** to be weather, frost, shock resistant, non-flammable and meet the following physical requirements:

1.Compressive strength (ANSI A118.4): >2500 psi (17.2 MPa)
2. Bond strength (ANSI A118.4): >450 psi (3.1 MPa)
3. Smoke & Flame Contribution (ASTM E84 Modified): 0
4. Total VOC Content: < 0.05 mg/m^3

F. Latex Portland Cement Pointing Mortar / Grout: MVIS Pointing Mortar to be weather, frost and shock resistant, as well as meet the following physical requirements:
1. Compressive Strength (ASTM C91): 3500 psi (24.1 MPa)
2. Smoke & Flame Contribution (ASTM E84 Modified): 0
3. Total VOC Content: < 0.00 mg/m^3

G. Expansion and Control Joint Sealant: MVIS Silicone Sealant to be a one component, neutral cure, exterior grade silicone sealant and meet the following requirements:

1. Tensile Strength (ASTM C794): 280 psi (1.9 MPa)
2. Hardness (ASTM D751; Shore A): 25 (colored sealant) /15 (clear sealant)
3. Weather Resistance (QUV Weather-ometer): 10000 hours (no change)

H. Spot Bonding Epoxy Adhesive: LATAPOXY 310 Stone Adhesive (Standard or Rapid Grade) for installing adhered masonry veneer, brick and stone over vertical and overhead surfaces shall be high strength, high temperature resistant, non-sag and shall meet the following physical requirements:

1. Thermal Shock Resistance (ANSI A118.3): >1000 psi (6.9 MPa)
2. Water Absorption (ANSI A118.3): 0.1 %
3. Compressive Strength (ANSI A118.3): >8300 psi (57.2 MPa)
4. Shear Bond Strength (ANSI A118.3 Modified): >730 psi (5 MPa)

PART 3 EXECUTION

3.1 EXAMINATION AND PREPARATION

A. Do not begin installation until backing structure is plumb, bearing surfaces are level and substrates are clean and properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

C. Examination: Examine conditions and proceed with work in accordance with Section 01700.
1. Verify that field conditions are acceptable and are ready to receive work.
2. Verify items provided by other Sections of work are properly sized and located.
3. Verify that built in items are in proper location and ready for roughing into masonry work.
4. Verify correct product prior to installation.

5. Verify that masonry and concrete substrates do not have residual coatings (paint, bond breaker, curing compounds, etc.) present, which may affect bonding of mortar to substrate.

    a. Install metal lath if residual coatings are present on substrate.

6. Consult Owner and manufacturer if deficiencies exist. Correct deficiencies in accordance with stone manufacturer's recommendations.

D. Protect surrounding area from possible damage during installation work.

E. Initiating installation constitutes Installer's acceptance of existing surfaces and substrate.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.3 INSTALLATION OF ADHERED MASONRY THIN VENEER - MORTARED JOINTS

A. General: Install in accordance with current versions of American National Standards Institute, Inc. (ANSI) "A108 American National Standard Specifications for Installation of Ceramic Tile" and TCNA "Handbook for Ceramic Tile Installation." Cut and fit adhered masonry veneer neatly around corners, fittings, and obstructions. Perimeter pieces to be minimum half unit of stone. Maintain masonry courses to uniform dimensions. Form vertical and horizontal joints of uniform thickness. Install divider strips at junction of flooring and dissimilar materials.

B. Lath & Plaster Method: Install cleavage membrane / water resistive barrier complying with current revision of ANSI A108.02 (3.8 Membrane or cleavage membrane). Install metal lath complying with the current revision of ANSI A108.01 (3.3 Requirements for lathing and portland cement plastering), ANSI A108.02 (3.6 Metal lath) and A108.1A (1.0 – 1.2, 1.4, & 5.1). Apply latex-portland cement mortar as scratch/leveling coat over wire lath, concrete or masonry in compliance with current revision of ANSI A108.01 (3.3.5.1) and A108.1A (1.4). Float surface of scratch/leveling coat plumb, true and allow mortar to set until firm. For installation of adhered masonry veneer follow Direct Adhere Method (§ 3.3 D).

C. Direct Adhere Method to Install Masonry Veneer: Install latex portland cement mortar in compliance with current revisions of ANSI A108.02 (3.11), A108.1B and ANSI A108.5. Use the appropriate trowel notch size to ensure proper bedding of the adhered masonry veneer, selected so that 100% coverage of the back surface of the Thin Adhered Veneer is achieved. Work the latex portland cement mortar into good contact with the substrate and comb with notched side of trowel. Spread only as much latex portland cement mortar as can be covered while the mortar surface is still wet and tacky. When installing large format (>8" x 8"/200mm x 200mm) units, spread latex portland cement mortar onto the back of (i.e. 'back-butter') each piece/unit in addition

to troweling latex portland cement mortar over the substrate. Beat each piece/unit into the latex portland cement mortar with a beating block or rubber mallet to insure 100% full bedding and flatness. Allow installation to set until firm. Clean excess latex portland cement mortar from adhered masonry veneer face and joints between pieces.

1. Pattern Bond:

    a. Layout work in advance and distribute color range of stone uniformly over total work area.
    b. Lay stone with face exposed.
    c. Take care to avoid concentration of any one color to any one wall surface.
    d. Maintain uniform joints, as stone allows.
    e. Do not use stacked vertical joints.

D. Expansion and Control Joints: Provide control or expansion joints as needed per the manufacturers installation requirements.

1. Substrate joints must carry through, full width, to surface of adhered masonry veneer.
2. Install expansion joints in adhered masonry veneer work over construction/cold joints or control joints in substrates.
3. Install expansion joints where adhered masonry veneer abut restraining surfaces (such as perimeter walls, curbs, columns), changes in plane and corners.
4. Joint width and spacing depends on application and should be determined by the project design team.
5. Joint width: ≥ ⅛” (3mm) and ≤ 1” (25mm).
6. Joint width: depth ~2:1 but joint depth must be ≥ ⅛” (3mm) and ≤ ½” (12mm).
7. Layout (field defined by joints): 1:1 length: width is optimum but must be ≤ 2:1. Remove all contaminants and foreign material from joint spaces/surfaces, such as dirt, dust, oil, water, frost, setting/pointing materials, sealers and old sealant/backer. Use LATICRETE Latasil™ 9118 Primer for underwater and permanent wet area applications, or for porous stone (e.g. limestone, sandstone etc.) installations. Install appropriate backing material (e.g. closed cell backer rod) based on expansion joint design and as specified in § 07920. Apply masking tape to face of adhered masonry veneer, brick or stone veneer. Use caulking gun, or other applicator, to completely fill joints with sealant. Within 5-10 minutes of filling joint, ‘tool’ sealant surface to a smooth finish. Remove masking tape immediately after tooling joint. Wipe smears or excess sealant off the face of adhered masonry veneer or other absorptive surfaces immediately.

G. Adjusting: Correction of defective work for a period of one (1) year following substantial completion, return to job and correct all defective work. Defective work includes, without limitation, adhered masonry veneer units stones broken in normal abuse due to deficiencies in setting bed, loose grout/pointing mortar, and all other defects which may develop as a result of poor workmanship.

1. Control and Expansion Joints:

a. Keep joints open and free of debris.
b. Coordinate control joints as specified in Section 07 90 00 for sealant performance.

2. Sealant Recesses:
   a. Provide open joints 3/4 inch deep and 1/4 inch wide, where masonry meets doors, windows, and other exterior openings.
   b. Coordinate sealant joints as specified in Section 07 90 00 for sealant performance.

3. Cutting and Fitting:
   a. Cut and fit thin veneer stone for chases, pipes, conduit, sleeves, grounds, and other penetrations and adjacent materials.
   b. Coordinate with other work to provide correct size, shape, and location.

4. During progress of the work, cover top of unfinished stone masonry work for protection from weather.

3.4 INSTALLATION BUILDING VENEER

A. Install building veneer stone and mortar in accordance with manufacturer's instructions and ACI 530.1/ASCE 6/TMS 602.

B. Maintain masonry courses to uniform dimensions. Form vertical and horizontal joints of uniform thickness.

3.5 CLEANING

A. Keep face of stone free of mortar as work progresses.

B. If residual mortar is on face of stone, allow to dry partially and brush mortar off surface and sponge off residue.

C. When work is completed and mortar has set for 2 to 3 days, clean surface from top to bottom using mild masonry detergent acceptable to natural stone manufacturer.

D. Do not use harsh cleaning materials or methods that could damage stone.

E. Do not use metal brushes or acids for cleaning.

3.6 PROTECTION

A. Protect installed natural stone veneer to ensure that, except for normal weathering, stone will be without damage or deterioration at time of Substantial Completion.

B. Touch-up, repair, or replace damaged stone before Substantial Completion.

END OF SECTION 04412

SECTION 04810 - UNIT MASONRY ASSEMBLIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
1. Concrete masonry units.
2. Mortar and grout.
3. Steel reinforcing bars.
4. Masonry-joint reinforcement.
5. Ties and anchors.
6. Miscellaneous masonry accessories.

B. Products Installed but not Furnished under This Section:
1. Cast-stone trim in unit masonry.

C. Related Requirements:
1. Section 051200 "Structural Steel Framing" for installing anchor sections of adjustable masonry anchors for connecting to structural steel frame.
2. Section 07190 "Water Repellents" for water repellents applied to unit masonry assemblies.
3. Section 07620 "Sheet Metal Flashing and Trim" for exposed sheet metal flashing and for furnishing manufactured reglets installed in masonry joints.

1.3 DEFINITIONS

A. CMU(s): Concrete masonry unit(s).

B. Reinforced Masonry: Masonry containing reinforcing steel in grouted cells.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For the following:

1. Masonry Units: Show sizes, profiles, coursing, and locations of special shapes.
2. Precast Concrete Sill Units: Show sizes, profiles, and locations of each precast unit required.
3. Reinforcing Steel: Detail bending, lap lengths, and placement of unit masonry reinforcing bars. Comply with ACI 315. Show elevations of reinforced walls.
4. Fabricated Flashing: Detail corner units, end-dam units, and other special applications.

1.6 INFORMATIONAL SUBMITTALS

A. List of Materials Used in Constructing Mockups: List generic product names together with manufacturers, manufacturers' product names, model numbers, lot numbers, batch numbers, source of supply, and other information as required to identify materials used. Include mix proportions for mortar and grout and source of aggregates.
   1. Submittal is for information only. Receipt of list does not constitute approval of deviations from the Contract Documents unless such deviations are specifically brought to the attention of Architect and approved in writing.

B. Qualification Data: For testing agency.

C. Material Certificates: For each type and size of the following:
   1. Masonry units.
      a. Include data on material properties.
      b. For masonry units used in structural masonry, include data and calculations establishing average net-area compressive strength of units.
   2. Cementitious materials. Include name of manufacturer, brand name, and type.
   3. Mortar admixtures.
   4. Preblended, dry mortar mixes. Include description of type and proportions of ingredients.
   5. Grout mixes. Include description of type and proportions of ingredients.
   6. Reinforcing bars.
   7. Joint reinforcement.
   8. Anchors, ties, and metal accessories.

D. Mix Designs: For each type of mortar and grout. Include description of type and proportions of ingredients.
   1. Include test reports for mortar mixes required to comply with property specification. Test according to ASTM C 109/C 109M for compressive strength, ASTM C 1506 for water retention, and ASTM C 91/C 91M for air content.
   2. Include test reports, according to ASTM C 1019, for grout mixes required to comply with compressive strength requirement.

E. Statement of Compressive Strength of Masonry: For each combination of masonry unit type and mortar type, provide statement of average net-area compressive strength of masonry units, mortar type, and resulting net-area compressive strength of masonry determined according to TMS 602/ACI 530.1/ASCE 6.

F. Cold-Weather and Hot-Weather Procedures: Detailed description of methods, materials, and equipment to be used to comply with requirements.

1.7 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM C 1093 for testing indicated.

B. Mockups: Build mockups to verify to set quality standards for materials and execution.
   1. Build mockup of typical wall area.
   2. Build mockups for typical exterior and interior walls in sizes approximately 72 inches long by 48 inches high by full thickness.
      a. Include lower corner of window opening, framed with precast sill units, at upper corner of exterior wall mockup. Make opening approximately 12 inches wide by 16 inches high.
   3. Subject to compliance with requirements, approved mockups may become part of the completed Work.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.

B. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

C. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.

D. Deliver preblended, dry mortar mix in moisture-resistant containers. Store preblended, dry mortar mix in delivery containers on elevated platforms in a dry location or in covered weatherproof dispensing silos.

E. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.9 FIELD CONDITIONS

A. Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.
   1. Extend cover a minimum of 24 inches down both sides of walls, and hold cover securely in place.
   2. Where one wythe of multiwythe masonry walls is completed in advance of other wythes, secure cover a minimum of 24 inches down face next to unconstructed wythe and hold cover in place.

B. Do not apply uniform floor or roof loads for at least 12 hours and concentrated loads for at least three days after building masonry walls or columns.

C. Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.
   1. Protect base of walls from rain-splashed mud and from mortar splatter by spreading coverings on ground and over wall surface.
   2. Protect sills, ledges, and projections from mortar droppings.
   3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
   4. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.

D. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.
   1. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40 deg F and higher and will remain so until masonry has dried, but not less than seven days after completing cleaning.

E. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in TMS 602/ACI 530.1/ASCE 6.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations for Masonry Units: Obtain exposed masonry units of a uniform texture and color, or a uniform blend within the ranges accepted for these characteristics, from single source from single manufacturer for each product required.

B. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from single manufacturer for each cementitious component and from single source or producer for each aggregate.

2.2 PERFORMANCE REQUIREMENTS

A. Provide structural unit masonry that develops indicated net-area compressive strengths at 28 days.
   1. Determine net-area compressive strength of masonry from average net-area compressive strengths of masonry units and mortar types (unit-strength method) according to TMS 602/ACI 530.1/ASCE 6.
   2. Determine net-area compressive strength of masonry by testing masonry prisms according to ASTM C 1314.

2.3 UNIT MASONRY, GENERAL

A. Masonry Standard: Comply with TMS 602/ACI 530.1/ASCE 6, except as modified by requirements in the Contract Documents.

B. Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated. Do not use units where such defects are exposed in the completed Work and will be within 20 feet vertically and horizontally of a walking surface.

C. Fire-Resistance Ratings: Comply with requirements for fire-resistance-rated assembly designs indicated.
   1. Where fire-resistance-rated construction is indicated, units shall be listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction.

2.4 CONCRETE MASONRY UNITS

A. Shapes: Provide shapes indicated and as follows, with exposed surfaces matching exposed faces of adjacent units unless otherwise indicated.
   1. Provide special shapes for lintels, corners, jambs, sashes, movement joints, headers, bonding, and other special conditions.
   2. Provide bullnose units for outside corners unless otherwise indicated.

B. CMUs: ASTM C 90.
   1. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of 2150 psi.
   2. Density Classification: Normal weight.
   3. Size (Width): Manufactured to dimensions 3/8 inch less than nominal dimensions.
   4. Exposed Faces: Provide color and texture matching the range represented by Architect's sample.
   5. Faces to Receive Plaster: Where units are indicated to receive a direct application of plaster, provide textured-face units made with gap-graded aggregates.

2.5 MASONRY LINTELS

A. General: Provide one of the following:

B. Masonry Lintels: Prefabricated or built-in-place masonry lintels made from bond beam CMUs matching adjacent CMUs in color, texture, and density classification, with reinforcing bars placed as indicated and filled with coarse grout. Cure precast lintels before handling and installing. Temporarily support built-in-place lintels until cured.

2.6 PRECAST SILL UNITS

A. Precast Concrete: Compressive strength 4,000 - 6,000 PSI at 28 days, with portland white cement conforming to ASTM C-150.

B.

1. Reinforcing M13 #4, Grade 60 rebar.
2. Aggregate-Fine carefully graded and washed natural sand conforming to ASTM C-33.
3. Shape as indicated on the drawings.

2.7 MORTAR AND GROUT MATERIALS

A. Portland Cement: ASTM C 150/C 150M, Type I or II, except Type III may be used for cold-weather construction. Provide natural color or white cement as required to produce mortar color indicated.
   1. Alkali content shall not be more than 0.1 percent when tested according to ASTM C 114.

B. Hydrated Lime: ASTM C 207, Type S.

C. Portland Cement-Lime Mix: Packaged blend of portland cement and hydrated lime containing no other ingredients.
   1. Formulate blend as required to produce color indicated or, if not indicated, as selected from manufacturer's standard colors.
   2. Pigments shall not exceed 10 percent of portland cement by weight.

D. Aggregate for Mortar: ASTM C 144.
   1. For mortar that is exposed to view, use washed aggregate consisting of natural sand or crushed stone.
   2. For joints less than 1/4 inch thick, use aggregate graded with 100 percent passing the No. 16 sieve.
   3. White-Mortar Aggregates: Natural white sand or crushed white stone.
   4. Colored-Mortar Aggregates: Natural sand or crushed stone of color necessary to produce required mortar color.

E. Aggregate for Grout: ASTM C 404.

F. Epoxy Pointing Mortar: ASTM C 395, epoxy-resin-based material formulated for use as pointing mortar for glazed or pre-faced masonry units (and approved for such use by manufacturer of units); in color indicated or, if not otherwise indicated, as selected by Architect from manufacturer's colors.

G. Refractory Mortar Mix: Ground fireclay or non-water-soluble, calcium aluminate, medium-duty refractory mortar that passes ASTM C 199 test; or an equivalent product acceptable to authorities having jurisdiction.

H. Cold-Weather Admixture: Nonchloride, noncorrosive, accelerating admixture complying with ASTM C 494/C 494M, Type C, and recommended by manufacturer for use in masonry mortar of composition indicated.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
      a. BASF Corporation.
      b. Euclid Chemical Company (The); an RPM company.

I. Water-Repellent Admixture: Liquid water-repellent mortar admixture intended for use with CMUs containing integral water repellent from same manufacturer.

J. Water: Potable.

2.8 REINFORCEMENT

A. Uncoated-Steel Reinforcing Bars: ASTM A 615/A 615M or ASTM A 996/A 996M, Grade 60.

B. Reinforcing Bar Positioners: Wire units designed to fit into mortar bed joints spanning masonry unit cells and to hold reinforcing bars in center of cells. Units are formed from 0.148-inch steel wire, hot-dip galvanized after fabrication. Provide units designed for number of bars indicated.

C. Masonry-Joint Reinforcement, General: ASTM A 951/A 951M.
1. Interior Walls: Hot-dip galvanized carbon steel.
2. Exterior Walls: Hot-dip galvanized carbon steel.
3. Wire Size for Side Rods: 0.187-inch diameter.
4. Wire Size for Cross Rods: 0.148-inch diameter.
5. Spacing of Cross Rods, Tabs, and Cross Ties: Not more than 16 inches o.c.
6. Provide in lengths of not less than 10 feet , with prefabricated corner and tee units.

D. Masonry-Joint Reinforcement for Single-Wythe Masonry: Ladder type with single pair of side rods.

2.9 TIES AND ANCHORS

A. General: Ties and anchors shall extend at least 1-1/2 inches into masonry but with at least a 5/8-inch cover on outside face.

B. Adjustable Anchors for Connecting to Structural Steel Framing: Provide anchors that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall.
1. Anchor Section for Welding to Steel Frame: Crimped 1/4-inch-diameter, hot-dip galvanized steel wire. Mill-galvanized wire may be used at interior walls unless otherwise indicated.
2. Tie Section: Triangular-shaped wire tie made from 0.187-inch- diameter, hot-dip galvanized steel wire. Mill-galvanized wire may be used at interior walls unless otherwise indicated.

C. Adjustable Anchors for Connecting to Concrete: Provide anchors that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall.
1. Connector Section: Dovetail tabs for inserting into dovetail slots in concrete and attached to tie section; formed from 0.060-inch-thick steel sheet, galvanized after fabrication.

2. Tie Section: Triangular-shaped wire tie made from 0.187-inch- diameter, hot-dip galvanized steel wire. Mill-galvanized wire may be used at interior walls unless otherwise indicated.
3. Corrugated-Metal Ties: Metal strips not less than 7/8 inch wide with corrugations having a wavelength of 0.3 to 0.5 inch and an amplitude of 0.06 to 0.10 inch made from 0.060-inch-thick steel sheet, galvanized after fabrication with dovetail tabs for inserting into dovetail slots in concrete.

D. Partition Top Anchors: 0.105-inch-thick metal plate with a 3/8-inch-diameter metal rod 6 inches long welded to plate and with closed-end plastic tube fitted over rod that allows rod to move in and out of tube. Fabricate from steel, hot-dip galvanized after fabrication.

E. Rigid Anchors: Fabricate from steel bars 1-1/2 inches wide by 1/4 inch thick by 24 inches long, with ends turned up 2 inches or with cross pins unless otherwise indicated.
1. Corrosion Protection: Hot-dip galvanized to comply with ASTM A 153/A 153M.

F.

2.10 MISCELLANEOUS MASONRY ACCESSORIES

A. Compressible Filler: Premolded filler strips complying with ASTM D 1056, Grade 2A1; compressible up to 35 percent; of width and thickness indicated; formulated from neoprene, urethane or PVC.

B. Preformed Control-Joint Gaskets: Made from styrene-butadiene-rubber compound, complying with ASTM D 2000, Designation M2AA-805 and designed to fit standard sash block and to maintain lateral stability in masonry wall; size and configuration as indicated.

C. Bond-Breaker Strips: Asphalt-saturated felt complying with ASTM D 226/D 226M, Type I (No. 15 asphalt felt).

2.11 MORTAR AND GROUT MIXES

A. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures unless otherwise indicated.
1. Do not use calcium chloride in mortar or grout.
2. Use portland cement-lime mortar unless otherwise indicated.
3. For exterior masonry, use portland cement-lime mortar.
4. For reinforced masonry, use portland cement-lime mortar.
5. Add cold-weather admixture (if used) at same rate for all mortar that will be exposed to view, regardless of weather conditions, to ensure that mortar color is consistent.

B. Preblended, Dry Mortar Mix: Furnish dry mortar ingredients in form of a preblended mix. Measure quantities by weight to ensure accurate proportions, and thoroughly blend ingredients before delivering to Project site.

C. Mortar for Unit Masonry: Comply with ASTM C 270, Proportion Specification. Provide the following types of mortar for applications stated unless another type is indicated.
   1. For masonry below grade or in contact with earth, use Type M.
   2. For reinforced masonry, use Type M or Type S.
   3. For mortar parge coats, use Type S or Type N.
   4. For exterior, above-grade, load-bearing and non-load-bearing walls and parapet walls; for interior load-bearing walls; for interior non-load-bearing partitions; and for other applications where another type is not indicated, use Type N.
   5. For interior non-load-bearing partitions, Type O may be used instead of Type N.
      a.

D. Grout for Unit Masonry: Comply with ASTM C 476.
   1. Use grout of type indicated or, if not otherwise indicated, of type (fine or coarse) that will comply with TMS 602/ACI 530.1/ASCE 6 for dimensions of grout spaces and pour height.
   2. Proportion grout in accordance with ASTM C 476, paragraph 4.2.2 for specified 28-day compressive strength indicated, but not less than 2000 psi.
   3. Provide grout with a slump of 8 to 11 inches as measured according to ASTM C 143/C 143M.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
   1. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
   2. Verify that foundations are within tolerances specified.
   3. Verify that reinforcing dowels are properly placed.
   4. Verify that substrates are free of substances that impair mortar bond.

B. Before installation, examine rough-in and built-in construction for piping systems to verify actual locations of piping connections.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Thickness: Build cavity and composite walls and other masonry construction to full thickness shown. Build single-wythe walls to actual widths of masonry units, using units of widths indicated.

B. Build chases and recesses to accommodate items specified in this and other Sections.

C. Leave openings for equipment to be installed before completing masonry. After installing equipment, complete masonry to match construction immediately adjacent to opening.

D. Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.

E. Select and arrange units for exposed unit masonry to produce a uniform blend of colors and textures. Mix units from several pallets or cubes as they are placed.

F. Matching Existing Masonry: Match coursing, bonding, color, and texture of existing masonry.

G. Wetting of Brick: Wet brick before laying if initial rate of absorption exceeds 30 g/30 sq. in. per minute when tested according to ASTM C 67. Allow units to absorb water so they are damp but not wet at time of laying.

3.3 TOLERANCES

A. Dimensions and Locations of Elements:
   1. For dimensions in cross section or elevation, do not vary by more than plus 1/2 inch or minus 1/4 inch.
   2. For location of elements in plan, do not vary from that indicated by more than plus or minus 1/2 inch.
   3. For location of elements in elevation, do not vary from that indicated by more than plus or minus 1/4 inch in a story height or 1/2 inch total.

B. Lines and Levels:
   1. For bed joints and top surfaces of bearing walls, do not vary from level by more than 1/4 inch in 10 feet, or 1/2-inch maximum.
   2. For conspicuous horizontal lines, such as lintels, sills, parapets, and reveals, do not vary from level by more than 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 1/2-inch maximum.
   3. For vertical lines and surfaces, do not vary from plumb by more than 1/4 inch in 10 feet, 3/8 inch in 20 feet, or 1/2-inch maximum.
   4. For conspicuous vertical lines, such as external corners, door jambs, reveals, and expansion and control joints, do not vary from plumb by more than 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 1/2-inch maximum.
   5. For lines and surfaces, do not vary from straight by more than 1/4 inch in 10 feet, 3/8 inch in 20 feet, or 1/2-inch maximum.
   6. For vertical alignment of exposed head joints, do not vary from plumb by more than 1/4 inch in 10 feet or 1/2-inch maximum.
   7. For faces of adjacent exposed masonry units, do not vary from flush alignment by more than 1/16 inch except due to warpage of masonry units within tolerances specified for warpage of units.

C. Joints:
   1. For bed joints, do not vary from thickness indicated by more than plus or minus 1/8 inch, with a maximum thickness limited to 1/2 inch.
   2. For exposed bed joints, do not vary from bed-joint thickness of adjacent courses by more than 1/8 inch.

3. For head and collar joints, do not vary from thickness indicated by more than plus 3/8 inch or minus 1/4 inch.
4. For exposed head joints, do not vary from thickness indicated by more than plus or minus 1/8 inch. Do not vary from adjacent bed-joint and head-joint thicknesses by more than 1/8 inch.
5. For exposed bed joints and head joints of stacked bond, do not vary from a straight line by more than 1/16 inch from one masonry unit to the next.

3.4 LAYING MASONRY WALLS

A. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.

B. Bond Pattern for Exposed Masonry: Unless otherwise indicated, lay exposed masonry in running bond; do not use units with less-than-nominal 4-inch horizontal face dimensions at corners or jambs.

C. Lay concealed masonry with all units in a wythe in running bond or bonded by lapping not less than 4 inches. Bond and interlock each course of each wythe at corners. Do not use units with less-than-nominal 4-inch horizontal face dimensions at corners or jambs.

D. Stopping and Resuming Work: Stop work by stepping back units in each course from those in course below; do not tooth. When resuming work, clean masonry surfaces that are to receive mortar, remove loose masonry units and mortar, and wet brick if required before laying fresh masonry.

E. Built-in Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry around built-in items.

F. Fill space between steel frames and masonry solidly with mortar unless otherwise indicated.

G. Where built-in items are to be embedded in cores of hollow masonry units, place a layer of metal lath, wire mesh, or plastic mesh in the joint below, and rod mortar or grout into core.

H. Fill cores in hollow CMUs with grout 24 inches under bearing plates, beams, lintels, posts, and similar items unless otherwise indicated.

I. Build non-load-bearing interior partitions full height of story to underside of solid floor or roof structure above unless otherwise indicated.
1. Install compressible filler in joint between top of partition and underside of structure above.
2. Fasten partition top anchors to structure above and build into top of partition. Grout cells of CMUs solidly around plastic tubes of anchors and push tubes down into grout to provide 1/2-inch clearance between end of anchor rod and end of tube. Space anchors 48 inches o.c. unless otherwise indicated.

3. Wedge non-load-bearing partitions against structure above with small pieces of tile, slate, or metal. Fill joint with mortar after dead-load deflection of structure above approaches final position.
4. At fire-rated partitions, treat joint between top of partition and underside of structure above to comply with Section 078443 "Joint Firestopping."

3.5 MORTAR BEDDING AND JOINTING

A. Lay CMUs as follows:
1. Bed face shells in mortar and make head joints of depth equal to bed joints.
2. Bed webs in mortar in all courses of piers, columns, and pilasters.
3. Bed webs in mortar in grouted masonry, including starting course on footings.
4. Fully bed entire units, including areas under cells, at starting course on footings where cells are not grouted.
5. Fully bed units and fill cells with mortar at anchors and ties as needed to fully embed anchors and ties in mortar.

B. Lay solid masonry units with completely filled bed and head joints; butter ends with sufficient mortar to fill head joints and shove into place. Do not deeply furrow bed joints or slush head joints.

C. Install clay flue liners to comply with ASTM C 1283. Install flue liners ahead of surrounding masonry. Set clay flue liners in full bed of refractory mortar 1/16 to 1/8 inch thick. Strike joints flush on inside of flue to provide smooth surface. Maintain expansion space between flue liner and surrounding masonry except where surrounding masonry is required to provide lateral support for flue liners.

D. Set precast sill units in full bed of mortar with full vertical joints. Fill dowel, anchor, and similar holes.
1. Clean soiled surfaces with fiber brush and soap powder and rinse thoroughly with clear water.
2. Allow cleaned surfaces to dry before setting.
3. Wet joint surfaces thoroughly before applying mortar.
4. Rake out mortar joints for pointing with sealant.

E. Rake out mortar joints at pre-faced CMUs to a uniform depth of 1/4 inch and point with epoxy mortar to comply with epoxy-mortar manufacturer's written instructions.

F. Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.
1. For glazed masonry units, use a nonmetallic jointer 3/4 inch or more in width.

G. Cut joints flush for masonry walls to receive plaster or other direct-applied finishes (other than paint) unless otherwise indicated.

H. Cut joints flush where indicated to receive waterproofing or air barriers unless otherwise indicated.

3.6 MASONRY-JOINT REINFORCEMENT

A. General: Install entire length of longitudinal side rods in mortar with a minimum cover of 5/8 inch on exterior side of walls, 1/2 inch elsewhere. Lap reinforcement a minimum of 6 inches.
   1. Space reinforcement not more than 16 inches o.c.
   2. Space reinforcement not more than 8 inches o.c. in foundation walls and parapet walls.
   3. Provide reinforcement not more than 8 inches above and below wall openings and extending 12 inches beyond openings in addition to continuous reinforcement.

B. Interrupt joint reinforcement at control and expansion joints unless otherwise indicated.

C. Provide continuity at wall intersections by using prefabricated T-shaped units.

D. Provide continuity at corners by using prefabricated L-shaped units.

E. Cut and bend reinforcing units as directed by manufacturer for continuity at corners, returns, offsets, column fireproofing, pipe enclosures, and other special conditions.

3.7 ANCHORING MASONRY TO STRUCTURAL STEEL AND CONCRETE

A. Anchor masonry to structural steel and concrete, where masonry abuts or faces structural steel or concrete, to comply with the following:
   1. Provide an open space not less than 1/2 inch wide between masonry and structural steel or concrete unless otherwise indicated. Keep open space free of mortar and other rigid materials.
   2. Anchor masonry with anchors embedded in masonry joints and attached to structure.
   3. Space anchors as indicated, but not more than 24 inches o.c. vertically and 36 inches o.c. horizontally.

3.8 CONTROL JOINTS

A. General: Install control-joint materials in unit masonry as masonry progresses. Do not allow materials to span control and expansion joints without provision to allow for in-plane wall or partition movement.

B. Form control joints in concrete masonry using one of the following methods:
   1. Fit bond-breaker strips into hollow contour in ends of CMUs on one side of control joint. Fill resultant core with grout and rake out joints in exposed faces for application of sealant.
   2. Install preformed control-joint gaskets designed to fit standard sash block.
   3. Install interlocking units designed for control joints. Install bond-breaker strips at joint. Keep head joints free and clear of mortar or rake out joint for application of sealant.
   4. Install temporary foam-plastic filler in head joints and remove filler when unit masonry is complete for application of sealant.

C. Provide horizontal, pressure-relieving joints by either leaving an airspace or inserting a compressible filler of width required for installing sealant and backer rod specified in Section 079200 "Joint Sealants," but not less than 3/8 inch.

D.

1. Locate horizontal, pressure-relieving joints beneath shelf angles supporting masonry.
2.

3.9 LINTELS

A. Install steel lintels where indicated.

B. Provide masonry lintels where shown and where openings of more than 12 inches for brick-size units and 24 inches for block-size units are shown without structural steel or other supporting lintels.

C. Provide minimum bearing of 8 inches at each jamb unless otherwise indicated.
1.

3.10 REINFORCED UNIT MASONRY INSTALLATION

A. Temporary Formwork and Shores: Construct formwork and shores as needed to support reinforced masonry elements during construction.
1. Construct formwork to provide shape, line, and dimensions of completed masonry as indicated. Make forms sufficiently tight to prevent leakage of mortar and grout. Brace, tie, and support forms to maintain position and shape during construction and curing of reinforced masonry.
2. Do not remove forms and shores until reinforced masonry members have hardened sufficiently to carry their own weight and that of other loads that may be placed on them during construction.

B. Placing Reinforcement: Comply with requirements in TMS 602/ACI 530.1/ASCE 6.

C. Grouting: Do not place grout until entire height of masonry to be grouted has attained enough strength to resist grout pressure.
1. Comply with requirements in TMS 602/ACI 530.1/ASCE 6 for cleanouts and for grout placement, including minimum grout space and maximum pour height.
2. Limit height of vertical grout pours to not more than 60 inches.

3.11 FIELD QUALITY CONTROL

A. Testing and Inspecting: Owner will engage special inspectors to perform tests and inspections and prepare reports. Allow inspectors access to scaffolding and work areas as needed to perform tests and inspections. Retesting of materials that fail to comply with specified requirements shall be done at Contractor's expense.

B. Inspections: Special inspections according to Level B in TMS 402/ACI 530/ASCE 5.

1. Begin masonry construction only after inspectors have verified proportions of site-prepared mortar.
2. Place grout only after inspectors have verified compliance of grout spaces and of grades, sizes, and locations of reinforcement.
3. Place grout only after inspectors have verified proportions of site-prepared grout.

C. Testing Prior to Construction: One set of tests.

D. Testing Frequency: One set of tests for each 5000 sq. ft. of wall area or portion thereof.

E. Clay Masonry Unit Test: For each type of unit provided, according to ASTM C 67 for compressive strength.

F. Concrete Masonry Unit Test: For each type of unit provided, according to ASTM C 140 for compressive strength.

G. Mortar Aggregate Ratio Test (Proportion Specification): For each mix provided, according to ASTM C 780.

H. Mortar Test (Property Specification): For each mix provided, according to ASTM C 780. Test mortar for mortar air content and compressive strength.

I. Grout Test (Compressive Strength): For each mix provided, according to ASTM C 1019.

J. Prism Test: For each type of construction provided, according to ASTM C 1314 at 28 days.

3.12 PARGING

A. Parge exterior faces of below-grade masonry walls, where indicated, in two uniform coats to a total thickness of 3/4 inch. Dampen wall before applying first coat and scarify first coat to ensure full bond to subsequent coat.

B. Use a steel-trowel finish to produce a smooth, flat, dense surface with a maximum surface variation of 1/8 inch per foot. Form a wash at top of parging and a cove at bottom.

C. Damp-cure parging for at least 24 hours and protect parging until cured.

3.13 REPAIRING, POINTING, AND CLEANING

A. Remove and replace masonry units that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Install new units to match adjoining units; install in fresh mortar, pointed to eliminate evidence of replacement.

B. Pointing: During the tooling of joints, enlarge voids and holes, except weep holes, and completely fill with mortar. Point up joints, including corners, openings, and adjacent construction, to provide a neat, uniform appearance. Prepare joints for sealant application, where indicated.

C. In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooling joints.

D. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:
   1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
   2. Test cleaning methods on sample wall panel; leave one-half of panel uncleaned for comparison purposes. Obtain Architect's approval of sample cleaning before proceeding with cleaning of masonry.
   3. Protect adjacent stone and nonmasonry surfaces from contact with cleaner by covering them with liquid strippable masking agent or polyethylene film and waterproof masking tape.
   4. Wet wall surfaces with water before applying cleaners; remove cleaners promptly by rinsing surfaces thoroughly with clear water.
   5. Clean brick by bucket-and-brush hand-cleaning method described in BIA Technical Notes 20.
   6. Clean concrete masonry by applicable cleaning methods indicated in NCMA TEK 8-4A.
   7. Clean masonry with a proprietary acidic cleaner applied according to manufacturer's written instructions.
   8. Clean stone trim to comply with stone supplier's written instructions.
   9. Clean limestone units to comply with recommendations in ILI's "Indiana Limestone Handbook."

3.14 MASONRY WASTE DISPOSAL

A. Salvageable Materials: Unless otherwise indicated, excess masonry materials are Contractor's property. At completion of unit masonry work, remove from Project site.

B. Waste Disposal as Fill Material: Dispose of clean masonry waste, including excess or soil-contaminated sand, waste mortar, and broken masonry units, by crushing and mixing with fill material as fill is placed.
   1. Crush masonry waste to less than 4 inches in each dimension.
   2. Mix masonry waste with at least two parts of specified fill material for each part of masonry waste. Fill material is specified in Section 312000 "Earth Moving."
   3. Do not dispose of masonry waste as fill within 18 inches of finished grade.

C. Masonry Waste Recycling: Return broken CMUs not used as fill to manufacturer for recycling.

D. Excess Masonry Waste: Remove excess clean masonry waste that cannot be used as fill, as described above or recycled, and other masonry waste, and legally dispose of off Owner's property.

END OF SECTION 04810

SECTION 05312- ARCHITECTURAL(ACOUSTICAL) CEILING DECK SYSTEM

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

A. Architecturally exposed and acoustical metal-ceiling-deck system and accessories. Acoustical perforated panels to be used at interior applications, and non-perforated & non acoustical panels to be used at exterior canopies.

1.3 RELATED SECTIONS

A. Section 05310 - Steel Decking.

B. Section 05500 - Metal Fabrications.

C. Section 07210 – Building Insulation.

D. Section 07411 – Metal Roof Panels

E. Section 07250 - Weather Barriers.

1.5 DESIGN / PERFORMANCE REQUIREMENTS

A. Ceiling-deck system assembly specified shall comply with the following:
   1. AISI Specifications: Comply with calculated structural characteristics of steel deck according to AISI's North American Specification for the Design of Cold-Formed Steel Structural Members.
   2. AAMA 621, Voluntary Specifications for High Performance Organic Coatings on Coil Coated Architectural Hot Dipped Galvanized (HDG) & Zinc- Aluminum Coated Steel Substrates
   3. ASTM A 653/A 653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
   4. ASTM A 792 - Specification for Steel Sheet, 55% Aluminum-Zinc Alloy-Coated

by the Hot-Dip Process.

5. ASTM A 924/A 924M - Standard Specification for General Requirements for Steel Sheet, Metallic- Coated by the Hot-Dip Process.
6. ANSI/ASTM C 423 - Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method
7. ICC - ES Evaluation Report(s) for conformance with the 2012, 2009 and 2006 International Building Code.
8. SDI Publication No.31 - Design Manual for Composite Decks, Form Decks and Roof Decks with enhanced aesthetic standards established and adopted by the Manufacturer.
9. SDI MOC2 - Manual of Construction with Steel Deck.
10. SDI SPD2 - Standard Practice Details with enhanced aesthetic standards established and adopted by the Manufacturer with enhanced aesthetic standards established and adopted by the Manufacturer.
11. UL Certification's Directory.
12. UL 580 - Tests for Uplift Resistance of Roof Assemblies.

B. Ceiling-deck system assembly specified shall meet the following performance characteristics:
   1. Superimposed service-phase design loads and locations applied to assembly shall be established and approved by the Architect and the Engineer of Record (EOR).
   2. When design loads vary in magnitude and location over the deck surfaces, conform with the EOR's design Drawings denoting the distribution and intensity of the varying loads.
   3. Uniform Live Load Requirements: Submit certified design confirming the uniform live load carrying capacities of the steel deck section(s).
      a. Design Loads: Minimum 20 lbs./ft.2 or greater as indicated on the Drawings.
   4. Concentrated Load Requirements: Submit certified design confirming the concentrated load carrying capacities of the steel deck section(s).
      a. Design Loads: 250 lbs applied at mid-span in the installed condition or greater as indicated on the Drawings.
   5. Diaphragm Load Requirements: Submit certified design confirming the shear strength and stiffness capacities of the steel deck section(s).
      a. Design Loads: As directed indicated on the Drawings.
      b. Ultimate Wind Uplift Requirements: Submit certified design confirming the wind uplift capacities of the steel deck section(s).
         1) Design Loads: Minimum -49.9 lbs./ft.2 or greater as indicated on the Drawings.
   6. Deflection Limits: Maximum deflection of steel deck section(s) subjected to uniformly applied or concentrated loading shall not exceed the lesser of 1/240th of span length or 1 inch (25 mm) or less as indicated on the Drawings.
   7. Allowance for Thermal Movement: Deck cladding system assembly shall accommodate in-plane thermal contraction and expansion movements based on design data indicated on the Drawings.

1.6 SUBMITTALS

A. Submit under provisions of Section 01330 – Submittal Procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Deck property information for the proposed deck units.
   2. Preparation instructions and recommendations.
   3. Storage and handling requirements and recommendations.
   4. Erection instructions.

C. Shop Drawings: Show location, connections, bearing on supports, methods of anchoring, coordination of the fastener locations of the structural insulated roof deck panels, attachment of accessories, adjusting plate details and the manufacturer's erection instructions and pertinent details.

D. Shop Drawings:
   1. Showing plans, sections, elevations, layouts, profiles and product component locations, including anchorage, bracing, fasteners, accessories and finishes, sealed by a Professional Engineer registered in the state of the project.
   2. Indicate component details, framed openings, bearing, anchorage, loading, welds, type and location of fasteners, and accessories.
   3. Indicate method for securing studs and other components to tracks and for framing connections.
   4. Submit calculations for loadings and stresses under Professional engineer's seal registered in the state of the project.

E. Selection Samples: For each finish product specified, two complete sets of color chips representing manufacturer's full range of available colors and patterns.

F. Welders Certificates: Certify welders employed on the Work, verifying AWS qualification within previous 12 months.

G. Manufacturer's Certificates: Certify products meet or exceed specified requirements.

1.7 QUALITY ASSURANCE

A. Manufacturer with documented evidence of not less than 10 years of successful experience in the placement of architecturally exposed ceiling-deck systems on projects of similar size, scope and end use.

B. Installer Qualifications: Company certified by the manufacturer and specializing in performing Work of this section with minimum 5 years documented experience.

C. Welding: Qualify procedures and personnel according to AWS D1.3, Structural Welding Code - Sheet Steel.

D. Design structural elements under direct supervision of Professional Engineer experienced in design of this Work and registered in the state of the project.

E. Pre-installation Meetings: Conduct pre-installation meeting to verify project requirements, substrate conditions, and manufacturer's installation instructions.

F. Welding Standards: Comply with applicable provisions AWS D1.1 and AWS D1.3 of the Structural Welding Code.

G. Qualify welding processes and welding operators in accordance with AWS Standard Qualification Procedure.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Store products in compliance with Manufacturer's printed recommendations.

B. Separate sheets and store on dry wood sleepers; slope for positive drainage. Protect with a waterproof covering and ventilate to avoid condensation.

C. Handle factory-painted deck panel surfaces with utmost care during lifting, unbundling. separating, spreading and placement phases. Work shall be performed in a manner that minimizes abrasion between sheets and between painted surfaces and structural supports.

1.9 SEQUENCING

A. Coordinate installation of sound-absorbing insulation strips and non-corrosive spacers (lath when required) in the ribs of cellular acoustical deck to ensure protection of insulation strips against damage from effects of weather and other causes.

1.10 WARRANTY

A. Provide with the paint manufacturers 20 year film integrity limited warranty against cracking, peeling, checking or flaking under normal anticipated conditions.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturer: New Millennium Building Systems, which is located at: 7575 W. Jefferson Ave.; Fort Wayne, IN 46804 ; Tel: 260-969-3500; Fax: 260-868-6002; Email: request info (info@newmill.com) or Architect approved equal.

B. Substitutions: Not permitted.

2.2 ARCHITECTURAL CEILING DECK

A. Materials General:
1. Minimum Thickness: 20 GA (0.0359-inch) or greater as determined by design.
2. Minimum Yield Strength: 40,000-1b/inch2.
3. Protective Coating: Galvanized (zinc) coating weight.
a. G-90

B. Deck Panel Type: Provide the following deck type(s) to the applications indicated on the Drawings.
1. Type: Versa-Dek 2.0 S ES, 2 inches deep re-entrant (dovetail) rib-shaped panel sections without longitudinal stiffener.
a. Type: Standard deck with the following.
1) Removable access panels.
2) Acoustical treatments.
b. Depth: 2 inches.
c. Pitch: 6 inches.
d. Cover Width: 24 inches.
e. Side-lap Formation: Nestable, self-aligning.

2. Type: Cellular Linear Panels: Linear Panels:
   a. Steel Materials:
      1) Thickness: Minimum 20 GA or greater as determined by design.
      2) Minimum Yield Strength: 40,000-1b/inch2.
   b. Appearance: Flat with continuous longitudinal minor stiffening ribs uniformly spaced 6 inches apart.
   c. Attachment to Deck Panel Sections:
   d. Method: Resistive Spot Welding process.
      1) Weld size and spacing as determined by Manufacturer to assure unified, composite strength.
3. Removable Access Covers:
   a. Factory roll formed to tightly match bottom formation of the ceiling-deck panel section. Cover to assure a smooth transition of aesthetic surfaces.
   b. Locations: One each per ceiling penetration denoted on the Reflected Ceiling Plans or as required for access to equipment based on architect's approval of the panel location. Position ceiling penetration at mid-length of access cover. Maximum 3 penetrations per deck span spaced minimum 2 feet apart.
   c. Length: 7 feet maximum.
   d. Identification: Labels placed on the non-exposed side marked to correspond to positions denoted on the approved ceiling deck installation drawings.
   e. Paint Coatings: Paint to match coating system applied to exposed ceiling-side of deck panel sections.
   f. Modifications to Ceiling-deck Panel Sections:
      1) Openings: Factory clean cut, rectangular, one per ceiling-deck penetration.
      2) Length: As required to assure adequate clearance for access and attachment of field assembled service lines and equipment; Maximum 6 feet.
      3) Reinforcement of deck panels: As determined by Manufacturer to re-establish structural properties, if required.
4. Screws: Low profile, pan-head type of size and quantity as determined by Manufacturer.
5. Intermediate Support Devices for Service Lines and/or Equipment Between Factory Cut Openings:
   a. Manufacturer's Designation: Dek Strut brackets.
   b. Factory installed.
6. Length: Deck panel sections shall be installed in lengths to create two-span, three-support conditions.
7. Sections not installed in minimum two-span lengths shall be as indicated on the ceiling-deck system installation drawings.
   a. Minimum end bearing: 1-1/2-inch.
   b. Spacing and attachment as determined by Manufacturer.

C. Acoustical Treatments: Architectural ceiling deck (Interior applications only, non-perforated panels at exterior canopies).
1. Acoustical Properties:
   a. NCR Rating:
      1) Versa-Dek 2.0 S ES Acoustical = 0.95- 1.15
2. Acoustical Insulation Batts:

a. Factory and Field installed.
b. Factory and Field installed over non-corrosive plastic lath spacer.
1) Type: Unwrapped fiberglass, formaldehyde free.
2) Density: 3.0 lblft3.
3) Dimensions: Size as determined by Manufacturer to assure minimum NRC rating value required.

D. Paint Coatings: Manufacturer shall apply uniform, factory-applied coatings, combining steel sheet, passivation, pre-treatment primer and finish top-coat paint where specified to deck panel sections. Coatings shall comply with AAMA 621.
1. Non-architecturally exposed side deck panel surfaces:
a. Continuous coil-coated and oven-cured:
1) Versa-Cote Ultra G-P.
2. Architecturally exposed ceiling-side deck panel surfaces: Protect pre-finished deck with craft-paper interleafing between deck panel surfaces.
3. Interior application shall be wood grained simulated finish, as selected from manufacture’s full range wood grained colors.
4. Exterior application shall be solid color white.

E. Fasteners
1. Welded attachment of any architectural ceiling-deck system assembly component is not permitted unless expressly allowed in writing by manufacturer.
2. Mechanical fasteners for deck panel to support steel not exceeding 3/16 inch (5 mm) thickness and deck panel side-lap attachments. All fasteners shall be concealed and not exposed at the finish face of the panel.
a. Hex-head, self-drilling screws with 300 series stainless steel over hex washer head with integrated EDPM washer; thermo-set polyester film over zinc-plated carbon steel shanks and powder paint coated heads color matched to the top-coat paint finish of the deck panels
b. Buildex "SCOTS"; AD Cladding; Use in aggressive environments thermo-set polyester film over zinc-plated carbon steel heads and shanks, integrated EPDM washer and powder paint coated heads color matched to the top-coat paint finish of the deck panels.
c. Buildex "MAX1SEAL"; AD Cladding; Use in non-aggressive environments thermo-set polyester film over zinc-plated carbon steel heads and shanks
d. Buildex "TEKS"; Use in non-aggressive interior deck ceiling applications.
e. Screws attaching two steel components with a combined material thickness less than 0.095-inch shall possess back-out resistant threads.
f. Size, Spacing and Location: As indicated in ceiling-deck system installation drawings.
3. Type: Mechanical fasteners for deck panels to support steel equal to or greater than 3/16 inch thick:
a. Description: Powder-actuated pins with integral washer and knurled shanks of diameter and length matched by Pin Manufacturer to the steel support member's base thickness.
b. Size, Spacing and Location: As indicated in ceiling-deck system installation drawings.

F. Accessories:

1. Provide Ridge and Valley Plates, Butt Plates, Z-Closures, Finish Strips, Sump Pans and Cell Closures as required.
2. Use size, spacing and location as indicated in ceiling-deck system installation drawings

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not install roof deck until supporting construction is in place.

B. Examine support framing and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance of work of this section.

C. If supporting construction is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Locate deck bundles to prevent overloading of support members.

3.3 INSTALLATION - GENERAL

A. Install deck panels and accessories in accordance with the Contract Documents approved installation drawings and requirements of this Section. Fasteners shall not be exposed at the finish face of the decking.

B. Place each deck panel on structural supports and adjust to final position with accurately aligned side laps and ends butted over structural supports to assure minimum specified end bearing length.

C. Cut and neatly fit deck units and accessories around openings and other work projecting through or adjacent to the decking.

D. Deck Panel Attachments to structural supports, deck side-lap, and deck perimeter edge attachments: Attach with fasteners of the type, size and spacing indicated on the ceiling-deck system installation drawings immediately after panel placement and alignment. Welded attachment of any architectural ceiling-deck system assembly component is not permitted unless expressly allowed in writing by Manufacturer. If allowed, specification language covering the execution of weld fastening shall accompany the written approval.
   1. Minimum Fastening Requirements:
      a. Fasten deck panels to supports as indicated on the ceiling-deck system installation drawings using mechanical fasteners, powder-actuated pins or self-drilling screws.
      b. Fasten side-laps of deck panel sections as indicated on the ceiling-deck system installation drawings. Fasten side-laps with No. 10 diameter self-drilling screws.
      c. Fasten perimeter edges of deck panels at maximum 12 inch on center intervals or as indicated on the ceiling-deck system installation

drawings. Use mechanical fasteners, powder-actuated pins or self-drilling screws.

2. Accessory Attachments: Anchor accessories to supporting members with self-drilling screws at 12 inches on center intervals or as Indicated on the ceiling-deck system installation drawings.

E. Reinforce unscheduled openings cut through roof deck in accordance with SDI MOC2 or as indicated on the ceiling-deck system Installation drawings or the structural drawings.

F. Do not expose the insulation batts to snow, rain, or condensation. Remove and replace any wet insulation.

3.4 INSPECTION AND REPAIR

A. Remove dirt and debris from entire deck surfaces before installation of any topping material.

B. Prior to the application of the roof covering, inspect completed portions of the ceiling-deck system assembly and correct any deficiencies and/or damage to the surface. Replace decking that has been damaged.

C. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on both surfaces of deck with galvanized repair paint.

D. Repair Painting: Apply repair paint, of same color as adjacent shop-primed deck, to bottom surfaces of deck exposed to view.

3.5 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION

SECTION 05500 - METAL FABRICATIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Stainless Steel Corner Guards.
2. Metal bollards.
3. Miscellaneous angles, tubes, and steel shapes as required for the work to be furnished and installed (i.e. glue-laminated timber, counters, benches, etc.)

B. Related Sections:

1. Division 3 Section "Cast-in-Place Concrete" for installing anchor bolts, steel pipe sleeves, slotted-channel inserts, wedge-type inserts and other items cast into concrete.
2. Division 5 Section "Structural Steel".

1.3 ACTION SUBMITTALS

A. Shop Drawings: Show fabrication and installation details for metal fabrications.

1. Include plans, elevations, sections, and details of metal fabrications and their connections. Show anchorage and accessory items.

2. Plan showing corner guard locations and heights.

B. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer, registered in the State of Florida, responsible for their preparation.

C. Prime Paint and Galvanizing Coating Product Data.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified professional engineer, registered in the State of Florida.

1.5 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

B. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."

1.6 PROJECT CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication.

1.7 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

PART 2 - PRODUCTS

2.1 METALS, GENERAL

A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For metal fabrications exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes. All fabrications shall be prime painted with zinc rich primer. Fabrications that are not fully concealed shall be painted in accordance with Division 9 “Interior Painting.”

2.2 FERROUS METALS

A. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.

B. Steel Tubing: ASTM A 500, cold-formed steel tubing.

2.3 NONFERROUS METALS

A. Aluminum Plate and Sheet: ASTM B 209, Alloy 6061-T6.

B. Aluminum Extrusions: ASTM B 221, Alloy 6063-T6.

C. Aluminum Castings: ASTM B 26/B 26M, Alloy 443.0-F.

2.4 FASTENERS

A. General: Unless otherwise indicated, provide Type 304 stainless-steel fasteners for interior use at stainless steel applications. Type 316 stainless-steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5, at exterior walls. Select fasteners for type, grade, and class required.

1. Provide stainless-steel fasteners for fastening aluminum.

B. Steel Bolts and Nuts: Regular hexagon-head bolts, ASTM A 307, Grade A; with hex nuts, ASTM A 563; and, where indicated, flat washers.

C. Steel Bolts and Nuts: Regular hexagon-head bolts, ASTM A 325, Type 3; with hex nuts, ASTM A 563, Grade C3; and, where indicated, flat washers.

D. Stainless-Steel Bolts and Nuts: Regular hexagon-head annealed stainless-steel bolts, ASTM F 593; with hex nuts, ASTM F 594; and, where indicated, flat washers; Alloy Group 1.

E. Eyebolts: ASTM A 489.

F. Machine Screws: ASME B18.6.3.

G. Lag Screws: ASME B18.2.1.

H. Plain Washers: Round, ASME B18.22.1.

I. Lock Washers: Helical, spring type, ASME B18.21.1.

2.5 MISCELLANEOUS MATERIALS

A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

B. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.

C. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

D. Concrete: Comply with requirements in Division 3 Section "Cast-in-Place Concrete" for normal-weight, air-entrained, concrete with a minimum 28-day compressive strength of 4000 psi.

2.6 FABRICATION, GENERAL

A. Shop Assembly: Preassemble items in the shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.

B. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

D. Form exposed work with accurate angles and surfaces and straight edges.

E. Weld corners and seams continuously to comply with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

F. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners or welds where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) fasteners unless otherwise indicated. Locate joints where least conspicuous.

G. Fabricate seams and other connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.

H. Cut, reinforce, drill, and tap metal fabrications as indicated to receive finish hardware, screws, and similar items.

I. Provide for anchorage of type indicated; coordinate with supporting structure. Space anchoring devices to secure metal fabrications rigidly in place and to support indicated loads.

1. Where units are indicated to be cast into concrete or built into masonry, equip with integrally welded steel strap anchors, 1/8 by 1-1/2 inches, with a minimum 6-inch embedment and 2-inch hook, not less than 8 inches from ends and corners of units and 24 inches o.c., unless otherwise indicated.

2.7 MISCELLANEOUS FRAMING AND SUPPORTS

A. General: Provide steel framing and supports not specified in other Sections and Drawings as needed to complete the Work.

B. Fabricate units from steel shapes, plates, and bars of welded construction unless otherwise indicated. Fabricate to sizes, shapes, and profiles indicated and as necessary to receive adjacent construction.

C. Prime miscellaneous interior framing and supports with zinc-rich primer unless otherwise specified in Division 9 Section “Interior Painting.” Galvanize fabrications for

exterior use with G90 coating.

2.8 METAL BOLLARDS

A. Fabricate metal bollards from 1/4-inch wall-thickness round steel tubing.
   1. Bollards to be concrete filled will be fabricated with holes for concrete fill application and galvanizing and provided with a vinyl sleeve cover to match existing.

B. Hot-dip galvanize after fabrication.

C. Plastic Cover: Polyethylene Thermoplastic (HDPE) tubes having ultra-violet resistance and antistatic properties, normal thickness 0.250 inches. Color shall be OHSA yellow unless otherwise noted. Size covers for pipe diameters.

2.9 STAINLESS STEEL CORNER GUARDS

A. Stainless steel corner guards Type 304, 16 gauge, 2” x 2”, with vertical grain-brushed finished – No. 4 – full wall height unless noted otherwise.

B. Factory applied two sided tape or field applied construction adhesive.

2.10 STEEL AND IRON FINISHES

A. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A 153/A 153M for steel and iron hardware and with ASTM A 123/A 123M for other steel and iron products at all exterior locations.

   1. G90 coating.

   2. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.

   3. Touch-up galvanized coating after field welding is completed.

B. Shop prime iron and steel items not indicated to be galvanized unless they are to be embedded in concrete, sprayed-on fireproofing, or masonry, or unless otherwise indicated.

   1. Shop prime with unless zinc-rich primer is indicated.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment,

and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.

B. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.

C. Field Welding: Comply with the following requirements:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

D. Fastening to In-Place Construction: Provide anchorage devices and fasteners where metal fabrications are required to be fastened to in-place construction. Provide threaded fasteners for use with concrete and masonry inserts, toggle bolts, through bolts, epoxy set anchors, lag screws, wood screws, and other connectors.

E. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

3.2 INSTALLING MISCELLANEOUS FRAMING AND SUPPORTS

A. General: Install framing and supports to comply with requirements of items being supported, including manufacturers' written instructions and requirements indicated on Shop Drawings.

3.3 INSTALLING METAL BOLLARDS

A. Fill metal-capped bollards solidly with concrete where noted on the Drawings and allow concrete to cure seven days before installing.

B. Anchor bollards in concrete. Fill annular space around bollard solidly with nonshrink, nonmetallic grout; mixed and placed to comply with grout manufacturer's written instructions. Slope grout up approximately 1/8 inch toward bollard.

C. Anchor bollards in place with concrete footings. Center and align bollards in holes 3 inches above bottom of excavation. Place concrete and vibrate or tamp for consolidation. Support and brace bollards in position until concrete has cured.

3.4 INSTALLING CORNER GUARDS

A. Examination:
1. Examine areas and conditions in which the corner guard systems will be installed.
2. Complete all finishing operations, including painting, before beginning installation of corner guards.
3. Wall surface shall be dry and free from dirt, grease and loose particles.

B. Preparation:

1. General: Prior to installation, clean substrate to remove dust, debris and loose particles.

C. Installation:
1. General: Locate the Corner Guard as indicated on the Architect accepted shop drawing for the appropriate substrate and install corner guard level and plumb as the indicated on the shop drawings.
2. Installation of Stainless Steel Corner Guards

a. Surface must be dry, clean and property sealed.
b. Two-sided tape: Peel paper from the factory applied tape and apply pressure until a light fit is achieved, or; Cement on: Apply a premium heavy-duty construction adhesive in a zigzag pattern over the back of each wing of the corner guard. Position corner guard on the wall and apply pressure until a tight fit is achieved.
c. Remove the protection plastic covering from the exposed surface of the corner guard.

D. Cleaning

1. At completion of the installation, clean surfaces with a natural based, non-abrasive cleaner. Ammonia and alcohol based cleaners may be used.

END OF SECTION 05500

(INTENTIONALLY LEFT BLANK)

SECTION 06105 – MISCELLANEOUS CARPENTRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Provisions and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Rough carpentry work not specified elsewhere and generally intended for support of other work.
2. Wood furring/blocking
3. Wood equipment bases.
4. Miscellaneous blocking, grounds, nailers, and panels.
5. Plywood panels.
6. Custom decorative polyurethane brackets

B. Particle Board and MDF is not acceptable as a substitute for plywood.

C. Related Sections include the following:

1. Division 6 Section “Interior Finish Carpentry”.

2. Division 7 Section “Sheet Metal Flashing and Trim” and Roof Accessories”

1.3 ACTION SUBMITTALS

A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.

1. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Indicate type of preservative used and net amount of preservative retained.
2. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Include physical properties of treated materials based on testing by a qualified independent testing agency.
3. For fire-retardant treatments, include physical properties of treated lumber both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency according to ASTM D 5664.

4. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.
5. Include copies of warranties from chemical treatment manufacturers for each type of treatment.
6. Florida product approval or engineered documents for exterior cladding and decorative elements.

1.4 INFORMATIONAL SUBMITTALS

A. Evaluation Reports: For the following, from ICC-ES:

1. Preservative-treated wood.
2. Fire-retardant-treated wood.
3. Power-driven fasteners.
4. Powder-actuated fasteners.
5. Expansion anchors.
6. Metal framing anchors.

1.5 QUALITY ASSURANCE

A. Regulatory Requirements: Comply with applicable requirements of the laws, codes, ordinances, and regulations of Federal, State, and local authorities having jurisdiction. Obtain necessary approvals from such authorities.

B. Quality Standard: Comply with AWI AWS for grades of architectural woodwork, construction, finishes, and other requirements. Provide AWI certification labels or AWI certificates of compliance indicating that woodwork meets requirements of grades specified.

Surface Burning Characteristics Provide materials with the following characteristics as determined by testing identical products per ASTM test method indicated below by Underwriters Laboratories, Inc. (UL), Intertek Testing Services (ITS), Hardwood Plywood and Veneer Association (HPVA), or another inspecting and testing agency acceptable to authorities having jurisdiction.

1. Surface burning characteristics shall not exceed values indicated or required by Local Codes and tested per ASTM E 84.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Storage: Keep materials under cover and dry. Protect against exposure to weather and contact with damp or wet surfaces. Stack material above ground level on uniformly spaced supports to prevent deformation.

B. For material pressure treated with waterborne chemicals, place spacers between each bundle for air circulation.

C. Remove or loosen plastic wrappings. Sticker individual panels to hasten acclimatization.

PART 2 - PRODUCTS

2.1 LUMBER, GENERAL

A. Standards: Furnish lumber manufactured to comply with PS 20 "American Softwood Lumber Standard" and with applicable grading rules of inspection agencies certified by American Lumber Standards Committee's (ALSC) Board of Review.

B. Grade Stamps: Furnish lumber with each piece factory-marked with grade stamp of inspection agency that indicates grading agency, grade, species, moisture content at time of surfacing, and mill.

1. Sizes: Provide nominal sizes indicated, complying with PS 20 except where actual sizes are specifically noted as being required.

C. Surfacing: Dressed lumber, S4S, unless otherwise indicated.

D. MDF or particle board is not acceptable.

2.2 DIMENSION LUMBER FOR CONCEALED CONDITIONS

A. Species: Any wood species listed by PS 20.

B. Moisture Content: S-DRY, KD 19 or MC 19 (19 percent maximum moisture content).

C. Grade: No. 2 or standard grade.

2.3 DIMENSION LUMBER FOR EXPOSED CONDITIONS

A. Species: Any wood species listed by PS 20.

B. Moisture Content: S-DRY, KD 19 or MC 19 (19 percent maximum moisture content).

C. Grade: No. 2 or standard grade.

2.4 BOARDS FOR CONCEALED CONDITIONS

A. Species: Any wood species listed by PS 20.

B. Moisture Content: S-DRY, KD 19 or MC 19 (19 percent maximum moisture content).

C. Grade: No. 2, 2 Common, or Construction Boards.

2.5 BOARDS FOR EXPOSED CONDITIONS

A. Species: Any wood species listed by PS 20.

B. Moisture Content: S-DRY, KD 19 or MC 19 (19 percent maximum moisture content).

C. Grade: No. 2, 2 Common, Construction Common, or Construction Boards.

2.6 BOARDS FOR WET CONDITIONS

A. Boards for wet conditions, such as base cabinets with sinks or subject to wetting shall be constructed of Marine Grade Plywood.

B. Species: Douglas fir or Western Larch

C. Moisture Content: S-Dry, KD 19 or MC 19 (19 percent maximum moisture content).

D. Grade: All plies of veneer shall be B or better – (B-B Marine Grade).

E. The exposure durability rating is “Exterior” and the glue used shall be fully waterproof structural adhesive.

2.7 CONSTRUCTION PANELS

A. Standards: Comply with requirements of PS 1 Voluntary Product Standard "Construction and Industrial Plywood" for veneer plywood and APA PRP-108 "Performance Standards and Policies for Structural-Use Panels" for performance-rated panels.

1. Trademark: Furnish construction panels that are each factory-marked with APA trademark for grade specified.

B. Miscellaneous Exposed Plywood: DOC PS 1, A-D Interior, thickness as indicated but not less than ½-inch.

C. Miscellaneous Concealed Plywood: C-C Plugged Exterior, thickness as indicated but not less than ½-inch nominal.

D. Electrical/Telephone Backing Panels: C-D Plugged, Exposure 1 plywood panels, fire-retardant treated, thickness as indicated but not less than ¾” inch nominal. (4’-0” X 8’-0”)

2.8 FASTENERS

A. General: Where miscellaneous carpentry is exposed to weather, in ground contact, or in area of high relative humidity, provide fasteners with a hot-dip zinc coating per ASTM A 153 or of AISI Type 304 stainless steel.

B. Nails, Wire, Brads and Staples: FS FF-N-105.

C. Bolts: ASTM A 307, Grade A; with ASTM A 563 hex nuts and flat washers.

D. Expansion Anchors: Anchor bolt and sleeve assembly of material indicated below with capability to sustain, without failure, a load equal to 4 times the load imposed when installed in concrete as determined by testing per ASTM E 488 conducted by a qualified independent testing and inspecting agency.

1. Material: Stainless steel with bolts and nuts complying with ASTM F 593 and ASTM F 594, Alloy Group 1 or 2 (ASTM F 738M and ASTM F 836M, Grade A1 or A4).

2.9 PRESERVATIVE WOOD TREATMENT BY PRESSURE PROCESS

A. General: Obtain preservative-treated lumber complying with AWPA Standard C2. Mark each treated item with AWPB or SPIB Quality Mark Requirements. Coat surfaces cut after treatment to comply with AWPA M4.

1. Preservative Chemicals: Acceptable to authorities having jurisdiction and containing no arsenic or chromium.

B. Above-Ground Wood Treatment: Pressure treat with waterborne preservatives to a minimum retention of 0.25 pcf.

1. Kiln-dry interior dimension lumber after treatment to 19 percent maximum moisture content.
2. Treat wood items indicated and in the following circumstances:

a. In contact with roofing, flashing, or waterproofing.
b. In contact with masonry or concrete.
c. Within 18 inches of grade.

C. Ground-Contact Wood Treatment: Pressure treat with waterborne preservatives to a minimum retention of 0.40 pcf.

2.10 FIRE-RETARDANT TREATMENT BY PRESSURE PROCESS

A. General: Identify treated wood with appropriate classification marking of Underwriters Laboratories Inc. or other testing and inspection agency acceptable to authorities having jurisdiction.

B. Dimension Lumber: Comply with AWPA C20.

1. Treatment Types: Interior Type A for protected wood and Exterior Type for wood exposed to weather.

C. Plywood: Comply with AWPA C27.

1. Treatment Types: Interior Type A for protected wood and Exterior Type for wood exposed to weather.

D. Inspect each piece after drying and discard damaged or defective pieces.

2.11 DECORATIVE POLYURETHANE BRACKETS

A. Custom decorative brackets based on the profile as detailed on the drawings, as manufactured by Fypon Inc., or Architect approved equal. Products to be UV resistant polyurethane.

B. Finish to be white.

PART 3 - PART 3 - EXECUTION

3.1 EXAMINATION

A. Verification of Conditions: Examine areas and conditions under which the work is to be installed, and notify the Contractor in writing, with a copy to the Owner and the Architect, of any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Condition work to average prevailing humidity conditions in installation areas before installing. Before installing work, examine shop-fabricated work for the completion and complete work as required.

3.3 INSTALLATION, GENERAL

A. Discard units of material with defects that impair quality of miscellaneous carpentry and in sizes that would require an excessive number or poor arrangement of joints.

B. Cut and fit miscellaneous carpentry accurately. Install members plumb and true to line and level.

C. Coat cut edges of preservative-treated wood to comply with AWPA M4.

D. Securely fasten miscellaneous carpentry as indicated and according to applicable Florida building codes and recognized standards.

E. Countersink nail heads on exposed carpentry work and fill holes.

F. Use fasteners of appropriate type and length. Predrill members when necessary to avoid splitting wood.

G. Quality Standard: Install architectural woodwork to comply with AWI AWS for the same grades specified in Part 2 – Products of this Section for type of architectural woodwork involved.

H. Fire Retardant - Treated Wood: Handle, store, and install fire retardant – treated wood to comply with recommendations of chemical treatment, manufacturer, including, but not limited to, those for adhesives used to install architectural woodwork.

I. Installation Tolerances: Install architectural woodwork plumb, level, true, and straight with no distortions. Shim as required with concealed shims.

3.4 WOOD GROUNDS, NAILERS, BLOCKING, AND SLEEPERS

A. Install where shown and where required for screeding or attachment of other work. Cut and shape to required size. Coordinate location with other work involved.

B. Attach to substrates as required to support applied loading. Countersink bolts and nuts flush with surfaces, unless otherwise indicated.

3.5 WOOD FURRING

A. General: Install at spacing indicated, with closure strips at edges and openings. Shim with wood as required for tolerance of finished work.

3.6 CONSTRUCTION PANELS

A. Comply with applicable installation recommendations in APA Form E30 "Design/Construction Guide--Residential & Commercial."

B. Install Electrical/Telephone Backing Panels as required to accommodate equipment.
   1. Obtain Fire Marshall approval and acceptance of fire-rated panels prior to painting surfaces.

3.7 ADJUSTING AND CLEANING

A. Repair damaged and defective work where possible to eliminate functional and visual defects. Where not possible to repair, replace the work.

B. Clean architectural woodwork on exposed and semi-exposed surfaces. Touch-up shop-applied finishes to restore damaged or soiled areas.

3.8 PROTECTION

A. Provide final protection and maintain conditions in a manner acceptable to the installer, that shall ensure that the work shall be without damage at time of Substantial Completion.

END OF SECTION 06105

SECTION 06202 – INTERIOR FINISH CARPENTRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Provisions and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Interior running trim and wood veneer.

B. Related Sections include the following:

1. Division 6 Section "Miscellaneous Carpentry" for furring, blocking, and other carpentry work not specified in this Section.

C. Products furnished, but not installed, under this Section include the products listed below. Coordinating and scheduling the purchase and delivery of these products remain requirements of this Section.

1.3 DEFINITIONS

A. MDF: Medium-density fiberboard. (Shall not be used)

B. MDO Plywood: Plywood with a medium-density overlay on the face.

1.4 SUBMITTALS

A. Product Data: For each type of process and factory-fabricated product. Indicate component materials, dimensions, profiles, textures, and colors and include construction and application details.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Protect materials against weather and contact with damp or wet surfaces. Stack lumber, plywood, and other panels flat with spacers between each bundle to provide air circulation. Provide for air circulation within and around stacks and under temporary coverings.

B. Deliver interior finish carpentry materials only when environmental conditions meet requirements specified for installation areas. If interior finish carpentry materials must

be stored in other than installation areas, store only where environmental conditions meet requirements specified for installation areas.

1.6 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install interior finish carpentry materials until building is enclosed and weatherproof, wet work in space is completed and nominally dry, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

B. Do not install finish carpentry materials that are wet, moisture damaged, or mold damaged.

1. Indications that materials are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
2. Indications that materials are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

A. Lumber: DOC PS 20 and applicable grading rules of inspection agencies certified by ALSC's Board of Review.

1. Factory mark each piece of lumber with grade stamp of inspection agency indicating grade, species, moisture content at time of surfacing, and mill.
2. For exposed lumber, mark grade stamp on end or back of each piece.

B. Softwood Plywood: DOC PS 1.

C. Hardboard: AHA A135.4.

D. Marine Plywood: BS 1088, Medium Density Overlay.

E. Stain: Match Architect’s sample; the wood trim shall match the wood veneer door stain.

F. Mill unfinished aluminum: ¼ inch ga.

2.2 INTERIOR TRIM AND WOOD VENEER

A. Hardwood Moldings and veneer for Transparent Finish (Stain or Clear Finish): WMMPA HWM 2, N-grade wood moldings made to patterns included in WMMPA HWM 1. Transparent finish where scheduled or shown on the drawings match Architects sample for stain color or color selected by the Architect based on manufacturer’s full range of colors.

1. Species: White Oak to match stained doors.
2. Maximum Moisture Content: 9 percent.
3. Finger Jointing: Not allowed.
4. Matching: Selected for compatible grain and color.

B. Moldings for Opaque Finish (Painted Finish): Made to patterns included in WMMPA WM 12.

1. Hardwood Moldings: WMMPA HWM 2, P-grade.

a. Species: Yellow poplar; MDF not allowed.
b. Maximum Moisture Content: 9 percent.

2. Finger Jointing: Allowed.

2.3 MISCELLANEOUS MATERIALS

A. Fasteners for Interior Finish Carpentry: Nails, screws, and other anchoring devices of type, size, material, and finish required for application indicated to provide secure attachment, concealed where possible.

1. Where galvanized finish is indicated, provide fasteners and anchorages with hot-dip galvanized coating complying with ASTM A 153/A 153M.

B. Glue: Aliphatic-resin, polyurethane, or resorcinol wood glue recommended by manufacturer for general carpentry use.

C. Multipurpose Construction Adhesive: Formulation complying with ASTM D 3498 that is recommended for indicated use by adhesive manufacturer.

2.4 FABRICATION

A. Back out or kerf backs of the following members except those with ends exposed in finished work:

1. Interior standing and running trim.

B. Ease edges of lumber to 1/16-inch radius.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Examine finish carpentry materials before installation. Reject materials that are wet, moisture damaged, and mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean substrates of projections and substances detrimental to application.

B. Before installing interior finish carpentry, condition materials to average prevailing humidity in installation areas for a minimum of 24 hours unless longer conditioning is recommended by manufacturer.

3.3 INSTALLATION, GENERAL

A. Do not use materials that are unsound, warped, improperly treated or finished, inadequately seasoned, or too small to fabricate with proper jointing arrangements.

1. Do not use manufactured units with defective surfaces, sizes, or patterns.

B. Install interior finish carpentry level, plumb, true, and aligned with adjacent materials. Use concealed shims where necessary for alignment.

1. Scribe and cut interior finish carpentry to fit adjoining work. Refinish and seal cuts as recommended by manufacturer.
2. Countersink fasteners, fill surface flush, and sand where face fastening is unavoidable. Where wood is scheduled to be stained or wood grain exposed, wood filler shall match wood species and shall be stainable. Fasteners shall be concealed and spaced regularly in consistent pattern @ stained wood components.
3. Install to tolerance of 1/8 inch in 96 inches for level and plumb. Install adjoining interior finish carpentry with 1/32-inch maximum offset for flush installation.
4. Coordinate interior finish carpentry with materials and systems in or adjacent to it. Provide cutouts for mechanical and electrical items that penetrate interior finish carpentry.

3.4 STANDING AND RUNNING TRIM INSTALLATION

A. Install with minimum number of joints practical, using full-length pieces from maximum lengths of lumber available. Do not use pieces less than 24 inches long, except where necessary. Stagger joints in adjacent and related standing and running trim. Miter at returns, miter at outside corners, and cope at inside corners to produce tight-fitting joints with full-surface contact throughout length of joint. Use scarf joints for end-to-end joints. Plane backs of casings to provide uniform thickness across joints where necessary for alignment.

1. Match color and grain pattern of trim for transparent finish (stain or clear finish) across joints & fastener nail hole filler.
2. Install trim after gypsum-board joint finishing operations are completed.

3. Install without splitting; drill pilot holes before fastening where necessary to prevent splitting. Fasten to prevent movement or warping. Countersink fastener heads on exposed carpentry work and fill holes.

3.5 ADJUSTING

A. Replace interior finish carpentry that is damaged or does not comply with requirements. Interior finish carpentry may be repaired or refinished if work complies with requirements and shows no evidence of repair or refinishing. Adjust joinery for uniform appearance.

3.6 CLEANING

A. Clean interior finish carpentry on exposed and semi exposed surfaces. Touch up factory-applied finishes to restore damaged or soiled areas.

3.7 PROTECTION

A. Protect installed products from damage from weather and other causes during remainder of the construction period.

B. Remove and replace finish carpentry materials that are wet, moisture damaged, and mold damaged.

1. Indications that materials are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
2. Indications that materials are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION 06202

SECTION 06402 - INTERIOR ARCHITECTURAL WOODWORK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Plastic-laminate cabinets.
2. Solid-surfacing-material countertops and splashes and millwork.
3. Cabinet accessories.

B. Related Sections include the following:

1. Division 5 Section “Metal Fabrications”.
2. Division 6 Section "Miscellaneous Carpentry" for wood blocking required for installing woodwork and concealed within other construction before woodwork installation.
3. Division 6 Section "Interior Finish Carpentry" for interior carpentry exposed to view that is not specified in this Section.
4. Division 6 Section “Fire Retardant Treatment (Fire Retardant Treated Wood)” for fire retardant treatment for wood products.
5. Division 7 Section “Joint Sealants” for sealant schedule.
6. Division 9 Section "Interior Painting” for field applied finishes and stains.
7. Division 10 Section “Toilet Compartments” for toilet partitions and screens.

1.3 DEFINITIONS

A. Interior architectural woodwork includes wood furring, blocking, shims, and hanging strips for installing woodwork items unless concealed within other construction before woodwork installation.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated, including cabinet hardware and accessories and finishing materials and processes.

B. Shop Drawings: Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices, and other components.

1. Show details full size.
2. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
3. Show locations and sizes of cutouts and holes for plumbing fixtures, faucets, soap dispensers and other items installed in architectural woodwork.
4. Show locations of vents for computer equipment and grommets for cable wiring for power, data, and telephone equipment connections.

C. Samples for Initial Selection:

1. Shop-applied opaque finishes.
2. Plastic laminates.
3. PVC edge material.
4. Solid surface samples.
5. Cabinet Hardware samples when requested by the Architect.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer and fabricator.

B. Product Certificates: For each type of product, signed by product manufacturer.

C. Woodwork Quality Standard Compliance Certificates: AWI Quality Certification Program certificates.

1.6 QUALITY ASSURANCE

A. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate products similar to those required for this Project and whose products have a record of successful in-service performance. Shop is a certified participant in AWI's Quality Certification Program.

B. Installer Qualifications: Certified participant in AWI's Quality Certification Program.

C. Source Limitations: Engage a qualified woodworking firm to assume undivided responsibility for production of interior architectural woodwork with sequence-matched wood veneers.

D. Quality Standard: Unless otherwise indicated, comply with AWI's "Architectural Woodwork Quality Standards" for grades of interior architectural woodwork indicated for construction, finishes, installation, and other requirements.

1. Provide AWI Quality Certification Program certificates indicating that woodwork, including installation, complies with requirements of grades specified.
2. The Contract Documents contain selections chosen from options in the quality standard and additional requirements beyond those of the quality standard. Comply with such selections and requirements in addition to the quality standard.

E. Pre-installation Conference: Conduct conference at Project site to comply with

requirements in Division 1 Section "Project Management and Coordination."

1.7 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver woodwork until painting and similar operations that could damage woodwork have been completed in installation areas. If woodwork must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Project Conditions" Article.

1.8 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install woodwork until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

B. Field Measurements: Where woodwork is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1. Locate concealed framing, blocking, and reinforcements that support woodwork by field measurements before being enclosed, and indicate measurements on Shop Drawings.
2. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating woodwork without field measurements. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.9 COORDINATION

A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that interior architectural woodwork can be supported and installed as indicated.

B. Coordinate sizes of computer equipment, or other equipment provided by the Owner, that is integral to the cabinetry work.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General: Provide materials that comply with requirements of AWI's quality standard for each type of woodwork and quality grade specified, unless otherwise indicated.

B. Certified Wood: Interior architectural woodwork shall be produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."

C. Wood Products: Comply with the following:

1. Hardboard: AHA A135.4.
2. Softwood Plywood: DOC PS 1, Medium Density Overlay.
3. Marine Plywood: BS 1088, Medium Density Overlay.
4. NO PARTICLEBOARD MDF, OR FIBERBOARD SHALL BE USED.

D. High-Pressure Decorative Laminate: NEMA LD 3, grades as indicated or, if not indicated, as required by woodwork quality standard.

1. Manufacturer: Subject to compliance with requirements, provide high-pressure decorative laminates by one of the following:

a. Abet Laminati, Inc.
b. Arborite; Division of ITW Canada, Inc.
c. Lamin-Art, Inc.
d. Wilsonart.
e. Nevamar Company, LLC; Decorative Products Div.

2. Color: As scheduled on the Drawings or specified to match millwork to be selected from manufacturer's full range of colors. Refer to article "Solid-surfacing Material Countertops and Integral Sinks" this section for additional information.

E. Solid-Surfacing Material: Homogeneous solid sheets of filled plastic resin complying with ISSFA-2. "Caesarstone Quartz" or Architect and Owner approved substitution the color and properties of any proposed substitution shall be an exact match to the materials specified or scheduled, subject to the approval of the Owner.

2.2 CABINET HARDWARE AND ACCESSORIES

A. General: Provide cabinet hardware and accessory materials associated with architectural cabinets, except for items specified in Division 8 Section "Door Hardware (Scheduled by Describing Products)." Basis of Design: Hafele or Architect approved equal.

B. Frameless Concealed Hinges (European Type): BHMA A156.9, B01602, 170 degrees of opening.

C. Wire Pulls: Back mounted, solid metal, 5 inches long, 2-1/2 inches deep, and 5/16 inch in diameter. Steel, matte nickel finish.

D. Adjustable Shelf Standards and Supports: BHMA A156.9, B04071; recessed; with shelf rests, B04081. Flush with cabinet interior face. Groove plug for wood shelves ¾" thick at book cases and ½" thick at interior cabinets.

E. Rakks Angle Counter Support Bracket EH-1818-P: Primed finish. Painted to match

wall color.

F. Drawer Slides: BHMA A156.9, B05091.

1. Heavy Duty (Grade 1HD-100 and Grade 1HD-200): Side mounted; full-extension type; zinc-plated steel ball-bearing slides.

G. Grommets for Cable Passage through Countertops: 2-inch OD, black, molded-plastic grommets and matching plastic caps with slot for wire passage.

1. Product: Subject to compliance with requirements, provide "SG series" by Doug Mockett & Company, Inc. or polished edge of the through color solid surface material where approved by the Architect.

H. Exposed Hardware Finishes: For exposed hardware, provide finish that complies with BHMA A156.18 for BHMA finish number indicated.

1. Satin Chromium Plated: BHMA 626 for brass or bronze base; BHMA 652 for steel base or as selected by Architect from manufacturer’s standard available finishes.

I. For concealed hardware, provide manufacturer's standard finish that complies with product class requirements in BHMA A156.9.

J. Kitchen/ Break Area: Under Counter Pull out Trash Cans: Concealed pull-out trash bin, heavy duty side wall mounted guides, (1) one 36 quart gray bin. Hafele –503.88.990 , or Architect approved equal.

K. Restroom Trash Bin: The pull out trash bin shall be supported and enclosed within a custom heavy gauge 316 stainless steel clad-plywood enclosure, under the counter and overhead supported by the counter top, with clear floor space below the cabinet enclosure and lockable continuous hinged stainless steel door lock shall be keyed to building standard. Refer to the drawings for profile, dimension & size of stainless steel trash bin.

2.3 MISCELLANEOUS MATERIALS

A. Furring, Blocking, Shims, and Hanging Strips: Softwood or hardwood lumber, kiln dried to less than 15 percent moisture content. All concealed blocking shall be fire retardant.

B. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide nonferrous-metal or hot-dip galvanized anchors and inserts on inside face of exterior walls and elsewhere as required for corrosion resistance. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.

C. Adhesives, General: Adhesives shall not contain urea formaldehyde.

D. VOC Limits for Installation Adhesives: Installation adhesives shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D

(EPA Method 24):

1. Wood Glues: 30 g/L.
2. Multipurpose Construction Adhesives: 70 g/L.
3. Contact Adhesive: 250 g/L.

E. Adhesive for Bonding Plastic Laminate: Unpigmented contact cement.

1. Adhesive for Bonding Edges: Hot-melt adhesive or adhesive specified above for faces.

2.4 FABRICATION, GENERAL

A. Interior Woodwork Grade: Unless otherwise indicated, provide Custom -grade interior woodwork complying with referenced quality standard.

B. Wood Moisture Content: Comply with requirements of referenced quality standard for wood moisture content in relation to ambient relative humidity during fabrication and in installation areas.

C. Fabricate woodwork to dimensions, profiles, and details indicated. Ease edges to radius indicated for the following:

1. Corners of Cabinets and Edges of Solid-Wood (Lumber) Members and Rails: 1/16 inch.

D. Complete fabrication, including assembly, finishing, and hardware application, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.

1. Notify Architect seven days in advance of the dates and times woodwork fabrication will be complete.
2. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements indicated on Shop Drawings before disassembling for shipment.

E. Shop-cut openings to maximum extent possible to receive hardware, appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

1. Seal edges of openings in countertops with a coat of varnish.

2.5 PLASTIC-LAMINATE CABINETS

A. Grade: Custom.

B. AWI Type of Cabinet Construction: Reveal overlay Reveal overlay on face frame.

C. Reveal Dimension: 1/2 inch.

D. Laminate Cladding for Exposed Surfaces: High-pressure decorative laminate complying with the following requirements:

1. Horizontal Surfaces Other Than Tops: Grade HGS.
2. Postformed Surfaces: Grade HGP.
3. Vertical Surfaces: Grade HGS.
4. Edges: PVC edge banding, 012 inch thick, matching laminate in color, pattern, and finish.

E. Materials for Semiexposed Surfaces:

1. Surfaces Other Than Drawer Bodies: High-pressure decorative laminate, Grade VGS.

    a. Edges of Plastic-Laminate Shelves: PVC edge banding, 012 inch thick, matching laminate in color, pattern, and finish.
    b. For semi exposed backs of panels with exposed plastic-laminate surfaces, provide surface of high-pressure decorative laminate, Grade VGS.

2. Drawer Sides and Backs: Plywood backed decorative panels or wood clear finish as selected by Architect.
3. Drawer Bottoms: Plywood backed decorative panels or wood clear finish as selected by Architect.

F. Concealed Backs of Panels with Exposed Plastic Laminate Surfaces: High-pressure decorative laminate, Grade BKL.

G. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed laminate surfaces complying with the following requirements:

1. Match existing millwork as approved by Architect and Owner from laminate manufacturer's full range in the following categories:

    a. Solid colors, matte finish.
    b. Solid colors with core same color as surface, matte finish.
    c. Wood grains, matte finish.
    d. Patterns, matte finish.

H. Provide dust panels of 1/4-inch plywood or tempered hardboard above compartments and drawers, unless located directly under tops.

I. Use marine grade plywood with plastic laminate veneer for all counter tops, cabinet bases and cabinet boxes with sinks.

2.6 SOLID-SURFACING WINDOW SILLS AND RESTROOM COUNTER TOPS

A. Grade: Premium.

B. Solid-Surfacing-Material Thickness: 1/2 inch or 3/4 inch or composite thickness to achieve profiles shown on drawings. Thickness shall be built up to 1 ½" @ counter edges, top openings, and sink rims.

C. Bullnose edge: Manufacturer's standard composite bull nose edge at counter tops and window sills, 1 ½" total thickness at counter top edge and window sills; edge openings at sinks to be flush with sink and edge openings at trash chute to be 1/8" radius eased edge.

D. Colors, Patterns, and Finishes: Provide materials and products that result in colors of solid-surfacing material complying with the following requirements:

1. Basis-of-Design shall be "Caesarstone" Quartz, color for restrooms countertop shall be "6600 Nougat" color for window sill is "5000 London Grey". Multiple color selections per Architect's and Owner's selection.

2. Integral Sinks – Elkay "Quartz Classic".

E. Fabricate tops in one piece, unless otherwise indicated. Comply with solid-surfacing-material manufacturer's written recommendations for adhesives, silicone, sealers, fabrication, and finishing.

1. Fabricate tops with shop-applied edges of materials and configuration indicated or specified.
2. Fabricate tops with loose backsplashes for field application, at back and sides of counter tops unless noted otherwise and integral sills are scheduled or required.
3. All supporting substrates will be fully concealed, cut outs in counter tops shall be trimmed in solid surface material where cutouts are indicated on the drawings.
4. Coordinate and pre drill holes for plumbing fixtures and scheduled accessories.
5. Field verify dimensions of the countertops & template before fabrication.

F. Install integral sink bowls in countertops in shop.

G. Drill holes in countertops for plumbing fittings and soap dispensers in shop. Polish all edges.

H. Refer to Section "Joint Sealants" – Sealants for mildew resistant silicone sealant to be used at counter tops.

2.7 SHOP FINISHING

A. Grade: Provide finishes of same grades as items to be finished.

B. General: Finish architectural woodwork at fabrication shop as specified in this Section. Defer only final touchup, cleaning, and polishing until after installation.

C. General: Shop finish transparent-finished interior architectural woodwork at fabrication shop as specified in this Section. Refer to Division 9 painting Sections for finishing opaque-finished architectural woodwork.

D. Preparation for Finishing: Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing architectural woodwork, as applicable to each unit of work.

1. Back priming: Apply one coat of sealer or primer, compatible with finish coats, to concealed surfaces of woodwork. Apply two coats to back of paneling and to end-grain surfaces. Concealed surfaces of plastic-laminate-clad woodwork do not require back priming when surfaced with plastic laminate, backing paper, or thermoset decorative panels.

PART 3 - EXECUTION

3.1 PREPARATION

A. Before installation, condition woodwork to average prevailing humidity conditions in installation areas.

B. Before installing architectural woodwork, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming.

3.2 INSTALLATION

A. Grade: Install woodwork to comply with requirements for the same grade specified in Part 2 for fabrication of type of woodwork involved.

B. Assemble woodwork and complete fabrication at Project site to comply with requirements for fabrication in Part 2, to extent that it was not completed in the shop.

C. Install woodwork level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb (including tops) to a tolerance of 1/8 inch in 96 inches.

D. Scribe and cut woodwork to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.

E. Anchor woodwork to anchors or blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners and blind nailing as required for complete installation. Use fine finishing nails or finishing screws for exposed fastening, countersunk and filled flush with woodwork and matching final finish if transparent finish is indicated.

F. Cabinets: Install without distortion so doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.

1. Install cabinets with no more than 1/8 inch in 96-inch sag, bow, or other variation from a straight line.
2. Fasten wall cabinets through back, near top and bottom, at ends and not more than 16 inches o.c. with No. 10 wafer-head sheet metal screws through metal backing or metal framing behind wall finish.

G. Countertops: Anchor securely by screwing through corner blocks of base cabinets or other supports into underside of countertop.

1. Align adjacent solid-surfacing-material countertops and form seams to comply with manufacturer's written recommendations using adhesive in color to match countertop. Carefully dress joints smooth, remove surface scratches, and clean entire surface.
2. Install countertops with no more than 1/8 inch in 96-inch sag, bow, or other variation from a straight line.
3. Secure backsplashes to walls with adhesive.
4. Caulk space between backsplash and wall with sealant specified in Division 7 Section "Joint Sealants."

H. Touch up finishing work specified in this Section after installation of woodwork. Fill nail holes with matching filler where exposed.

3.3 ADJUSTING AND CLEANING

A. Repair damaged and defective woodwork, where possible, to eliminate functional and visual defects; where not possible to repair, replace woodwork. Adjust joinery for uniform appearance.

B. Clean, lubricate, and adjust hardware.

C. Clean woodwork on exposed and semi exposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

END OF SECTION 06402

SECTION 06703 – FIRE RETARDANT TREATMENT (FIRE RETARDANT TREATED WOOD)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes fire retardant treatment for wood, including framing, decking, sheathing and other wood construction, not exposed to weather.

B. Related Sections include the following:

1. Division 6 Section “Miscellaneous Carpentry” for wood blocking and plywood construction panels.
2. Division 6 Section “Interior Finish Carpentry.”

1.3 REFERENCES

A. General: Standards listed by reference, including revisions by issuing authority, form a part of this specification section to extent indicated. Standards listed are identified by issuing authority, authority abbreviation, designation number, title, or other designation established by issuing authority. Standards subsequently referenced herein are referred to by issuing authority abbreviation and standard designation. Most recent editions should be used.

B. American Society for Testing and Materials (ASTM):

1. ASTM D 5516 Standard Test Method for Evaluating the Flexural Properties of Fire Retardant Treated Softwood Plywood Exposed to Elevated Temperatures.
2. ASTM D 5664 Standard Test Method for Evaluating the Effects of Fire-Retardant Treatments and Elevated Temperatures on Strength Properties of Fire-Retardant Treated Lumber.
3. ASTM E 84 Standard Test Method for Surface Burning Characteristics of Building Materials.

C. American Wood Protection Association (AWPA):

1. AWPA Standard P25 Standard for Waterborne Preservatives.
2. AWPA Standard P49 Fire Retardant Formulations.
3. AWPA Standard U1, Use Category System.

D. Military Specification (Mil. Spec.):

1. Mil. Spec. L-19140E Lumber and Plywood, Fire-Retardant Treated.

E. National Fire Protection Association (NFPA):

1. NFPA 255 Standard Test Method for Surface Burning Characteristics of Building Materials.

F. Underwriters Laboratories, Inc. (UL):

1. UL 723 Test for Surface Burning Characteristics of Building Materials.
2. UL Building Materials Directory.

1.4 SYSTEM DESCRIPTION

A. Performance Requirements: Provide fire retardant treatment which will perform in accordance with manufacturer's stated performance criteria without defects, damage or failure.

1.5 SUBMITTALS

A. General: Submit listed submittals in accordance with Conditions of the Contract and Division 1 Section "Submittals Procedures."

B. Product Data: Submit product data, including manufacturer's product sheet, for specified products.

C. Quality Assurance Submittals: Submit the following:

1. Test Report: Certified test report showing compliance with specified performance characteristics and physical properties. Include in test report certification that fire retardant solution does not contain ammonium phosphate.

a. Evaluation Report: National Evaluation Report ESR-1626 indicating flamespread, strength, corrosion and hygroscopic properties.

2. Certificate: Certification from treatment plant certifying wood treatment applied complies with Dricon fire retardant treatment by Arch Wood Protection.

D. Closeout Submittals: Submit the following:

1. Warranty: Warranty documents specified herein.

1.6 QUALITY ASSURANCE

A. Wood Treatment Plant Qualifications: Wood treatment plant experienced in performing work of this section which has specialized in the treatment of wood similar to that required for this project and a plant licensed by Arch Wood Protection.

1. Certificate: When requested, submit certificate indicating qualification.

B. Regulatory Requirements: Provide fire retardant treatment which complies with the following regulatory requirements:

1.7 DELIVERY, STORAGE AND HANDLING

A. General: Comply with Division 1 Section “Product Requirements.”

B. Storage and Protection: Store materials protected from exposure to harmful weather conditions and at temperature conditions recommended by manufacturer.

1.8 WARRANTY

A. Project Warranty: Refer to Conditions of the Contract for project warranty provisions.

B. Manufacturer’s Warranty: Submit, for Owner’s acceptance, manufacturer’s standard warranty document executed by authorized company official. Manufacturer’s warranty is in addition to, and not a limitation of, other rights Owner may have under the Contract Documents.

PART 2 - PRODUCTS

2.1 FIRE RETARDANT TREATMENT

A. Manufacturer: Arch Wood Protection. (Lonza)

1. Contact: 5660 New Northside Dr. NW, Suite 1100
Atlanta, GA 30328
Telephone: (678) 627-2000

B. Product Treatment: Dricon fire retardant treatment for wood is produced by licensed treatment plant. Fire retardant chemical shall provide protection against termites and fungal decay, shall be registered for use as a wood preservative by the U.S. Environmental Protection Agency (EPA), shall comply with formulation FR-1 of the current edition of AWPA Standard P49, and shall be free of halogens, sulfates and ammonium phosphate. Treated wood shall have a flamespread of less than 25 when tested in an extended 30-minute tunnel test in accordance with ASTM E 84, NFPA 255 or UL 723.

1. Corrosion Properties: Fire retardant treated wood in contact with carbon steel, galvanized steel, aluminum, copper and red brass shall exhibit corrosion rates less than 1 mil (0.025 mm) per year when tested in accordance with Fed. Spec. MIL-L-19140, Paragraph 4.6.5.2.

2. Testing: Testing on fire performance, strength and corrosion properties of fire retardant treated wood shall be recognized by issuance of a National Evaluation Services Report.

C. Fire Retardant Treatment: Manufacturer’s solution for fire retardant treatment of wood.

1. Treatment Standard: Comply with AWPA Standard U1.

2.2 PRODUCT SUBSTITUTIONS

A. Substitutions: Substitutions permitted in accordance with Division 01 provisions, Section 01600 - Materials and Equipment.

2.3 RELATED WOOD MATERIALS

A. General: Refer to Division 6 Sections for related wood materials specified herein.

2.4 SOURCE QUALITY

A. Source Quality: Obtain fire retardant treatment from a single manufacturer.

PART 3 - EXECUTION

3.1 MANUFACTURER'S INSTRUCTIONS

A. Compliance: Comply with manufacturer's product data, including product technical bulletins, for fire retardant treatment installation.

3.2 APPLICATION

A. Fire Retardant Treatment: Apply a fire retardant treatment in accordance with requirements of applicable codes and manufacturer's requirements.

3.3 PROTECTION

A. Protection: Protect fire retardant treated wood from damage during construction.

END OF SECTION 06703

SECTION 07115 – BITUMINOUS DAMPPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes cold-applied, emulsified-asphalt dampproofing applied to the following surfaces:

1. Interior face of concealed masonry exterior walls and as indicated on the Drawings or scheduled.

2. Hollow metal frame bucks, concealed side of door frame.

B. Related Sections include the following:

1. Division 8 Section “Metal Doors and Frames

2. Division 9 Section “Painting”

1.3 SUBMITTALS

A. Product Data: For each type of product indicated. Include recommendations for method of application, primer, number of coats, coverage or thickness, and protection course.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain primary dampproofing materials and primers through one source from a single manufacturer. Provide secondary materials recommended by manufacturer of primary materials.

1.5 PROJECT CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit asphalt dampproofing to be performed according to manufacturers' written instructions.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Cold-Applied, Emulsified-Asphalt Dampproofing:

a. ChemMasters Corp.
b. DeGusse Building Systems, Sonneborne brand products.
c. Gardener Gibson, Inc.
d. Henry Company.
e. Karnak Corporation.
f. Koppers Industries, Inc.
g. Malarkey Roofing Company.
h. Meadows, W. R., Inc.
i. Tamms Industries.

2.2 BITUMINOUS DAMPPROOFING

A. Cold-Applied, Emulsified-Asphalt Dampproofing:

1. Trowel Coats: ASTM D 1227, Type II, Class 1.
2. Fibered Brush and Spray Coats: ASTM D 1227, Type II, Class 1.
3. Brush and Spray Coats: ASTM D 1227, Type III, Class 1.
4. Product shall be acceptable for use within interior space applications.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Applicator present, for compliance with requirements for surface smoothness and other conditions affecting performance of work.

1. Begin dampproofing application only after substrate construction and penetrating work have been completed and unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Protection of Other Work: Mask or otherwise protect adjoining exposed surfaces from being stained, spotted, or coated with dampproofing. Prevent dampproofing materials from entering and clogging weep holes and drains.

B. Clean substrates of projections and substances detrimental to work; fill voids, seal joints, and apply bond breakers if any, as recommended by prime material manufacturer.

3.3 APPLICATION, GENERAL

A. Comply with manufacturer's written recommendations unless more stringent requirements are indicated or required by Project conditions to ensure satisfactory performance of dampproofing.

1. Apply additional coats if recommended by manufacturer or required to achieve coverages indicated.
2. Allow each coat of dampproofing to cure 24 hours before applying subsequent coats.

B. Apply dampproofing to provide continuous plane of protection on exterior face of exterior masonry walls.

3.4 CLEANING

A. Remove dampproofing materials from surfaces not intended to receive dampproofing.

END OF SECTION 07115

SECTION 07180 - TRAFFIC COATINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

A. Drawings and general provisions of the contract, including General and Supplementary Conditions and other Division / Specification Sections, apply to the Section.

1.2 SUMMARY

A. This Section includes traffic coatings for the following applications:

1. Hangar floors.

1.3 SUBMITTALS

A. Product Data: For each product indicated.

B. Shop Drawings: Show extent of each traffic coating. Include details for treating substrate joints and cracks, and other termination conditions. Include layout of traffic striping and markings.

C. Samples: For each type of traffic coating required, prepared on rigid backing. Provide stepped samples on backing large enough to illustrate build-up of traffic coatings.

D. Material certificates and Installer certifications,

E. Maintenance data.

1.4 QUALITY ASSURANCE

A. Installer (Applicator) Qualifications: Applicator who is certified by manufacturer.

1. Certification: Written approval or license of applicator by traffic coating manufacturer.

B. Source Limitations: Use traffic coatings of a single manufacturer.

1.5 PROJECT CONDITIONS

A. Environmental Limitations: Do not apply traffic coatings to damp or wet substrates, when temperatures are below 40 deg F, when relative humidity exceeds 85 percent, or when temperatures are less than 5 deg F above dew point.

1. Do not apply traffic coatings in snow, rain, fog, or mist, or when such weather conditions are imminent during the application and curing period. Apply only when frost-free conditions occur throughout the depth of the substrate.

1.6 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace traffic coatings that fails in materials and workmanship within **five** years from date of Substantial Completion.

1. Warranty does not include deterioration or failure due to unusual weather phenomena, failure of prepared and treated substrate, formation of new substrate cracks exceeding 1/16 inch in width, fire, vandalism, or abuse by snowplow, maintenance equipment, and truck traffic.
2. Failure includes, but is not limited to, the following:

a. Adhesive or cohesive failures.
b. Abrasion or tearing failures.
c. Surface crazing or spalling.
d. Intrusion of water, oils, gasoline, grease, salt, deicer chemicals, or acids into substrate.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Material Compatibility: Provide primers; base, intermediate, and top coats; and miscellaneous materials that are compatible with one another and with substrate under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.

B. VOC Content: Provide waterproofing and traffic paint materials that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):

1. Opaque waterproofing treatments: 400 g/L.
2. Pavement-Marking Paint: 150 g/L
3. Zone-Marking Coatings: 450 g/L.

2.2 TRAFFIC COATING

A. Basis-of-Design Product: The design for the vehicle bay floor coating is based on the product indicated below. Products by other listed manufacturers may be considered provided deviations from specifications of the product named are minor as judged by the Architect.

1. **Basis of Design: Dex-O-Tex Division /Crossfield Products Corp.- Aero-Flor III;**

2. Delta Polymers Inc.- Polythane 1005;

3. Dur-a-flex Inc.- Poly-thane #3

B. Primer: Manufacturer's standard factory-formulated primer recommended for substrate and conditions indicated.

C. Preparatory and Base Coats: Aliphatic Polyurethane coating

D. Top Coat: Aliphatic Polyurethane coating

1. Color and Gloss: As selected from manufacturer's full range of pigmented gloss and matte finishes.

E. Component Coat Thicknesses: As recommended by manufacturer for substrate and service conditions indicated, but not less than 13 mils dry film thickness (measured excluding aggregate):

F. Aggregate: Uniformly graded washed silica sand of particle sizes, shape, and minimum hardness recommended in writing by traffic coating manufacturer.

1. Spreading Rate: As recommended by manufacturer for substrate and service conditions indicated, but not less than the following:

a. Top Coat: As required to achieve slip-resistant finish.

2.3 MISCELLANEOUS MATERIALS

A. Joint Sealants: Multicomponent urethane sealant recommended in writing by manufacturer for substrate and joint conditions indicated and for compatibility with traffic coatings; complying with ASTM C 920.

PART 3 - EXECUTION

3.1 APPLICATION

A. General: Comply with manufacturer's written recommendations.

B. Verify compatibility with and suitability of substrates and that substrates are visibly dry and free of moisture.

1. Application of coating indicates acceptance of surfaces and conditions.

C. Concrete Substrates: Begin coating application only after minimum concrete curing and drying period recommended by traffic coating manufacturer has passed and after surfaces are dry.

1. Test for moisture by method recommended in writing by manufacturer.
2. Mechanically abrade concrete surfaces to a uniform profile according to ASTM D 4259. Do not acid etch.

D. Clean and prepare substrates to produce clean, dust-free, dry substrate for traffic coating application.

E. Mask adjoining surfaces not receiving traffic coatings including floor drains, hangar door rails and other substrate penetrations to prevent spillage, leaking, and migration of coatings.

F. Prepare, treat, rout, and fill joints and cracks substrates. Before coating surfaces, remove dust and dirt from joints and cracks according to ASTM D 4258.

G. Start traffic coating application in presence of manufacturer's technical representative.

1. Verify that wet film thickness of each component coat complies with requirements every 100 sq. ft.
2. Prevent contamination and damage during application and curing stages.

END OF SECTION 07180

SECTION 07120 – MEMBRANE WATERPROOFING

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 GENERAL

A. Furnish all labor, materials, tools, equipment, etc., and services necessary and incidental to the complete fabrication, furnishing and erection of this Section as shown, noted, detailed, necessary and reasonably implied on the drawings and in the specifications.

1.3 SUBMITTALS

A. Submit manufacturer's detailed drawings and product data under provisions of Division 1 Section “Submittal Procedures.”

B. Submit manufacturer's printed literature indicating specifications, installation, instructions and general recommendations for waterproofing.

C. Include manufacturer's warranty, certification, or other data substantiating that the materials comply with the requirements, and are recommended by the manufacturer for the application shown or specified.

D. Submit certifications according to Article 1.4 – Quality Assurance.

1.4 QUALITY ASSURANCE

A. The manufacturer of waterproof materials shall have been regularly engaged in production of these materials for a minimum of 10 years and shall have 3 similar installations with a minimum of 5 years service at each installation.

B. The applying contractor shall be an approved applicator by the manufacturer.

C. The applying contractor must request the services of an approved representative of the manufacturer for the initial instructions in preparation, mixing and application of materials. Notification shall be in writing and allow 5 days for manufacturer to comply.

1.5 JOB-SITE MEETING

A. Job-site meeting of General Contractor, Applicator, Architect and approved manufacturer's representative shall be held before any work begins, to verify all surfaces and conditions to receive membrane. All approved submittals, drawings and specifications shall be examined and coordinated with job conditions.

1.6 DELIVERY AND STORAGE

A. Deliver materials in original sealed containers, clearly marked with manufacturer's name, brand name, and type of material.

B. Store materials per manufacturer's instructions.

1.7 WARRANTY

A. Warranty waterproofing work against defects in material and workmanship, leaks or any migration of water for a period of five (5) years from the date of substantial completion. Replace or make good such defects at no additional costs during warranty period including costs of correcting adjacent work affected in any way by replacing or correcting such defects.

PART 2- PRODUCTS

2.1 MATERIALS

A. Showers, etc., as listed in Article 3.1 – Installation, General, to receive membrane waterproofing, as manufactured by Laticrete International, Inc., as follows:

1. First ply shall be 9235 liquid applied waterproof membrane.

2. Reinforcing fabric shall be Laticrete brand rot-proof, hi-tensile cloth specifically treated for use with Laticrete waterproofing materials.

3. Second ply shall be 9235 liquid applied waterproof membrane.

B. Shower pan liners are specified in Division 15 Section, and shall be provided at the shower.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. All items in this Section shall be installed by experienced mechanics and in the best workmanlike standard of this trade and in strict accordance to the manufacturer's printed instructions and approved methods.

B. Membrane shall be installed in the following locations and where shown and/or indicated on the drawings:

1. All permanent shower floors, walls, soap and shampoo coves and tiled ceilings.

3.2 INSTALLATION

A. Prior to commencing of this work, the applicator shall examine the area to be covered and advise the Contractor and Architect of any existing conditions or surface contamination that will require correction before the work commences.

B. All floor drains and other penetrations shall be in place before the work commences.

C. All horizontal surfaces or surfaces to receive membrane shall be cleaned of all oil, grease, mortar and other foreign matter before the work commences. Membrane-mesh-reinforcing shall be installed at shower seats and horizontal surfaces.

D. Membrane shall be turned up walls a minimum of 6 inches at showers.

E. Corners and joints shall receive a double ply of the membrane and mesh reinforcing in accordance with manufacturer’s standard installation procedures.

F. Membrane-mesh-reinforcing shall not be required for vertical surfaces; install fluid applied membrane to vertical surfaces per the manufacture’s installation instructions.

3.3 TESTING

A. Completed sections of horizontal surface as agreed upon by Architect and manufacturer's representative shall be tested with a minimum of 1 inch of water for 48 hours.

B. All waterproof membranes shall be allowed to cure for a period of 3-5 days prior to flood testing. Manufacturer's representative shall have final decision on number of curing days.

C. After water test is approved, surface shall be allowed to dry before other work begins. Surfaces shall be protected as recommended by manufacturer, until finish materials are installed.

3.4 MATERIAL AND WORKMANSHIP

A. All damaged material and faulty workmanship shall be removed and be replaced with new material in the best workmanlike manner at no extra cost to the Owner.

END OF SECTION 07120

SECTION 07190 – WATER REPELLENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes clear water-repellent coatings for the following horizontal surfaces:

1. Exterior concrete and concrete walkways, or where noted on the Drawings.

1.3 RELATED SECTIONS

A. Coordinate work of this Section with work of other Sections as required to properly execute the work and as necessary to maintain satisfactory progress of the work of other Sections, including:

1. Section 03300 – Cast-In-Place Concrete.
2. Section 03481 – Precast Concrete Bollards

1.4 REFERENCES

A. ACI 308: Standard Specification for Curing Concrete.

1.5 SUBMITTALS

A. Product Data: For each product indicated.

B. Product test reports.

C. Manufacturer’s compatibility certification with other sealants and finishes specified.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: A qualified installer (applicator) who employs only persons trained and approved by manufacturer to apply manufacturer’s products.

B. Apply a test sample, 4 feet by 4 feet in area, at designated location for approval prior to initiation of work, and examine concrete surfaces to establish standard of acceptable surface to be sealed.

C. Pre-Installation Meetings: Conduct meeting at Project site.

1. Schedule and convene meeting a minimum of 2 weeks, prior to commencing Work of this Section.
2. Review requirements for application, including surface preparation specified under other Sections, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details, installation procedures, testing and inspection procedures, protection, and repair.
3. Discuss procedures for protecting adjacent finished Work.

1.7 WARRANTY

A. Special Warranty: Manufacturer's standard for in which Installer agrees to repair or replace water-repellent coatings that fail in materials and workmanship within ten (10) years from date of Substantial Completion. Warranty does not include deterioration or failure of coating due to unusual weather phenomena, failure of prepared and treated substrate, formation of new joints and cracks in excess of 1/16 inch in width, fire, vandalism, or abuse by maintenance equipment.

1.8 DELIVERY, STORAGE AND HANDLING

A. Comply with Section 01600 – Materials and Equipment.

B. Comply with manufacturer's ordering instructions and lead-time requirements to avoid construction delays.

C. Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact.

D. Store tightly sealed materials off ground and away from moisture, direct sunlight, extreme heat, and freezing temperatures.

E. Store in unopened packaging in clean, dry environmental protected from sunlight at 40 degrees F (4 degrees C) to 85 degrees F (29 degrees C) prevent material from freezing.

1.9 PROJECT CONDITIONS

A. Environmental Requirements:

1. Ensure that substrate surface and ambient air temperature are minimum of 35 degrees F (minus 7 degrees C) and rising at application time and remain above 35 degrees F (minus 7 degrees C) for at least 24 hours after application. Ensure that frost or frozen surfaces are thawed and dry.
2. Do not place surface hardener in areas without roof cover.
3. Allow surfaces to attain temperature and conditions specified before proceeding with surface hardener application.
4. Perform Work of this Section in well-ventilated areas.

PART 2 - PRODUCTS

2.1 WATER REPELLENTS

A. Silicate: Inorganic silicate-based curing, hardener and dustproofer for use on concrete either interior or exterior.Penetrating water-soluble, water-repellent, clear compound containing water, or other proprietary solvent carrier and densifier, that when applied in accordance with manufacturer's application recommendations will produce dense surface resistance to abrasion, moisture, and tire marking.

1. VOC Requirements: With 0g/L VOCs or less.

2. Products: Subject to compliance with requirements, provide one of the following:

a. BASF- Kure N Harden ® (Masterkure HD 200 WB)

b. Or approved equal, approved and accepted by the Architect and provided substitution complies with specified criteria, and resistant to staining from coffee, sodas, and markers.

PART 3 - EXECUTION

3.1 APPLICATION

A. Preparation: Clean substrate of substances that might interfere with penetration or performance of water repellents. Test for moisture content, according to water repellent manufacturer's written instructions, to ensure surface is sufficiently dry.

1. Formed Concrete: Remove oil, curing compounds, laitance, and other substances that could prevent adhesion or penetration of water repellents.

2. Clean concrete unit masonry pursuant to NCMA recommendations.

3. Application of sealer shall be evidence of substrate acceptance.

4. Remove all concrete fins, splatters, and finished concrete anomalies prior to sealer application.

B. Test for pH level, according to water repellent manufacturer's written instructions, to ensure chemical bond to silicate minerals.

C. Weather and Substrate Conditions: Do not proceed with application of water repellent under any of the following conditions, except with written instruction of manufacturer:

1. Ambient temperature is less than 40 deg F.

2. Concrete surfaces and mortar have cured for less than 28 days.

3. Rain or temperatures below 40 deg F are predicted within 24 hours.

4. Application is earlier than 24 hours after surfaces have been wet.

5. Substrate is frozen or surface temperature is less than 40 deg F.

6. Windy condition exists that may cause water repellent to be blown onto vegetation or surfaces not intended to be coated.

D. Protect adjoining work including sealant bond surfaces, from spillage or blow-over of water repellent. Cover adjoining and nearby surfaces of aluminum and glass if there is possibility of water repellent being deposited on surfaces. Cover live plants and grass.

E. Coordination with Sealants: Do not apply water repellent until sealants for joints adjacent to surfaces receiving water-repellent treatment have been installed and cured.

1. Water-repellent work may precede sealant application only if sealant adhesion and compatibility have been tested and verified using substrate, water repellent, and sealant materials identical to those used in the Work.

F. Test Application: Before performing water-repellent work, including bulk purchase and delivery of products, prepare small application in an unobtrusive location and in a manner approved by Architect to demonstrate final effect (visual, physical, and chemical) of planned application. Proceed with work only after Architect approves test application or as otherwise directed.

1. Revisions of planned application, if any, as requested by Architect, will be by Change Order if they constitute departure from requirements of the Contract Documents at time of contracting.

G. Apply heavy saturation spray coating of water repellent on surfaces indicated for treatment using low-pressure spray equipment. Comply with manufacturer’s written instructions for using airless spraying procedure, unless otherwise indicated.

H. Apply second saturation spray coating, repeating first application. Comply with manufacturer’s written instructions for limitations on drying time between coats and after rainstorm wetting of surfaces between coats. Consult manufacturer’s technical representative if written instructions are not applicable to Project conditions.

I. Immediately clean water repellent from adjoining surfaces and surfaces soiled or damaged by water-repellent application as work progresses. Repair damage cause by water-repellent application. Comply with manufacturer’s written cleaning instructions. Do allow residue to dry on the concrete surface or allow staining (white residue) to form.

J. After application is complete, remove protective coverings from adjacent surfaces and other protected areas.

3.2 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Provide services of a factory-authorized technical service representative to inspect and approve substrate before application and to instruct applicator on product and application method to be used.

END OF SECTION 07190

SECTION 07210 - BUILDING INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Mineral-wool board insulation.

    a. Reference Drawings for UL Design options and assemblies for applicability of this product.

2. Rigid board foam (closed cell) insulation.
3. Mineral-wool blanket insulation.

    a. Reference Drawings for UL Design options and assemblies for applicability of this product.

4. Spray polyurethane foam insulation.
5. Sound batt insulation.

B. Related Sections:

1. Division 7 Section "Fire-Resistive Joint Systems" for insulation installed as part of a perimeter fire-resistive joint system.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated, including, but not limited to installation instructions and attachment devices.

B. Manufacturer’s Certification: Manufacturer’s certification that product complies with the project requirements and is suitable for the use intended.

C. Manufacturer’s Thermal Performance Warranty.

1.4 INFORMATIONAL SUBMITTALS

A. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each product.

B. Research/Evaluation Reports: For foam-plastic insulation, from ICC-ES.

1.5 QUALITY ASSURANCE

A. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

B. Manufacturer will maintain quality control during manufacturing so that the insulating product will perform as specified in test reports and ratings given in manufacturer's printed material.

C. Interior Wall Insulation shall not be produced with, or contain, any of the United States EPA regulated CFC compounds listed in the Montreal Protocol of the United Nations Environmental Program.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.

B. All materials shall be delivered to the project site in their original unbroken containers, bearing the manufacturer's name, brand and specification designation.

PART 2 - PRODUCTS

2.1 MINERAL-WOOL BOARD INSULATION

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Isolatek International.
2. Owens Corning.
3. Thermafiber.

B. Unfaced, Mineral-Wool Board Insulation: ASTM C 612; with maximum flame-spread and smoke-developed indexes of 15 and zero, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.

1. Nominal density of 6 lb/cu. ft., Type II, thermal resistivity of 4.16 deg F x h x sq. ft./Btu x in. at 75 deg F.
2. Fiber Color: Darkened, where indicated.

2.2 RIGID BOARD FOAM (CLOSED CELL) INSULATION

A. Basis-of-Design: Subject to compliance with requirements, provide The Dow Chemical Company; Styrofoam Brand Z-Mate Extruded Polystyrene Foam Insulation.

B. Material Properties:

1. Rigid closed-cell extruded polystyrene foam insulation.
2. Comply with ASTM C 578-95, Type X, density 1.35 lb/cu. ft. min., compressive strength 15 psi (ASTM D 1621-94).
3. Thermal resistance: 5-year aged R-values of 5.4 and 5.0 min. °F-ft^2-h/Btu^2/inch at 40°F and 75° respectively (ASTM C 518-91).
4. Water absorption: Max. 0.1% by volume (ASTM C 272-91).
5. Surface Burning Characteristics:

a. Flame Spread: 15 or less.
b. Smoke Developed: 165.

C. Thickness: (R-5)/inch; Refer to Drawings for composite “R” value of the assembly.

2.3 GLASS-FIBER BLANKET INSULATION

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Guardian Building Products, Inc.
2. Johns Manville.
3. Owens Corning.

B. Unfaced, Glass-Fiber Blanket Insulation: ASTM C 665, Type I; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.

C. Sustainability Requirements: Provide glass-fiber blanket insulation as follows:

1. Free of Formaldehyde: Insulation manufactured with 100 percent acrylic binders and no formaldehyde.
2. Low Emitting: Insulation tested according to ASTM D 5116 and shown to emit less than 0.05-ppm formaldehyde.

2.4 MINERAL-WOOL BLANKET INSULATION

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Fibrex Insulations Inc.
2. Owens Corning.
3. Thermafiber.
4. Johns Manville.

B. Unfaced, Mineral-Wool Blanket Insulation: ASTM C 665, Type I (blankets without

membrane facing); consisting of fibers; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.

2.5 SPRAY POLYURETHANE FOAM INSULATION

A. Closed-Cell Polyurethane Foam Insulation: ASTM C 1029, Type II, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E 84.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Dow Chemical Company (The).
b. BASF Corporation.
c. Henry Company.

2. Minimum density of 1.5 lb/cu. ft., thermal resistivity of 6.2 deg F x h x sq. ft./Btu x in. at 75 deg F.

2.6 SOUND ATTENUATION BATTS

A. Sound attenuation batts shall be unfaced glass fiber insulation and have been tested in accordance with ASTM C665, Type 1, ASTM E-84 and ASTM C-423, as manufactured by Owens Corning Corp. or approved equal.

B. Material thickness and locations shall be, but not limited to, the following:

1. 2-12 inch thick (NRC = .85): for all waste and drain pipes, and rainwater leaders in all walls.
2. 3-1/2 inch thick (NRC = 1.05): for sound walls, dropped ceilings of that same space as above, dropped ceilings at all bathrooms, and conference rooms, at a minimum. Refer to Drawings for extent.

2.7 ACOUSTICAL SEALANT (CAULKING)

A. Sealant shall be a non-hardening, non-drying and non-bleeding acoustical sealant as manufactured by TREMCO Sealant Systems or USG Sealant for use at sound walls only.

2.8 STYROFOAM PANELS

A. Styrofoam panels shall be STYROFOAM 60 High Load (roofs) and Square Edge XPS (walls), in 2.5 inch thickness as manufactured by Dupont or approved equal.

2.9 INSULATION FASTENERS

A. Adhesively Attached, Spindle-Type Anchors: Plate welded to projecting spindle; capable of holding insulation of specified thickness securely in position indicated with

self-locking washer in place.

1. Products: Subject to compliance with requirements, provide one of the following:

   a. AGM Industries, Inc.; Series T TACTOO Insul-Hangers.
   b. Gemco; Spindle Type.

2. Plate: Perforated, galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
3. Spindle: Copper-coated, low-carbon steel; fully annealed; 0.105 inch in diameter; length to suit depth of insulation indicated.

B. Insulation Standoff: Spacer fabricated from galvanized mild-steel sheet for fitting over spindle of insulation anchor to maintain air space of 1 inch between face of insulation and substrate to which anchor is attached.

1. Product: Subject compliance with requirements, provide one of the following:

   a. Gemco; Clutch Clip.

C. Anchor Adhesive: Product with demonstrated capability to bond insulation anchors securely to substrates indicated without damaging insulation, fasteners, and substrates.

1. Products: Subject to compliance with requirements, provide one of the following:

   a. AGM Industries, Inc.; TACTOO Adhesive.
   b. Gemco; Tuff Bond Hanger Adhesive.

PART 3 - EXECUTION

3.1 PREPARATION

A. Clean substrates of substances that are harmful to insulation or that interfere with insulation attachment.

B. Verify that masonry joints are struck flush and that other conditions are satisfactory for proper installation.

C. Remove concrete fins and mortar projections that interfere with placement of insulation boards.

3.2 INSTALLATION, GENERAL

A. Comply with insulation manufacturer's written instructions applicable to products and applications indicated.

B. Install insulation that is undamaged, dry, and unsoiled and that has not been left

exposed to ice, rain, or snow at any time.

C. Extend insulation to envelop entire area to be insulated. Cut and fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.

D. Provide sizes to fit applications indicated and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units to produce thickness indicated unless multiple layers are otherwise shown or required to make up total thickness.

3.3 INSTALLATION OF INSULATION FOR FRAMED CONSTRUCTION

A. Apply insulation units to substrates by method indicated, complying with manufacturer's written instructions. If no specific method is indicated, bond units to substrate with adhesive or use mechanical anchorage to provide permanent placement and support of units.

B. Mineral-Wool Insulation: Reference Drawings for UL Design options and assemblies for installation of mineral-wool insulation as required.

C. Spray-Applied Insulation: Apply spray-applied insulation according to manufacturer's written instructions. Do not apply insulation until installation of pipes, ducts, conduits, wiring, and electrical outlets in walls is completed, and windows, electrical boxes, and other items not indicated to receive insulation are masked. After insulation is applied, make flush with face of studs by using method recommended by insulation manufacturer.

D. Miscellaneous Voids: Install insulation in miscellaneous voids and cavity spaces where required to prevent gaps in insulation using the following materials:

1. Spray Polyurethane Insulation: Apply according to manufacturer's written instructions.

3.4 INSTALLATION OF BOARD INSULATION

A. Install board insulation where indicated on Drawings according to manufacturer's written instructions.

1. Hold insulation in place by securing metal clips and straps or integral pockets within window frames, spaced at intervals recommended in writing by insulation manufacturer to hold insulation securely in place. Maintain cavity width of dimension indicated between insulation and wall face.
2. Install 2-furring channels vertically at 24” o.c., fit insulation boards between the furring channels.
3. Insulate around plumbing fixtures with a compatible spray foam insulation.
4. Seal the space between STYROFOAM Brand Z-MATE Extruded Polystyrene Foam Insulation and window frames with latex acrylic sealant.

3.5 INSTALLATION OF SOUND ATTENUATION BATTS

A. Sound batts shall be installed between metal studs continuous from floor slab to bottom of slab at ceiling.

B. Wrap and tape around piping, conduit, and duct work to provide an unbroken barrier.

C. Batts shall be butted tight at all joints and securely put into place.

D. Extend & overlap sound batts a minimum of 4’-0” beyond face of sound rated walls that do not extend to the structure.

3.6 INSTALLATION OF ACOUSTICAL SEALANT

A. Install sealant around perimeters of all code required fire rated sound-rated wall, including vertical surfaces, floors and ceilings.

B. Install sealant around all electrical outlet and switch boxes, and where pipes and conduit pass through code required sound-rated walls.

3.7 INSTALLATION OF STYROFOAM PANELS

A. STYROFOAM 60 High Load (roofs) and Square Edge XPS (walls) shall be installed as detailed, shown and/or indicated on the drawings or as specified; roof applications shall comply with wind load requirements.

3.8 MATERIAL AND WORKMANSHIP

A. All damaged material and faulty workmanship shall be removed and be replaced with new material in the best workmanlike manner at NO EXTRA COST to the Owner.

3.9 PROTECTION

A. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

END OF SECTION 07210

SECTION 07250 - WEATHER BARRIERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

A. Weather barrier membrane system, including manufacturer's accessories for cement siding and framed stucco and metal lath assemblies.

B. Fasteners

1.3 REFERENCES

A. ASTM International

1. ASTM C 920; Standard Specification for Elastomeric Joint Sealants
2. ASTM C 1193; Standard Guide for Use of Joint Sealants
3. ASTM D 882; Test Method for Tensile Properties of Thin Plastic Sheeting
4. ASTM D 1117; Standard Guide for Evaluating Non-woven Fabrics
5. ASTM E 84; Test Method for Surface Burning Characteristics of Building Materials
6. ASTM E 96; Test Method for Water Vapor Transmission of Materials
7. ASTM E 1677; Specification for Air Retarder Material or System for Framed Building Walls
8. ASTM E2178; Test Method for Air Permeance of Building Materials
9. ASTM E2357; Standard Test Method for Determining Air Leakage of Air Barrier Assemblies

B. AATCC – American Association of Textile Chemists & Colorists

1. Test Method 127 Water Resistance: Hydrostatic Pressure Test

C. TAPPI

1. Test Method T-410; Grams of Paper and Paperboard (Weight per Unit Area)
2. Test Method T-460; Air Resistance of Paper (Gurley Hill Method)

1.4 SUBMITTALS

A. Refer to Section 01330 Submittal Procedures.

B. Product Data: Submit manufacturer current technical literature for each component of the system.

C. Samples: Weather Barrier Membrane, minimum 8-1/2 inches by 11 inch.

D. Quality Assurance Submittals

1. Design Data, Test Reports: Provide manufacturer test reports indicating product compliance with indicated requirements.
2. Manufacturer Instructions: Provide manufacturer's written installation instructions.
3. Manufacturer's Field Service Reports: Provide site reports from authorized field service representative, indicating observation of weather barrier assembly installation.

E. Closeout Submittals

1. Refer to Section 01780 Closeout Submittals.
2. Weather Barrier Warranty: Manufacturer's executed warranty form with authorized signatures and endorsements indicating date of Substantial Completion. Warranty period 10 years.

1.5 QUALITY ASSURANCE

A. Qualifications

1. Installer shall have experience with installation of weather barrier assemblies under similar conditions.
2. Installation shall be in accordance with weather barrier manufacturer's installation guidelines and recommendations.
3. Source Limitations: Provide weather barrier and accessory materials produced by single manufacturer.

B. Mock-up

1. Install mock-up using approved weather barrier assembly including fasteners, flashing, tape and related accessories per manufacturer's current printed instructions and recommendations. Mock up may be integrated into work.
2. Contact manufacturer's designated representative and Architect prior to weather barrier assembly installation, to perform required mock-up visual inspection and analysis as required for warranty.

C. Pre-installation Meeting

1. Refer to Section 01310 Project Management and Coordination.
2. Hold a pre-installation conference, two weeks prior to start of weather barrier installation. Attendees shall include Contractor, Architect, installer, Owner or Owner's designated representative, and weather barrier manufacturer's designated representative.

3. Review all related project requirements and submittals, status of substrate work and preparation, areas of potential conflict and interface, availability of weather barrier assembly materials and components, installer's training requirements, equipment, facilities and scaffolding, and coordinate methods, procedures and sequencing requirements for full and proper installation, integration and protection.

1.6 DELIVERY, STORAGE AND HANDLING

A. Refer to Section 01600 Product Requirements.

B. Deliver weather barrier materials and components in manufacturer's original, unopened, undamaged containers with identification labels intact.

C. Store weather barrier materials as recommended by weather barrier manufacturer.

1.7 SCHEDULING

A. Review requirements for sequencing of installation of weather barrier assembly with installation of other building elements and flashings to provide a weather-tight barrier assembly.

B. Schedule installation of weather barrier materials and exterior cladding within nine months of weather barrier assembly installation.

1.8 WARRANTY

A. Refer to Section 01740 Warranties and Bonds, and Section 01770 Closeout Procedures.

B. Special Warranty

1. Weather barrier manufacturer's warranty for weather barrier for a period of ten (10) years from date of purchase.
2. Pre-installation meetings and jobsite observations by weather barrier manufacturer for warranty is required prior to assembly installation.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. DuPont; 4417 Lancaster Pike, Chestnut Run Plaza 728, Wilmington, DE 19805; 1-800-44-TYVEK (8-9835); http://www.construction.tyvek.com

B. Basis of Design: spunbonded polyolefin, non-woven, non-perforated, weather barrier is based upon DuPont™ Tyvek® CommercialWrap® D and related assembly

components and accessories, or equal approved by the Architect. Dupont™ fluid applied “WB+” weather barrier and flashings will be acceptable in lieu of weather barrier wrap material/sheet.

C. Performance Characteristics:

1. Air Penetration: 0.001 cfm/ft^2 at 75 Pa when tested in accordance with ASTME2178. Type 1 when tested in accordance with ASTM E 1677. ≤0.04 cfm/ft @ 75 Pa when tested in accordance with ASTM E2357.
2. Water Vapor Transmission: 30 perms, when tested in accordance with ASTM E 96, Method B.
3. Water Penetration Resistance: 235 cm when tested in accordance with AATCC Test Method 127.
4. Basis Weight: 2.4 oz/yd^2, when tested in accordance with TAPPI Test Method T-410.
5. Air Infiltration Resistance: Air infiltration at >750 seconds, when tested in accordance with TAPPI Test Method T-460.
6. Tensile Strength: 33/41 lbs/in., when tested in accordance with ASTM D 822 , Method A.
7. Surface Burning Characteristics: Class A, when tested in accordance with ASTM E 84. Flame Spread: 15, Smoke Developed: 25.

D. Other manufacturers and product substitutions will be considered for approval in accordance with Section 01600 Materials and Equipment, and that are approved by the Architect.

2.2 ACCESSORIES

A. Seam Tape: 3” DuPont™ Tyvek® Tape as distributed by DuPont or Architect approved weather barrier manufacturer’s seam tape, or fluid applied flashings for the sprayed-fluid applied weather barrier system.

B. Fasteners:

1. Steel Frame Construction DuPont™ Tyvek® Wrap Cap Screws: 1-5/8 inch rust resistant screw with 2-inch diameter plastic cap fasteners, or Architect approved weather barrier manufacturer’s fastener and cap screw system.

C. Sealants

1. Refer to Section 07920 Joint Sealants for additional requirements.
2. Provide sealants that comply with ASTM C 920, elastomeric polymer sealant to maintain watertight conditions.
3. Products:

   a. DuPont™ Commercial Sealant.
   b. Sealants recommended by the weather barrier manufacturer.

D. Adhesives:

1. Provide adhesive recommended by weather barrier manufacturer.
2. Products:

    a. Liquid Nails® LN-109
    b. Denso Butyl Liquid
    c. 3M High Strength 90
    d. Adhesives recommend by the weather barrier manufacturer.

E. Primers:

1. Provide flashing manufacturer recommended primer to assist in adhesion between substrate and flashing.

2. Products:

    a. 3M High Strength 90
    b. Denso Butyl Spray
    c. Permagrip 105
    d. Primers recommended by the flashing manufacturer

F. Flashing, as required to meet manufacturer's system assembly for complete system. Flashings listed below are based on the Basis of Design, provide approved weather barrier manufacturer flashings.

1. DuPont™ FlexWrap™: Flexible membrane flashing materials for window openings and penetrations.
2. DuPont™ FlexWrap™ NF: Flexible membrane flashing materials for window openings and penetrations.
3. DuPont™ StraightFlash™: Straight flashing membrane materials for flashings and sealing penetrations such as masonry ties, etc.
4. DuPont™ Thru-Wall Surface Adhered Membrane with Integrated Drip Edge: Thru-Wall flashing membrane materials for flashing at changes in direction or elevation (shelf angles, foundations, etc.) and at transitions between different assembly materials.
5. Preformed Inside and Outside Corners and End Dams as distributed by DuPont: Preformed three-dimensional shapes to complete the flashing system used in conjunction with DuPont™ Thru-Wall Flashing.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify substrate and surface conditions are in accordance with weather barrier manufacturer recommended tolerances prior to installation of weather barrier and accessories.

3.2 INSTALLATION - WEATHER BARRIER

A. Install weather barrier over exterior face of exterior wall substrate in accordance with manufacturer recommendations

B. Start weather barrier installation at a building corner, leaving 6-12 inches of weather barrier extended beyond corner to overlap.

C. Install weather barrier in a horizontal manner starting at the lower portion of the wall surface with subsequent layers installed in a shingling manner to overlap lower layers. Maintain weather barrier plumb and level

D. Sill Plate Interface: Extend lower edge of weather barrier over sill plate interface 3-6 inches. Secure to foundation with elastomeric sealant as recommended by weather barrier manufacturer.

E. Openings: Extend weather barrier completely over openings.

F. Overlap weather barrier

1. Exterior corners: minimum 12 inches.
2. Seams: minimum 6 inches.

G. Weather Barrier Attachment:

1. Framed Construction: Attach weather barrier to studs through exterior sheathing. Secure using weather barrier manufacturer recommend fasteners, space 6 -18 inches vertically on center along stud line, and 24 inch on center, maximum horizontally.

H. Apply 4 inch by 7 inch piece of weather barrier flashing manufacturer approved alternate to weather barrier membrane prior to the installation cladding anchors.

3.3 SEAMING

A. Seal seams of weather barrier with seam tape at all vertical and horizontal overlapping seams.

B. Seal any tears or cuts as recommended by weather barrier manufacturer.

3.4 OPENING PREPARATION

A. Flush cut weather barrier at edge of sheathing around full perimeter of opening.

B. Cut a head flap at 45-degree angle in the weather barrier at window head to expose 8 inches of sheathing. Temporarily secure weather barrier flap away from sheathing with tape.

3.5 FLASHING

A. Install flashing in accordance with manufacturer's requirements and standards. Coordinate flashing with other building elements.

B. Cut 9-inch wide DuPont™ FlexWrap™ or DuPont™ FlexWrap™ NF a minimum of 12 inches longer than width of sill rough opening.

C. Cover horizontal sill by aligning DuPont™ FlexWrap™ or DuPont™ FlexWrap™ NF edge with inside edge of sill. Adhere to rough opening across sill and up jambs a minimum of 6 inches. Secure flashing tightly into corners by working in along the sill before adhering up the jambs.

D. Fan DuPont™ FlexWrap™ at bottom corners onto face of wall. Firmly press in place. Mechanically fasten fanned edges. Mechanically fastening DuPont™ FlexWrap™ NF is not required.

E. Apply 9-inch wide strips of DuPont™ StraightFlash™ at jambs. Align flashing with interior edge of jamb framing. Start StraightFlash™ at head of opening and lap sill flashing down to the sill.

F. Spray-apply primer to top 6 inches of jambs and exposed sheathing.

G. Install DuPont™ FlexWrap™ or DuPont™ FlexWrap™ NF at opening head using same installation procedures used at sill. Overlap jamb flashing a minimum of 2 inches.

H. Coordinate flashing with other building elements.

I. Position weather barrier head flap across head flashing. Adhere using 4-inch wide DuPont™ StraightFlash™ over the 45-degree seams.

3.6 THRU-WALL FLASHING INSTALLATION

A. Apply primer per manufacturer's written instructions.

B. Install preformed corners and end dams bedded in sealant in appropriate locations along wall.

C. Starting at a corner, remove release sheet and apply membrane to primed surfaces in lengths of 8 to 10 feet.

D. Extend membrane through wall and leave ¼ inch minimum exposed to form drip edge.

E. Roll flashing into place. Ensure continuous and direct contact with substrate.

F. Lap ends and overlap preformed corners 4 inches minimum. Seal all laps with sealant.

G. Trim exterior edge of membrane 1-inch and secure metal drip edge per manufacturer's written instructions.

H. Terminate membrane on vertical wall. Terminate into reglet, counterflashing or with termination bar.

I. Apply sealant bead at each termination.

3.7 THRU-WALL FLASHING / WEATHER BARRIER INTERFACE AT BASE OF WALL

A. Overlap thru-wall flashing with weather barrier by 6-inches.

B. Mechanically fasten bottom of weather barrier through top of thru-wall flashing.

C. Seal vertical and horizontal seams with tape or sealing membrane.

3.8 FIELD QUALITY CONTROL

A. Notify manufacturer’s designated representative to obtain periodic observations of weather barrier assembly installation.

3.9 PROTECTION

A. Protect installed weather barrier from damage.

END OF SECTION 07250

SECTION 07260 - VAPOR RETARDER

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

B. Products supplied under this section:

1. Vapor barrier and installation accessories for installation under concrete slabs.

1.2 SUMMARY

A Furnish all labor, materials, tools, equipment, etc. and services necessary and incidental to the complete fabrication, furnishing and erection of this Section as shown, noted, detailed, necessary and reasonably implied on the drawings and specifications at all new cast-in-place slab on grade concrete floors and pavement.

B. Where existing concrete slab-on-grade floors are removed or demoed for new work, install new vapor retarder.

1.3 RELATED SECTIONS

A. Division 2 – Site Work

B. Section 02361 – Termite Control

C. Section 03300 – Cast-in-place Concrete

1.4 REFERENCES

A. ASTM D 882 – Tensile Properties of Thin Plastic Sheeting.

B. ASTM D 1709 – Impact Resistance of Plastic Film by the Free-Falling Dart Method.

C. ASTM D 2582 – Puncture-Propagation Tear Resistance of Plastic Film and Thin Sheeting.

D. ASTM D 3776 – Mass per Unit Area (Weight) of Woven Fabric.

E. ASTM D 4833 – Index Puncture Resistance of Geotextiles, Geomembranes, and Related Products.

F. ASTM E 96 – Water Vapor Transmission of Materials.

G. ASTM E 1643 – Installation of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs.

H. ASTM E 1745 – Water Vapor Retarders Used in Contact with Soil or Granular Fill Under Concrete Slabs.

I. ACI 302.2R-06 – Guide for Concrete Slabs that Receive Moisture Sensitive Flooring Materials.

1.5 SUBMITTAL DATA AND SAMPLES

A. Submit product data under provisions of Section 01300 – Shop Drawings, Product Data and Samples.

B. Submit manufacturer's data describing products, product samples, installation procedures, a schedule of locations, and details of joint and construction penetrations.

1. Summary of test results per paragraph 9.3 of ASTM E 1745.
2. Manufacturer’s installation instructions for placement, seaming and penetration repair instructions.
3. All mandatory ASTM E1745 testing must be performed on a single production roll per ASTM E1745 Section 8.1.

1.6 STORAGE AND PROTECTION

A. Deliver materials to site in manufacturer’s original, unopened containers and packaging, with labels clearly identifying product name and manufacturer.

B. Storage and protection shall be in accordance with Section 01600 – Materials and Equipment.

1.7 WARRANTY

A. Refer to Section 01740 – Warranties and Bonds.

PART 2 – PRODUCTS

2.1 MEMBRANE VAPOR RETARDER

A. Comply with applicable portions of the Florida Building Code for minimum requirements for vapor barriers and dampproofing.

B. Provide products from the manufacturers listed below. Products of other manufacturers will be considered under standard substitution procedures. See Section 01600 – Materials and Equipment.

C. Underslab Membrane:

1. Vapor barrier shall have all of the following qualities:

a. Maintain permeance of less than 0.01 Perms [grains/(ft^2 · hr · inHg)] as tested in accordance with mandatory conditioning tests per ASTM E1745 Section 7.1 (7.1.1-7.1.5).
b. Other performance criteria:

1) Strength: ASTM E1745 Class A.
2) Thickness: 15 mils minimum

2. Basis-of-Design Product: Stego Wrap 15 mil. Underslab membrane by Stego Industries, LLC; www.stegoindustries.com, 1-877-464-7834.

3. Alternate Manufacturer's:

a. Griffolyn Vaporguard by Reef Industries, Inc.

b. Perminator- 15mil. by W.R. Meadows

c. Other Manufacturers approved by the Architect.

D. Seem/Penetration & Perimeter Tape: Polyethylene, self-adhering type, 2-inches wide, compatible with sheet material as recommended by the membrane manufacturer. Perimeter tape shall be manufacturer's standard double-sided, or term bar may be used. Do not use Duct Tape; Provide manufacturer's approved system components.

E. Mastic: Manufacturer's standard mastic or sealant.

PART 3 – EXECUTION

3.1 INSTALLATION, GENERAL

A. All items in this Section shall be installed by experienced mechanics of this trade, in the best workmanlike manner of this trade's best standard practice and in strict accordance with the manufacturer's printed instructions.

3.2 PREPARATION

A Ensure that subsoil is approved by Architect or Geotechnical Engineer.

1. Level and compact base material.

3.3 VAPOR RETARDER INSTALLATION

A. Vapor retarder shall be placed over firmly compacted fill, lapping in direction concrete will be placed. Lap a minimum of 6 inches and seal laps, edges and cuts water tight with self-adhering tape. Place reinforcing steel and electrical conduit above membrane. If any tears result, mend with self-adhering tape sealed down watertight.

B. Vapor retarder for walls shall be placed and anchored per manufacturers recommendations and lapped a minimum of 6 inches and sealed, edges and cuts water tight with self-adhering tape.

3.4 MATERIAL AND WORKMANSHIP

A. All damaged material and faulty workmanship shall be removed and replaced with new material in the best workmanlike manner at no extra cost to the Owner.

END OF SECTION 07260

SECTION 07411 - METAL ROOF PANELS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Standing-seam metal roof panels.
2. Metal soffit panels.

B. Related Sections:

1. Division 5 Section "Steel Deck" for steel roof deck supporting metal roof panels.
2. Division 7 Section "Joint Sealants" for field-applied sealants not otherwise specified in this Section.
3. Division 7 Section “Building Insulation” for closed cell insulation.

1.3 DEFINITIONS

A. Metal Roof Panel Assembly: Metal roof panels, attachment system components, miscellaneous metal framing, thermal insulation, and accessories necessary for a complete weathertight roofing system.

1.4 PERFORMANCE REQUIREMENTS

A. General Performance: Metal roof panels shall comply with performance requirements without failure due to defective manufacture, fabrication, installation, or other defects in construction.

B. Delegated Design: Design metal roof panel assembly, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

C. Air Infiltration: Air leakage through assembly of not more than 0.06 cfm/sq. ft. of roof area when tested according to ASTM E 1680 at the following test-pressure difference:

1. Test-Pressure Difference: Positive and negative 1.57 lbf/sq. ft..
2. Positive Preload Test-Pressure Difference: Greater than or equal to 15.0 lbf/sq. ft. and the greater of 75 percent of building live load or 50 percent of building design positive wind-pressure difference.

3. Negative Preload Test-Pressure Difference: 50 percent of design wind-uplift-pressure difference.

D. Water Penetration: No water penetration when tested according to ASTM E 1646 at the following test-pressure difference:

1. Test-Pressure Difference: 20 percent of positive design wind pressure, but not less than 6.24 lbf/sq. ft. and not more than 12.0 lbf/sq. ft.
2. Positive Preload Test-Pressure Difference: Greater than or equal to 15.0 lbf/sq. ft. and the greater of 75 percent of building live load or 50 percent of building design positive wind-pressure difference.
3. Negative Preload Test-Pressure Difference: 50 percent of design wind-uplift-pressure difference.

E. Hydrostatic-Head Resistance: No water penetration when tested according to ASTM E 2140.

F. Wind-Uplift Resistance: Provide metal roof panel assemblies that comply with the wind-uplift-resistance class indicated on the drawings.

G. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F , ambient; 180 deg F, material surfaces.

H. Thermal Performance: Provide insulated metal roof panel assemblies with thermal-resistance value (R-value) indicated when tested according to ASTM C 518.

I. Energy Performance: Provide roof panels with solar reflectance index not less than 29 when calculated according to ASTM E 1980 based on testing identical products by a qualified testing agency.

1.5 SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of roof panel and accessory.

B. Shop Drawings: Show fabrication and installation layouts of metal roof panels; details of edge conditions, side-seam and endlap joints, panel profiles, corners, anchorages, trim, flashings, closures, and accessories; and special details. Distinguish between factory- and field-assembled work. Composite insulation sheathing foot nor location coordination with metal decking flutes to ensure fasteners are not exposed within finish face of the metal decking

1. Accessories: Include details of the following items, at a scale of not less than 1-1/2 inches per 12 inches :

a. Flashing and trim

b. Gutters
c. Downspouts
d. Rainchains

C. Delegated-Design Submittal: For metal roof panel assembly indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation, licensed in the State of Florida.

D. Coordination Drawings: Roof plans, drawn to scale, on which the following are shown and coordinated with each other, based on input from installers of the items involved:

1. Roof panels and attachments
2. Roof-mounted items including roof hatches, equipment supports, pipe supports and penetrations, lighting fixtures, snow guards, and items mounted on roof curbs

E. Manufacturer Certificates: Signed by manufacturer certifying that roof panels comply with energy performance requirements specified in "Performance Requirements" Article.

1. Submit evidence of meeting performance requirements.

F. Qualification Data: For qualified Installer, professional engineer and testing agency.

G. Material Certificates: For thermal insulation, from manufacturer.

H. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each product.

I. Field quality-control reports.

J. Maintenance Data: For metal roof panels to include in maintenance manuals.

K. Warranties: Samples of special warranties.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An employer of workers trained and approved by manufacturer.

B. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.

C. Source Limitations: Obtain each type of metal roof panels from single source from single manufacturer.

D. Surface-Burning Characteristics: Provide metal roof panels having insulation core material with the following surface-burning characteristics as determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: 450 or less.

E. Fire-Resistance Ratings: Where indicated, provide metal roof panels identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.
2. Combustion Characteristics: ASTM E 136.

F. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.

1. Build mockup of typical roof eave, including fascia, and soffit; approximately four panels wide by full eave width, including insulation, underlayment, attachments, and accessories.
2. Apcceptance of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

G. Preinstallation Conference: Conduct conference at Project site.

1. Meet with Owner, Architect and Owner's designated representative, testing and inspecting agency representative, metal roof panel Installer, metal roof panel manufacturer's representative, deck Installer, and installers whose work interfaces with or affects metal roof panels including installers of roof accessories and roof-mounted equipment.
2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
3. Review methods and procedures related to metal roof panel installation, including manufacturer's written instructions.
4. Examine deck substrate conditions for compliance with requirements, including flatness and attachment to structural members.
5. Review structural loading limitations of deck during and after roofing.
6. Review flashings, special roof details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that will affect metal roof panels.
7. Review governing regulations and requirements for insurance, certificates, and testing and inspecting if applicable.
8. Review temporary protection requirements for metal roof panel assembly during and after installation.
9. Review roof observation and repair procedures after metal roof panel installation.
10. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver components, sheets, metal roof panels, and other manufactured items so as not to be damaged or deformed. Package metal roof panels for protection during transportation and handling.

B. Unload, store, and erect metal roof panels in a manner to prevent bending, warping, twisting, and surface damage.

C. Stack metal roof panels on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal roof panels to ensure dryness. Do not store metal roof panels in contact with other materials that might cause staining, denting, or other surface damage.

D. Protect strippable protective covering on metal roof panels from exposure to sunlight and high humidity, except to extent necessary for period of metal roof panel installation.

E. Protect foam-plastic insulation as follows:

1. Do not expose to sunlight, except to extent necessary for period of installation and concealment.
2. Protect against ignition at all times. Do not deliver foam-plastic insulation materials to Project site before installation time.
3. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

1.8 PROJECT CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit metal roof panel work to be performed according to manufacturer's written instructions and warranty requirements.

B. Field Measurements: Verify actual dimensions of construction contiguous with metal roof panels by field measurements before fabrication.

1.9 COORDINATION

A. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

B. Coordinate metal roof panels with rain drainage work, flashing, trim, and construction of decks, parapets, walls, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.10 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace metal roof panel assemblies that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures including rupturing, cracking, or puncturing.

b. Deterioration of metals, metal finishes, and other materials beyond normal weathering.

2. Warranty Period: Two years from date of Substantial Completion.

B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal roof panels that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Finish Warranty Period: 20 years from date of Substantial Completion.

C. Special Weathertightness Warranty for Standing-Seam Metal Roof Panels: Manufacturer's standard form in which manufacturer agrees to repair or replace standing-seam metal roof panel assemblies that fail to remain weathertight, including leaks, within specified warranty period.

1. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PANEL MATERIALS

A. Metallic-Coated Steel Sheet: Restricted flatness steel sheet metallic coated by the hot-dip process and prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
1. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, Class AZ50 coating designation, Grade 40 ; structural quality.
2. Surface: Smooth, flat finish.
3. Exposed Coil-Coated Finish:

a. 2-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

4. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil .

B. Panel Sealants:

1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch wide and 1/8 inch thick.
2. Joint Sealant: ASTM C 920; elastomeric polyurethane, polysulfide, or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal roof panels and remain weathertight; and as recommended in writing by metal roof panel manufacturer.
3. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C 1311.

2.2 FIELD-INSTALLED THERMAL INSULATION-PLYWOOD PANEL COMPOSITE

A. Extruded-Polystyrene Closed CEU Board Insulation: ASTM C 578, Type IV, 1.60-lb/cu. ft. minimum density unless otherwise indicated; with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively. 0.02 perm. R-30 minimum. Plywood Composite - Exterior grade sheathing bonded to the closed cell insulation.

2.3 UNDERLAYMENT MATERIALS

A. Self-Adhering, High-Temperature Sheet: Utilize sheet at eaves and valleys and penetrations. 30 to 40 mils thick minimum, consisting of slip-resisting, polyethylene-film top surface laminated to layer of butyl or SBS-modified asphalt adhesive, with release-paper backing; cold applied. Provide primer when recommended by underlayment manufacturer.

1. Thermal Stability: Stable after testing at 240 deg F ; ASTM D 1970.
2. Low-Temperature Flexibility: Passes after testing at minus 20 deg F ; ASTM D 1970.
3. Products: Subject to compliance with requirements, provide the following:

    a. Carlisle Coatings & Waterproofing Inc., Div. of Carlisle Companies Inc.; CCW WIP 300HT.
    b. Grace Construction Products; a unit of Grace, W. R. & Co.; Ultra.
    c. Henry Company; Blueskin PE200 HT.
    d. Metal-Fab Manufacturing, LLC; MetShield.
    e. Owens Corning; WeatherLock Metal High Temperature Underlayment.

2.4 MISCELLANEOUS MATERIALS

A. Panel Fasteners: Self-tapping screws, bolts, nuts, self-locking rivets and bolts, end-welded studs, and other suitable fasteners designed to withstand design loads. Exposed fasteners will not be acceptable.

B. Bituminous Coating: Cold-applied asphalt mastic, SSPC-Paint 12, compounded for 15-mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.5 STANDING-SEAM METAL ROOF PANELS

A. General: Provide factory-formed metal roof panels designed to be installed by lapping and interconnecting raised side edges of adjacent panels with joint type indicated and mechanically attaching panels to supports using concealed clips and fasteners in side laps. Include clips, cleats, pressure plates, and accessories required for weathertight installation.

1. Steel Panel Systems: Unless more stringent requirements are indicated, comply with ASTM E 1514.

B. Vertical-Rib, Seamed-Joint, Standing-Seam Metal Roof Panels: Formed with vertical ribs at panel edges and intermediate stiffening ribs symmetrically spaced between ribs; designed for sequential installation by mechanically attaching panels to supports using concealed clips located under one side of panels and engaging opposite edge of adjacent panels, and mechanically seaming panels together.

1. Basis-of-Design Product: Subject to compliance with requirements, provide ATAS, International Inc., 1 ½" "Field Lok" Lap Seam metal panel or comparable product by one of the following:

a. AEP-Span.
b. Englert, Inc.

2. Material: Aluminum-zinc alloy-coated steel sheet, 22 gauge nominal thickness.

a. Exterior Finish: Kynar 500 PVDF.
b. Color: As selected from Manufacture's full range of colors.

3. Batten: Same material, finish, and color as roof panels.
4. Clips: Floating to accommodate thermal movement.

a. Material: 0.028-inch- nominal thickness, aluminum-zinc alloy-coated steel sheet.

5. Joint Type: As standard with manufacturer.
6. Panel Coverage: 16 ½ inches (minimum).
7. Panel Height: 1 ½ inches.

2.6 METAL SOFFIT PANELS

A. General: Provide factory-formed metal soffit panels designed to be installed by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners and factory-applied sealant in side laps. Include accessories required for weathertight installation.

B. Flush-Profile Metal Soffit Panels: Solid panels formed with vertical panel edges and flat pan between panel edges; with flush joint between panels.

1. Basis-of-Design Product: Subject to compliance with requirements, provide ATAS International; Opaline Panels or comparable product by one of the following:

2. Material: Aluminum-zinc alloy-coated steel sheet, 24 gauge nominal thickness.

    a. Exterior Finish: 2-coat fluoropolymer.
    b. Color: As selected from Duranar Coatings, 2-coat system and Duranar Sunstorm Coatings, 2-coat system colors-full range.
    c. If required, insert requirements for stainless steel. Verify availability with manufacturers.

3. Panel Coverage: 8 inches.
4. Panel Height: 1.0 inch.
5. Sealant: Factory applied within interlocking joint.

2.7 ACCESSORIES

A. Reference Section 07720 Roof Accessories for additional requirements.

B. Roof Panel Accessories: Provide components approved by roof panel manufacturer and as required for a complete metal roof panel assembly including trim, copings, fasciae, corner units, ridge closures, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal roof panels unless otherwise indicated.

1. Closures: Provide closures at eaves and ridges, fabricated of same metal as metal roof panels.
2. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1-inch- thick, flexible closure strips; cut or premolded to match metal roof panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.
3. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.

C. Flashing and Trim: Formed from same material as roof panels, prepainted with coil coating, minimum 0.018 inch thick. Provide flashing and trim as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, eaves, rakes, corners, bases, framed openings, ridges, fasciae, and fillers. Finish flashing and trim with same finish system as adjacent metal roof panels.

D. Gutters: Formed from same material roof panels. Match profile as shown on the Architectural Drawings, complete with end pieces, outlet tubes, and other special pieces as required. Fabricate in minimum 96-inch- long sections, of size and metal thickness according to SMACNA's "Architectural Sheet Metal Manual." Furnish gutter supports spaced a maximum of 36 inches o.c., fabricated from same metal as gutters. Provide wire ball strainers of compatible metal at outlets. Finish gutters to match roof fascia and rake trim.

2.8 FABRICATION

A. Fabricate and finish metal roof panels and accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes and as necessary to

fulfill indicated performance requirements. Comply with indicated profiles and with dimensional and structural requirements.

B. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.

C. Fabricate metal roof panel side laps with factory-installed captive gaskets or separator strips that provide a tight seal and prevent metal-to-metal contact, in a manner that will seal weathertight and minimize noise from movements within panel assembly.

D. Sheet Metal Accessories: Fabricate flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to the design, dimensions, metal, and other characteristics of item indicated.

1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
2. End Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
3. End Seams for Other Than Aluminum: Fabricate nonmoving seams with flat-lock seams. Tin edges to be seamed, form seams, and solder.
4. Sealed Joints: Form nonexpansion but movable joints in metal to accommodate elastomeric sealant to comply with SMACNA standards.
5. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
6. Fabricate cleats and attachment devices of size and metal thickness recommended by SMACNA's "Architectural Sheet Metal Manual" or by metal roof panel manufacturer for application, but not less than thickness of metal being secured.

2.9 FINISHES

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal roof panel supports, and other conditions affecting performance of the Work.

B. Examine primary and secondary roof framing to verify that rafters, purlins, angles, channels, and other structural panel support members and anchorages have been installed within alignment tolerances required by metal roof panel manufacturer.

C. Examine solid roof sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal roof panel manufacturer.

D. Examine roughing-in for components and systems penetrating metal roof panels to verify actual locations of penetrations relative to seam locations of metal roof panels before metal roof panel installation.

E. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean substrates of substances harmful to insulation, including removing projections capable of interfering with insulation attachment.

B. Miscellaneous Framing: Install subpurlins, eave angles, furring, and other miscellaneous roof panel support members and anchorage according to metal roof panel manufacturer's written instructions.

1. Soffit Framing: Wire tie or clip furring channels to supports, as required to comply with requirements for assemblies indicated.

3.3 UNDERLAYMENT INSTALLATION

A. Self-Adhering Sheet Underlayment: Apply primer if required by manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation. Apply at locations indicated below, wrinkle free, in shingle fashion to shed water, and with end laps of not less than 6 inches staggered 24 inches between courses. Overlap side edges not less than 3-1/2 inches . Extend underlayment into gutter trough. Roll laps with roller. Cover underlayment within 14 days.

1. Roof perimeter for a distance up from eaves of 24 inches beyond interior wall line.
2. Valleys, from lowest point to highest point, for a distance on each side of 18 inches. Overlap ends of sheets not less than 6 inches .
3. Rake edges for a distance of 18 inches.
4. Hips and ridges for a distance on each side of 12 inches.
5. Roof to wall intersections for a distance from wall of 18 inches.
6. Around penetrating elements for a distance from element of 18 inches.

B. Apply slip sheet over underlayment before installing metal roof panels.

3.4 THERMAL INSULATION INSTALLATION

A. Composite Sheathing Board Insulation: Extend insulation in thickness indicated to cover entire roof. Comply with installation requirements in Division 7 Section "Building Insulation."

B. Fasteners shall not protrude into finish side of structural and acoustical metal decking; coordinate fastener location with flute of metal decking.

3.5 METAL ROOF PANEL INSTALLATION, GENERAL

A. Provide metal roof panels of full length from eave to ridge unless otherwise indicated or restricted by shipping limitations.

B. Thermal Movement. Rigidly fasten metal roof panels to structure at one and only one location for each panel. Allow remainder of panel to move freely for thermal expansion and contraction. Predrill panels for fasteners.

1. Point of Fixity: Fasten each panel along a single line of fixing located at eave.
2. Avoid attaching accessories through roof panels in a manner that will inhibit thermal movement.

C. Install metal roof panels as follows:

1. Commence metal roof panel installation and install minimum of 1000 square feet in presence of factory-authorized representative.
2. Field cutting of metal panels by torch is not permitted.
3. Locate and space fastenings in uniform vertical and horizontal alignment.
4. Provide metal closures at rake edges and each side of ridge and hip caps.
5. Flash and seal metal roof panels with weather closures at eaves, rakes, and perimeter of all openings.
6. Install ridge and hip caps as metal roof panel work proceeds.
7. End Splices: Locate panel end splices over, but not attached to, structural supports. Stagger panel end splices to avoid a four-panel splice condition.
8. Install metal flashing to allow moisture to run over and off metal roof panels.

D. Fasteners:

1. Steel Roof Panels: Use stainless-steel fasteners for surfaces exposed to the exterior and galvanized-steel fasteners for surfaces exposed to the interior.

2. Fasteners to be fully concealed.

E. Anchor Clips: Anchor metal roof panels and other components of the Work securely in place, using manufacturer's approved fasteners according to manufacturers' written instructions.

F. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating, by applying rubberized-asphalt underlayment to each contact surface, or by other permanent separation as recommended by metal roof panel manufacturer.

1. Coat back side of roof panels with bituminous coating where roof panels will contact wood, ferrous metal, or cementitious construction.

G. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weatherproof performance of metal roof panel assemblies. Provide types of gaskets, fillers, and sealants indicated or, if not indicated, types recommended by metal roof panel manufacturer.

1. Seal metal roof panel end laps with double beads of tape or sealant, full width of panel. Seal side joints where recommended by metal roof panel manufacturer.
2. Prepare joints and apply sealants to comply with requirements in Division 7 Section "Joint Sealants."

3.6 METAL ROOF PANEL INSTALLATION

A. Standing-Seam Metal Roof Panels: Fasten metal roof panels to supports with concealed clips at each standing-seam joint at location, spacing, and with fasteners recommended by manufacturer.

1. Install clips to supports with self-tapping fasteners.
2. Install pressure plates at locations indicated in manufacturer's written installation instructions.
3. Seamed Joint: Crimp standing seams with manufacturer-approved, motorized seamer tool so clip, metal roof panel, and factory-applied sealant are completely engaged.

3.7 METAL SOFFIT PANEL INSTALLATION

A. In addition to complying with requirements in "Metal Roof Panel Installation, General" Article, install metal soffit panels to comply with requirements in this article.

B. Metal Soffit Panels: Provide metal soffit panels full width of soffits. Install panels perpendicular to support framing.

1. Flash and seal panels with weather closures where metal soffit panels meet walls and at perimeter of all openings.

C. Metal Fascia Panels: Align bottom of panels and fasten with blind rivets, bolts, or self-tapping screws. Flash and seal panels with weather closures where fasciae meet soffits, along lower panel edges, and at perimeter of all openings.

3.8 ACCESSORY INSTALLATION

A. General: Install accessories with positive anchorage to building and weathertight mounting and provide for thermal expansion. Coordinate installation with flashings and other components.

1. Install components required for a complete metal roof panel assembly including trim, copings, ridge closures, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.

B. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.

1. Install exposed flashing and trim that is without excessive oil canning, buckling, and tool marks and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof and weather-resistant performance.
2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet with no joints allowed within 24 inches of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with mastic sealant (concealed within joints).

C. Gutters: Join sections with riveted and soldered or lapped and sealed joints. Attach gutters to eave with gutter hangers spaced not more than 36 inches o.c. using manufacturer's standard fasteners. Provide end closures and seal watertight with sealant. Provide for thermal expansion.

D. Downspouts: Join sections with telescoping joints. Provide fasteners designed to hold downspouts securely 1 inch away from walls; locate fasteners at top and bottom and at approximately 60 inches o.c. in between.
1. Connect downspouts to underground drainage system indicated.

E. Pipe Flashing: Form flashing around pipe penetration and metal roof panels. Fasten and seal to metal roof panels as recommended by manufacturer.

3.9 ERECTION TOLERANCES

A. Installation Tolerances: Shim and align metal roof panel units within installed tolerance of 1/4 inch in 20 feet on slope and location lines as indicated and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

3.10 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect metal roof panel installation, including accessories. Report results in writing.

B. Remove and replace applications of metal roof panels where inspections indicate that they do not comply with specified requirements.

C. Additional inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.11 CLEANING

A. Remove temporary protective coverings and strippable films, if any, as metal roof panels are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of metal roof panel installation, clean finished surfaces as recommended by metal roof panel manufacturer. Maintain in a clean condition during construction.

B. Replace metal roof panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 07411

SECTION 07421 – Metal Wall Panels

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes:
   1. Factory-formed: concealed-fastener, metal wall panels.
   2. Finish must conform to the "Metal Construction Association Certified Premium Painted™" designation. Manufacture's full range of colors.

B. Related Sections include the following:
   1. Division 5 Section "Cold Formed Metal Framing"
   2. Division 6 Section "Rough Carpentry"
   3. Division 7 Section "Sheet Metal Flashing and Trim"
   4. Division 13 Section "Metal Building Systems"

1.3 PERFORMANCE REQUIREMENTS

A. General: Provide metal wall panel assemblies that comply with performance requirements specified as determined by testing manufacturers' standard assemblies similar to those indicated for this Project, by a qualified testing and inspecting agency.

B. System shall meet performance criteria as installed. Either test data or signed and sealed engineering calculations shall document the performance of the panel system to meet design loads required.

C. Wind Loading: Design and size components to withstand dead and live loads caused by wind pressures as follows:
   1. Refer to the drawings for the wind loading criteria.

D. Maximum Deflection under Design Loads:
   1. 1/180 of span

E. Air Infiltration: Air leakage through assembly of not more than 0.06 cfm/sq. ft. of wall area when tested according to ASTM E 283 at a static-air-pressure difference of 6.24lbf/sq. ft.

F. Water Penetration: No water penetration when tested according to ASTM E 331 at a minimum differential pressure of 20 percent of inward-acting, wind-load design pressure of not less than 6.24 lbf/sq. ft. and not more than 12 lbf/sq. ft.

1.5 SUBMITTALS

A. Product Data: Manufacturer's current product specifications and installation instructions.
   1. Metal wall panels
   2. Flashing and trim.
   3. Accessories
   4. Florida Product Approval Certifications for exterior building elements, if required by Authorities Having Jurisdiction

B. Shop Drawings:
   1. Include small-scale elevations, as required.
   2. Show details of trim and flashing conditions, fastening and anchorage methods, weatherproofing techniques, terminations, and penetrations.

C. Samples:
   1. Selection Samples: Submit actual metal chips with full range of colors available for Architect's selection.
   2. Verification Samples: Submit two samples of each type of metal panel required, not less than 12 inches (305mm), and illustrating finished panel profile.

D. Product Test Reports: Submit copies of test reports or load tables verifying performance capability of panel system:
   1. Metal Wall Panels: Include reports for UL 790/ASTM E 108, ASTM E 283, ASTM E 331, Field Tested, ASTM E 84 Flame Spread Rating, Paint Performance Tests.
   2. Fastener test and pull-out calculations
   3. Load tables
   4. Maintenance Data

E. Sample Warranty.

1.6 QUALITY ASSURANCE

A. Installer: Company specializing in the type of work required for this project, with not less than 2 years of documented experience.

B. Pre-Installation meeting: Convene meeting not less than one week prior to beginning installation between general contractor, installing contractor, owner's representative and manufacturer.

1.7 DELIVERY, STORAGE & HANDLING

A. Do not deliver materials of this section to project site until suitable facilities for storage and protection are available.

B. Protect materials from damage during transit and at project site. Store under cover, but sloped to provide positive drainage. Do not expose materials with strippable protective film to direct sunlight or extreme heat.

C. Do not allow storage of other materials or allow staging of other work on installed metal panel system.

D. Upon receipt of delivery of metal panel system, and prior to signing the delivery ticket, the installer is to examine each shipment for damage and for completion of the consignment.

1.8 WARRANTY

A. Special Warranty on Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace sheet metal roofing that shows evidence of deterioration of factory-applied finishes within specified warranty period.
   1. Fluoropolymer Finish Warranty Period: 30 years from date of Substantial Completion.

B. Special Installer's Warranty: Specified form in which Wall Installer agrees to repair or replace components of custom-fabricated sheet metal wall that fail in materials or workmanship within 5 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturer's Qualifications: All panels are to be factory formed and packaged per job requirements.
   1. Manufacturer shall have a minimum of ten (10) years' experience in the factory fabrication of metal wall panels.
   2. Manufacturer must be certified to ISO 9001:2008 with design.

B. Basis of Design shall be ATAS International, Inc. No other manufacturer of metal wall systems shall be accepted as an alternate product without prior written approval by the Architect.

C. Coordinate with insulation requirements as noted by Architect.

D. Secondary framing members as required for load criteria and wind requirements.

2.2 CONCEALED-FASTENER, LAP-SEAM METAL WALL PANELS

A. Concealed-fastener, Lap seam Metal Wall Panels: Provide factory-formed metal wall panels designed to be field assembled by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners in side laps. Include accessories required for weathertight installation

B. Trapezoidal-Rib-Profile, Exposed-Fastener Metal Wall Panels: Formed with raised, trapezoidal ribs at 4 inches o.c. that are evenly spaced across panel width, and with rib/recess sides angled at 60 degrees or more.
   1. Basis-of Design Product: ATAS International, Inc.; Rigid Wall - MFN160
   2. Available Manufacturers:
      a. ATAS International, Inc.
      b. Or Architect-approved alternate manufactures
   3. Material: Aluminum - .040 thick
      c. Texture: Smooth
      d. Finish: KYNAR 5000® PDVF or HYLAR 5000® Finish
      e. Color: A selection from Manufacture's full range of colors to be chosen later by the Architect
   4. Panel Coverage: 16"
   5. Panel Height: 15/16"
   6. Panel Application Orientation: Horizontal.

2.3 FABRICATION

A. Panels:
   1. Panels to be Factory fabricated in a controlled environment.
   2. Panels to be tension leveled during roll forming process.
   3. Panels to be produced in longest lengths possible, except when modular units are utilized.

B. Form all components true to shape, accurate in size, square and free from distortion or defects. Cut panels to precise lengths indicated on approved shop drawings or as required by field conditions.

C. Accessories: Factory fabricates trim and flashing components in standard 12-foot lengths.
   1. Form panel lines, breaks, and angles to be sharp and true, with surfaces free from warp and buckle.
   2. Fabricate wall panels as required to maintain fabrication tolerances and to withstand design loads.

D. Fabricate metal wall panels in a manner that eliminates condensation on interior side of panel and with joints between panels designed to form weathertight seals.

E. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

F. Panels, fabrication and installation shall meet the requirements of the Metal Construction Association Preformed Metal Wall Guidelines

PART 3 - EXECUTION

3.1 PREPARATION

A. Field Measurements
   1. Field measurements should be taken by the installer for verification of dimensional correctness in relationship to original plans, prior to providing manufacturer with a bill of material.

B. Delivery, Storage and Handling
   1. Do not deliver materials of this section to project site until suitable facilities for storage and protection are available.
   2. Protect materials from damage during transit and at project site. Store under cover, but sloped to provide positive drainage. Do not expose materials with strippable protective film to direct sunlight or extreme heat.
   3. Do not allow storage of other materials or allow staging of other work on installed metal panel system.
   4. Upon receipt of delivery of metal panel system, and prior to signing the delivery ticket, the installer is to examine each shipment or damage and for completion of the consignment.

C. Sequencing and Scheduling
   1. Installer shall coordinate with general contractor as to scheduled delivery time after receipt of field verified bill of material by manufacturer as it relates to actual project scheduling.

3.2 METAL WALL PANEL INSTALLATION, GENERAL

A. General: Install metal wall panels in orientation, sizes, and locations indicated on Drawings. Install panels perpendicular to girts and subgirts, unless otherwise indicated. Anchor metal wall panels and other components of the Work securely in place, with provisions for thermal and structural movement.
   1. Field cutting of metal wall panels by torch is not permitted.
   2. Rigidly fasten metal wall panels and allow for thermal expansion and contraction as required by the panel manufacturer. Pre-drill panels as required.
   3. Install screw fasteners.
   4. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
   5. Apply elastomeric sealant continuously between metal base channel (sill angle) and concrete, and elsewhere as indicated or, if not indicated, as necessary for waterproofing and material compatibility.
   6. Provide weatherproof seals for pipe and conduit penetrating exterior walls.

B. Fasteners: Use fasteners of size and length as required for compatibility with substrate.
   1. Aluminum Wall Panels: Use stainless-steel fasteners or metallic coated fasteners for surfaces exposed to the exterior and aluminum or galvanized steel fasteners for surfaces exposed to the interior.
   2. Concealed fasteners shall have a high performance coating
   3. Metal Protection: Where dissimilar metals will contact each other or corrosive

substrates, protect against galvanic action by painting contact surfaces with bituminous coating, by applying rubberized-asphalt underlayment to each contact surface, or by other permanent separation as recommended by metal wall panel manufacturer.

4. Coat back side of aluminum wall panels with bituminous coating where wall panels will contact wood, ferrous metal, or cementitious construction.

C. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weatherproof performance of metal wall panel assemblies.

D. Provide water and air infiltration retarder / barriers as noted within project documents.

3.3 ACCESSORY INSTALLATION

A. General: Install accessories with positive anchorage to building and weathertight mounting and provide for thermal expansion. Coordinate installation with flashings and other components.

1. Install components required for a complete sheet metal roofing assembly including trim, copings, ridge closures, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.
2. Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual" and NRCA Waterproofing Manual. Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
3. Panels, fabrication and installation shall meet the requirements of the Metal Construction Association Preformed Metal Wall Guidelines.

B. Coordinate with installation of:

1. Cold Formed Metal Framing, as noted in Section 5
2. Rough Carpentry, as noted in Section 6
3. Sheet Metal Flashing and Trim, as noted in Section 7

3.4 CLEANING AND PROTECTION

A. Remove temporary protective coverings and strippable films, if any, as metal wall panels are installed. Maintain in a clean condition during construction.

B. Protection:

1. Provide as required completed work of this section will be without damager or deterioration at date of substantial completion.

C. Touch up minor abrasions with matching paint provided by panel manufacturer. Remove and replace panels that cannot be satisfactorily touched up. See Metal Construction Association Technical Bulletin #95-1051.

D. Sweep and remove chips, shavings and dust from roof on a daily basis during installation period. Leave installed work clean, free from grease, finger marks and stains. Remove all protective masking from material immediately after installation of

product.

E. Upon completion of installation, remove scraps and debris from project site.

F. After metal wall panel installation, clear weep holes and drainage channels of obstructions, dirt and sealant.

END OF SECTION 07421

SECTION 07464 – CEMENT SIDING

PART 1 GENERAL

1.0 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.1 SECTION INCLUDES

A. Fiber cement lap siding, trim, molding and accessories; and vapor barrier for exterior cladding.

1.2 RELATED SECTIONS

A. Section –“ Rough Carpentry”

B. Section – “Weather Barriers”

C. Section – “Exterior Painting”

1.3 REFERENCES

A. AS D3359 - Standard Test Method for Measuring Adhesion by Tape Test, Tool and Tape.

B. AS E136 - Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750 degrees C.

1.4 SUBMITTALS

A. Submit under provisions of Section 01330– Submittal Procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, including:
1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.

C. Shop Drawings: Provide detailed drawings of atypical non-standard applications of cementitious siding materials which are outside the scope of the standard details and specifications provided by the manufacturer, including flashing details, windows sills & trim details.

D. Selection Samples: For each finish product specified, two complete sets of color chips representing manufacturer's full range of available colors and patterns.

E. Verification Samples: For each finish product specified, two samples, minimum size 4 by 6 inches (100 by 150 mm), representing actual product, color, and patterns.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: Minimum of 2 years experience with installation of similar products.

B. Mock-Up: Provide a mock-up for evaluation of surface preparation techniques and application workmanship.
1. Finish areas designated by Architect.

2. Do not proceed with remaining work until workmanship, color, and sheen are approved by Architect.
3. Remodel mock-up area as required to produce acceptable work.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Store siding on edge or lay flat on a smooth level surface. Protect edges and corners from chipping. Store sheets under cover and keep dry prior to installing.

C. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.

1.7 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.8 WARRANTY

A. Product Warranty: Limited, non-pro-rated product warranty.
1. Lap siding for 30 years.
2. Trim boards for 15 years.

B. Finish Warranty: Limited product warranty against manufacturing finish defects.
1. When used for its intended purpose, properly installed and maintained according to the manufacture’s published installation instructions.

C. Workmanship Warranty: Application limited warranty for 2 years.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design: James Hardie Building Products, Inc., or Architect approved equal. James Hardie Building Products, is located at: 231 S. La Salle St. Suite 2000; Chicago, IL 60604; Toll Free Tel: 877-236-7526; Email: requestinfo(info@jameshardie.com); Web:www.jameshardiepros.com|www.jameshardie.com,

B. Requests for approval of equal substitutions will be considered in accordance with provisions of Section 01600 - Materials and Equipment

2.2 SIDING AND TRIM (Basis of Design)

A. HardiePlank HZ10 lap siding, ,
1. Fiber-cement siding - complies with ASTM C 1186 Type A Grade II.
2. Fiber-cement siding - complies with ASTM E 136 as a noncombustible material.
3. Fiber-cement siding - complies with ASTM E 84 Flame Spread Index = 0, Smoke Developed Index = 5.

B. 2X Smooth HardieTrim:
1. 2X Smooth HardieTrim manufactured by James Hardie Building Products, Inc.
2. Overall Thickness: 1-1/2 in (38 mm).
3. Width: 5-1/2 inch (140 mm).(Refer to Drawings for other sizes)
4. Width: 7-1/4 inch (184 mm).
5. Width: 9-1/4 inch (235 mm).

6. Texture: Smooth.

2.3 FASTENERS

A. Wood Framing Fasteners:
1. Wood Framing: 0.121 inch (3 mm) shank by 0.371 inch (9.4 mm) head by 1-1/4 inches (32 mm) corrosion resistant roofing nails.

B. Metal Framing:
1. Metal Framing: 1-5/8 inches (41 mm) No. 8-18 by 0.323 inch (8.2 mm) head self-drilling, corrosion resistant S-12 ribbed buglehead screws.

C. Masonry Walls:
1. Masonry Walls: Aerico Stud Nail, ET&F ASM No.-144-125, 0.14 inch (3.6 mm) shank by 0.30 inch (7.6 mm) head by 2 inches (51 mm) long corrosion resistant nails.

2.4 FINISHES

A. Factory Primer: Provide factory applied universal primer.
1. Primer: Factory primed by James Hardie.
2. Topcoat: Refer to Section 09911 - exterior finish; custom color.

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If infill framing preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

C. Nominal 2 inch by 4 inch (51 m by 102 mm) PT. wood framing selected for minimal shrinkage and complying with local building codes, including the use of water-resistive barriers or vapor barriers. Minimum 1-1/2 inches (38 mm) face and straight, true, of uniform dimensions and properly aligned.
1. Install water-resistive barriers and claddings to dry surfaces.
2. Repair any punctures or tears in the water-resistive barrier prior to the installation of the siding.
3. Protect siding from other trades.

D. Minimum 16-gauge (54 mm) 6” inches (92 mm) C-Stud 24 inches (610 mm) maximum on center metal framing complying with local building codes, including the use of water-resistive barriers and/or vapor barriers. Minimum 1-1/2 inches (38 mm) face and straight, true, of uniform dimensions and properly aligned.
1. Install water-resistive barriers and claddings to dry surfaces.
2. Repair any punctures or tears in the water-resistive barrier prior to the installation of the siding.
3. Protect siding from other trades.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

C. Install a water-resistive barrier is required in accordance with local building code requirements.

D. The water-resistive barrier must be appropriately installed with penetration and junction flashing in accordance with local building code requirements.

E. Install weather barrier in accordance with local building code requirements and manufacture’s requirements

F. Seal all joints flash and lap weather barrier per manufacture’s requirements.

3.3 INSTALLATION- SIDING

A. Install materials in strict accordance with manufacturer's installation instructions.

B. Starting: Install a minimum 1/4 inch (6 mm) thick lath starter strip at the bottom course of the wall. Apply planks horizontally with minimum 1-1/4 inches (32 mm) wide laps at the top. The bottom edge of the first plank overlaps the starter strip.

C. Allow minimum vertical clearance between the edge of siding and any other material in strict accordance with the manufacturer's installation instructions.

D. Align vertical joints of the planks over framing members.

E. Butt joints must not fall within 4 inches (102 mm) of a stud or furring strip. Do not nail within 2 inches (51 mm) of the end of planks.

F. Maintain clearance between siding and adjacent finished grade.

G. Locate splices at least one 24” inches away from window and door openings.

H. For proper fastener selection and fastening schedules for various wind load requirements and framing options, refer to the Technical Data Sheet per FBC-NOA.

3.4 INSTALLATION - TRIM

A. Install materials in strict accordance with manufacturer's installation instructions. Install flashing around all wall openings.

B. Fasten through trim into structural framing or code complying sheathing. Fasteners must penetrate minimum 3/4 inch (19 mm) or full thickness of furring or substrate. Additional fasteners may be required to ensure adequate security.

C. Place fasteners no closer than 3/4 inch (19 mm) and no further than 2 inches (51 mm) from side edge of trim board and no closer than 1 inch (25 mm) from end. Fasten maximum 16 inches (406 mm) on center.

D. Maintain clearance between trim and adjacent finished grade.

E. Trim inside corner with a single board trim both side of corner.

F. Outside Corner Board Attach Trim on both sides of corner with 16 gage corrosion resistant finish nail 1/2 inch (13 mm) from edge spaced 16 inches (406 mm) apart, weather cut each end spaced minimum 12 inches (305 mm) apart.

G. Allow 1/8-inch gap between trim and siding.

H. Seal gap with silicone sealant.

I. Shim frieze board as required to align with corner trim.

J. Fasten through overlapping boards. Do not nail between lap joints.

K. Overlay siding with single board of outside corner board then align second corner board to outside edge of first corner board. Do not fasten trim boards to adjacent boards; secure to the substrate.

L. Finish factory primed siding with a minimum of one coat of high-quality 100 percent acrylic or latex or oil based exterior grade paint within 180 days of installation. Follow paint manufacturer's written product recommendation and written application instructions.

3.5 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before final acceptance.

END OF SECTION

SECTION 07620 - SHEET METAL FLASHING AND TRIM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Formed Products:

a. Formed low-slope roof sheet metal fabrications.
b. Formed overhead-piping safety pans.

B. Related Sections:

1. Division 6 Section "Miscellaneous Carpentry" for wood nailers, curbs, and blocking.
2. Division 7 Section "Roof Accessories" for equipment supports, vents, and other manufactured roof accessory units.

1.3 PERFORMANCE REQUIREMENTS

A. General: Sheet metal flashing and trim assemblies as indicated shall withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed sheet metal flashing and trim shall not rattle, leak, or loosen, and shall remain watertight.

1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each manufactured product and accessory.

B. Shop Drawings: Show fabrication and installation layouts of sheet metal flashing and trim, including plans, elevations, expansion-joint locations, and keyed details. Distinguish between shop- and field-assembled work. Include the following:

1. Identification of material, thickness, weight, and finish for each item and location in Project.
2. Details for forming sheet metal flashing and trim, including profiles, shapes, seams, and dimensions.
3. Details for joining, supporting, and securing sheet metal flashing and trim, including layout of fasteners, cleats, clips, and other attachments. Include pattern of seams.
4. Details of termination points and assemblies, including fixed points.
5. Details of expansion joints and expansion-joint covers, including showing direction of expansion and contraction.
6. Details of edge conditions, including eaves, ridges, valleys, rakes, crickets, and counterflashings as applicable.
7. Details of special conditions.
8. Details of connections to adjoining work.
9. Detail formed flashing and trim at a scale of not less than 1-1/2 inches per 12 inches.

C. Samples for Initial Selection: For each type of sheet metal flashing, trim, and accessory indicated with factory-applied color finishes involving color selection.

1. Sheet Metal Flashing: 12 inches long by actual width of unit, including finished seam and in required profile. Include fasteners, cleats, clips, closures, and other attachments.
2. Trim, Metal Closures, Expansion Joints, Joint Intersections, and Miscellaneous Fabrications: 12 inches long and in required profile. Include fasteners and other exposed accessories.
3. Accessories and Miscellaneous Materials: Full-size Sample.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified fabricator.

B. Warranty: Sample of special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For sheet metal flashing, trim, and accessories to include in maintenance manuals.

1.7 QUALITY ASSURANCE

A. Fabricator Qualifications: Shop that employs skilled workers who custom fabricate sheet metal flashing and trim similar to that required for this Project and whose products have a record of successful in-service performance.

B. Sheet Metal Flashing and Trim Standard: Comply with SMACNA's "Architectural Sheet Metal Manual" unless more stringent requirements are specified or shown on Drawings.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage. Store sheet metal flashing and trim materials away from uncured concrete and masonry.

B. Protect strippable protective covering on sheet metal flashing and trim from exposure to sunlight and high humidity, except to the extent necessary for the period of sheet metal flashing and trim installation.

1.9 WARRANTY

A. Special Warranty on Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace sheet metal flashing and trim that shows evidence of deterioration of factory-applied finishes within specified warranty period.

1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SHEET METALS

A. General: Protect mechanical and other finishes on exposed surfaces from damage by applying a strippable, temporary protective film before shipping.

B. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, Type 304, dead soft, fully annealed.

1. Finish: Brushed.
2. Surface: Smooth, flat.

C. Metallic-Coated Steel Sheet: Restricted flatness steel sheet, metallic coated by the hot-dip process and prepainted by the coil-coating process to comply with ASTM A 755/A 755M.

1. Surface: Smooth, flat and mill phosphatized for field painting.
2. Three-Coat Flouropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
3. Color: As selected by Architect from manufacturer’s full range.
4. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil.

2.2 UNDERLAYMENT MATERIALS

A. Self-Adhering, High-Temperature Sheet: Minimum 30 to 40 mils thick, consisting of slip-resisting polyethylene-film top surface laminated to layer of butyl or SBS-modified asphalt adhesive, with release-paper backing; cold applied. Provide primer when recommended by underlayment manufacturer.

1. Thermal Stability: ASTM D 1970; stable after testing at 240 deg F.
2. Low-Temperature Flexibility: ASTM D 1970; passes after testing at minus 20 deg F.
3. Products: Subject to compliance with requirements, provide one of the following:

    a. Carlisle Coatings & Waterproofing Inc.; CCW WIP 300HT.
    b. Grace Construction Products, a unit of W. R. Grace & Co.; Ultra.
    c. Henry Company; Blueskin PE200 HT.
    d. Metal-Fab Manufacturing, LLC; MetShield.
    e. Owens Corning; WeatherLock Metal High Temperature Underlayment.

2.3 MISCELLANEOUS MATERIALS

A. General: Provide materials and types of fasteners, solder, welding rods, protective coatings, separators, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation and recommended by manufacturer of primary sheet metal or manufactured item unless otherwise indicated.

B. Fasteners: Wood screws, annular threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads and recommended by manufacturer of primary sheet metal or manufactured item.

1. General: Blind fasteners or self-drilling screws, gasketed, with hex-washer head.

    a. Exposed Fasteners: Heads matching color of sheet metal using plastic caps or factory-applied coating.
    b. Blind Fasteners: High-strength aluminum or stainless-steel rivets suitable

for metal being fastened.

2. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.
3. Fasteners for Stainless-Steel Sheet: Series 300 stainless steel.
4. Fasteners for Aluminum-Zinc Alloy-Coated Steel Sheet: Hot-dip galvanized steel according to ASTM A 153/A 153M or ASTM F 2329 or Series 300 stainless steel.

C. Solder:

1. For Stainless Steel: ASTM B 32, Grade Sn60, with an acid flux of type recommended by stainless-steel sheet manufacturer.
2. For Zinc-Coated (Galvanized) Steel: ASTM B 32, Grade Sn50, 50 percent tin and 50 percent lead or Grade Sn60, 60 percent tin and 40 percent lead.

D. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch wide and 1/8 inch thick.

E. Elastomeric Sealant: ASTM C 920, elastomeric polyurethane polymer sealant; low modulus; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.

F. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type expansion joints with limited movement.

G. Epoxy Seam Sealer: Two-part, noncorrosive, aluminum seam-cementing compound, recommended by aluminum manufacturer for exterior nonmoving joints, including riveted joints.

H. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D 1187.

I. Asphalt Roofing Cement: ASTM D 4586, asbestos free, of consistency required for application.

2.4 FABRICATION, GENERAL

A. General: Custom fabricate sheet metal flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, geometry, metal thickness, and other characteristics of item indicated. Fabricate items at the shop to greatest extent possible.

1. Fabricate sheet metal flashing and trim in thickness or weight needed to comply with performance requirements, but not less than that specified for each application and metal.
2. Obtain field measurements for accurate fit before shop fabrication.
3. Form sheet metal flashing and trim without excessive oil canning, buckling, and tool marks and true to line and levels indicated, with exposed edges folded back to form hems.
4. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces exposed to view.

B. Fabrication Tolerances: Fabricate sheet metal flashing and trim that is capable of installation to a tolerance of 1/4 inch in 20 feet on slope and location lines as indicated and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

C. Sealed Joints: Form nonexpansion but movable joints in metal to accommodate elastomeric sealant.

D. Expansion Provisions: Where lapped expansion provisions cannot be used, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with butyl sealant concealed within joints.

E. Fabricate cleats and attachment devices of sizes as recommended by SMACNA's "Architectural Sheet Metal Manual" and by FMG Loss Prevention Data Sheet 1-49 for application, but not less than thickness of metal being secured.

F. Seams: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with elastomeric sealant unless otherwise recommended by sealant manufacturer for intended use. Rivet joints where necessary for strength.

G. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints where necessary for strength.

H. Do not use graphite pencils to mark metal surfaces.

I. Do not use segments to fabricate arches. Provide seams where indicated on Drawings.

2.5 LOW-SLOPE ROOF SHEET METAL FABRICATIONS

A. Base Flashing: Fabricate from the following materials:

1. Stainless Steel: 0.019 inch thick.

B. Counterflashing: Fabricate from the following materials:

1. Stainless Steel: 0.019 inch thick.

C. Flashing Receivers: Fabricate from the following materials:

1. Stainless Steel: 0.016 inch thick.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions and other conditions affecting performance of the Work.

1. Verify compliance with requirements for installation tolerances of substrates.
2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.

B. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 UNDERLAYMENT INSTALLATION

A. General: Install underlayment as indicated on Drawings.

B. Self-Adhering Sheet Underlayment: Install self-adhering sheet underlayment, wrinkle free. Apply primer if required by underlayment manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation; use primer rather than nails for installing underlayment at low temperatures. Apply in shingle fashion to shed water, with end laps of not less than 6 inches staggered 24 inches between courses. Overlap side edges not less than 3-1/2 inches. Roll laps with roller. Cover underlayment within 14 days.

3.3 INSTALLATION, GENERAL

A. General: Anchor sheet metal flashing and trim and other components of the Work securely in place, with provisions for thermal and structural movement. Use fasteners, solder, welding rods, protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system.

1. Install sheet metal flashing and trim true to line and levels indicated. Provide uniform, neat seams with minimum exposure of solder, welds, and sealant.
2. Install sheet metal flashing and trim to fit substrates and to result in watertight performance. Verify shapes and dimensions of surfaces to be covered before fabricating sheet metal.
3. Space cleats not more than 12 inches apart. Anchor each cleat with two fasteners. Bend tabs over fasteners.
4. Install exposed sheet metal flashing and trim without excessive oil canning, buckling, and tool marks.
5. Torch cutting of sheet metal flashing and trim is not permitted.
6. Do not use graphite pencils to mark metal surfaces.

B. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating or by other permanent separation as recommended by SMACNA.

1. Coat back side of uncoated aluminum and stainless-steel sheet metal flashing and trim with bituminous coating where flashing and trim will contact wood, ferrous metal, or cementitious construction.
2. Underlayment: Where installing metal flashing directly on cementitious or wood substrates, install a course of felt underlayment and cover with a slip sheet or

install a course of polyethylene sheet.

C. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet with no joints allowed within 24 inches of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently watertight, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with sealant concealed within joints.

D. Fastener Sizes: Use fasteners of sizes that will penetrate metal decking not less than recommended by fastener manufacturer to achieve maximum pull-out resistance.

E. Seal joints as shown and as required for watertight construction.

1. Where sealant-filled joints are used, embed hooked flanges of joint members not less than 1 inch into sealant. Form joints to completely conceal sealant. When ambient temperature at time of installation is moderate, between 40 and 70 deg F, set joint members for 50 percent movement each way. Adjust setting proportionately for installation at higher ambient temperatures. Do not install sealant-type joints at temperatures below 40 deg F.
2. Prepare joints and apply sealants to comply with requirements in Division 7 Section "Joint Sealants."

F. Soldered Joints: Clean surfaces to be soldered, removing oils and foreign matter. Pre-tin edges of sheets to be soldered to a width of 1-1/2 inches, except reduce pre-tinning where pre-tinned surface would show in completed Work.

1. Do not solder metallic-coated steel and aluminum sheet.
2. Do not use torches for soldering. Heat surfaces to receive solder and flow solder into joint. Fill joint completely. Completely remove flux and spatter from exposed surfaces.
3. Stainless-Steel Soldering: Tin edges of uncoated sheets using solder recommended for stainless steel and acid flux. Promptly remove acid flux residue from metal after tinning and soldering. Comply with solder manufacturer's recommended methods for cleaning and neutralization.

G. Rivets: Rivet joints in uncoated aluminum where indicated and where necessary for strength.

3.4 ROOF FLASHING INSTALLATION

A. General: Install sheet metal flashing and trim to comply with performance requirements, sheet metal manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, set units true to line, and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.

B. Counterflashing: Coordinate installation of counterflashing with installation of base flashing. Insert counterflashing in reglets or receivers and fit tightly to base flashing. Extend counterflashing 4 inches over base flashing. Lap counterflashing joints a minimum of 4 inches and bed with sealant. Secure in a waterproof manner by means of

snap-in installation and sealant or lead wedges and sealant or interlocking folded seam or blind rivets and sealant and anchor and washer at 36-inch centers at concealed conditions (not visible from public view.

3.5 ERECTION TOLERANCES

A. Installation Tolerances: Shim and align sheet metal flashing and trim within installed tolerance of 1/4 inch in 20 feet on slope and location lines as indicated and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

B. Installation Tolerances: Shim and align sheet metal flashing and trim within installed tolerances specified in MCA's "Guide Specification for Residential Metal Roofing."

3.6 CLEANING AND PROTECTION

A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.

B. Clean and neutralize flux materials. Clean off excess solder.

C. Clean off excess sealants.

D. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of installation, remove unused materials and clean finished surfaces. Maintain in a clean condition during construction.

E. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 07620

SECTION 07720 - ROOF ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Equipment supports.
2. Equipment pipe supports and conduit sleeves.
3. Preformed flashing sleeves.
4. Square/rectangular, elbows, and offsets gutters.
5. Precast splash blocks.
6. Gutter & rain chains.

B. Related Sections:

1. Division 5 Section "Metal Fabrications".
2. Division 7 Section “Metal Roof Panels”.

1.3 REFERENCES

A. ASTM International (ASTM):

1. ASTM A240 - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.
2. ASTM A527 - Specification for Steel Sheet, Zinc-Coated (Galvanized) by the Hot-Dip Process, Lock-Forming Quality.
3. ASTM A568 - Standard Specification for Steel, Sheet, Carbon, Structural, and High-Strength, Low-Alloy, Hot-Rolled and Cold-Rolled, General Requirements for.
4. ASTM A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
5. ASTM B6 - Standard Specification for Zinc.
6. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

1.4 PERFORMANCE REQUIREMENTS

A. General Performance: Roof accessories shall withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.

B. FBC Product Approval: Roof accessories mounted to the roof shall be in compliance with the FBC product approval requirements or shall be engineered to comply with the wind speed resistance required for the project. Signed and sealed engineered drawings may be provided by a licensed engineer in the State that the project is located in, in lieu of Florida Product approval certification.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of roof accessory indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings: For roof accessories. Include plans, elevations, keyed details, and attachments to other work. Indicate dimensions, loadings, and special conditions. Distinguish between plant- and field-assembled work.

1.6 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Roof plans, drawn to scale, and coordinating penetrations and roof-mounted items. Show the following:

1. Size and location of roof accessories specified in this Section.
2. Method of attaching roof accessories to roof or building structure.
3. Other roof-mounted items including mechanical and electrical equipment, ductwork, piping, and conduit.
4. Required clearances.

B. Warranty: Sample of special warranty.

1.7 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For roof accessories to include in operation and maintenance manuals.

1.8 COORDINATION

A. Coordinate layout and installation of roof accessories with roofing membrane and base flashing and interfacing and adjoining construction to provide a leakproof, weathertight, secure, and noncorrosive installation.

B. Coordinate dimensions with rough-in information or Shop Drawings of equipment to be

supported.

1.9 QUALITY ASSURANCE

A. Manufacturer Qualifications: All primary products specified in this section shall be supplied by a single manufacturer with a minimum of ten years' experience.

B. Installer Qualifications: Minimum 2 years experience installing similar products.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Deliver products in manufacturer's unopened packaging bearing the brand name and manufacturer's identification until ready for installation.

B. Store products in clean, dry, sheltered area off the ground until ready for use.

1.11 WARRANTY

A. Special Warranty on Painted Finishes: Manufacturer's standard form in which manufacturer agrees to repair finishes or replace roof accessories that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 METAL MATERIALS

A. Aluminum Sheet: ASTM B 209, manufacturer's standard alloy for finish required, with temper to suit forming operations and performance required.

1. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
2. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester-backer finish consisting of prime coat and wash coat, with a minimum total dry film thickness of 0.5 mil.

B. Aluminum Extrusions and Tubes: ASTM B 221, manufacturer's standard alloy and temper for type of use, finished to match assembly where used, otherwise mill finished.

C. Stainless-Steel Sheet and Shapes: ASTM A 240/A 240M or ASTM A 666, Type 304.

2.2 GUTTERS & RAIN CHAINS

A. Basis of Design: Chris Industries, located at: 290 Larkin Ave.; Wheeling, IL 60090; Toll ReWeb:www.chrisind.com

B. Size as indicated on drawings.

C. Alternate manufacturers shall include:

1. Architectural Products Company

2. AMSI - Supply.

3. or Architect approved equal.

D. Requests for substitutions will be considered in accordance with provisions of the General Requirements and Specifications.

E. Gutter Materials: The finishes listed in this specification are made using materials listed below as applicable and as specified.

1. Aluminum: Kynar Painted Flat Sheet: Alloy 3105-H15. ASTM B209.

F. Size

1. Rain Chain links:

a. 316 stainless steel

2. Installation Base

a. Aluminium

G. Precast Concrete Splash Blocks:

1. Precast concrete splash block 10” wide by 24” long; reinforces Grey concrete:4000 PSI @ 28 days as manufacturer by Commercial Concrete Products, Inc. or architect approved equal, with stainless steel rain chain – epoxy set stainless steel eye bolt.

2.3 WEATHER VANE

A. Basis of Design: Weathervane Factory, located at: 1318 Main Road, Eddington, ME, 04428, Ph. No.: 1-207-843-0040, www.weathervanefacyory.com, or Architect approved equal. Model Number 131 American Eagle, with coper spacer balls, directional, rod and ring and attachment devices for roof mounting.

B. Requests for Substitutions will be considered in accordance with provisions of the

General Requirements and Specifications.

C. Weathervane Materials: Copper with factory applied patina finish. Filed applied exterior grade clear coat polyurethane coating over the entire weathervane assemble and components.

1. Size: 36 inches long, 27 inches high, and a 36-inch wingspan

2. 16-ounce copper, 24 gauge

3. Four-pronged stainless-steel mount, model number BHP046.

2.4 MISCELLANEOUS MATERIALS

A. General: Provide materials and types of fasteners, protective coatings, sealants, and other miscellaneous items required by manufacturer for a complete installation.

B. Glass-Fiber Board Insulation: ASTM C 726, thickness as indicated.

C. Board Insulation: ASTM C 1289, thickness as indicated, to match roof insulation.

D. Wood Nailers: Softwood lumber, pressure treated with waterborne preservatives for aboveground use, acceptable to authorities having jurisdiction, containing no arsenic or chromium, and complying with AWPA C2; not less than 1-1/2 inches thick.

E. Fasteners: Roof accessory manufacturer's recommended fasteners suitable for application and metals or wood blocking, or curbs being fastened. Match finish of exposed fasteners with finish of material being fastened. Provide nonremovable fastener heads to exterior exposed fasteners. Furnish the following unless otherwise indicated:

1. Fasteners for Zinc-Coated or Aluminum-Zinc Alloy-Coated Steel: Series 300 stainless steel or hot-dip zinc-coated steel according to ASTM A 153/A 153M or ASTM F 2329.
2. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.
3. Fasteners for Stainless-Steel Sheet: Series 300 stainless steel.

F. Gaskets: Manufacturer's standard tubular or fingered design of neoprene, EPDM, PVC, or silicone or a flat design of foam rubber, sponge neoprene, or cork.

G. Elastomeric Sealant: ASTM C 920, elastomeric polyurethane polymer sealant as recommended by roof accessory manufacturer for installation indicated; low modulus; of type, grade, class, and use classifications required to seal joints and remain watertight.

H. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for expansion joints with limited movement.

I. Asphalt Roofing Cement: ASTM D 4586, asbestos free, of consistency required for application.

2.5 EQUIPMENT SUPPORTS

A. Equipment Supports: Internally reinforced metal equipment supports capable of supporting superimposed live and dead loads and FBC wind loads, including equipment loads and other construction indicated on Drawings; with welded or mechanically fastened and sealed corner joints, stepped integral metal cant (as required by roof manufacturer) raised the thickness of roof insulation, and integrally formed deck-mounting flange at perimeter bottom.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Thaler Metal USA, Inc.
   b. Custom Solution Roof and Metal Products.
   c. LM Curbs.
   d. Milcor Inc.; Commercial Products Group of Hart & Cooley, Inc.
   e. Roof Products, Inc.
   f. Thybar Corporation.

B. Size: Coordinate dimensions with roughing-in information or Shop Drawings of equipment to be supported. Provide a minimum of 1’-0” clear above roof to bottom of support frame.

C. Loads: As indicated on Drawings.

D. Material: Aluminum sheet, 0.090 inch thickness as required to meet or exceed loading requirements.

1. Finish: Baked enamel or powder coat.
2. Color: As selected by Architect from manufacturer's full range.

2.6 PREFORMED FLASHING SLEEVES

A. Exhaust Vent Flashing: Double-walled metal flashing sleeve or boot, insulation filled, with integral deck flange, 12 inches high above roof surface, with removable metal hood and slotted metal collar.

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:

   a. Custom Solution Roof and Metal Products.
   b. Thaler Metal USA Inc.

2. Metal: Aluminum sheet, 0.063 inch thick.
3. Diameter: As indicated on Mechanical Drawings.
4. Finish: Manufacturer's standard.

B. Vent Stack Flashing: Metal flashing sleeve, uninsulated, with integral deck flange.

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings or comparable product by one of the following:

a. Custom Solution Roof and Metal Products.
b. Thaler Metal USA Inc.

2. Metal: Aluminum sheet, 0.063 inch thick.
3. Height: 13 inches.
4. Diameter: As indicated on Mechanical Drawings.
5. Finish: Manufacturer's standard.

2.7 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.4 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of the Work.

B. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.

C. Verify dimensions of roof openings for roof accessories.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.5 INSTALLATION

A. General: Install roof accessories according to manufacturer's written instructions.

1. Install roof accessories level, plumb, true to line and elevation, and without warping, jogs in alignment, excessive oil canning, buckling, or tool marks.
2. Anchor roof accessories securely in place so they are capable of resisting indicated loads.
3. Use fasteners, separators, sealants, and other miscellaneous items as required to complete installation of roof accessories and fit them to substrates.
4. Install roof accessories to resist exposure to weather without failing, rattling, leaking, or loosening of fasteners and seals.

B. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact

surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.

1. Coat concealed side of stainless-steel roof accessories with bituminous coating where in contact with wood, ferrous metal, or cementitious construction.
2. Bed flanges in thick coat of asphalt roofing cement where required by manufacturers of roof accessories for waterproof performance.

C. Equipment Support Installation: Install equipment supports so top surfaces are level with each other.

D. Equipment Pipe Support Installation: Install pipe supports so top surfaces are in contact with and provide equally distributed support along length of supported item.

E. Preformed Flashing-Sleeve Installation: Secure flashing sleeve to roof membrane according to flashing-sleeve manufacturer's written instructions.

F. Seal joints with elastomeric or butyl sealant as required by roof accessory manufacturer.

3.6 REPAIR AND CLEANING

A. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing according to ASTM A 780.

B. Touch up factory-primed surfaces with compatible primer ready for field painting according to Division 9 painting Sections.

C. Clean exposed surfaces according to manufacturer's written instructions.

D. Clean off excess sealants.

E. Replace roof accessories that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures.

END OF SECTION 07720

SECTION 07841 - PENETRATION FIRESTOP SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Penetrations in fire-resistance-rated walls.
2. Penetrations in horizontal assemblies.
3. Penetrations in smoke barriers.

B. Related Sections:

1. Division 7 Section "Fire-Resistive Joint Systems" for joints in or between fire-resistance-rated construction, at wall/floor intersections, and in smoke barriers.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Product Schedule: For each penetration firestopping system. Include location and design designation of qualified testing and inspecting agency, and UL approved assembly.

1. Where Project conditions require modification to a qualified testing and inspecting agency's illustration for a particular penetration firestopping condition, submit illustration, with modifications marked, approved by penetration firestopping manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly. Engineer must be registered in the State of Florida.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer.

B. Installer Certificates: From Installer indicating penetration firestopping has been installed in compliance with requirements and manufacturer's written

recommendations.

C. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for penetration firestopping.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: A single professional firestopping installation firm for the entire Building with penetration firestopping experience on similar applications in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful performance. Qualifications include having the necessary experience, staff, and training to install manufacturer's products per specified requirements. Manufacturer's willingness to sell its penetration firestopping products to Contractor or to Installer engaged by Contractor does not in itself confer qualification on buyer.

B. Fire-Test-Response Characteristics: Penetration firestopping shall comply with the following requirements:

1. Penetration firestopping tests are performed by a qualified testing agency acceptable to authorities having jurisdiction.
2. Penetration firestopping is identical to those tested per testing standard referenced in "Penetration Firestopping" Article. Provide rated systems complying with the following requirements:

    a. Penetration firestopping products bear classification marking of qualified testing and inspecting agency.
    b. Classification markings on penetration firestopping correspond to designations listed by the following:

        1) UL in its "Fire Resistance Directory."
        2) FM Global in its "Building Materials Approval Guide."

C. Pre-installation Conference: Conduct conference at Project site.

1.6 PROJECT CONDITIONS

A. Environmental Limitations: Do not install penetration firestopping when ambient or substrate temperatures are outside limits permitted by penetration firestopping manufacturers or when substrates are wet because of rain, frost, condensation, or other causes.

B. Install and cure penetration firestopping per manufacturer's written instructions using natural means of ventilations or, where this is inadequate, forced-air circulation.

1.7 COORDINATION

A. Coordinate construction of openings and penetrating items to ensure that penetration firestopping is installed according to specified requirements.

B. Coordinate sizing of sleeves, openings, core-drilled holes, or cut openings to accommodate penetration firestopping.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Grace Construction Products.
2. Hilti, Inc.
3. Specified Technologies Inc.
4. 3M Fire Protection Products.

2.2 PENETRATION FIRESTOPPING

A. Provide penetration firestopping that is produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of construction penetrated. Penetration firestopping systems shall be compatible with one another, with the substrates forming openings, and with penetrating items if any.

B. Penetrations in Fire-Resistance-Rated Walls: Provide penetration firestopping with ratings determined per ASTM E 814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg.

1. Fire-resistance-rated walls include fire walls fire-barrier walls smoke-barrier walls and fire partitions.
2. F-Rating: Not less than the fire-resistance rating of constructions penetrated.

C. Penetrations in Horizontal Assemblies: Provide penetration firestopping with ratings determined per ASTM E 814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg.

1. Horizontal assemblies include floor/ceiling assemblies and ceiling membranes of roof/ceiling assemblies.
2. F-Rating: At least 1 hour, but not less than the fire-resistance rating of constructions penetrated.

3. T-Rating: At least 1 hour, but not less than the fire-resistance rating of constructions penetrated except for floor penetrations within the cavity of a wall.

D. Penetrations in Smoke Barriers: Provide penetration firestopping with ratings determined per UL 1479.

1. L-Rating: Not exceeding 5.0 cfm/sq. ft. of penetration opening at 0.30-inch wg at both ambient and elevated temperatures.

E. W-Rating: Provide penetration firestopping showing no evidence of water leakage when tested according to UL 1479.

F. Exposed Penetration Firestopping: Provide products with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E 84.

G. VOC Content: Penetration firestopping sealants and sealant primers shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):

1. Sealants: 250 g/L.
2. Sealant Primers for Nonporous Substrates: 250 g/L.
3. Sealant Primers for Porous Substrates: 775 g/L.

F. Accessories: Provide components for each penetration firestopping system that are needed to install fill materials and to maintain ratings required. Use only those components specified by penetration firestopping manufacturer and approved by qualified testing and inspecting agency for firestopping indicated.

1. Permanent forming/damming/backing materials, including the following:

a. Slag-wool-fiber or rock-wool-fiber insulation.
b. Sealants used in combination with other forming/damming/backing materials to prevent leakage of fill materials in liquid state.
c. Fillers for sealants.

2. Temporary forming materials.
3. Substrate primers.
4. Collars.

2.3 MIXING

A. For those products requiring mixing before application, comply with penetration firestopping manufacturer's written instructions for accurate proportioning of materials,water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other items or procedures needed to produce products of uniform quality with optimum performance characteristics for application indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning: Clean out openings immediately before installing penetration firestopping to comply with manufacturer's written instructions and with the following requirements:

1. Remove from surfaces of opening substrates and from penetrating items foreign materials that could interfere with adhesion of penetration firestopping.
2. Clean opening substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with penetration firestopping. Remove loose particles remaining from cleaning operation.
3. Remove laitance and form-release agents from concrete.

B. Priming: Prime substrates where recommended in writing by manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

C. Masking Tape: Use masking tape to prevent penetration firestopping from contacting adjoining surfaces that will remain exposed on completion of the Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove stains. Remove tape as soon as possible without disturbing firestopping's seal with substrates.

3.3 INSTALLATION

A. General: Install penetration firestopping to comply with manufacturer's written installation instructions and published drawings for products and applications indicated.

B. Install forming materials and other accessories of types required to support fill materials during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.

1. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of firestopping.

C. Install fill materials for firestopping by proven techniques to produce the following results:

1. Fill voids and cavities formed by openings, forming materials, accessories, and penetrating items as required to achieve fire-resistance ratings indicated.
2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
3. For fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.4 IDENTIFICATION

A. Identify penetration firestopping with permanent preprinted metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches of firestopping edge so labels will be visible to anyone seeking to remove penetrating items or firestopping.

Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:

1. The words "Warning - Penetration Firestopping - Do Not Disturb. Notify Building Management of Any Damage."
2. Contractor's name, address, and phone number.
3. Designation of applicable testing and inspecting agency.
4. Date of installation.
5. Manufacturer's name.
6. Installer's name.

3.5 CLEANING AND PROTECTION

A. Provide final protection and maintain conditions during and after installation that ensure that penetration firestopping is without damage or deterioration at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, immediately cut out and remove damaged or deteriorated penetration firestopping and install new materials to produce systems complying with specified requirements.

3.6 PENETRATION FIRESTOPPING SCHEDULE

A. Where UL-classified systems are indicated, they refer to system numbers in UL's "Fire Resistance Directory" under product Category XHEZ.

B. Firestopping for Metallic Pipes, Conduit, or Tubing FS-MP-1:

1. UL-Classified Systems: C-AJ- 1226.
2. F-Rating: 3 hours.
3. L-Rating at Ambient: Less than 1 cfm/sq. ft..

4. W-Rating: No leakage of water at completion of water leakage testing.

C. Firestopping for Metallic Pipes, Conduit, or Tubing FS-MP-2:

1. UL-Classified Systems: W-L-1054.
2. F-Rating: 1 and 2 hours.
3. L-Rating at Ambient: Less than 1 cfm/sq. ft..
4. W-Rating: No leakage of water at completion of water leakage testing.

D. Firestopping for Nonmetallic Pipe, Conduit, or Tubing FS-NMP-1:

1. UL-Classified Systems: C-AJ- 2109.
2. F-Rating: 2 hours and 3 hours.
3. T-Rating: 0, 2, 3 hours.
4. W-Rating: No leakage of water at completion of water leakage testing.

E. Firestopping for Nonmetallic Pipe, Conduit, or Tubing FS-NMP-2:

1. UL-Classified Systems: W-L- 2078.
2. F-Rating: 1 hour and 2 hours.
3. T-Rating: 0, 1, 2 hours.
4. W-Rating: No leakage of water at completion of water leakage testing.

F. Firestopping for Cable Trays with Electric Cables FS-CT-1:

1. UL-Classified Systems: W-J- 4009.
2. F-Rating: 2 hours.

G. Firestopping for Cable Trays with Electric Cables FS-CT-2:

1. UL-Classified Systems: W-L- 4005.
2. F-Rating: 1 and 2 hours.

H. Firestopping for Insulated Pipes FS-IMP-1:

1. UL-Classified Systems: C-AJ- 5198.
2. F-Rating: 2 hours.
3. T-Rating: 0 and ½ Hour.
4. W-Rating: No leakage of water at completion of water leakage testing.

I. Firestopping for Insulated Pipes FS-IMP-2:

1. UL-Classified Systems: C-AJ- 5301.
2. F-Rating: 2 hours.
3. T-Rating: 0 and 1½ Hours.
4. W-Rating: No leakage of water at completion of water leakage testing.

J. Firestopping for Insulated Pipes FS-IMP-3:

1. UL-Classified Systems: W-L- 5029.
2. F-Rating: 1 and 2 hours.

3. T-Rating: ½ , ¾, 1, 1 ½ and 1 ¾ hours.
4. W-Rating: No leakage of water at completion of water leakage testing.
5. L-Rating at Ambient: 4 cfm/sq ft

K. Firestopping for Insulated Pipes FS-IMP-4:

1. UL-Classified Systems: W-L- 5028.
2. F-Rating: 1 and 2 hours.
3. T-Rating: ¾, hours.
4. W-Rating: No leakage of water at completion of water leakage testing.
5. L-Rating at Ambient: less than 1 cfm/sq ft

L. Firestopping for Miscellaneous Mechanical Penetrants FS-MDC-1:

1. UL-Classified Systems: W-J- 7089.
2. F-Rating: 2 hours.
3. T-Rating: 0 hour.
4. L-Rating at Ambient: Less than 1 cfm/sq. ft.

M. Firestopping for Miscellaneous Mechanical Penetrants FS-MDC-2:

1. UL-Classified Systems: W-L- 7149.
2. F-Rating: 2 hours.
3. T-Rating: 0 hour.
4. L-Rating at Ambient: Less than 1 cfm/sq. ft..

N. Firestopping for Groupings of Penetrants FS-MLP-1:

1. UL-Classified Systems: C-AJ- 1048.
2. F-Rating: 3 hours.
3. T-Rating: 1/2 hour.
4. L-Rating at Ambient: Less than 1 cfm/sq. ft..
5. W-Rating: No leakage of water at completion of water leakage testing.

O. Firestopping for Groupings of Penetrants FS-MLP-2:

1. UL-Classified Systems: W-L- 1173.
2. F-Rating: 3 and 4 hours.
3. T-Rating: 1 hour.
4. L-Rating at Ambient: Less than 1 cfm/sq. ft..

END OF SECTION 07841

SECTION 07844 - FIRE-RESISTIVE JOINT SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Joints in or between fire-resistance-rated constructions.
2. Joints in smoke barriers.

B. Related Sections:
1. Division 7 Section "Through-Penetration Firestop Systems" for penetrations in fire-resistance-rated walls, horizontal assemblies, and smoke barriers.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Product Schedule: For each fire-resistive joint system. Include location and design designation of qualified testing agency.

1. Where Project conditions require modification to a qualified testing agency's illustration for a particular fire-resistive joint system condition, submit illustration, with modifications marked, approved by fire-resistive joint system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly. Engineer must be registered in the State of Florida.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer.

B. Installer Certificates: From Installer indicating fire-resistive joint systems have been installed in compliance with requirements and manufacturer's written recommendations.

C. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for fire-resistive joint systems.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: A single professional firm for the entire project with experience in installing fire-resistive joint systems similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful performance. Qualifications include having the necessary experience, staff, and training to install manufacturer's products per specified requirements. Manufacturer's willingness to sell its fire-resistive joint system products to Contractor or to Installer engaged by Contractor does not in itself confer qualification on buyer.

B. Fire-Test-Response Characteristics: Fire-resistive joint systems shall comply with the following requirements:

1. Fire-resistive joint system tests are performed by a qualified testing agency acceptable to authorities having jurisdiction.
2. Fire-resistive joint systems are identical to those tested per testing standard referenced in "Fire-Resistive Joint Systems" Article. Provide rated systems complying with the following requirements:

a. Fire-resistive joint system products bear classification marking of qualified testing agency.
b. Fire-resistive joint systems correspond to those indicated by reference to designations listed by the following:

1) UL in its "Fire Resistance Directory."

C. Pre-installation Conference: Conduct conference at Project site.

1.6 PROJECT CONDITIONS

A. Environmental Limitations: Do not install fire-resistive joint systems when ambient or substrate temperatures are outside limits permitted by fire-resistive joint system manufacturers or when substrates are wet due to rain, frost, condensation, or other causes.

B. Install and cure fire-resistive joint systems per manufacturer's written instructions using natural means of ventilation or, where this is inadequate, forced-air circulation.

1.7 COORDINATION

A. Coordinate construction of joints to ensure that fire-resistive joint systems are installed according to specified requirements.

B. Coordinate sizing of joints to accommodate fire-resistive joint systems.

C. Notify Owner's testing agency at least seven days in advance of fire-resistive joint system installations; confirm dates and times on day preceding each series of installations.

PART 2 - PRODUCTS

2.1 FIRE-RESISTIVE JOINT SYSTEMS

A. Where required, provide fire-resistive joint systems that are produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of assemblies in or between which fire-resistive joint systems are installed. Fire-resistive joint systems shall accommodate building movements without impairing their ability to resist the passage of fire and hot gases.

B. Joints in or between Fire-Resistance-Rated Construction: Provide fire-resistive joint systems with ratings determined per ASTM E 1966 or UL 2079:

1. Joints include those installed in or between fire-resistance-rated walls, floor or floor/ceiling assemblies and roofs or roof/ceiling assemblies.
2. Fire-Resistance Rating: Equal to or exceeding the fire-resistance rating of construction they will join.
3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Hilti, Inc.
    b. Specified Technologies Inc.
    c. 3M Fire Protection Products.

C. Joints at Exterior Wall/Floor Intersections: Provide fire-resistive joint systems with rating determined by ASTM E 119 based on testing at a positive pressure differential of 0.01-inch wg or ASTM E 2307.

1. Fire-Resistance Rating: Equal to or exceeding the fire-resistance rating of the floor assembly.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Hilti, Inc.
    b. Specified Technologies Inc.
    c. 3M Fire Protection Products.
    d. Thermafiber, Inc.

D. Joints in Smoke Barriers: Provide fire-resistive joint systems with ratings determined per UL 2079.

1. L-Rating: Not exceeding 5.0 cfm/ft of joint at 0.30 inch wg at both ambient and elevated temperatures.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Hilti, Inc.
    b. Specified Technologies Inc.
    c. 3M Fire Protection Products.

E. Exposed Fire-Resistive Joint Systems: Provide products with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E 84.

F. VOC Content: Fire-resistive joint system sealants shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):

1. Architectural Sealants: 250 g/L.
2. Sealant Primers for Nonporous Substrates: 250 g/L.
3. Sealant Primers for Porous Substrates: 775 g/L.

G. Accessories: Provide components of fire-resistive joint systems, including primers and forming materials, that are needed to install fill materials and to maintain ratings required. Use only components specified by fire-resistive joint system manufacturer and approved by the qualified testing agency for systems indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for joint configurations, substrates, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning: Clean joints immediately before installing fire-resistive joint systems to comply with fire-resistive joint system manufacturer's written instructions and the following requirements:

1. Remove from surfaces of joint substrates foreign materials that could interfere with adhesion of fill materials.
2. Clean joint substrates to produce clean, sound surfaces capable of developing optimum bond with fill materials. Remove loose particles remaining from cleaning operation.
3. Remove laitance and form-release agents from concrete.

B. Priming: Prime substrates where recommended in writing by fire-resistive joint system manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

C. Masking Tape: Use masking tape to prevent fill materials of fire-resistive joint system from contacting adjoining surfaces that will remain exposed on completion of the Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove stains. Remove tape as soon as possible without disturbing fire-resistive joint system's seal with substrates.

3.3 INSTALLATION

A. General: Install fire-resistive joint systems to comply with manufacturer's written installation instructions and published drawings for products and applications indicated.

B. Install forming materials and other accessories of types required to support fill materials during their application and in position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.

1. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of fire-resistive joint system.

C. Install fill materials for fire-resistive joint systems by proven techniques to produce the following results:

1. Fill voids and cavities formed by joints and forming materials as required to achieve fire-resistance ratings indicated.
2. Apply fill materials so they contact and adhere to substrates formed by joints.
3. For fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.4 IDENTIFICATION

A. Identify fire-resistive joint systems with a permanent preprinted metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches of joint edge so labels will be visible to anyone seeking to remove or penetrate joint system. Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:

1. The words "Warning - Fire-Resistive Joint System - Do Not Disturb. Notify Building Management of Any Damage."
2. Contractor's name, address, and phone number.
3. Designation of applicable testing agency.
4. Date of installation.
5. Manufacturer's name.
6. Installer's name.

3.5 FIELD QUALITY CONTROL

A. Inspecting Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Where deficiencies are found or fire-resistive joint systems are damaged or removed due to testing, repair or replace fire-resistive joint systems so they comply with

requirements.

C. Proceed with enclosing fire-resistive joint systems with other construction only after inspection reports are issued and installations comply with requirements.

3.6 CLEANING AND PROTECTING

A. Clean off excess fill materials adjacent to joints as the Work progresses by methods and with cleaning materials that are approved in writing by fire-resistive joint system manufacturers and that do not damage materials in which joints occur.

B. Provide final protection and maintain conditions during and after installation that ensure fire-resistive joint systems are without damage or deterioration at time of Substantial Completion. If damage or deterioration occurs despite such protection, cut out and remove damaged or deteriorated fire-resistive joint systems immediately and install new materials to produce fire-resistive joint systems complying with specified requirements.

3.7 FIRE-RESISTIVE JOINT SYSTEM SCHEDULE

A. Where UL-classified systems are indicated or as required to maintain ratings, they refer to system numbers in UL's "Fire Resistance Directory" under product Category XHBN or Category XHDG.

B. Wall-to-Wall, Concrete to concrete or CMU Fire-Resistive Joint Systems FRJS-1:

1. UL-Classified Systems: WW-D- 0001.
2. Assembly Rating: 1, 2 and 3 hour.
3. Nominal Joint Width: 1 inch.
4. Movement Capabilities: Class II - 12.5 percent compression or extension.
5. L-Rating at Ambient: Less than 1 cfm/ft..

C. Wall-to-Wall, Gypsum / Concrete or CMU Fire-Resistive Joint Systems FRJS-2:

1. UL-Classified Systems: WW-S- 0052.
2. Assembly Rating: 1, 2 and 3 hour.
3. Nominal Joint Width: 1 inch.
4. L-Rating at Ambient: Less than 1 cfm/ft..

D. Floor-to-Wall, Concrete Floor to Concrete or CMU Wall; Fire-Resistive Joint Systems FRJS-3:

1. UL-Classified Systems: FW-D-0023.
2. Assembly Rating: 1 hour 2 hours.
3. Nominal Joint Width: 2 inches.
4. Movement Capabilities: Class II - 19 percent compression or extension.
5. L-Rating at Ambient: Less than 1 cfm/ft..

E. Head-of-Wall, CMU or Concrete Partitions; Fire-Resistive Joint Systems FRJS-HWD-

CMU:

1. UL-Classified Systems: HW-D-1034.
2. Assembly Rating: 1 hour to 3 hour.

F. Head-of-Wall, gypsum Partitions; Fire-Resistive Joint Systems FRJS-HWD-GWB:

1. UL-Classified Systems: HW-D-0043.
2. Assembly Rating: 1 hour to 2 hour.

G. Perimeter Fire-Resistive Joint Systems PFRJS-1:

1. UL-Classified Perimeter Fire-Containment Systems: CW- S-2034.
2. Integrity Rating: 1 ½ to 2 hours.
3. Insulation Rating: 1/4 hour.
4. Linear Opening Width: 8 inches, maximum.
5. L-Rating at Ambient Temperature: Less than 1 cfm/ft..

H. Perimeter Fire-Resistive Joint Systems PFRJS-2:

1. UL-Classified Perimeter Fire-Containment Systems: CW- S-20349.
2. Integrity Rating: 1 ½ to 2 hours.
3. Insulation Rating: 1/4 hour.
4. Linear Opening Width: 8 inches, maximum.
5. L-Rating at Ambient Temperature: Less than 1 cfm/ft..

I. Perimeter Fire-Resistive Joint Systems PFRJS-3:

1. UL-Classified Perimeter Fire-Containment Systems: CW- S-2044.
2. Integrity Rating: 1 ½ to 2 hours.
3. Insulation Rating: 1/4 hour.
4. Linear Opening Width: 8 inches, maximum.
5. L-Rating at Ambient Temperature: Less than 1 cfm/ft..

END OF SECTION 07844

SECTION 07900 - CAULKING AND SEALANTS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Furnish all labor, materials, tools, equipment, etc. and services necessary and incidental to the complete fabrication, furnishing and erection of this Section as noted, detailed, necessary, and reasonably implied on the drawings and in the specifications.

1.3 RELATED SECTIONS

A. Coordinate work of this Section with work of other Sections as required to properly execute the work and as necessary to maintain satisfactory progress of the work of other Sections, including:

1. Section 07210 – Sound Reduction Sealants.

2. Section 07841 – Penetration Firestop Systems.

3. Section 08905 – Window Walls and Exterior Glazing.

4. Divisions 15 and 16, Mechanical, Plumbing, Fire Protection, Electrical.

1.4 DEFINITIONS

A. "Caulking Compound" shall apply only to materials and work in connection with the filling or closing of interior joints where expansion or contraction are of no consideration, and where filling and closing of these interior joints are primarily for appearance.

B. "Sealant" shall apply to materials and work to seal and make watertight all joints on the exterior of the building and joints on the interior of the building that may be expected to expand and contract.

C. "Silicone" shall apply to glazing systems including perimeter, butt joint, structural, storefront, and metal curtainwall.

D. “Mildew Resistant Sealant” shall apply to sealant to be applied to all interior tiled joints or other non-porous substrates that are subject to in-service exposures of high humidity and temperature extremes.

1.5 SUBMITTALS

A. Submit product data under provisions of Section 01300 – Shop Drawings,

Product Data, and Samples.

B. Complete data sheets clearly identifying all materials, specifications and locations where they are proposed for use in this project.

C. Manufacturer's printed data, specifications, and installation procedures.

D. Manufacturer’s compatibility statement that sealant bonding surfaces and materials are acceptable surfaces for proposed sealant and surface preparation requirements, including priming and cleaning criteria.

E. Manufacturer’s field pull test for existing adhesion, stain and primer requirements for each sealant application and sealant surface. Pull test shall be conducted in accordance with ASTM standards.

1.6 WARRANTY

A. Refer to Section 01700 - Project Closeout, Detail Requirements. Provide a warranty covering sealant materials and joint failure.

B. Joint failure is defined as:

1. Leaks of air or water.

2. Evidence of loss of cohesion - cohesive failure.

3. Fading of sealant material beyond manufacturer's standard printed Criteria.

4. Migration of sealant.

5. Evidence of loss of adhesion between sealant and joint edge - adhesive failure.

1.7 DELIVERY, STORAGE AND HANDLING

A. Deliver products to site under provisions of Section 01600 – Materials and Equipment and Section 01620 – Storage and Protection.

B. Deliver materials in their original unbroken containers, bearing the manufacturer's name and brand designation and specification number where applicable. Caulking compound, sealant, or components more than 6 months old shall not be used.

1.8 SCOPE

A. The work includes caulking and sealing all portions of new construction.

B. Specific materials and areas to be caulked or sealed include, but are not limited to, the following:

1. Door and window opening frames at interior and exterior of building

2. Door thresholds at exterior of building

3. Intersection of dissimilar materials at interior and exterior floors, walls, stairs, and ceilings of the buildings

4. Intersection or termination of specialty materials such as granite countertops, marble, tile, etc.

5. Stucco joints and accessories

6. Sheet metal work other than flashings

7. Joint conditions as directed by the Architect

PART 2 – PRODUCTS

2.1 CAULKING

A. Interior, air-conditioned areas, caulking compound shall be acrylic latex type, ASTM C834. Provide one of the following:

1. GE – RCS20

2. Sonneborn “Sonolac.”

3. Pecora “AC-20.”

4. Bostik “Chem-Calk 600/650.”

5. Tremco “Tremflex 834.”

2.2 ELASTOMERIC SEALANTS

A. Provide single-component or multi-component, low-modulus, non-sag polyurethane sealant that is suitable for continuous immersion in water; comply with ASTM C920, Type S or M, Grade NS, Class 25.

1. Acceptable Sealants:

a. Tremco “Vulkem 116/921/922.”

b Tremco, “Dymeric 511.”

c. Bostik “Chem Caulk 900.”

d. Pecora “Dynatrol 1.”

e. Sika “Sikaflex 1A,” Sikaflex 2cNS", or "Sikaflex 15LM

B. Provide single-component or multi-component polyurethane sealant having a Shore A hardness of not less than 25, or more than 50, and plus-or-minus 25 percent joint movement capability that is suitable for continuous immersion in water; comply with ASTM C920, Type S or M, Grade P or NS, Class 25.

1. Acceptable Sealants:

   a. Tremco “Vulkem 45/245/227.”

   b. Tremco “THC 900/901.”

   c. “Sikaflex-1a" or "Sikaflex-2c NS/SL"

C. Sealant shall meet ASTM C 920 for one part and two-part polysulfide base sealants.

1. Pecora “GC-9 Synthacalk,” one part.

2. Pecora “GC-5 Synthacalk,” two part.

3. Sonneborn “Sonolastic Sealant,” one part or two part.

   a. Color of sealants as selected by Architect from manufacturer's standard colors.

2.3 MILDEW RESISTANT SEALANT (INTERIOR WET AND TILED AREAS)

A. One-Part, Mildew-Resistant Silicone Sealant: ASMT C 920; Type S; Grade NS; Class 25; Uses NT, G, A, and, as applicable to nonporous joint substrates indicated, O; formulated with fungicide, intended for sealing interior ceramic tile joints and other nonporous substrates that are subject to in-service exposures of high humidity and temperature extremes.

B. Colors: Provide colors of exposed sealants to match colors of grout in tile adjoining sealed joints, unless otherwise indicated.

C. Products: Subject to compliance with requirements, provide one of the following products:

1. Dow Corning “Dow Corning 786.”

2. GE Silicones “Sanitary 1700.”

3. Pecora “Pecora 898 Sanitary Silicone Sealant.”

2.4 SILICONE

A. Silicone sealants shall meet ASTM C 920.

B. Silicone shall be as manufactured by G.E., or Dow Corning, or Sika as recommended by the manufacturer as appropriate for the intended use.

C. Color as selected by the Architect.

2.5 PENETRATION SEALANT/FIRE RATED SEALANT SYSTEMS

A. See Section 07840 – Firestopping (Penetration Seals).

2.6 BOND BREAKERS

A. Bond breakers where required by sealant manufacturer.

2.7 PRIMER

A. Primers for joint groove shall be primers recommended by the caulking or sealant manufacturer as being required to seal the pores in the materials, the sides of the joint grooves, and as being compatible with the caulking or sealant being used.

2.8 BACKER MATERIAL

A. Backing material shall be a closed cell non-staining polyethylene in round or square shape as recommended by the manufacturer of the compound. Materials shall be free from oil or other staining elements. Oakum and other types of absorptive or open cell materials shall not be used.

PART 3 – EXECUTION

3.1 INSTALLATION, GENERAL

A. All items in this Section shall be installed by experienced skilled mechanics in the best workmanlike manner of the trade's best standard practice and in strict accordance with approved submittals.

3.2 JOINT DIMENSIONS

A. Depth of joint is defined as distance from outside face of joint to closest point of joint filler, whether joint filler is rod shaped or rectangular shaped.

B. Joints: Depth and width as required and confirmed by product manufacturer but no less than the following requirements.

1. Joints: Never less than 1/8 inch depth by 1/4 inch width, unless specifically approved by Architect.

2. For joints in concrete or masonry, depth of sealant must be 1/2 of the width of joint up to 1/2 inch wide. For expansion, other joints exceeding 1/2 inch in width, depth of sealant: no greater than 1/2 sealant width.

3. For joints in non-porous surfaces, metal, glass, sealant depth: minimum of 1/2 sealant width, in no case exceeding sealant width.

4. Contractor shall determine/verify that joint dimension limits noted above and required by the joint sealant manufacturer are met.

3.3 JOINT INSPECTION

A. Building joints shall be examined prior to application and any conditions detrimental to achieving a positive, weather-tight seal shall be reported to the General Contractor and the Architect.

B. All openings, joints, or channels to be sealed shall be thoroughly clean, dry, and free from dust, oil, grease, loose mortar, or any other foreign matter.

C. Surfaces with protective coatings that the sealant will come in contact with such as new aluminum or bronze, shall be wiped with approved solvent, and wiped dry with a clean cloth; to remove any protective coating not tightly adhered and any oil deposit that may be left on the metal surfaces.

D. All joints shall have a closed-cell polyethylene joint backing, which shall be packed into the joint within 1/2 inch of the surface.

E. Concrete shall be fully cured, free of release agents, curing compounds, loose aggregate and other surface treatments. Treated surfaces shall be tested for adhesion before proceeding with sealant work.

F. Joint spaces and surfaces: Thoroughly dry before installation of sealant materials. Do not install sealant materials when temperature is below 40 degrees F, or during or after rain or fog.

3.4 INSTALLATION

A. The mixing and application of all caulking/sealant compounds shall be in strict accordance with the manufacturer's instructions.

B. All joints where caulking compounds are to be applied in excess of 1/2 inch in depth shall be packed with a polyethylene foam rod stack filler material to within 1/2 inch from the face to surface. The caulking width and depth in relation to joint movement shall be a maximum of 25 percent compression and 25 percent extension.

C. Bond breaker strips shall be used where sufficient room for backer rods does not exist or as required by manufacturer.

D. Primer shall be used as it comes from can, unaltered. Prime joints before insertion of joint filler materials, per caulking/sealant manufacturer's directions.

E. Seal the heads, sills, and jambs of all windows and the heads and jambs of doorframes where they abut walls.

F. Sealant shall be applied with full gun pressure forcing the caulking well back into joint. Build the sealant out to a 45-degree angle in all corners, finish the sealant bead by tooling at the doorframes in masonry walls.

G. Wipe all excess compound and leave in proper condition for painting. Use only a paintable sealant material.

H. Exterior thresholds shall be set in a full bed of exterior-type sealant compound.

I. Fill joint with filler material so that depth and width of joint have relationships as noted herein before under "Joint Dimensions".

J. Sealant materials shall be applied within the "application life" recommended by

manufacturer for prevailing temperature and humidity conditions.

K. Protect exposed surfaces adjacent to joints to prevent permanent staining or other damage to adjacent work.

1. All joints shall be tooled into place to give concave shaped surfaces.

L. Wood shall be clean, dry and primed with a primer as recommended by the manufacturer of compound to be used.

M. Metal and glass shall be dry, free of oil, grease and dirt. Immediately before sealing with compounds, wipe surfaces to be filled with clean rags soaked in either methylethyl ketone, high flash naptha, lacquer solvents, or 50-50 alcohol and water, as appropriate, and wiped dry with a clean cloth.

N. Seal all interior wood trim and metal surfaces which bear or abut on masonry surfaces and all corners where wood and metal adjoins masonry surfaces. Seal all joints between concrete and masonry surfaces. Masonry joints shall be dry, wire brushed, free of dirt, grease or oil and primed with a primer, recommended by the manufacturer of compound to be used.

O. If primer used will produce yellowing, discoloration, or dirt pickup when applied on substrates, surfaces adjacent to joint shall be protected from such contamination by use of masking. Care shall be taken to remove masking tape before permanent adhesion takes place.

P. All exterior wall mounted fixtures shall be caulked at top and both sides of the fixture or mounting plate. All conduits that penetrate exterior wall shall be sealed and junction boxes shall be sealed at the perimeter of the box prior to setting fixture.

3.5 CLEANING

A. The surfaces of all materials adjacent to caulking and sealing operations shall be cleaned of any smears of compound or other soiling due to the caulking and sealing application. Fresh compound that has been smeared on adjacent surfaces shall be removed immediately and rubbed clean with non-staining solvent.

3.6 MATERIALS AND WORKMANSHIP

A. All damaged material and faulty workmanship shall be removed and replaced with new material in the best workmanlike manner at no extra cost to the Owner.

END OF SECTION 07900

SECTION 08100 - METAL DOORS AND FRAMES

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Furnish all labor, materials, tools, equipment, etc. and services necessary and incidental to the complete fabrication, furnishing and erection of this Section as shown, noted, detailed and reasonably implied on the drawings and in the specifications.

1.3 RELATED SECTIONS

A. Coordinate work of this Section with work of other Sections as required to properly execute the work and as necessary to maintain satisfactory progress of the work of other Sections, including:

1. Section 04810 – “Unit Masonry Assemblies.”
2. Section 07900 – “Joint Sealers.”
3. Section 08710 – “Door Hardware.”
4. Section 09911 – “Exterior Painting.”
5. Section 09912 – “Interior Painting.”

1.4 SHOP DRAWINGS AND SUBMITTALS

A. Submit shop drawings and product data under provisions of Section 01300 – Shop Drawings, Product Data and Samples.

B. Provide a schedule of doors and frames using same reference numbers for openings and details as those on Contract Document. Indicate coordination of glazing frames and stops with glass and glazing requirements.

C. Show dimensioned door and frame elevations, locations, jamb conditions, methods of assembling, hardware preparation, label compliance, sound ratings, finishes, and anchorage details.

D. Submit manufacturer's printed literature on all doors frames, louvers and transoms including State of Florida-NOA product approval data sheets, demonstrating performance for all wind load conditions and pressures, outlined per the Structural Drawings. Product Data: For each type of sliding automatic entrance door indicated.

E. Submit test reports per Article 1.7, this Section.

1.5 DELIVERY, STORAGE AND HANDLING

A. Deliver products to site under provisions of Section 01600 – Materials and Equipment and Section 01620 – Storage and Protection.

B. Doors and frames shall be stored per manufacturer's instructions.

C. All doors shall be individually packaged in cartons completely covering entire door to prevent damage or marring of the finish.

D. Store doors and frames at building site under cover. Place units on minimum 4 inch high wood blocking. Avoid use of non-vented plastic or canvas coverings which could create humidity chamber. Provide ¼ inch spaces between staked doors to promote air circulation.

1.6 WARRANTY

A. Hollow metal doors shall be warranted by the manufacturer for a period of one (1) year against delamination, a lifetime warranty on rust perforation, and a one (1) year warranty from defects in materials and workmanship starting from date of substantial completion. See Section 01770 - Closeout Procedures, Detail Requirements.

1.7 TEST REPORTS AND COMPLIANCE

A. Flush Face Exterior Doors:

1. Acoustical qualities of 1-3/4 inch Doors shall be a minimum sound transmission classification of 26 as tested under ASTM E90. The urethane foam core shall have a "U" factor of 0.067 and "R" factor 14.8

2. Shall meet ANSI A151.1 performance test acceptance criteria for physical endurance; Level "A' (Class A) one million cycles; S.D.I. 100 classification Grade 2, Heavy Duty; Model 4.

B. Underwriter's Laboratories, Factory Mutual and Warnock Hersey labeled fire doors and frames:

1. ALL labeled fire doors and frames shall be of a type which has been investigated and tested in accordance with UL 10(b), ASTM E152, NFPA 252, ANSI A2.2 and, when required, UL 305.

2. A physical label shall be affixed to the fire door and fire door frame at an authorized facility as evidence of compliance with procedures of the labeling agency.

3. Labeled doors shown on the drawings shall meet the requirements of Underwriter's Laboratories, Inc., for Class of construction and shall bear their approval label, as one of the following.

a. 3 hour.

b. 1-1/2 hour.

c. 1 hour.

d. 3/4 hour.

e. 20 minute.

C. EXTERIOR OPENINGS: Exterior doors shall comply with wind load criteria specified per the latest version of the FBC. Door material gauges and reinforcement criteria specified here are minimum criteria. Door assemblies shall resist the cyclic pressures, static pressures and missile impact loads as detailed in Florida Building Code test protocols TAS 201, TAS 202, and TAS 203. Subject to compliance with requirements, and complete assembly testing for the Florida Building Code wind load requirements, manufacturers not listed below, offering products that may be incorporated into the work, are subject to the Architect's approval prior to award of the contract.

PART 2 – PRODUCTS

2.1 METAL DOORS (HM-1)

A. General: Refer to Door Schedule on the Drawings for door profiles.

B. Metal doors, Type "A" or Class I heavy duty, flush face as manufactured by Baron Metal Industries Inc. Equivalent products manufactured by CECO Corp., Curries, S.W. Fleming Ltd., Steelcraft Manufacturing, Republic Builders Products, Mesker Door, Inc., or Daybar are acceptable.

2.2 CONSTRUCTION

A. Exterior flush face doors shall be of composite construction, fabricated of two (2) level 2, heavy duty, 18 gauge seamless steel sheets from roller leveled prime quality cold-rolled steel for interior areas and roller leveled prime quality hot dipped galvanized or A60 galvannealed steel sheets for exterior areas. Interior doors to be 20 gauge, A60 galvannealed with mechanically interlocking seams on door edges only. Gauge of steel sheets may be required to be 16 gauge at exterior doors to resist higher wind pressures and dependent on door manufacturer’s standards and the structural capacity of the door dipped galvanized or A60 galvannealed steel sheets for exterior areas, with fully welded seams. Interior doors to be 20 gauge, A60 galvannealed with mechanically interlocking seams on door edges only.

B. Doors shall be accurately mortised, reinforced, drilled and tapped for finish hardware. Reinforcement plates for hardware shall be welded to door assembly and be of sufficient size to develop the door strength.

C. Top and bottom of the doors shall be closed flush by 16 gauge steel channels unless recessed automatic door bottoms are required. See Section 08710 – Finish Hardware.

D. Minimum gauges for hardware reinforcing plates shall be as follows:

1. Hinges and pivots - 7 gauge W.C.G. steel, prepared for 1 1/2 pairs of standard weight 4" hinges.

2. Lock face, flush bolts, concealed holders, concealed or surface-mounted closers - 12 gauge.

3. All other surface-mounted hardware - 16 gauge.

4. Hardware templates will be furnished by hardware supplier (Refer to Section 08710 – Finish Hardware).

E. After all welds and joints are ground smooth, the doors shall be thoroughly cleaned, given a coat of baked-on primer, all irregularities filled and made flush and then given a final coat of baked-on primer, interior doors 0.7 mils DFT and exterior doors 1.4 mils DFT. Exterior means doors exposed to outside air atmosphere, or non-conditioned spaces.

F. Core insulation:

1. Exterior doors shall have rigid urethane or polystyrene core foamed-in-place, or honey combed core, chemically bonded to all interior surfaces of face sheets; core shall be provided per door manufacture’s requirements to comply with the FBC windload requirements and thermal (“R” value) requirements at doors that are contigous to conditioned spaces, as shown on the Drawings or specified, or scheduled.

2. Interior doors shall have pre-expanded honeycomb core bonded to all interior surfaces of face.

G. Exterior Doors: Provide weatherstripping (3 sides). In addition, these doors shall include a threshold with recessed channel to receive automatic door bottom when scheduled. Refer to Section 08710 – Finish Hardware.

1. Maximum air infiltration shall be 1.25 cfm per square foot of door area.

2. Frames shall be prepared to accommodate automatic door bottoms when this hardware is scheduled or required.

2.3 DOORS SWINGING IN PAIRS

A. Doors shall have two-piece overlapping astragals which consist of an 18 gauge steel edge channel applied to inactive leaf and applied to the active leaf an extruded aluminum overlap strip with wool pile insert. All metal parts painted to match the doors.

B. Pair of labeled fire doors shall have two-piece overlapping astragals consisting of 16 gauge steel edge channel applied to inactive door and 12 gauge steel overlap strip applied to active leaf in accordance with procedures of labeling agencies.

C. Refer to Finish Hardware Schedule, Section 08710 – Finish Hardware, for meeting stiles and additional astragals.

2.4 METAL FRAMES

A. Metal frames shall be of the combination type with the trim and stops formed as an integral part of the frame. Profiles shall be press brake-formed true and sharp with head and jambs accurately mitered, continuously welded and ground smooth (welding type T-3). Frames shall have proper concealed anchors as required for each wall material.

B. Frames shall be 16 gauge hot-dipped galvanized steel with following anchors as required: Note that metal frames coated with S. W. Fleming Ltd.'s "paintable Galvanneal coating" satisfies the hot-dipped galvanized requirement.

1. Each jamb installed adjacent to masonry shall have one 16 gauge hot-dipped galvanized steel "T" anchor for each 24 inches of the jamb height, 3 min. per jamb.

2. Each jamb installed in existing concrete walls shall use expansion anchors, minimum of 3 per jamb.

3. Each jamb installed in drywall openings shall have a minimum of 3 adjustable drywall stud anchors per jamb.

4. Welded "Z" clips per manufacturers recommendations for specific installation requirements.

5. All door jambs shall rest on building floor slab construction and shall have 12 gauge floor angles welded to jambs for floor anchorage.

6. All door frame assemblies shall have removable steel spreaders welded to the bottom of the jambs to assure alignment.

C. Frames shall be accurately mortised, reinforced, drilled and tapped for finish hardware. Reinforcing for hardware shall be welded at the frame assembly. Closure bracket reinforcement, plaster guards, hinge reinforcements and reinforcement for all other surface applied hardware to be manufacturer's standard. Dust covers shall be welded over all punched openings and reinforcements to prevent clogging of tapped holes or openings.

D. After all welds and joints are ground smooth, the doors shall be thoroughly cleaned, given a coat of baked-on primer, all irregularities filled and made flush and then given a final coat of baked-on primer, interior doors 0.7 mils DFT and exterior doors 1.4 mils DFT. Exterior means doors exposed to exterior elements, including but not limited to salt air atmosphere.

E. Punch lock side of stop for single doors at 3 points and at 2 points on stop at head section of pairs of doors to receive door silencers.

F. Frames for labeled doors shall meet the requirements of Underwriters Laboratories, Inc., for Class of construction as indicated on schedule, and bear their approved label. See Article 1.7, Test Reports and Compliance.

G. After fabrication is completed, the frames shall be thoroughly cleaned,

bonderized and given a coat of baked on primer, interior frames 0.7 mils DFT and exterior frames 1.4 mils DFT.

H. KNOCK-DOWN TYPE FRAMES SHALL NOT BE PERMITTED!

I. Prepare frames to receive hardware as specified in Section 08710 – Finish Hardware.

2.5 LOUVERS AND FRAMES

A. Door louvers, where scheduled or shown shall be of the fixed slat type providing a minimum of 50% net free area. Louver blades shall be formed of 18 gauge steel and set in 16 gauge frames. Louvers for exterior openings shall have insect screens set in removable frames, mounted to the inside face of louver.

B. Panels above doors shall be of the same construction as door below panel.

2.6 PAINTING

A. Painting of hollow metal doors and frames shall comply with the following:

1. Door and Frame Schedules.

2. Section 09911 – Exterior Painting.

3. Section 09912 – Interior Painting.

4. Field apply bituminous paint to first 18 inches above finish floor of all exterior hollow metal door frames at interior/concealed surfaces of the door frame.

B. Colors of doors and frames shall be approved and selected by the Architect and Owner.

PART 3 – EXECUTION

3.1 INSTALLATION, GENERAL

A. All work shall be shop fabricated by experienced, qualified mechanics of this trade, to required profiles by forming and welding with corners, angles and edges straight and sharp.

B. Fit and fabricate accurately with corners, joints, seams and surfaces free from warp, wave buckle or other defects.

3.2 INSTALLATION

A. All metal doors and frame shall be installed true, level and plumb and in the best workmanlike manner of this trade. After wall construction is complete, remove temporary braces and spreaders, leaving surfaces smooth and undamaged.

B. All door hardware shall be installed in strict accordance with the manufacturer's printed instructions and free of all defects.

C. At masonry walls, frames shall be braced until wall in which frame is installed is complete.

D. Frames to be installed in masonry walls shall be set prior to starting masonry work. Anchors shall be installed in jambs and in masonry joints, the area between the masonry and jamb shall be filled solid with mortar. Frame installation shall comply with provisions of SDI-105 “Recommended Erection Instructions For Steel Frames”, and as specified herein.

E. Templates for all hardware items shall be coordinated with hardware suppliers.

F. Install fire rated frames according to NFPA 80 and fire rated doors with clearances specified in NFPA 80. Fit doors accurately in frames, within clearances specified in ANSI/SDI-100.

G. Provide a minimum of three anchors per jamb, adjacent to the hinge location on the hinge jamb, and at corresponding heights on strike jamb.

H. Prime coat touch up immediately after erection, sand smooth any rusted or damaged areas of prime coat and apply touch-up coating of compatible air drying primer.

3.3 MATERIAL AND WORKMANSHIP

A. All damaged material and faulty workmanship shall be removed and be replaced with new material in the best workmanlike manner at no extra cost to the Owner.

B. Check and re-adjust operating hardware items, leaving steel doors and frames undamaged and in complete and proper operating condition.

END OF SECTION 08100

SECTION 08212 - STILE AND RAIL DOORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
1. Interior stile and rail doors.
2. Interior fire-rated, stile and rail doors.
3. Finishing stile and rail doors.
4. Fitting stile and rail doors to frames and machining for hardware.

B. Related Sections:
1. Division 6 Section "Interior Architectural Woodwork" for requirements for veneers from the same flitches for both architectural woodwork and stile and rail wood doors.
2. Division 8 Section “Interior Glazing“ for glass doors.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

1. Include details of construction and glazing.
2. Include factory finishing specifications.

B. Shop Drawings: For stile and rail wood doors. Indicate location, size, and hand of each door; elevation of each kind of door; construction details not covered in Product Data, including those for stiles, rails, panels, and moldings (sticking); and other pertinent data, including the following:

1. Dimensions of doors for factory fitting.
2. Locations and dimensions of mortises and holes for hardware.
3. Requirements for veneer matching.
4. Doors to be factory finished, and finish requirements.
5. Details of sound-control seals, door bottoms, and thresholds (where sound rated doors are indicated on Drawings or scheduled).
6. Fire ratings for fire-rated doors.

a. Neutral Pressure – UL10-B or,
b. Positive Pressure – UL10-C.

C. Samples for Initial Selection: For factory-finished doors.

D. Samples for Verification: Corner sections of doors, approximately 12 by 12 inches, with door faces and edgings representing typical range of color and grain for each species of veneer and solid lumber required. Finish Sample, approximately 6 by 6 inches with same materials proposed for factory-finished doors.

E. Schedule: Provide a schedule of sound-control door assemblies prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with the Door Hardware Schedule.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified acoustical testing agency.

B. Product Certificates: For each type of door, from manufacturer.

C. Warranty: Sample of special warranty.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.

B. Acoustical Testing Agency Qualifications: An independent agency accredited as an acoustical laboratory according to the National Voluntary Laboratory Accreditation Program of NIST.

C. Source Limitations: Obtain stile and rail doors from single manufacturer. Paint grade and stain grade doors to have matching architectural details, profiles, and dimensions.

D. Source Limitations: Provide custom stile and rail wood doors scheduled to be stained to match the Architect’s sample and finished in same shop as work in Division 6 Section 06202 Interior Finish Carpentry.

E. Sound Rating: Provide sound-control door assemblies identical to those of assemblies tested as sound-retardant units by an acoustical testing agency, and have the following minimum rating:
   1. See the Sound-Control Door Assemblies Table at the end of the Evaluations for a list of manufacturers' products according to door material (steel or wood) and STC rating. Higher ratings may require doors that are thicker than 1-3/4 inches (44 mm). Verify with manufacturer.
   2. STC Rating: Rating of 34 as determined by ASTM E 413 when tested in an operable condition according to ASTM E 90 and ASTM E 1408.

F. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at as close to neutral pressure as possible according to NFPA 252 or UL 10B.

   1. Temperature-Rise Limit: At vertical exit enclosures and exit passageways, provide doors that have a maximum transmitted temperature end point of not more than 250 deg F above ambient after 30 minutes of standard fire-test exposure.

G. Safety Glass: Provide products complying with testing requirements in 16 CFR 1201, for Category II materials, unless those of Category I are expressly indicated and permitted.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Comply with manufacturer's written instructions and requirements of quality standard referenced in Part 2.

B. Doors & frames shall be stored on a flat and level surface in a well ventilated dry building. Doors shall not be stored on edge and shall be protected from dirt, water and abuse.

C. Package doors individually in opaque plastic bags or cardboard cartons.

D. Protect doors & frames from exposure to light for veneers which are light sensitive.

E. Doors & frames shall not be subjected to extreme heat or humidity. HVAC systems should be set to provide a temperature range of 60 – 90 degrees F and 25-55% relative humidity.

F. Handle doors and frames with clean hands or gloves. Do not drag doors across floors or other surfaces.

G. Mark each door and frame on top and bottom edge with opening number used on Shop Drawings.

1.8 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install doors until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and permanent or temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period in accordance with mfg. requirements.

1.9 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace doors that fail in materials or workmanship, or have warped (bow, cup, or twist) more than 1/4 inch in a 42-by-84-inch section.

1. Warranty shall also include installation and finishing that may be required due to repair or replacement of defective doors.
2. Warranty shall be in effect during the following period of time from date of Substantial Completion:
   a. Interior Doors: Life of installation.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General: Use only materials that comply with referenced standards and other requirements specified.

1. Assemble interior doors, frames, and sidelites (where scheduled), including components, with either dry-use or wet-use adhesives complying with ASTM D 5572 for finger joints and with ASTM D 5751 for joints other than finger joints.

B. Certified Wood: Fabricate doors with all wood products produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."

C. Low-Emitting Materials: Fabricate doors with adhesives and composite wood products that do not contain urea-formaldehyde resins.

D. Low-Emitting Materials: Fabricate doors with coatings, adhesives and composite wood products that comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

E. Panel Products: Any of the following:

1. Medium-density fiberboard made from wood fiber, with binder containing no urea-formaldehyde resin, complying with ANSI A208.2, Grade 130. Panels shall be compressed to a density of 48 pounds per cubic foot in a hot press by a process in which the added binder creates the entire inter-fiber bond.
2. Hardboard, complying with AHA A135.4.
3. Veneer core plywood, made with adhesive containing no urea-formaldehyde resin.

2.2 INTERIOR STILE AND RAIL DOORS

A. Interior Stile and Rail MDF Doors (Painted): Stock interior doors complying with AWI's "Architectural Woodwork Quality Standards,"AWI's "Manual of Millwork," WDMA I.S.6A, "Industry Standard for Architectural Stile and Rail Doors," and with other requirements specified.

1. Basis-of-Design Product: Subject to compliance with requirements, provide TruStile Doors, LLC; TS3300 & TS1000 (Glass Panel) MDF Doors or comparable product by one of the following:

   a. Harring Doors.
   b. Ideal Architectural Doors & Plywood.
   c. Maiman Company (The).
   d. Marshfield Door Systems, Inc.

2. Panel Designs: Indicated by Drawings. Do not modify intended aesthetic effects, as judged solely by Architect and Owner, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.
3. Grade: Custom.
4. Finish: Factory Primed with low VOC, water based primer.
5. Louver Type: Where indicated on Drawings, vented with inverted “V” type louver blades.

6. Door Construction:

a. Stile and Rail Construction: Medium-density fiberboard core material with manufacturer's standard hardwood edge system for improved screw holding to extend the entire height of door.
b. Panel Construction: Shaped, medium-density fiberboard.

1) Panel Type: As selected by Architect and Owner from manufacturer's full range.

7. Stile and Rail Widths: Manufacturer's standard, but not less than the following:

a. Stiles, Top and Intermediate Rails: 4-1/2 inches.
b. Bottom Rails: 10 inches.

8. Raised-Panel Thickness: Manufacturer's standard, but not less than thickness required to comply with specified standards.
9. Flat-Panel Thickness: Manufacturer's standard, but not less than thickness required to comply with specified standards.
10. Molding Profile (Sticking): Recessed square or as selected by Architect and Owner from manufacturer's full range.
11. Glass: Uncoated, clear, fully tempered float glass, 5.0 mm thick, complying with Division 8 Section "Interior Glazing."

B. Interior Stile and Rail Veneer Doors (Stained): Stock interior doors complying with AWI's "Architectural Woodwork Quality Standards,"AWI's "Manual of Millwork," WDMA I.S.6A, "Industry Standard for Architectural Stile and Rail Doors," and with other requirements specified. Refer to door schedule for stained doors.

1. Basis-of-Design Product: Subject to compliance with requirements, provide TruStile Doors, LLC; TS3300 & TS1000 (Glass Panel) Doors or comparable product by one of the following:

a. Harring Doors.
b. Ideal Architectural Doors & Plywood.
c. Maiman Company (The).
d. Marshfield DoorSystems, Inc.
e. Woodharbor.

2. Panel Designs: Indicated by Drawings. Do not modify intended aesthetic effects, as judged solely by Architect, except with Architect's and Owner's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.
3. Grade: Custom.
4. Finish: Transparent or Opaque as scheduled, to match Architect's sample.
5. Louver Type: Where indicated on Drawings, vented with inverted "V" type louver blades.
6. Wood Species and Cut for Transparent Finish: "A" grade plain sliced White Oak – Color to match Architect's control sample; Grey Mist
7. Door Construction:

a. Stile and Rail Construction: Core material to be constructed of engineered wood to resist moisture, warping, checking and improved screw pull. Stiles are to be constructed for improved screw holding by use of solid wood edges. Hardwood stiles to match face veneers.
b. Panel Construction: Medium-density fiberboard core with solid wood panels laminated both sides or solid wood to match profile specified.

1) Panel Type: As selected by Architect and Owner from manufacturer’s full range.

8. Stile and Rail Widths: Manufacturer's standard, but not less than the following:

a. Stiles, Top and Intermediate Rails: 4-1/2 inches.
b. Bottom Rails: 10 inches.

9. Raised-Panel Thickness: Manufacturer's standard, but not less than thickness required to comply with specified standards.
10. Flat-Panel Thickness: Manufacturer's standard, but not less than thickness required to comply with specified standards.
11. Molding Profile (Sticking): Recessed square or as selected by Architect from manufacturer's full range.
12. Glass: Uncoated, clear, fully tempered float glass, 5.0 mm thick, complying with Division 8 Section "Interior Glazing."
13. Provide AWI Quality Certification Labels or an AWI letter of licensing for Project indicating that doors comply with requirements of grades specified.
14. Provide WI-Certified Compliance Certificate indicating that doors comply with requirements of grades specified.
15. Mark, label, or otherwise identify stile and rail wood doors as complying with WDMA I.S.6A and grade specified.
16. Provide match wood astrgals at pairs of wood doors, to match the door vendor.

C. Interior Stile and Rail Fire-RatedDoors: Fire-rated (20 -minute rating as scheduled) doors complying with AWI's "Architectural Woodwork Quality Standards," AWI's "Manual of Millwork," and with other requirements specified.

1. Fire doors to be Category A with concealed intumescent strips where positive pressure is required by code.
2. Panel Designs: To match MDF / Veneer Stile and Rail doors in every detail.
3. Grade: Custom.
4. Finish: Transparent or Opaque as scheduled.
5. Wood Species and Cut for Transparent Finish: To match Veneer Stile and Rail doors in every detail.
6. Door Construction: Core material shall allow panel profiles to match non rated doors.
7. Edge Construction: Stiles to be constructed for improved screw holding by use of manufacturer’s standard hardwood edge system to extend the entire height of door. Softwoods are not allowed.
8. Stile and Rail Widths: To match MDF / Veneer Stile and Rail doors in every detail

9. Molding Profile (Sticking): Recessed square or as selected by Architect from manufacturer's full range.
10. Provide AWI Quality Certification Labels or an AWI letter of licensing for Project indicating that doors comply with requirements of grades specified.
11. Provide WI-Certified Compliance Certificate indicating that doors comply with requirements of grades specified.

2.3 SOUND-CONTROL PANELS

A. Provide sound-control panels of same materials, construction, sound rating, and finish as specified for adjoining sound-control doors.

2.4 SOUND-CONTROL HARDWARE

A. Description: Provide manufacturer's standard sound-control system, including head and jamb seals, door bottoms, hinges, and thresholds, as required by testing to achieve STC and fire rating indicated.

B. Auto door bottoms shall be fully mortised type at public spaces.

2.5 STILE AND RAIL MDF DOOR FABRICATION

A. Fabricate stile and rail MDF doors in sizes indicated for field fitting.

B. Factory fit doors to suit frame-opening sizes indicated, with the following uniform clearances and bevels unless otherwise indicated:

1. Clearances: Provide 1/8 inch at heads, jambs, and between pairs of doors. Provide 1/2 inch from bottom of door to top of decorative floor finish or covering. Where threshold is shown or scheduled, provide not more than 3/8 inch from bottom of door to top of threshold or finish floor.

    a. Comply with NFPA 80 for fire-rated doors.

2. Bevel non-fire-rated doors 1/8 inch in 2 inches at lock and hinge edges.
3. Bevel fire-rated doors 1/8 inch in 2 inches on lock edge; trim stiles and rails only to extent permitted by labeling agency.

C. Factory machine doors for hardware that is not surface applied. Locate hardware to comply with DHI-WDHS-3. Comply with final hardware schedules, door frame Shop Drawings, DHI A115-W Series standards, and hardware templates.

1. Coordinate measurements of hardware mortises in metal frames to verify dimensions and alignment before factory machining.

D. Glazed Openings: Trim openings indicated for glazing with solid wood moldings, with one side removable. Miter wood moldings at corner joints.

E. Glazed Openings: Glaze doors at factory with glass of type and thickness indicated, complying with Division 8 Section "Glazing." Install glass using manufacturer's standard elastomeric glazing sealant complying with ASTM C 920. Secure glass in place with removable wood moldings. Miter wood moldings at corner joints.

F. Transom and Side Panels: Fabricate panels to match adjoining doors in materials, finish, and quality of construction.

G. Provide hardware that complies with Division 8 Section "Door Hardware."

2.6 SHOP PRIMING

A. Doors for Opaque Finish: Shop prime doors with low VOC water based primer. Seal all four edges, edges of cutouts, and mortises with primer. Refer to Door Schedule.

B. Doors for Transparent Finish: Shop prime doors with stain (if required) and other required pretreatments. Seal all four edges, edges of cutouts, and mortises with first coat of finish. Refer to Door Schedule.

2.7 FINISHING

A. Prime paint MDF stile and rail doors at factory, scheduled to receive opaque finish.

1. Color: As selected by Architect and Owner from manufacturer’s full range.

B. For Veneer stile and rail doors indicated to be factory finished, comply with AWI's "Architectural Woodwork Quality Standards," WDMA I.S.6A, "Industry Standard for Architectural Stile and Rail Doors," and with other requirements specified.

1. Finish faces and all four edges of doors, including mortises and cutouts. Stains and fillers may be omitted on top and bottom edges, edges of cutouts, and mortises; however surfaces not stained shall be sealed.

2. Color and sheen to match Architect’s control sample.

C. Paints and coatings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

D. Transparent Finish:

1. Grade: Custom.
2. Finish: AWI catalyzed polyurethane finish system.
3. Staining: Match Architect's approved sample.
4. Effect: Semifilled finish, produced by applying an additional finish coat to partially fill the wood pores.
5. Sheen: Satin.

E. Opaque Finish:

1. Grade: Custom.
2. Finish: AWI catalyzed polyurethane finish system.
3. Color: Match Architect's approved sample.
4. Sheen: Semigloss.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine doors and substrates, with Installer present, for suitable conditions where wood stile and rail doors and fire-rated wood door frames will be installed.

1. Verify that installed frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with level heads and plumb jambs.
2. Reject doors with defects.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install fire-rated wood door frames level, plumb, true, and aligned with adjacent materials. Use concealed shims where necessary for alignment.

1. Countersink fasteners, fill surface flush, and sand smooth.

B. Hardware: For installation, see Division 8 Section "Door Hardware."

C. Install doors to comply with manufacturer's written instructions, WDMA I.S.6, "Industry Standard for Wood Stile and Rail Doors," AWI's "Architectural Woodwork Quality Standards," WI's "Manual of Millwork," WDMA I.S.6A, "Industry Standard for Architectural Stile and Rail Doors," and other requirements specified.

1. Provide WI-Certified Compliance Certificate for Installation.
2. Install fire-rated doors in corresponding fire-rated frames according to NFPA 80.

D. Field-Fitted Doors: Align and fit doors in frames with uniform clearances and bevels as indicated below; do not trim stiles and rails in excess of limits set by manufacturer or permitted with fire-rated doors. Machine doors for hardware. Seal cut surfaces after fitting and machining.

1. Clearances: Provide 1/8 inch at heads, jambs, and between pairs of doors. Provide 1/2 inch from bottom of door to top of decorative floor finish or covering. Where threshold is shown or scheduled, provide 3/8 inch from bottom of door to top of threshold.

a. Comply with NFPA 80 for fire-rated doors.

2. Bevel non-fire-rated doors 1/8 inch in 2 inches at lock and hinge edges.
3. Bevel fire-rated doors 1/8 inch in 2 inches on lock edge; trim stiles and rails only to extent permitted by labeling agency.

E. Factory-Fitted Doors: Align in frames for uniform clearance at each edge.

F. Factory-Finished Doors: Restore finish before installation if fitting or machining is required at Project site.

G. Sound-Control Seals: Where seals have been prefit and preinstalled in the factory and subsequently removed for shipping, reinstall seals and adjust according to manufacturer's written instructions.

3.3 FIELD QUALITY CONTROL

A. Testing Services: Acoustical testing and inspecting agency shall select one sound-control door(s) at random from sound-control door assemblies that are completely installed and perform testing for verification that assembly complies with STC rating requirements.

1. Field tests shall be conducted according to ASTM E 336, with results calculated according to ASTM E 413. Acceptable field STC values shall be within 5 dB of laboratory STC values.
2. Inspection Report: Acoustical testing agency shall submit report in writing to Architect and Contractor within 24 hours after testing.
3. If tested door fails, replace or rework all sound-control door assemblies to bring them into compliance at Contractor's expense.

a. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

B. Prepare test and inspection reports.

3.4 ADJUSTING

A. Operation: Rehang or replace doors that do not swing or operate freely.

B. Finished Doors: Replace doors that are damaged or do not comply with requirements. Doors may be repaired or refinished if Work complies with requirements and shows no evidence of repair or refinishing.

END OF SECTION 08212

SECTION 08311 - ACCESS DOORS AND FRAMES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Access doors and frames for walls and ceilings.

    a. Provide access doors as required in walls and gypsum wall board ceilings for access to equipment and operational controls, where removal for access of ceilings are not scheduled or shown on the Drawings.

B. Related Requirements:

1. Division 15 Section "Duct Accessories" for heating and air-conditioning duct access doors.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, fire ratings, materials, individual components and profiles and finishes.

B. Shop Drawings

1. Include plans, elevations, sections, details, and attachments to other work.
2. Detail fabrication and installation of access doors and frames for each type of substrate.

C. Samples: For each door face material, at least 3 by 5 inches in size, in specified finish.

D. Product Schedule: Provide complete access door and frame schedule, including types, locations, sizes, latching or locking provisions, and other data pertinent to installation.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Rated Access Doors and Frames: Units complying with NFPA 80 that are identical to access door and frame assemblies tested for fire-test-response characteristics according to the following test method and that are listed and labeled by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

1. NFPA 288 for fire-rated access door assemblies installed horizontally.

2.2 ACCESS DOORS AND FRAMES FOR WALLS AND CEILINGS

A. Basis-of-Design Product:

1. Karp Associates, Inc.

2. Subject to compliance with requirements, provide product indicated or comparable product by one of the following:

a. J. L. Industries, Inc.; Div. of Activar Construction Products Group.
b. Larsen's Manufacturing Company.
c. Milcor Inc.

B. Source Limitations: Obtain each type of access door and frame from single source from single manufacturer.

2.3 MATERIALS

A. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.

B. Rolled-Steel Floor Plate: ASTM A 786/A 786M, rolled from plate complying with ASTM A 36/A 36M or ASTM A 283/A 283M, Grade C or D.

C. Steel Sheet: Uncoated or electrolytic zinc coated, ASTM A 879/A 879M, with cold-rolled steel sheet substrate complying with ASTM A 1008/A 1008M, Commercial Steel (CS), exposed.

D. Aluminum Extrusions: ASTM B 221, Alloy 6063-T6.

E. Aluminum-Alloy Rolled Tread Plate: ASTM B 632/B 632M, Alloy 6061-T6.

F. Aluminum Sheet: ASTM B 209, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with not less than strength and durability properties of Alloy 5005-H15; with minimum sheet thickness according to ANSI H35.2.

G. Frame Anchors: Same type as door face.

H. Inserts, Bolts, and Anchor Fasteners: Hot-dip galvanized steel according to ASTM A 153/A 153M or ASTM F 2329.

2.4 FABRICATION

A. General: Provide access door and frame assemblies manufactured as integral units ready for installation.

B. Metal Surfaces: For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness. Paint to match adjacent surface in public areas.

C. Access Panel Doors and Frames: Grind exposed welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access doors to types of supports indicated.

1. For concealed flanges with drywall bead, provide edge trim for gypsum board securely attached to perimeter of frames.
2. For concealed flanges with plaster bead for full-bed plaster applications, provide zinc-coated expanded metal lath and exposed casing bead welded to perimeter of frames.
3. Provide mounting holes in frames for attachment of units to metal or wood framing.
4. Provide mounting holes in frame for attachment of masonry anchors.

D. Latching Mechanisms: Furnish number required to hold doors in flush, smooth plane when closed.

2.5 FINISHES

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

D. Steel Finishes:

1. Factory Prime: Apply manufacturer's standard, fast-curing, lead- and chromate-free, universal primer immediately after surface preparation and pretreatment.

2. Field paint to match adjacent surface or color selected by Architect if adjoining finish is not painted.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Comply with manufacturer's written instructions for installing access doors and frames.

B. Install doors flush with adjacent finish surfaces or recessed to receive finish material.

3.3 ADJUSTING

A. Adjust doors and hardware, after installation, for proper operation.

B. Remove and replace doors and frames that are warped, bowed, or otherwise damaged.

END OF SECTION 08311

SECTION 08336 – OVERHEAD COILING DOORS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

B. Overhead coiling doors.

1.2 RELATED SECTIONS

A. Section 05500 - Metal Fabrications: Support framing and framed opening.

B. Section 06105 - Finish Carpentry: Pressure treated wood jambs.

C. Section 08710 - Door Hardware: Product Requirements for cylinder core and keys.

D. Section 09900 - Painting: Field applied finish.

1.3 REFERENCES

A. NFRC 102 - Test Procedure for Measuring the Steady-State Thermal Transmittance of Fenestration Systems.

B. ASTM E 90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Element.

C. ASTM E 330 - Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.

D. ASTM A 653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

E. ASTM A 666 - Standard Specification for Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.

F. ASTM A 924 - Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process.

G. ASTM B 221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

1.4 DESIGN / PERFORMANCE REQUIREMENTS

A. Overhead coiling non-insulated doors:
   1. Wind Loads: Design door assembly to withstand wind/suction load per the wind load drawings or as required by FBC without damage to door or assembly components in conformance with ASTM E 330.
   2. Operation: Design door assembly, including operator, to operate for not less than 20,000 cycles.

B. Single-Source Responsibility: Provide doors, tracks, and accessories from one manufacturer for each type of door. Provide secondary components from source acceptable to manufacturer of primary components.

C. Windborne: Provide overhead coiling doors that pass cyclic-pressure tests according to ASTM E 1996 for the wind zone for the building location, the requirements per FBC or as noted and scheduled.

1.5 SUBMITTALS

A. Submit under provisions of Section 01300.

B. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Details of construction and fabrication.
   4. Installation instructions.
   5. FBC NOA product approval.

C. Shop Drawings: Include detailed plans, elevations, details of framing members, anchoring methods, required clearances, hardware, and accessories. Include relationship with adjacent construction.

D. Selection Samples: For each finish product specified, two complete sets of color chips representing manufacturer's full range of available colors and patterns.

E. Verification Samples: For each finish product specified, two samples, minimum size 6 inches (150 mm) long, representing actual product, color, and patterns.

F. Manufacturer's Certificates: Certify products meet or exceed specified requirements.

G. Operation and Maintenance Data: Submit lubrication requirements and frequency, and periodic adjustments required.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in performing Work of this section with a minimum of five years’ experience in the fabrication and installation of security closures.

B. Installer Qualifications: Installer Qualifications: Company specializing in performing Work of this section with minimum three years and approved by manufacturer.

C. Mock-Up: Provide a mock-up for evaluation of surface preparation techniques and application workmanship.
   1. Finish areas designated by Architect.
   2. Do not proceed with remaining work until workmanship, color, and sheen are approved by Architect.
   3. Refinish mock-up area as required to produce acceptable work.

D. Closeout Submittals – Maintenance and warranty data.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Protect materials from exposure to moisture. Do not deliver until after wet work is complete and dry.

C. Store materials in a dry, warm, ventilated weathertight location.

1.8 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.9 COORDINATION

A. Coordinate Work with other operations and installation of adjacent materials to avoid damage to installed materials.

1.10 WARRANTY

A. Warranty: Manufacturer’s limited door and operator system, except the counterbalance spring and finish, to be free from defects in materials and workmanship for 3 years or 20,000 cycles, whichever occurs first.
B. Warranty: Manufacturer’s limited door warranty for 2 years for all parts and components.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design: Overhead Door Corp., 2501 S. State Hwy. 121, Suite 200, Lewisville, TX 75067. ASD. Tel. Toll Free: (800) 275-3290. Phone: (469) 549-7100. Fax: (972) 906-1499. Web Site: www.overheaddoor.com.
E-mail: info@overheaddoor.com, or architect approved equal.

B. Subject to the compliance of the specified requirements a comparable product by one of the following manufacturers will be considered.
    a. Clopay.
    b. Cookson Company.
    c. Cornell Iron Works, Inc.
    d. Raynor.
    e. Wayne-Dalton Corp.

C. Requests for substitutions will be considered in accordance with provisions of Section 01600.

2.2 OVERHEAD COILING SERVICE DOORS

A. Overhead Coiling Service Doors: Overhead Door Corporation Model 625.
    1. Curtain: Interlocking roll-formed slats as specified following. Endlocks shall be attached to each end of alternate slats to prevent lateral movement.
        a. Flat profile type F-265i for doors up to 40 feet (12.19 m) wide.
        b. Front slat fabricated of:
            1) 18 gauge galvanized steel.
        c. Back slat fabricated to match front slat
        d. Non-insulated door slats are acceptable

    2. Performance:
        a. Wind load resistance as specified, shown on the drawings or required by FBC.
    3. Finish:
        a. Galvanized Steel: Slats and hood galvanized in accordance with ASTM A 653 and receive rust-inhibitive, roll coating process, including 0.2 mils thick baked-on prime paint, and 0.6 mils thick baked-on polyester top coat.
            1) Powder coat: PowderGuard
                (a) PowderGuard Weathered Finish: Industrial textured powder coat provides a thicker, more scratch resistant coat. Applied to entire door system including slats, guides, bottom bar and head plate color as selected by the Architect.
            2) Non-galvanized exposed ferrous surfaces shall receive one coat of rust-inhibitive primer.
    4. Weatherseals:
        a. Vinyl bottom seal, exterior guide and internal hood seals.
        b. Interior guide weatherseal.
        c. Lintel weatherseal.
    5. Bottom Bar:
        a. Two galvanized steel angles minimum thickness 1/8 inch (3 mm) bolted back to back to reinforce curtain in the guides.
    6. Guides: Three Structural steel angles
        a. Finish: PowderGuard Weathered finish with iron/black powder.
    7. Brackets:
        a. Galvanized steel to support counterbalance, curtain and hood.

8. Counterbalance: Helical torsion spring type housed in a steel tube or pipe barrel, supporting the curtain with deflection limited to 0.03 inch per foot of span. Counterbalance is adjustable by means of an adjusting tension wheel.
9. Hood: Provide with internal hood baffle weatherseal.
    a. 24 gauge galvanized steel with intermediate supports as required.
10. Manual Operation:
    a. Chain hoist; endless steel hand chain, chain-pocket wheel and guard and gear-reduction unit with maximum 25 lbf force for door operation (reversible).
11. Electric Motor Operation: Provide UL listed electric operator, size as recommended by manufacturer to move door in either direction; provide alley-steel hand chain holder secured to operator guide at not less than 2/3 foot nor more than 1 foot per second; with controller (disconnect switch) for motor exposure indicated.
    a. Sensing Edge Protection:
        1) Pneumatic sensing edge.
        2) Electric sensing edge.
    b. Operator Controls:
        1) Push-button operated control stations with open, close, and stop buttons at interior.
        2) Key operation with open, close, and stop controls.
        3) Push-button and key operated control stations with open, close, and stop buttons at exterior.
        4) Controls surface mounted at interior.
        5) Controls flush mounted at exterior.
    c. Motor Exposure: Humid; interior.
    d. Comply with NFPA 70.
    e. Single phase 208 volts, Hertz 60
    f. Special Operation:
        1) Vehicle detector operation.
        2) Radio control operation.
        3) Card reader control.
        4) Photocell operation.
        5) Door timer operation.
        6) Commercial light package.
        7) Explosion and dust ignition proof control wiring.
    g. Motor Voltage: 115/230 single phase, 60 Hz.
12. Windload Design:
    a. FBC certification FL# to meet wind loading specified or shown on the drawings, and per FBC requirements.
13. Locking:
    a. Chain keeper locks for chain hoist operation.
    b. Interior slide bolt lock for electric operation with interlock switch.
    c. Cylinder lock, exterior only.
        1) cylinders specified in for electric operation with interlock
14. Wall Mounting Condition:
    a. Between jambs mounting.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify opening sizes, tolerances and conditions are acceptable.

B. Examine conditions of substrates, supports, and other conditions under which this work is to be performed.

C. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.3 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Use anchorage devices to securely fasten assembly to wall construction and building framing without distortion or stress.

C. Securely and rigidly brace components suspended from structure. Secure guides to structural members only.

D. Fit and align assembly including hardware; level and plumb, to provide smooth operation.

E. Coordinate installation of sealants and backing materials at frame perimeter as specified in Section 07900.

F. Install perimeter trim and closures.

G. Instruct Owner’s personnel in proper operating procedures and maintenance schedule.

3.4 ADJUSTING

A. Test for proper operation and adjust as necessary to provide proper operation without binding or distortion.

B. Adjust hardware and operating assemblies for smooth and noiseless operation.

C. Lubricate bearings and sliding parts as recommended by manufacturer.

D. Adjust seals to provide a tight fit around entire perimeter.

3.5 CLEANING

A. Clean curtain and components using non-abrasive materials and methods recommended by manufacturer.

B. Remove labels and visible markings.

C. Touch-up, repair or replace damaged products before Substantial Completion.

3.6 PROTECTION

A. Protect installed products until completion of project.

END OF SECTION 08336

SECTION 08342 – MOTOR OPERATED HYDRAULIC-SINGLE HANGAR DOOR

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes individually motor operated “one piece” hydraulically operated hangar door and defines the nature and quality of required doors and their minimum standards of construction and operation.

B. Related Sections include the following:

1. Division 3 Section "Concrete" for concrete foundations, bottom rails, cross ties, and anchor-bolt installation.
2. Division 9 Section "Painting" for finishes, touch-up of shop coat, field welds and field bolts.
3. Division 8 Section “Steel Doors and Frames” for personnel doors and frames supplied by others to be installed in hangar doors.
4. Division 13 Section "Metal Building Systems" for metal siding panels, metal liner panels, jamb and corner trim, siding accessories, top guide supporting steel and bracing.
5. Division 16 Section "Electrical Basic Materials and Methods" for field wiring, conductors, conduit, boxes, exit lights and installation of trolley duct system.

1.3 DEFINITIONS

A. General: Hangar door for clear opening 100’-0” wide by 28’-0” high and consisting of a single leaf / panel hydraulically operated door system with hydraulic pistons at each jamb, flush mounted with exterior walls. Each door system to be complete with hinges pumps, heavy duty hydraulic cylinders wind load framing, operators, stops controls, hardware, flashing, trim top bottom truss, weather seal, etc., as required for a complete door assembly.

1.4 SYSTEM PERFORMANCE REQUIREMENTS

General: The hangar door system shall be designed to the same requirements for live, dead end wind loads as the hangar building. The door shall be engineered to resist all anticipated loads without sagging, bowing or conflicting with its smooth and efficient

operation. Refer to the drawings for additional loading requirement. Door System Design Building Design and Contractor Coordination:

1. Pre-engineered hydraulically-operated-top-hinged-hangar-door system for a complete assembly.
2. The door manufacturer shall furnish for other trades all drawings and details for any structural steel, bracing, holes required that will be part of building construction performed under other Divisions of the specifications, required for proper installation of the door. Drilling of holes, cutting or any other work affecting the structural framing of the building shall be subject to approval of the metal building Engineer of Record.
3. Furnish all supervision, labor, materials, tools, equipment, and services required for fabrication and erection of the motor operated hangar doors in strict accordance with the specifications and applicable drawings.
4. The following standards and requirements shall be included and coordinated by the Contractor with the door manufacturer and metal building manufacture:

    a. ASTM A-36 structural steel framing and bracing for door.
    b. Full depth horizontal girting to accommodate the exterior preformed metal building siding and the interior preformed metal liner panel, full height of the doors.
    c. The building steel header design shall be coordinated with the hangar door manufacturer, and shall be designed to accommodate horizontal and vertical building deflections to support the “one piece” door in all positions, along with the proper lateral steel bracing.
    d. The building door jamb-steel-columns shall be framed and of the proper design and size to reinforce the opening and to carry all loads and vibrations imposed by the door to these structural members, along with the proper lateral steel bracing..
    e. Complete weather-stripping; including flexible-door-head wind curtain weathering.
    f. All required hardware for motor operation.
    g. Complete electrification system and supports.
    h. The Contractor shall furnish and install a prewired electrical door operating mechanism to control each “One Piece” hydraulic door. The Contractor is responsible and required to completely install the prewired electrical door operating mechanism, push button controls, devices and electrical conduit and wiring to the door operating controls. Control panel with 24volt up/down/off switch pre-wired to motor, and over-ride controls with the required number of adequately sized insulated electrical conductors.
    i. All electrical controls and devices shall conform to the requirements of the current National Electrical Code 513, NEMA, and be UL approved. Provide UL Listed Electric Operator, size and type as recommended by the manufacturer. The door operator shall be furnished complete by the door manufacturer and shall consist of a motor and factory-wired control panels consisting of main fused disconnect switch, magnetic reversing starters, limit switches and push button controls, control circuit transformer, relays, timing devices, and warning devices..

j. One coat of primer paint on all fabricated structural steel, and painted factory finished on all pre-assembled components. Refer to paint specifications for finish painting requirements.
k. Complete engineering drawings, calculations and required submittals sealed by the door manufacturer's registered professional engineer licensed in the State the door is to be installed at.
l. Door erection/installation.
m. Maintenance and operating manuals.
n. Guarantee of complete installation.

5. Design criteria: The door shall be designed and constructed in accordance with the latest American Institute of Steel Construction Specifications. They shall consist of standard structural sections of ample size and strength for the loads and stresses imposed under the specified conditions. Structural shapes and flat plates shall be in accordance with ASTM Designation A-36.

a. The door as a completed unit shall be designed to withstand the minimum external and/or internal wind load as indicated on the structural drawings under the Main Wind-force Resistant system provisions of the current edition of the Florida Building Code (FBC) and per ASCE 7-98.
b. The wind load deflection shall not exceed the door height in inches divided by 120.
c. The fiber stresses in the door members due to combine dead and wind loads shall not exceed 24,000 psi.

1.5 SUBMITTALS

A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of the following hangar door system components:

1. Structural-framing system and summary of forces and loads on walls and jambs and engineering signed and sealed drawings or Florida Product Approval (NOA).Electrical control system.
2. Electrical wiring diagram.
3. Door hydraulic pump units.
4. Accessories.
5. Setting drawings, template, and installation instructions for built-in or embedded anchor devices.

B. Shop Drawings: For the following hangar door system components shall include plans, elevations, sections, details, and attachments to other Work, as follows.

1. The door manufacturer shall submit for approval all design and shop drawings and complete calculations of all structural, mechanical, electrical and operational features of the doors, sealed by registered Professional Engineer licensed to practice in the State pf the project location. Field wiring diagrams, schematic wiring diagrams and physical location of electrical controls drawings shall be provided. The shop drawings shall name and list in detail the components used in and on the

doors, including the manufacturer's name, catalog number and a full description of the component.

2. Complete calculations shall be submitted with the shop drawings. Shop drawings submitted without these calculations will be returned marked "Revise and Resubmit".
3. Submit shop drawings for approval prior to fabrication. Include detailed plans, elevations, and details of framing members, required clearance, anchors and accessories. Include relationship with adjacent materials. The make and type of door, operators and controls shall be clearly shown. Door weight method of suspension, operation, and all fastenings shall be indicated.
4. Submit (four) copies each of the following manufacturer's Manuals / Diagrams
    a. "One Piece" Hydraulic Door Literature
    b. Installation Manual
    c. Operating Instructions
    d. Maintenance data / manual.
    e. Safety Decal Placement Guide Manual / Warning Labels
    f. Electrical System Manual for the "One Piece" Hydraulic Door system
        1) Electrical Schematics
        2) Electrical Wiring Diagram

    g. Diagrams of potentially hazardous locations related to the operation of the door.

5. Submit shop drawings specific for this project.
   NOTE: Generalized project drawings not specific to this project will not be acceptable.

C. Product Certificates: Signed by the manufacturer of hangar door systems certifying that products furnished comply with requirements.

D. Letter of Design Certification: Professional Engineer's certificate prepared and signed by a Professional Engineer, legally authorized to practice in the State where Project is located, verify that the structural framing meets the indicated loading and deflection requirements and codes of Authorities Having Jurisdiction. Include the following:

    a. Name and location of Project.
    b. Order number.
    c. Name of manufacturer.
    d. Name of Contractor.
    e. Door dimensions, including width and height.
    f. Indicate compliance with AISC standards for hot-rolled steel and AISI standards for cold-rolled steel, including edition dates of each standard.
    g. Governing building code and year of edition.
    h. Design Loads: Include dead load, deflection, wind loads/speeds and exposure, seismic zone, or effective peak velocity-related acceleration/peak acceleration.

E. Manufacturer Certificates: Signed by manufacturers certifying that they comply with requirements. Include evidence of manufacturing experience.

F. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names, and addresses of architects and owners, and other information specified.

G. Warranties: Special warranties specified in this Section.

1.6 QUALITY ASSURANCE

A. Erector Qualifications: An experienced erector who has specialized in erecting and installing work similar in material, design, and extent to that indicated for this Project and who is acceptable to manufacturer.

B. Professional Engineer Qualifications: A professional engineer who is licensed and legally qualified to practice in the State where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of hangar door systems that are similar to those indicated for this Project in material, design, and extent.

C. Manufacturer Qualifications: A firm experienced in manufacturing hangar door systems similar to those indicated for this Project and with a record of successful in-service performance.

1. Doors and operating mechanisms shall be manufactured by a door manufacturer who has been continuously engaged in the design, manufacture, and installation of hydraulic aircraft hangar doors for over ten (10) years. The manufacturer will support with written evidence that they have designed, manufactured and installed a minimum of ten (10) motor operated door systems which have been in satisfactory operation for a minimum of three (3) years, with a minimum of ten (10) installations that are equal to or in excess of 20’-0” high.
2. Written evidence will include at least ten (10) hangar door installations of the hydraulic operated type, made by their company. Such list shall include name of installation, location, Owner, Architect, date installed and specific data as to size of doors, type of motors / pumps, safety devices, operating systems, , weather-stripping, etc. Written evidence shall list only door installations that have been designed, manufactured and installed by the submitting door manufacturer. The door manufacturer must certify that they will design and fabricate 90 percent or more of the door system by their personnel and in their facilities.
3. Engineering Responsibility: Preparation of Shop Drawings, testing program development, test result interpretation, and comprehensive engineering analysis by a qualified professional engineer.

D. Source Limitations: Obtain each type of the hangar door system component through one source from a single manufacturer.

E. Structural Steel: Comply with AISC S335, "Specification for Structural Steel Buildings--Allowable Stress Design, Plastic Design"; or AISC S342, "Load and Resistance Factor Design Specification for Structural Steel Buildings," for design requirements and allowable stresses.

F. Pre-Installation Conference: Schedule a pre-installation conference prior to commencement of field operations that might affect installation of the “One Piece” hydraulic door to establish procedures for maintaining optimum working conditions, and to coordinate this work with related and adjacent work.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver components, panels, and other manufactured items so as not to be damaged or deformed. Package items as required for protection during transportation and handling. Deliver materials and products in manufacturer’s labeled protective packages.

B. Handling: Unload, store on timbers or pallets above ground level to prevent bending, warping, twisting, and surface damage.

C. Stack materials on platforms or pallets, covered with tarpaulins or other suitable weathertight and ventilated covering. Do not store material in contact with other materials that might cause staining, denting, or other surface damage.

D. Store and handle in strict compliance with manufacturer’s written instructions and recommendations. Protect from damage from weather, excessive temperatures, and constructions operations.

E. Inspect the “One Piece” hydraulic door upon delivery for damage. Minor damages may be repaired provided refinished items are equal in all respects to new work and acceptable to Architect. Otherwise, remove and replace damaged items as directed.

F. Place the “One Piece” hydraulic door frame units on a minimum of 4” high wood blocking. Store doors components & packages at building site under cover. Avoid use of non-vented plastic or canvas shelters which could create humidity chamber. If the cardboard wrapper on door becomes wet, remove carton immediately.

G. The Contractor shall store the sheet, panels, components, and other manufactured items so that they will not be damaged or deformed. Store metal sheets or panels so that any water accumulations will drain freely. Do not store sheets or panels in contact with other materials which might cause staining.

1.8 PROJECT CONDITIONS

A. Weather Limitations: Proceed with installation only when weather conditions permit work to be performed according to manufacturer's written instructions and warranty requirements.

B. Field Measurements: Verify door opening by field measurements after the metal building has been erected and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1. Established Dimensions for Doors: Where field measurements cannot be made without delaying the Work, either establish framing and opening dimensions and proceed with fabrication of the door leaves without field measurements. Coordinate the door opening construction to ensure that actual building dimensions, locations of structural members, and openings correspond to established dimensions.

1.9 WARRANTY

A. General Warranty: Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

1. Manufacturer's Warranty Period: Two years from date of Substantial Completion signed by the door manufacturer and installer.
2. Four (4) complete three ring binders containing instructions for proper operation and maintenance of the doors shall be furnished to the Owner. They shall contain complete:

    a. Operating instructions.
    b. Maintenance instructions.
    c. A chart showing all points to be lubricated, type of lubricant and frequency of lubrication.
    d. A chart giving a checklist of parts to be serviced and adjusted and the frequency of adjustment.
    e. A complete list of spare parts.
    f. A manufacturer's catalog for every component used in or on the doors.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: The basis of design shall be Schweis's "One Piece" hydraulic hangar door, P.O. Box 220, Fairfax, MN 55332, Phone (507) 426-8273, Fax (507) 426-7408. Subject to compliance with requirements, of these specifications products approved in writing by the Architect and the Owner will be accepted.

B. Manufacturer's seeking approval of the product shall comply with the product substitution requirements in Division 01, prior to receipt of the bids for the project.

2.2 STRUCTURAL MATERIALS

A. Structural-Steel Shapes: ASTM A 36.

B. Steel Plate, Bar, or Strip: ASTM A 36

C. Steel Tubing or Pipe: ASTM A 500, Grade B; ASTM A 501; or ASTM A 53, Grade B.

D. High-Strength Bolts, Nuts, and Washers: ASTM A 325, Type 1, heavy hex steel structural bolts, heavy hex carbon-steel nuts, and hardened carbon-steel washers.

1. Finish: Mechanically deposited zinc coating, ASTM B 695, Class 50.
2. Direct-Tension Indicators: ASTM F 959, Type 325, or Type 490
   a. Finish: Mechanically deposited zinc coating, ASTM B 695, Class 50, epoxy coated.

E. Primers: As selected by manufacturer for resistance to normal atmospheric corrosion, compatibility with finish paint systems, capability to provide a sound foundation for field-applied topcoats despite prolonged exposure, and as follows:

1. Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer; complying with performance requirements of FS TT-P-664.

2.3 MISCELLANEOUS MATERIALS

A. Finish Painting: Refer to Division 9 Section "Painting."

2.4 FABRICATION, GENERAL

A. Door Construction: Door members in sizes suitable for convenient shipping shall be bolted and/or welded construction. Joints shall develop 100 percent of the strength of the framing members. Vertical members shall be continuous throughout the height of the door. The sections and framing members of which they are composed shall be true to dimension and square in all directions and shall not be out of line more than 1/8 inch in 20 feet. Vertical and horizontal members adjacent to each other and/or being joined in the field shall be accurately prepared to facilitate field assembly. Full depth members spaced vertically shall be provided for proper lateral support of inside and outside flanges for all main members. Diagonal bracing shall be provided so that the completed leaf assembly will be adequately braced to withstand shipping, assembly, and operational loads.

1. Fabrication of door shall be done in jigs so as to hold the sections to specified tolerances. Exposed welds and welds, which interfere with the installation of various parts, such as exterior panels and liner panels, etc., shall be ground smooth.

2. The exterior door covering shall be pre-formed metal panels of the type and gauge, furnished and installed as specified in Division 13 “Metal Building Systems”.

3. Weathering: Material, which is adjustable and readily replaceable, shall be provided at all necessary vertical edges, head and sill to afford a substantially weather-tight installation.

4. Weathering shall be properly fitted and adjusted to close all openings. It shall be fitted at the factory, marked, and removed before shipment. Clearances between

metal parts on vertical edges of leaves and between leaves and jambs, which are to be weathered, shall not be less than three (3) inches.

5. Provide manufacturer's seal continuous at top, bottom of each door. The sides of the "One Piece" Hangar door shall be sealed off with a special weather stripping. The entire door perimeter must be weather tight.

6. The door shall be equipped with neoprene weather stripping at heads and jambs to prevent flow of moisture into the door installation. Sills shall have a special fabric reinforced high grade rubber astragal. The entire door perimeter shall be weather tight.

7. Hangar door shall be electrically operated "One Piece" hydraulic type and shall be integral with the hangar building design.

8. When in the open position the door shall have a slight slope to direct drainage away from the building.

9. Door shall be hinged horizontally at the top and be arranged to open by moving frame out & up.

10. Door frames shall have pre-located top hinges to align with the building truss and steel framing members.

11. Door shall be self-contained with only the top hinges; side column cylinders supports legs.

12. The door framework shall consist of jig welded steel tube sections engineered by the door manufacturer to resist all anticipated loads without staffing, bowing or conflicting with its smooth operation.

13. Structural steel door framing members shall be ASTM A500 Grade B square structural welded steel tubing.

14. Provide an integral steel safety truss and brace at the bottom leading-edge of the door exterior.

15. Furnish all labor, materials, accessories, equipment, and services necessary to furnish a complete installation of a "One Piece" hydraulic hangar door, as indicated by the manufacturer. Including frame, sections, brackets, guides and side column cylinders supports legs, hardware, operators and installation instructions.

B. Hardware: Hardware shall be designed and manufactured expressly for use on aircraft hangar doors. The door manufacturer shall provide top guide roller assemblies, and required hardware for operation of the door as part of the finished door.

1. The hangar doors shall not be equipped with locking devices, except as specified for personnel doors.

2. Rubber bumpers shall be provided on the leading and trailing edges at top and bottom as required preventing the door from coming in contact with the end walls or any other obstruction.

C. Metal Siding:

1. Install door skins to completely clad the door frames, use noncorrosive fasteners.

2. The hangar door covering shall meet the requirements as specified for the metal siding of the hangar and the exposed surface shall be colored to match the exterior siding of the hangar.

3. Install the door skin and all trims according to the “One Piece” door recommendations.

D. Shop Paint: Door framing members shall be thoroughly cleaned of loose scale, shavings, filings, dirt, dust, or other objectionable materials that would interfere with the bond of paint.

1. All shop painting shall be done in accordance with good practice for such work. No painting shall be done in freezing weather. All painting shall be done in dry weather or under cover and surfaces of steel shall be free from moisture when painted.

2. All metal surfaces shall be given a priming coat of rust inhibitive paint.

3. Special care shall be taken in painting mechanisms, limit switches, electrical controls, etc., so that paint is applied to finished or to bearing surfaces. Components supplied by other manufacturers having painted surfaces need not be painted.

E. Operating System: Operation of each door shall be by hydraulic cylinders with one at each door jamb.

F. Electrical Controls: The door manufacturer shall furnish the doors with the proper electrical equipment and controls, built in accordance with the latest NEMA Standards. All equipment, power and control circuits shall be installed in accordance with the National Electrical Code, Standard No. 70, and the requirements of Authority Having Jurisdiction. Any equipment located eighteen (18) inches or less above the floor shall be explosion proof.

1. Magnetic reversing starters shall be enclosed in a NEMA 12 enclosure with a three pole fused lockable disconnect in the cabinet door and shall be factory wired and equipped with overload and under voltage protection, mechanical and electrical interlocks, relays, timing devices and transformers for the control circuits. A wiring diagram shall be placed on the inside of each enclosure cover.

2. The door shall be controlled by a constant pressure 2-button push button station, mounted on accessible interior faces at each end as required for a safe operable condition. Removing pressure from the buttons shall stop the hydraulic pump and set the brakes. Controls shall not be reversible. All interior push buttons shall be in

NEMA 12 enclosures with mushroom head buttons. All exterior push buttons shall be in NEMA 4 enclosures with mushroom head buttons

3. Limit switches shall be provided to stop the travel of the door in their fully opened or fully closed position. The limit switched shall be positive acting snap action type with actuating cams designed with sufficient over travel to permit the group to come to a complete stop without over traveling the limit switches. The limit switches shall be mounted on the power leaf with actuating cams mounted on the top guides overhead.

4. Interlocks shall be provided at hollow metal personnel door where shown on the drawings, that are located within the hangar door. Interlock shall prevent motor operation of the hangar door group when the personnel door is open. Provide an indicator light at door control stations indicating when the personnel door is open.

5. A clearly audible signal shall be provided on each hangar door and shall operate when the push buttons are actuated for movement of the doors in either direction. The signal device shall be not less than a six (6) inch diameter bell or equivalent decibel rated horn loud enough to be clearly heard in the hangar and on the apron. The signal shall sound continuously when the door group is in motion.

6. Each control enclosure shall be completely shop wired and be provided with a numbered terminal strip for the convenience of the electrical contractor.

F. Hydraulic Gear Motor Pump:

1. The hydraulic gear Motor pump system must stop and hold door in any position of the door travel.

2. Provide high starting torque, reversible, continuous duty, class A insulated, electric motors complying with NEMA MG 1, with fused protection, sized to start, accelerated and operate door in either direction from any position.

3. A magnetic starter with 24v control unit for reliability is standard.

4. Design operator so motor may be removed without disturbing limit switch adjustment and without affecting emergency auxiliary operator.

G. Electrical Wiring and Source of Power: All flexible wire ducts, conduit and fittings, flexible multi-conductor cables, junction boxes, and all labor to wire and connect to and between all electrical equipment on the doors shall be installed in accordance with the door manufacturer’s approved wiring diagrams and drawings by the electrical contractor.

1. If permanent electrical power is not available when the doors are installed, the electrical contractor shall obtain a temporary source of electrical power so the doors may be tested and adjusted under power.

2. The door manufacturer's wiring diagrams shall include a complete schematic wiring diagram; a field wiring diagram; a complete physical location drawing showing the location of all controls with the runs of conduit, size of conduit, number and size of wires in each conduit, location of junction boxes and full details of control mountings.

3. Provide Electrical Disconnect to completely disable the door, for service, maintenance, emergency backup operations.

4. Mount disconnect so it is accessible from floor level.

2.5 WALL PANELS

A. Panels (exterior) shall be provided by the metal building manufacturer. Refer to Division 13 Section "Metal Building Systems" for metal siding panels, metal liner panels, jamb and corner trim, siding accessories, wall insulation, top guide supporting steel and bracing requirements.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Erector present, for compliance with requirements for installation tolerances and other conditions affecting performance of the hangar door system.

1. Prepare a written report, listing conditions detrimental to performance of work.

2. Proceed with erection only after unsatisfactory conditions have been corrected.

3. Examine wall and overhead areas, including opening framing and blocking with the door installer present for compliance with requirements for installation tolerance, clearances and other conditions affecting performance of Work of this section.

4. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General:

1. Door manufacturer is required to coordinate with the metal building manufacturer in the development of the exact installation details and provide weights and door loadings to building manufacturer.

2. Install door, cylinder columns and operating equipment complete with necessary hardware, jamb and head mold strips, anchors, inserts, hangers and equipment

supports according to Shop Drawing manufacturer's written instructions and as specified.

3. Fasten / Hang horizontal track, hinges from structural overhead framing with angle or channel hangers welded and/or bolt fastened in place. Fasten and hang vertical cylinder columns, from structural column framing with angle or channel hangers welded and / or bolt fastened in place. Provide sway bracing, diagonal bracing and reinforcement as required for rigid installation of track, hinges, and door-operating equipment.

B. Recommended Clear Opening

1. Each "One Piece" door has a recommended clear opening setting, specified by the manufacture. Do not over travel the door beyond the recommended setting.

C. Apply Proper Safety Markings

1. Apply Proper Markings for any potentially hazardous locations related to the operation of the door.

2. Follow the pictorial diagram included in the door installation manual.

D. Installing Warning Labels

1. Furnish warning labels for any potentially hazardous locations related to the operation of the door. Fasten warning labels to the "One Piece" hydraulic door frame and by the operator's station in accordance with manufacturer's instructions, NO EXCEPTION.

E. Installer Certificates:

1. Signed by manufacturer certifying that installers comply with specified requirements.

F. Installing Services: (Optional)

1. Install Representative, Manufacturer's representative to supervise assembly of door.

3.3 ERECTION

A. Erect metal building system according to manufacturer's written instructions and erection drawings.

B. Do not field cut, drill, or alter structural members without written approval from the hangar door manufacturer's professional engineer.

C. Hangar doors shall be erected when the hangar roof has been completed and is in its proper position under full dead load. When the hangar roof is completed and in position, the door guides shall be adjusted in relationship to the rails to the proper line, gauge, and elevation in accordance with the approved tolerances stated herein.

D. All hangar doors and accessories shall be assembled in strict accordance with the approved shop and erection drawings. The doors shall be installed **under the supervision of an authorized representative of the door manufacturer**, who shall be responsible for proper and satisfactory operation.

E. Align and adjust framing members before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that will be in permanent contact. Make adjustments to compensate for discrepancies in alignment.

3.4 WALL PANEL INSTALLATION

A. Exterior wall panels

1. Metal building erector to install the same exterior wall panels that are on the building for the siding use the same type on the “One Piece” hydraulic door. Install the proper trims that are recommended by the metal building manufacturer.

B. General: Provide panels full height as shown on building elevations, sections, and details. Install panels perpendicular to girts.

1. Arrange and nest side-lap joints so prevailing winds blow over, not into, lapped joints. Install panels with vertical edges plumb. Lap ribbed or fluted sheets one full rib corrugation. Apply panels and associated items for neat and weathertight enclosure. Avoid "panel creep" or application not true to line.
2. Unless otherwise indicated, begin panel installation at corners with center of rib lined up with line of framing.
3. Field cutting by torch is not permitted.
4. Align bottom of wall panels and fasten with blind rivets, bolts, or self-tapping screws.
5. Fasten trim and similar elements with self-tapping screws.
6. Install screw fasteners with power tools having controlled torque adjusted to compress neoprene washer tightly without damage to washer, screw threads, or panels. Install screws in predrilled holes.
7. Provide weather-resistant escutcheons for items penetrating wall panels and liner panels.
8. Use aluminum or stainless-steel fasteners for exterior applications and galvanized fasteners for interior applications.
9. Locate and space fastenings in true vertical and horizontal alignment.

C. Field-Assembled, Insulated Panels: Install wall panels on exterior side of doors. Attach panels to supports with fasteners as recommended by manufacturer. Install insulation and cover with liner panels.

D. Liner Panels: Install panels on interior side of doors at locations indicated. Fasten with exposed fasteners as recommended by manufacturer.

3.3 INSPECTION AND TESTING

A. Inspection of the hangar door installation will be made after erection is complete. Any defects disclosed by the test shall be corrected by the door manufacturer and the installation delivered in and acceptable operable condition.

3.4 CLEANING AND PROTECTION

A. Touchup Painting: Immediately after erection, clean, prepare, and prime or reprime welds, bolted connections, and abraded surfaces of prime-painted framing, accessories, and plates.

1. Clean and prepare surfaces by hand-tool cleaning, SSPC-SP 2, or power-tool cleaning, SSPC-SP 3.
2. Apply compatible primer of same type as shop primer used on adjacent surfaces.

END OF SECTION 08342

SECTION 08461 - SLIDING AUTOMATIC ENTRANCE DOORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes automatic entrance door systems with bi-parting sliding operation.

B. Ref. Division 8 Section “Aluminum Entrances, Storefront” for adjacent related work.

C. Ref. Division 8 Section "Door Hardware" for lock cylinders.

D. Ref. Division 8 Section "Glazing" for glazing requirements for automatic entrance doors.

E. Ref. Division 16 Sections for Electrical Requirements.

F. Ref. Appendix B – Owner furnished furniture, fixtures and equipment for access control devices.

1.3 PERFORMANCE REQUIREMENTS

A. General: Provide automatic entrance door systems that have the following capabilities based on testing manufacturer's standard units in assemblies similar to those indicated for this Project:

1. Operating Temperature Range: Door operators capable of operating between minus 10 deg F and plus 120 deg F.
2. Maximum Opening Force:

    a. Exterior Doors: 15 lbf.
    b. Interior Doors: 5 lbf.

1.4 SUBMITTALS

A. Product Data: For each type of sliding automatic entrance door indicated.

B. Shop Drawings: Include plans, elevations, sections, details, hardware mounting heights, wiring diagrams, and attachments to other Work.

C. Hardware Schedule: Organize schedule into sets based on hardware specified. Include name of item and manufacturer, and complete designation of every item required for each automatic entrance door.

D. Submit shop drawings and product data under provisions of Section 01300 – Shop Drawings, Product Data and Samples.

E. Samples: For each exposed finish and for each color and texture required.

F. Product Certificates: Certifying that products furnished comply with emergency exit door requirements.

G. Maintenance data.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: A qualified installer, approved by manufacturer to install and maintain manufacturer's products.

B. Manufacturer's Certificate: Issued by the American Association of Automatic Door Manufacturers.

C. Welding Standards: Comply with AWS D1.2, "Structural Welding Code--Aluminum."

D. ANSI/BHMA Standard: ANSI/BHMA A156.10, "Power Operated Pedestrian Doors."

E. UL Standard: Provide power door operators that comply with UL 325.

F. Emergency Exit Door Requirements: Comply with requirements of authorities having jurisdiction for automatic entrance doors serving as a required means of egress.

1.6 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturers agrees to repair or replace components of automatic entrance door system that fail in materials or workmanship, excessive air leakage, faulty operation of operators and hardware, or deterioration of metals, metal finishes, and other materials beyond normal weathering within three (3) years from date established in Specification Section 01770 “Closeout Procedures”.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Stanley Security Solutions, Inc.
2. Besam Inc.
3. Horton Automatics; Div. of Overhead Door Corporation.

C. The automatic door and glass shall be wind rated for an essential facility per FBC requirements.

2.2 MATERIALS

A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated. Match finish of adjacent storefront.

1. Extruded: ASTM B 221.
2. Sheet and Plate: ASTM B 209.
3. Welding Rods and Bare Electrodes: AWS A5.10.

B. Glazing: As specified in Division 8 Section "Glazing" to be insulated and impact rated.

C. Sealants and Joint Fillers: Refer to Division 7 Section "Joint Sealants" for joints at perimeter of entrance system.

D. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, premixed, nonmetallic, noncorrosive, nonstaining grout; of consistency suitable for application.

E. Bituminous Paint: Cold-applied, asphalt-mastic paint complying with SSPC-Paint 12 requirements, except containing no asbestos; formulated for 30-mil thickness per coat.

2.3 AUTOMATIC ENTRANCE DOOR SYSTEM

A. General: Manufacturer's standard automatic entrance door system, complete with doors, sidelite and transom framing, operators, controls, activation devices, safety devices, and accessories as indicated.

1. Configuration: Bi-parting sliding doors, with sidelite on each side of door.

a. Traffic Pattern: Two-way.
b. Emergency Breakaway Capability
c. Mounting: Between jambs.

B. Activation Devices:

1. Infrared-scanner presence detector.
2. Security key pad and access control; the interior side of automatic doors heading to the secured – apron areas shall be accessed via a security keypad system and shall also be unlocked (or operated) from the FBO reception counter. A

security key pad shall also be provided at the exterior of the door for after hours access. Note that the security system access-control devices shall be provided by the owner.

C. Operator Safety Devices:

1. Photoelectric beams.

2.4 COMPONENTS

A. Doors: Manufacturer's 1-3/4-inch- thick glazed doors with minimum 0.125-inch-thick, extruded tubular stile and rail members impact rated glass for essential facilities. Fabricate corners with mechanically fastened reinforcing brackets or by welding. Incorporate concealed tie-rods that span full length of top and bottom rails and reinforcing for wind loading requirements.

1. Glazing Stops and Gaskets: Manufacturer's standard snap-on, extruded-aluminum, bevel glazing stops and preformed resilient glazing gaskets.
2. Stile Design: Medium stile.
3. Rail Design: 6-1/2-inch nominal height, 10 inch minimum at sill member.
4. Muntin Bars: Horizontal tubular rail member for each door; match stiles and rails.

B. Framing Members: Fabricate from extruded aluminum or formed-aluminum sheet or plate.

1. Main Extrusions: Minimum wall thickness of 0.125 inch.
2. Extruded Glazing Stops and Applied Trim: Minimum wall thickness of 0.062 inch.
3. Muntin Bars: Horizontal tubular rail members for sidelites; match stiles and rails.

C. Headers: Fabricated from minimum 0.125-inch thick, extruded aluminum or formed-aluminum sheet or plate. Conceal operator and roller track in header, providing access by means of hinged or removable access panel to permit service and adjustment. Secure panel to prevent unauthorized access.

1. Header Type: Concealed, fabricated to match depth of framing and to extend full width of door opening.

D. Carrier Assembly and Overhead Roller Track: Manufacturer's standard carrier assembly that allows vertical adjustment; consisting of nylon- or delrin-covered ball-bearing-center steel wheels operating on a continuous roller track, or ball-bearing-center steel wheels operating on a nylon- or delrin-covered continuous roller track. Support doors from carrier assembly by cantilever and pivot assembly.

1. Rollers: Minimum two ball-bearing roller wheels and two anti-rise rollers for each active leaf.

E. Sills: Manufacturer's standard sill members and bottom guide system, with stainless-steel ball-bearing-center roller wheels, and threshold and configuration indicated below:

1. Configuration: Saddle type threshold across door opening and pin-guide track system at sidelites.

F. Brackets and Reinforcements: Manufacturer's standard; compatible with adjacent materials. Provide nonstaining, nonferrous shims for aligning system components.

G. Fasteners and Accessories: Manufacturer's standard corrosion resistant, nonstaining, nonbleeding; compatible with adjacent materials.

1. Reinforcement: Reinforce members as required to retain fastener threads.
2. Exposed Fasteners: Do not use exposed fasteners, except for hardware application. For hardware application, use countersunk Phillips flat-head machine screws finished to match framing members or hardware being fastened, unless otherwise indicated.

H. Signage: Comply with ANSI/BHMA A156.10.

2.5 DOOR OPERATORS

A. General: Of size recommended by manufacturer for door size, weight, and movement; for condition of exposure; and for long-term, maintenance-free operation under normal traffic load for type of occupancy indicated.

1. Type: Power operated, complying with ANSI/BHMA A156.10.
2. Connections: For power and control wiring.
3. Adjustment Features: Fully adjustable without removing entrance doors, including adjustable speed, adjustable time delay for length of time door remains open, automatic door re-open if stopped while closing.
4. On/Off Feature: On/off/hold-open switch controls electric power to operator.

B. Electromechanical Operators: Self-contained overhead units, with power opening and closing mechanism, with checking in both opening and closing cycles, with safety-release clutch for obstructed closing, and that slides manually when power is off.

1. Closing Mechanism: Spring or Power operated.
2. Mounting: Concealed.

2.6 ACTIVATION AND SAFETY DEVICES

A. Infrared-Scanner Presence Detector: Self-contained, infrared-scanner presence-sensing device that activates door operator; that is adjustable to provide detection patterns and sensitivity equivalent to those required for control mats; and with metal or plastic housing in black finish.

2.7 HARDWARE

A. General: Refer to Division 8 Section "Door Hardware" for requirements for hardware items other than those indicated to be provided by automatic entrance door manufacturer.

B. Heavy-Duty Hardware: Provide units as indicated in size, number, and type recommended by manufacturer for entrances required. Finish exposed parts to match door finish, unless otherwise indicated.

C. Emergency Breakaway Hardware: Provide release hardware that allows panel to swing out in the direction of egress to a full 90 degrees from any position in the sliding mode with maximum force required to open panel of 50 lbf according to ANSI/BHMA A156.10. Interrupt operation of breakaway panel operator while in breakaway mode.

D. Deadlocks: Manufacturer's standard mortise hook bolt with 5-ply laminated steel, hook-shaped throw bolt, complying with ANSI/BHMA A156.5, Grade 1 requirements.

1. Cylinders: On door exterior, as specified in Division 8 Section "Door Hardware."
2. Two-Point Locking: Provide bottom bolt and mechanism that automatically throws active-leaf bottom bolt into threshold when deadlock engages inactive leaf and that provides one-stage unlocking.

E. Push Bars: As selected from manufacturer's full range.

F. Compression Weather Stripping: Manufacturer's standard replaceable, compressible gaskets of molded neoprene or molded PVC. Include bumper-type gaskets at door stops and laps.

G. Sliding Weather Stripping: Manufacturer's standard replaceable weather stripping of wool, polypropylene, or nylon woven pile, with nylon-fabric or aluminum-strip backing, complying with AAMA 701.

2.8 FABRICATION

A. Prefabrication: Complete automatic door fabrication, assembly, finishing, hardware application, and other work before shipment to Project site.

1. Perform fabrication operations, including cutting, fitting, forming, drilling, and grinding of metalwork in manner that prevents damage to exposed finish surfaces. For hardware, perform these operations before applying finishes.
2. Prepare components to receive concealed fasteners and anchor and connection devices.

B. Weld components to comply with referenced AWS standard. Weld before finishing components to greatest extent possible. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.

C. Glazing Channels: Provide minimum clearances for thickness and type of glass indicated according to GANA's "Glazing Manual."

D. Metal Protection: Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose.

E. Hardware: Install hardware, except surface-mounted hardware, at fabrication plant. Remove only as required for final finishing operation and for delivery to and installation at Project site.

F. Doors: Fabricate doors in profiles indicated. Reinforce as required to support imposed loads and for installing hardware. Factory assemble door and frame units.

1. Exterior Doors: Provide compression weather stripping at fixed stops. At locations without fixed stops, provide sliding weather stripping retained in adjustable strip mortised into door edge.

G. Framing: Fabricate tubular and channel frame assemblies in configuration indicated, with welded or mechanical joints according to manufacturer's standards. Provide subframes and reinforcement of types indicated or, if not indicated, as needed for a complete system to support required loads.

1. Exterior Framing: Fabricate components to drain water passing joints and condensation and moisture occurring or migrating within the system to the exterior. Provide anchorage and alignment brackets for concealed support of assembly from the building structure. Allow for thermal expansion of exterior units.

2.9 FINISHES

A. Aluminum High-Performance Organic Finish: Three-coat, thermocured system with fluoropolymer coats containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with AAMA 605.2.

1. Color: To match aluminum entrances and window walls

PART 3 - EXECUTION

3.1 INSTALLATION

A. Templates and Diagrams: Furnish templates, diagrams, and other data to fabricators and installers of related work, as necessary for coordinating automatic entrance door installation.

B. Do not install damaged components. Fit frame joints to produce hairline joints free of burrs and distortion. Rigidly secure nonmovement joints. Seal joints watertight.

C. Metal Protection: Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose. Where aluminum will contact

concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

D. Entrances: Install entrances plumb and true in alignment with established lines and grades without warp or rack of framing members and doors. Anchor securely in place. Lubricate operating hardware and other moving parts.

1. Install surface-mounted hardware using concealed fasteners to greatest extent possible.
2. Install components to drain water passing joints and condensation and moisture occurring or migrating within the system to the exterior.

E. Door Operators: Install door operator system, including control wiring. Refer to Division 16 Sections and electrical drawings for connection to electrical power distribution system and security access control.

F. Activation and Safety Devices: Install control devices and wiring, including connections to door operators, as follows:

1. Infrared-Scanner Presence Detectors: Install scanners on both interior and exterior sides of each sliding automatic entrance door as indicated.

G. Glazing: Comply with installation requirements in Division 8 Section "Glazing."

H. Sealants: Comply with requirements in Division 7 Section "Joint Sealants" for installing sealants, fillers, and gaskets.

1. Set continuous sill members and flashing in a full sealant bed to provide weathertight construction.
2. Seal frame perimeter with sealant to provide weathertight construction.

I. Adjusting: Adjust door operators, controls, and hardware for smooth and safe operation and for weathertight closure.

J. Security Access Control: Coordinate the interface and installation requirements for access control devices provided by the owner’s security contractor, and door operation requirements, (including wiring chase-ways/sleeves) and ensure proper operation of the door is achieved. The access control devices are to be located within the aluminum frame jambs of the door.

3.2 FIELD QUALITY CONTROL

A. Inspection: After completing installation, an inspector certified by the American Association of Automatic Door Manufacturers shall test and inspect each automatic entrance door for compliance with applicable ANSI/BHMA standards.

1. Inspection Report: Submit report in writing to Architect and Contractor within 24 hours after inspection.

B. Repair or remove and replace Work that does not comply with requirements.

3.3 DEMONSTRATION

A. Engage manufacturer's inspector certified by the American Association of Automatic Door Manufacturers to train Owner's maintenance personnel to adjust, operate, and maintain automatic entrance doors and operators. Refer to Division 1 Section "Closeout Procedures".

END OF SECTION 08461

SECTION 08710 – DOOR HARDWARE

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Work covered by this Section of Specifications consists of furnishing and delivering to the jobsite for fitting and installation, all Finish Hardware complete, in accordance with this Section, applicable drawings, and contractor's shop drawings, and subject to the terms and conditions of the Contract. It is intended that the following list of hardware will cover all Finish Hardware to complete the project. Omissions and/or discrepancies shall be brought to the Architect's attention during the bidding period. THE HARDWARE PROVIDED WILL NEED TO MATCH THE AIRPORT'S "CAMPUS" STANDARD AND SHALL BE CONFIRMED BY THE CONTRACTOR PRIOR TO ORDERING MATERIAL. The electronic locks and panic devices will need to be compatible with the Airport's security system.

B. The Contractor shall employ a DHI-certified Architectural Hardware Consultant who shall review the enclosed schedule and provide a detailed hardware submittal based on the Drawings and Specification requirements, and provisions for operation of the doors for this Project.

C. Furnish and install construction temporary hardware as required by the Contractor to secure finished units until accepted by the Owner.

D. Fire-rated openings:

1. Provide hardware for fire-rated openings in compliance with A.I.A. (NBFU) Pamphlet No. 80, NFPA Standards NO. 101, FBC-Latest Edition and UL10C. This requirement takes precedence over other requirements for such hardware. Provide only hardware that has been tested and listed by UL for the types and sizes of doors required and complies with the requirements of the door and door frame labels.

2. Where panic exit devices are required on fire-rated doors, provide supplementary marking on door UL label indicating Fire Door to be equipped with fire exit hardware and provide UL label on exit device indicating "Fire Exit Hardware". All exit doors accessing the SIDA area (Apron) shall be equipped with delayed egress panic devices and the Contractor shall coordinate all electrified hardware with the fire alarm, the Airport's security and access control system and verify compatibility and function of the door hardware.

1.2 ITEMS SPECIFIED IN OTHER SECTIONS

A. Hardware for the following items is specified as a part of the items in their respective Specification Sections or in the Base Building Specifications.

1. Glass and Glazing-Section.
2. Automatic Doors
3. Folding partitions
4. Rough Carpentry.
5. Access Panels.
6. Division 16 for Electrical, Fire Alarm interface, and access control requirements.

1.3 SUPPLIER

A. Finish Hardware shall be furnished by a hardware contractor/supplier approved by the Architect as having appropriate technical knowledge and experience to correctly interpret drawings and specifications. Supplier shall be prepared at all times during the progress of installation to promptly provide competent and efficient DHI-certified Architectural Hardware Consultant, “AHC”, to approve its complete installation in order that all items shall be installed in the best manner and function properly. This will necessitate a job visit to certify the hardware installation prior to final inspection. The Contractor/Supplier shall be bona-fide direct distributor of all material furnished.

1.4 TYPE AND QUALITY

A. For purposes of designating type and quality of work of this Section, specifications are based on products of companies named. Products of other manufacturers may be approved if submitted for consideration, in accordance with Section 01600 – Materials and Equipment prior to bid date and approved by Addendum.

1.5 DELIVERY

A. All items of Finish Hardware shall be delivered to the project site, or as otherwise specified or required, and shall be checked in for completeness and familiarization with the Contractor. All items of Finish Hardware shall be packaged, numbered, labeled to identify each opening for which it is intended, and to correspond with item numbers on the approved Hardware Schedule.

1.6 INSTALLATION

A. All Finish Hardware to be installed on or in metal doors and/or frames shall be manufactured to template. Template machine screws shall be furnished for all such materials. This supplier shall furnish Hardware Schedule as approved by the Architect and all necessary templates to metal door and frame fabricators for their coordination use.

B. Coordinate with the General Contractor and the security access control contractor the location of required conduits and electrical devices required for the operation and function of electrical hardware components, including but not limited to power for transformers, electric locks, magnetic hold open devices, delayed egress at secured doors with panic devices and security system hardware.

1.7 SCHEDULES AND SUBMITTALS

A. Submit six (6) complete typewritten Hardware Schedules to the Architect and Owner for acceptance. After acceptance, provide required number of copies of accepted Hardware Schedule for distribution. No factory order shall be placed for materials until acceptance has been given by the Architect.

B. Two current copies of catalog cuts shall be submitted with the Hardware Schedule for each item of the Hardware listed in the Schedule.

C. Each item in the Schedule shall be identified on the first page of the Schedule by the manufacturer's name.

D. Submit a separate detailed keying schedule indicating clearly how the Owner's final instructions on keying of locks has been fulfilled.

E. Provide sample lever sets for installation and verification of required clearances and mounting heights on panelized doors, or doors with applied trim.

F. Provide door hardware manufacturer's written certification at completion of the project, and certification that doors meet FBC ADA compliance.

1.8 RESPONSIBILITY

A. It shall be the Contractor/Supplier's responsibility to furnish Hardware in accordance with the intent of this Specification. Where, by virtue of Architectural design or by function, a change is necessary, Hardware of equal design and quality shall be furnished upon written approval of the Architect and Owner.

B. All Hardware shall meet the requirements of applicable codes. i.e. Underwriters Laboratory, International Building Code, and the local Fire Marshall.

1.9 TEMPLATES

A. Templates for doors, frames, and other work specified to be factory prepared for the installation of door hardware. Check shop drawings of other work to confirm that adequate provisions are made for locating and installing door hardware to comply with indicated requirements.

1. After hardware schedule has been approved, furnish templates required by manufacturing contractors for making proper provisions in their work for accurate fitting and finishing hardware setting. Furnish templates in ample time to facilitate progress of work.

1.10 QUALITY ASSURANCE

A. Supplier Qualifications: A recognized architectural door hardware supplier, with warehousing facilities in the Project's vicinity, that has a record of successful in service performance for supplying door hardware similar in quantity, type, and quality to that indicated for this Project and that employs an experienced architectural hardware consultant (AHC) who is available to Owner, Architect, and Contractor, at reasonable times during the course of the Work, for consultation.

1. Require supplier to meet with Owner to finalize keying requirements and to obtain final instructions in writing.

B. Fire-Rated Openings: Provide door hardware for fire-rated openings that complies with NFPA Standard No. 80 and requirements of authorities having jurisdiction.

C. Door undercuts & Thresholds: Verify door undercut requirements and clearance heights for thresholds or finished floor elevations, and compliance with door rating requirements, as approved by the local Fire Marshall.

1.11 WARRANTY

A. In addition to the Manufacturer's warranty on all products and finishes on products specified in the Section, the Contractor/Supplier shall provide a warranty against defects in installation and workmanship for a period of (1) one year from the date of substantial completion of the building.

B. Provide the following manufacturers written warranty:

1. Locks & Latches: Three 3 years.

2. Closers: Ten (10) years.

3. Exits Devices: Three (3) years.

C. Refer to Division 01 Project Closeout Section for additional and detail requirements.

1.12 LOCATIONS

A. Hardware locations and maximum dimensions shall be as follows:
Distance from finish floor to center line of:

Door Knob	38" (96.5 cm)
Door Pull	42" (107 cm)
Deadlock	45" (114 cm)
Exit Bolt Cross Bar	38" (96.5 cm)
Push Plate	50" (127 cm)
Butt Hinges	Bottom Hinge - Finish floor to bottom of hinge 10" (25.4 cm). Top Hinge - Head rabbet to top of hinge 5" (12.7 cm).

Center Hinge - equal distance between top and bottom hinges.

B. Hardware locations shall be confirmed on panelized and trimmed doors. Verify that the levers will clear projected trim or moldings, and that the mounting heights will comply with FBC and Accessibility requirements.

1.13 180 DEGREE OPENINGS

A. Other than those doors that are restricted to less than 180 degree opening by building or by overhead holders or stops, all butts and/or closer arms shall be of sufficient size to allow full 180 degree opening of doors.

1.14 PRODUCT HANDLING

A. Tag each item or package separately with identification related to final hardware schedule and include basic installation instructions with each item or package.

B. Packaging of door hardware is responsibility of supplier. As material is received by hardware supplier from various manufacturers, sort and repackage in containers clearly marked with appropriate hardware set number to match set numbers of approved hardware schedule.

C. Provide secure lock-up for door hardware delivered to the Project. Control handling and installation of hardware items that are not immediately replaceable so that completion of the Work will not be delayed by hardware losses both before and after installation.

PART 2 – PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. To the greatest extent possible, obtain each kind of hardware from only one manufacturer.

B. All numbers and symbols used herein have been taken from the current catalogues of the following manufacturers.

PRODUCT	ACCEPTABLE MANUFACTURER	ACCEPTABLE SUBSTITUTE
1) Hinges	Ives	Stanley, Bommer
2) Locks & Latches	Stanley/Best	N/A As approved by Architect
3) Door Closers	LCN	Falcon, Norton, Rixson
4) Exit Device	Von Duprin	None
5) Wall Stops/Floor Stops, Flushbolts	Ives	Burns,Trimco
6) Kick Plates	Ives	Burns, Trimco

7) Threshold/Weather-strip Zero National Guard, Pemko
8) Silencers Ives Trimco, Rockwood
9) Wall mounted mag locks Security Door Controls or approved equal

C. If material manufactured by other than that specified or listed herewith as an equal, is to be bid upon, permission must be requested from the Architect prior to bidding in accordance with Section 01600 – Materials and Equipment. If substitution is allowed, it will be so noted by addendum.

2.1 BUTT HINGES

A. Doors 1-3/4" (4.4 cm) over 3'- 6" (1.07 m) in width and doors designated as high frequency (see Door Schedule) extra heavy weight (4) ball bearing 5" (12.7 cm) high.

B. Doors 1-3/4" (4.4 cm) thick - minimum 4" (10.2 cm) high.

C. Doors 1-3/8" (3.49 cm) thick - minimum 3-1/2" (10.2 cm) high.

D. Each door shall have not less than three hinges. Doors 7'-6" (2.29 m) and higher shall have four hinges whether specified under items or not.

E. All exterior out-swinging doors to have non-removable pins except where modified in the Hardware Schedule.

F. All butts used with door closers shall be ball bearing. All exterior doors shall have ball bearing butts, except as otherwise specified.

G. All exterior doors shall have stainless steel hinges.

2.2 LOCKSETS/DEADLOCKS

A. Shall be the following manufacturer and shall be furnished in the function as specified in the Hardware Sets. Products shall be provided as specified, substitutions will be considered in accordance with provisions of the Substitutions and Product Options Section in Division 01.

1. Locksets shall be Stanley/Best AK Series (Heavy Duty Locks/Levers) with interchangeable core for quick re-keying and customized master keying with 626AM – Satin Chrome with antimicrobial finish and the lever type shall match the existing building standard. Cylinder lock cores shall be Stanley/Best High Security Series 7 Pin Cores to match the Airport Facility Standard.

B. All levers, escutcheons and cylinders shall be the product of the manufacturer. Levers shall comply with required FBC Accessibility requirements.

C. Lockset latch bolt throw 3/4" (1.27 cm).

D. Electric Strikes and Locks (Where required for secured or access-controlled doors):

1. Provide electrically controlled locks and transformers where card reader or secured doors are indicated on the Drawings, scheduled, or required as part of Building security requirements, and shall be compatible with the Airport's access control system.

2. Locks shall be provided by Stanley/Best or approved equal.

3. Coordinate control with swipe card or proximity readers provided by Owner's security contractor.

4. Verify voltage provided to mag locks will not cause damage to the lock or failure to operate or overheating.

5. All electrically locked doors shall be provided with a pushbutton release for emergency egress, on the secured side of the door; power supply and transformers shall be furnished and installed for operation of all electric door locks specified or scheduled. Electric magnetic locks shall be compatible with the Airport's security system.

6. All exterior doors to have lock guards.

2.3 EXIT DEVICES

A. All devices shall be rim or vertical rod in type and function as specified. Devices must be listed under "Panic Hardware" in accident equipment of Underwriters Laboratories. All labeled doors with "Fire Hardware" must have labels attached and be in strict accordance with Underwriters Laboratories. Pulls and dummy trim shall be lever type. Panic devices shall be equipped with a 15 second delay at doors accessing secured areas and shall be coordinated and compatible with the Airport's security system.

Manufacturer	Series
Von Duprin	99

2.4 DOOR CLOSERS

A. Closers shall be one of the following manufacturers or approved equal and shall be furnished in the manufacturer's recommended printed size for the specified condition unless otherwise noted in the Hardware Sets. Closers shall be full rack and pinion complete with back check. Springs shall be motor clock type. Furnish flush mount transom brackets where no transom bar exists. Furnish parallel arm where required. Closers shall be required on all rated doors; spring hinges shall not be allowed, unless approved by the Architect. Sentronic series closers shall be tied to the fire alarm and shall automatically release the door in the event of a fire alarm and shall be 120V powered and shall be provided with a metal cover for custom finishing.

Manufacturer	Series

LCN 4041 and 4040 series (SEL)
Stanley QDC 100

B. Furnish door closers with proper arms and/or brackets to avoid conflict with door lites and/or low ceiling reveals.

C. Door closer cylinders shall be of high strength cast iron construction to provide low wear operating capabilities of internal parts throughout the life of the installation. All door closers shall be tested to ANSI/BHMA A156.4 test requirements by a BHMA certified testing laboratory.

D. Door closers shall utilize temperature stable fluid capable of withstanding temperature ranges of 120 degrees Fahrenheit to -30 degrees Fahrenheit, without requiring seasonal adjustment of closer speed to properly close the door. Closers for fire-rated doors shall be provided with temperature stabilizing fluid that complies with the standards FBC (latest Authority Having Jurisdiction accepted edition) and UL 10C.

E. Door closers shall incorporate tamper resistant non-critical screw valves of V-slot design to reduce possible clogging from particles within the closer. Closers shall have separate and independent screw valve adjustments for latch speed, general speed, and hydraulic back check; Back check shall be properly located so as to effectively slow the swing of the door at a minimum of 10 degrees in advance of the dead stop location to protect the door frame and hardware from damage. Pressure relief valves (PRV) are not acceptable.

F. All fire-rated doors shall receive automatic door closers.

G. Closers shall be mounted such that the closer unit and arm are concealed and not visible from finished common/public areas. Confirm and coordinate with the Architect on the location of closers, prior to initiating installation and frame hardware prep.

2.5 DOOR TRIM

A. All push plates, pulls, pull plates, kick plates and/or armor plates shall be any one of the following manufacturer's products or approved equal in catalog number as set forth herein.

Manufacturer	Push Plate	Pull Plate	Kick Plate
Rockwood	70C	125 x 70C	Custom Stainless Steel

B. Stainless steel plate material shall be minimum .050 gauge thick.

C. Provide stainless steel kick plates where scheduled or directed by the Architect at high impact doors and where door finishes will be damaged by carts or high usage. Kick plates to be 10 inches (254 mm) high; or fit to the bottom rail of the door type scheduled.

2.6 SILENCERS

A. All interior wood and metal door frames shall have door silencers Type 64 or 65, three per single door, two per pair of doors.

2.7 STOPS, HOLDERS, AND LOCK GUARDS

A. Stops shall be of the following manufacturers or approved equal:

1. Ives.

2. Rockwood.

3. Glynn-Johnson.

4. Rixson

B. Provide magnetic hold open devices at all rated doors schedule to remain in an open position, where shown or scheduled in the Drawings. Hold open device hardware shall be fully concealed and not visible on the public side of the door, when in an open position.

C. Doorstops shall be furnished for all doors to prevent damage to doors or hardware from striking adjacent walls or fixtures. Wall bumpers equal to Ives WS407 Series are preferred, but where not practical furnish floor stops equal to Ives FS436 or FS438 series. Where conditions prohibit the use of either wall or floor type stops, furnish surface mounted overhead stops equal to Glynn Johnson, 450 Series. Heavy duty floor stops shall be provided at exterior doors.

D. Lock guards shall be provided at all exterior doors.

2.8 THRESHOLDS AND DOOR STRIPPING PRODUCTS

A. Thresholds, where scheduled or required for thermal performance enhancement of an exterior door opening, shall be of the following manufacturer's or approved equal. See Hardware Schedule for types required.

1. Zero Weatherstripping Co., Inc.

2. Pemko Manufacturing Co.

3. Reese Enterprises, Inc.

4. Hager.

5. National Guard.

B. Thresholds shall be low profile, ADA compliant type thresholds throughout. Metal thresholds shall not be provided at stone or tile floors in Areas, thresholds for these

locations shall be stone or marble, where thresholds are required or shown on the Drawings. Exterior door thresholds shall be set in a full bed of sealant.

C. Provide sound rated hardware consisting of door sweeps, thresholds (or auto door bottoms) and concealed door bottom gaskets at base of all sound rated doors where shown or scheduled on the Drawings.

1) At frames, surface-applied-self-adhesive sound gaskets shall be equal to Pemko – S88, Black, or approved equal.

2) Provide concealed-sound-rated auto-door-bottoms, Pemko- 434 RL, or approved equal at sound rated doors.

2.9 KEYING

A. All locks shall be master keyed as directed by the Architect or Owner. Submit a proposed keying schedule for approval. Furnish six (6) master keys and two (2) keys for each lock. All locks shall be construction keyed. Furnish four (4) construction master keys. Keys shall be mastered keyed to the Airport Building Standard.

1. Hardware supplier to provide temporary cylinders or cores during the construction phase and or construction keyed cylinders as scheduled. The contractor is to change out the temporary cylinders for the permanent cylinders.
2. Coordinate keying with the Airport where applicable.

2.10 FASTENINGS

A. All screws shall be of matching finish to their product and shall be the manufacturer's standard for that item.

B. Sex Bolts - Door closers, door holders, and exit devices installed on wood doors shall be attached by means of the bolts and sex nuts.

2.11 KEY CABINET

A. Furnish a key cabinet complete with accessories to accommodate all keys.

Manufacturer	Model No.
Telkee	AWC-250-S

B. Prepare and furnish the Owner with complete index of keys as directed by the Architect. Tag and file all keys in cabinet location as directed by the Architect. Hardware supplier shall deliver keys, index lists, and cabinet, set-up and assembled to the jobsite.

2.12 FINISHES

A. Where not specifically called out in the Finishing Manuals, for all non-public access areas and exterior doors, provide hardware items in finish US32D Stainless Steel in, or as indicated below.

1.	Butts – Exterior	Match door lever
2.	Butts - Interior	Match door lever
3.	Locks	Match door lever
4.	Push/Pulls, Kickplates, Lock Guards	Match door lever
5.	Closers	Match door frame or Spray painted to match hardware per Architect's approval.
6.	Door Stops & Miscellaneous	Match door lever
7.	Exit Devices	Match door frame

PART 3 – EXECUTION

3.1 INSTALLATION

A. Install each hardware item in compliance with the manufacturer's instructions and recommendations. Wherever cutting and fitting is required to install hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage and reinstallation or application of surface protections with finishing work specified in the Division 9 Sections. Do not install surface mounted items until finishes have been completed on the substrate.

B. Set units level, plumb, and true to line and location. Adjust and reinforce the attachment substrate as necessary for proper installation and operation.

C. Drill and countersink units that are not factory prepared for anchorage fasteners. Space fasteners and anchors in accordance with industry standards.

D. Adjust and check each operating item of hardware and each door, to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate freely and smoothly as intended for the application made.

E. Instruct Owner's personnel in proper adjustment and maintenance of hardware and hardware finishes, during the final adjustment of hardware.

F. Set thresholds for exterior doors in full bed of butyl-rubber or polyisobutylene mastic sealant complying with requirements specified in Division 7 Section "Joint

Protection,"

H. Weather-stripping and Seals: Comply with manufacturer's instructions and recommendations to the extent installation requirements are not otherwise indicated.

3.2 ADJUSTING AND CLEANING

A. Contractor shall adjust all hardware in strict compliance with manufacturer's instructions. Prior to turning over the project to Owner, Contractor shall clean and make any final adjustments to the finish hardware.

B. Hardware locations shall be as recommended by the Door Hardware Institute, 4 copies of the brochure shall be forwarded to the General Contractor.

C. Closer adjustment: A representative of the closer manufacturer shall visit jobsite, adjust and regulate all closers and inspect to see that they are installed according to factory recommendations and Florida Building Code (ADA) requirements and shall provide written certification of compliance.

D. Manufacturer's or Architectural Hardware Consultant's certification letter of project requirements shall be provided at the completion of the project.

E. Adjust and check each operating item of hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate freely and smoothly or as intended for the application made.

F. Clean adjacent surfaces soiled by hardware installation.

3.3 PROTECTION

A. Contractor shall protect hardware as it is stored on construction site in a covered and dry place.

B. Contractor shall protect exposed hardware installed on doors during the construction phase.

3.4 HARDWARE SCHEDULE

A. Submit required Hardware Schedule per Article 1.8 of this Section.

B. Change-out all temporary construction key cylinders once the locked space has been finished, and all construction work has been completed and accepted by the Owner and the Architect.

4.0 HARDWARE SETS:

A. The following schedule is furnished for whatever assistance it may afford the Contractor; do not consider it as entirely inclusive. Should any particular door or item be omitted in any scheduled hardware group, provide door or item with hardware same as required for similar purposes. Quantities listed are for each pair of doors or for each single door. The Contractor shall verify the function, operation, and compatibility of all electrified hardware with the Owner's security access control and the fire alarm systems.

B. Manufacturer index:

ACC = Accurate Lock	SCH = Schlage Lock
FRA = Frascio International	STA = Stanley
FSB = FSB USA	VON = Von Duprin
GLY= Glynn-Johnson	ZER = Zero International
IVE = Ives	LAR = Length As Required
LCN = LCN Closers	LDW = Less Door Width
PEM = Pemko	SDC = Security Door Controls
RIX = Rixson	
B/O = By Door Manufacturer	

* NOTE: All levers to be antimicrobial "AM"

END OF SECTION 08710

SECTION 08800 – INTERIOR GLAZING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes interior glazing for the following products and applications, including those specified in other Sections where glazing requirements are specified by reference to this Section:

1. Doors with glazing where scheduled or shown.

B. Related Sections:

1. Division 8 Section "Aluminum Entrances, Window Walls and Exterior Glazing" for exterior glazing.

1.3 DEFINITIONS

A. Glass Manufacturers: Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.

B. Glass Thicknesses: Indicated by thickness designations in millimeters according to ASTM C 1036.

1.4 ACTION SUBMITTALS

A. Product Data: For each glass product and glazing material indicated.

B. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.

1.1 INFORMATIONAL SUBMITTALS

A. Product Certificates: For glass and glazing products, from manufacturer.

1.2 QUALITY ASSURANCE

A. Source Limitations for Glazing Accessories: Obtain from single source from single manufacturer for each product and installation method.

B. Safety Glazing Labeling: Where safety glazing labeling is indicated, permanently mark glazing with certification label of the SGCC or another certification agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.

C. Fire-Protection-Rated Glazing Labeling: Permanently mark fire-protection-rated glazing with certification label of a testing agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, test standard, whether glazing is for use in fire doors or other openings, whether or not glazing passes hose-stream test, whether or not glazing has a temperature rise rating of 450 deg F, and the fire-resistance rating in minutes.

1.3 DELIVERY, STORAGE, AND HANDLING

A. Protect glazing materials according to manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.

B. Comply with insulating-glass manufacturer's written recommendations for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

1.4 PROJECT CONDITIONS

A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.

1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or below 40 deg F.

1.5 WARRANTY

A. Manufacturer's Special Warranty for Coated-Glass Products: Manufacturer's standard form in which coated-glass manufacturer agrees to replace coated-glass units that deteriorate within specified warranty period. Deterioration of coated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in coating.

1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 GLASS PRODUCTS, GENERAL

A. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass lites in thicknesses as needed to comply with requirements indicated.

B. Strength: Where float glass is indicated, provide annealed float glass, fully tempered, Kind FT heat-treated float glass.

C. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:

1. For monolithic-glass lites, properties are based on units with lites 6.0 mm thick.
2. Visible Reflectance: Center-of-glazing values, according to NFRC 300.

2.2 GLASS PRODUCTS

A. Heat-Treated Float Glass: ASTM C 1048; Type I; Quality-Q3; Class I (clear) unless otherwise indicated; of kind and condition indicated.

1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
2. For uncoated glass, comply with requirements for Condition A.
3. For coated vision glass, comply with requirements for Condition C (other coated glass).

B. Tempered Patterned Glass: ASTM C 1048, Kind FT (fully tempered), Type II, Class 1 (clear), Form 3; Quality-Q6, Finish F1 (patterned one side).

1. Basis-of-Design Product: Subject to compliance with requirements, provide pattern, frosted, or fluted glass as scheduled or comparable product by one of the following:

a. Guardian Industries
b. Pilkington Glass
c. PPG Industries

2.3 FIRE-PROTECTION-RATED GLAZING

A. Fire-Protection-Rated Glazing, General: Listed and labeled by a testing agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing according to NFPA 252 for door assemblies and NFPA 257 for window assemblies.

2.4 GLAZING GASKETS

A. Soft Compression Gaskets: Extruded or molded, closed-cell, integral-skinned neoprene, EPDM or silicone gaskets complying with ASTM C 509, Type II, black; of profile and hardness required to maintain watertight seal.

1. Application: Use where soft compression gaskets will be compressed by inserting dense compression gaskets on opposite side of glazing or pressure applied by means of pressure-glazing stops on opposite side of glazing.

B. Lock-Strip Gaskets: Neoprene extrusions in size and shape indicated, fabricated into frames with molded corner units and zipper lock-strips, complying with ASTM C 542, black.

2.5 GLAZING SEALANTS

A. General:

1. Compatibility: Provide glazing sealants that are compatible with one another and with other materials they will contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
2. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
3. Colors of Exposed Glazing Sealants: As selected by Architect from manufacturer's full range.

B. Glazing Sealant: Acid-curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 25, Use NT.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Dow Corning Corporation; 999-A.
b. GE Advanced Materials - Silicones; Contractors SCS1000 Construction SCS1200.
c. Tremco Incorporated; Proglaze Tremsil 200.
d. BASF Building Systems; OmniPlus.

C. Glazing Sealants for Fire-Rated Glazing Products: Products that are approved by testing agencies that listed and labeled fire-resistant glazing products with which they are used for applications and fire-protection ratings indicated.

2.6 MISCELLANEOUS GLAZING MATERIALS

A. General: Provide products of material, size, and shape complying with referenced glazing standard, requirements of manufacturers of glass and other

glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.

B. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.

C. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.

D. Spacers: Elastomeric blocks or continuous extrusions of hardness required by glass manufacturer to maintain glass lites in place for installation indicated.

E. Edge Blocks: Elastomeric material of hardness needed to limit glass lateral movement (side walking).

F. Cylindrical Glazing Sealant Backing: ASTM C 1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.

G. Perimeter Insulation for Fire-Resistive Glazing: Product that is approved by testing agency that listed and labeled fire-resistant glazing product with which it is used for application and fire-protection rating indicated.

2.7 FABRICATION OF GLAZING UNITS

A. Fabricate glazing units in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.

B. Clean-cut or flat-grind vertical edges of butt-glazed monolithic lites to produce square edges with slight chamfers at junctions of edges and faces.

C. Grind smooth and polish exposed glass edges and corners.

2.8 MONOLITHIC-GLASS TYPES

A. Refer to door schedule for glass type, pattern, rating, and clear glass. All glass in doors and side lights adjacent to doors shall be tempered glass.

B. Glass Type GL-CLR: Clear fully tempered float glass (where scheduled or shown on the drawings).

1. Thickness: 6.0 mm.
2. Provide safety glazing labeling.

C. Glass Type GL-Plate Fluted – Shall be Tempered patterned glass, where shown or scheduled.

2.9 FIRE-PROTECTION-RATED GLAZING TYPES AT RATED DOORS

A. Glass Type GL-FG: 20-minute coordinated with the rating of the wall or door installed and fire-rated glazing with 450 deg F temperature rise limitation; laminated glass with intumescent interlayers at fire rated doors with ratings or located within rated walls.

1. Provide safety glazing labeling.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine framing, glazing channels, and stops, with Installer present, for compliance with the following:

1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
2. Presence and functioning of weep systems.
3. Minimum required face and edge clearances.
4. Effective sealing between joints of glass-framing members.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.

B. Examine glazing units to locate interior surfaces. Label or mark units as needed so that exterior and interior surfaces are readily identifiable. Do not use materials that will leave visible marks in the completed work.

3.3 GLAZING, GENERAL

A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.

B. Adjust glazing channel dimensions as required by Project conditions during installation to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

C. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when

installed, could weaken glass and impair performance and appearance.

D. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.

E. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.

F. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.

G. Provide spacers for glass lites where length plus width is larger than 50 inches.

1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
2. Provide 1/8-inch minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.

H. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.

I. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.

J. Set glass lites with proper orientation so that coatings face exterior or interior as specified.

K. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.

L. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended by gasket manufacturer.

3.4 GASKET GLAZING (DRY)

A. Cut compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.

B. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.

C. Installation with Drive-in Wedge Gaskets: Center glass lites in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.

D. Installation with Pressure-Glazing Stops: Center glass lites in openings on setting blocks and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.

E. Install gaskets so they protrude past face of glazing stops.

3.5 SEALANT GLAZING (WET)

A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.

B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.

C. Tool exposed surfaces of sealants to provide a substantial wash away from glass.

3.6 LOCK-STRIP GASKET GLAZING

A. Comply with ASTM C 716 and gasket manufacturer's written instructions. Provide supplementary wet seal and weep system unless otherwise indicated.

3.7 CLEANING AND PROTECTION

A. Protect glass from contact with contaminating substances resulting from construction operations. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended in writing by glass manufacturer.

B. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains; remove as recommended in writing by glass manufacturer.

C. Remove and replace glass that is broken, chipped, cracked, or abraded or that is damaged from natural causes, accidents, and vandalism, during construction period.

D. Wash glass on both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

END OF SECTION 08800

SECTION 08905 – ALUMINUM ENTRANCES, WINDOW WALLS AND EXTERIOR GLAZING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Description of the Work:

1. Furnishing and installation of aluminum-framed entrances, exterior aluminum windows and/or window walls and exterior glazing for the conditions outlined by the Drawings or requirements of the specifications.

2. Provide labor, materials, equipment and related items as shown on Drawings and as specified. Provide items not specifically mentioned but necessary to complete the work, including, but not limited to:

a. Anchorage to building structure, including the bracing to the primary building structure where required to provide support for forces imposed by work of this section, furnishing of embeds (where required) for installation by General Contractor based on the layout drawing furnished by the glass and glazing Installer/subcontractor.

b. Special fabrication and reinforcing of segmented framing, sills and sub-sill flashing, where shown or required.

d. Sealants within work of this section and at boundaries with work of other sections.

e. All products proposed for the project shall have a Notice of Acceptance (NOA) certification, or FBC product approval approved by the State of Florida, in accordance with the local AHJ-Authority Having Jurisdiction requirements. Furnish complete NOA (or FBC product approval) certification package with Test Reports with preliminary proposal. NOA's (or FBC product approval) certifications will be required for all windows and storefront elements shown on the Drawings prior to approval for fabrication.

f. Glass visual mock-ups.

g. Field quality control tests.

1.3 RELATED SECTIONS

A. Coordinate work of this Section with work of other Sections as required to properly execute the work and as necessary to maintain satisfactory progress of the work of other Sections, including:

1. Division 3 Section “Cast-In-Place Concrete.”

2. Division 4 Section “Unit Masonry Assemblies.”

2. Division 7 Section “Caulking and Sealants.”

3. Division 8 Section “Sliding Automatic Entrance Doors.”

4. Division 8 Section “Interior Glazing.”

5. Division 9 Section “Gypsum Board Assemblies.”

12. Florida Building Code - Current Edition in effect - Test Protocols for High Velocity Hurricane Zones

13. Comply with the Florida Building Code –Current Edition in effect, NFPA 101 - Current Edition in effect and Florida Accessibility Code - Current Edition and or where required by this Section, exceed the Code. Nothing in this Section shall be construed as allowing or requiring noncompliance with Code.

14. Insulating glass certification council (IGCC) CBA.

1.5 SUBMITTALS

A. Submit drawings and product data under provisions of Section 01300 and as further described in this section.

B. **Preliminary Submittal:** Submittals for information only, shall be as described below. Upon request, promptly submit additional information and clarification of intent.

1. Submit paint manufacturer's approval of paint applicator, as required for warranty.

2. Complete NOA (or FBC product approval) certifications including fastener requirements and technical data provided or required for window system approval by State of Florida, for all assemblies indicated or shown on the Drawings.

3. Proposed paint manufacturer's warranty for coating system.

4. Sealant system technical data sheet proposed for the project.

5. Provide written statement of full compliance with the Drawings and Specifications. If deviations are proposed, provide an itemized list of specification and architectural drawing requirements which are not embodied in contract, or intended contract, for work of this section. Identify specification

page and paragraph, or architectural drawing sheet, elevation, plan, section or detail for each item. Deviations not specifically identified shall not be deemed valid in submittal review. Failure to provide either a statement of full compliance or an itemized list of deviations shall, at reviewers' discretion, shall be cause for return of preliminary submittals without review. Where NOA (Notice of Approval) lists more than one option, indicate clearly on the preliminary submittal which option is proposed for use on the project.

6. Written certification from the glass and aluminum manufactures that materials that are being provided are manufactured and fabricated domestically, within the United States.

D. **Shop Drawing Submittals:** Submittals for approval, submittals shall be complete and in required form. Resubmittals shall include requested corrections and shall respond to previous comments. Each revised sheet shall bear a revision date and number. Revisions shall be flagged with conspicuous revision symbols and numbers. Failure of submittals to be complete, in the proper form, responsive to comments, or identify revisions shall be cause for disapproval and return of documents without review. Failure of review comments to note a noncompliance with plans and specifications shall not relieve the Contractor from his obligation to comply.

1. Failure of review comments to note a noncompliance on a given submittal shall not preclude a directive to comply on future submittals. A maximum of two reviews will be performed without additional cost to the Contractor. If a submittal does not achieve an approved status by the second submittal, cost of additional reviews by Architect and Consultant shall be borne by Contractor

2. Submit drawings showing materials in place on building. Drawings shall include elevations, floor plans, sections and full size details. Details shall be fully drawn (not outlined). Drawings shall include the following information.

   a. Identify those products which, by Code, are subject to “impact” testing requirements or are required to have Product-Notice of Approval. and/or Product Label.

   b. Joinery and internal seals (details showing sill flashing, head receptors, sill and mullion intersections with details of sealing) as required for special conditions of window wall assembly.

   c. Identify products (by name and manufacturer) and provide details for any required thermal insulation and/or safing insulation.

   d. Metal alloy, temper, thickness, and finish.

   e. Glass thickness, strength, tint, and coating.

   f. Fastener alloy, strength, plating, diameter, length and spacing.

   g. Glazing materials identification

h. Sealant identification by product name.

i. Dimensions of the window wall assembly, relative to the layout of adjoining walls, beams, columns and slabs.

j. Dimensioned position of glass edge relative to metal daylight.

k. Provisions for movements and for internal reinforcement, where required

l. Locations of, and details for, embedded anchors

m. Location, manufacturer's part #, and samples or manufacturer's cut sheets for all hardware, thresholds and locking devices.

n. Weld information and weld symbols conforming to AWS conventions.

o. Glazing details applicable to replacement glass, with outline of procedure for glass replacement, to be provided as part of closeout documents.

p. Anchor details, showing provisions for adjustment of anchors to accommodate specified building structure tolerances..

q. Sample of coating manufacture’s specific project warranty certification and approval of applicator.

3. Submit glass manufacture's wind pressure analysis, thermal stress analysis, and manufacture's written review of shop drawings stating that details including glass products are suitable for the proposed use, including Code required “impact” resistance, glass bite, support clearances, air circulation on interior and consideration of the effects of exterior shading

4. Submit sealant manufacture's test reports confirming sealant adhesion, compatibility and absence of staining of adjacent materials. Submit application and quality control procedures for sealants.

5. Submit laboratory test reports for thermal tests performed in accordance with AAMA 1503.

6. When NOA (or FBC product approval) certifications are not available for a window assembly as a part of the preliminary submittal requirements outlined in this specification, or NOA (or FBC product approval) certification testing is in progress and not yet complete submit structural calculations to demonstrate that the assembly shall ultimately comply with FBC / and NOA requirements, prior to fabrication. Submit structural calculations prepared by a State of Florida licensed Structural Engineer in conformance with referenced documents and this section. Calculations shall be legible and shall incorporate sufficient cross references to shop drawings to make calculations understandable and readily reviewable. These structural calculations shall not waive the FBC requirements to provide product testing and NOA compliant

assemblies scheduled to be installed. **THE MANUFACTURER SHALL BE SOLELY RESPONSIBLE FOR ENSURING THAT THE WINDOW ASSEMBLIES MEET OR EXCEED THE FBC-NOA** (or FBC product approval) **COMPLIANCE PRODUCT REQUIREMENTS, IF FABRICATION IS INITIATED PRIOR TO NOA** (or FBC product approval) **TESTING IS COMPLETED.** Test reports are not an acceptable substitute for calculations. Calculations shall include:

a. Analysis of framing members, including provisions for thermal and building movements.

b. Analysis of anchors, including anchors embedded in concrete

c. Section property computations for framing members

d. Seal and signature of professional engineer registered in the state of Florida, with certification of compliance with specified performance criteria.

7. Submit record drawings as part of contract close-out documents, showing all changes made during construction.

8. Submit written certification from the installing contractor that hardware and door operating pressures comply with FBC accessibility code requirements for door operation.

E. Samples:

1. Submit for approval four (4) sets of labeled samples of each type and color of metal finish, on 12 inch long sections of extrusion shapes and 12 inch squares of sheet metal. Samples shall show extremes of color and texture variation. Samples will be reviewed by the Architect for color and texture only. Compliance with other requirements is the responsibility of the Contractor.

2. Submit for approval four (4) sets of labeled 12 inch square samples of each type of glass. Provide, at project, site visual mock-up using full size glass, for evaluation of color range and distortion of reflected image.

1.6 QUALIFICATIONS

A. Aluminum Fabricator: Company specializing in fabrication of architectural aluminum extrusions and sheet with satisfactory completion of similar work and of adequate financial responsibility. Engineer providing structural design shall be licensed in the State the work is to be completed and have experience designing architectural aluminum.

B. Glass Supplier and Fabricator: Company specializing in manufacture of flat glass and fabrication of architectural glass.

C. Gasket Supplier: Company specializing in manufacture of products specified in this section.

D. Sealant Supplier: Company specializing in manufacture of products specified in this section.

E. Installer: Company specializing in performing work of this section.

1.7 DESIGN REQUIREMENTS

A. Contract Documents define design intent and performance requirements. Details show intended relationships and preferred profiles. Contractor shall develop and provide final design details and shall be fully responsible for the conformance of the installed work to the design criteria herein.

B. Unless otherwise defined by Contract Documents, appearance of exposed elements, including width and depth, shall be consistent throughout the project for similar or like window opening conditions and/or configurations.

C. Unless otherwise defined by Contract Documents, overall thickness of each glass type, and component thickness of multiple layer glass types, shall be consistent throughout the project for similar or like conditions.

. D. Provide anchor adjustment capability for full range of specified tolerances for building structure, but not less than one inch in all directions, or dimensional requirements to accommodate construction tolerances of concrete and masonry openings in accordance with the Specifications.

E. Design wind pressures shall be in compliance with Authority Having Jurisdiction wind pressure maps, FBC, and the Structural Drawings. Block diagrams are shown on the Structural Drawings.

F. Wind pressures act perpendicular to flat surfaces, regardless of surface orientation. Wind pressures act perpendicular to tangents of curved surfaces. At corners and other changes in plane, either the inward pressure or the outward pressure shall be assumed to affect the two adjoining surfaces simultaneously. Design for simultaneous occurrence of inward pressure on one surface and outward pressure on adjoining surface is not required.

G. Structural elements of the work shall meet the requirements of applicable state and local codes and the requirements of rule 16B33.007 of the Department of Environmental Protection, State of Florida.

H. Structural Design Method:

1. Structural engineering, where required, shall be completed by a licensed Engineer, registered in the State of Florida, and calculations shall be completed in accordance with standard engineering practices, consistent with the requirements of the Florida Building Code (FBC) and FBC-NOA (or FBC product approval) certification.

I. Framing Members:

1. Glass, sealants and interior finishes shall not be assumed to contribute to framing member strength, stiffness or lateral stability.

2. Compression flanges of flexural members may be assumed to receive effective lateral bracing only from (a) anchors to building structure and (b) horizontal glazing rails or interior trim which contact the compression flange. Points of contra-flexure shall not be regarded as lateral braces or as end points of an unbraced length; unbraced length shall be the distance between effective lateral braces.

3. Where a framing member reaction is resisted by a continuous element, maximum assumed effective length of resisting element shall be four times the bearing length, but not more than one foot.

4. Splice joints permitting movement shall be assumed to have zero moment capacity.

5. Where a framing member runs continuously past a deflecting support, combined deflection of member and support shall not exceed specified limits.

6. Thermal breaks are not required and, if provided, shall be assumed to have no ability to transfer shear stress for composite action of flexural members (elements joined by a thermal break shall be assumed to act separately).

J. Fasteners

1. General Requirements

a. Quantity, spacing and length of fasteners shall be designed and engineered by the window wall manufacturer for specific jamb, head and sill conditions consistent with the NOA certification, approved by the State of Florida, and wind loading criteria as shown on the structural drawings.

b. Tension shall be taken as sum of direct tension plus tension due to prying.

c. Penetrations of a shim stack with total thickness "t" by a fastener with nominal diameter "d" shall require reductions in allowable tension and shear forces. Minimum reduction shall be zero percent for t=d, varying linearly to 100 percent for t=2d. Such reduction shall be in addition to any other reductions which may be applicable. An acceptable alternative method is to assume that shims provide no resistance to fastener bending, compute fastener bending stress with cross sectional properties based on root diameter, add bending stress to tension stress, and evaluate tension/shear interaction. Allowable stress for bending shall be the same as allowable stress for tension per standard engineering analysis or by an FBC approved NOA certification.

d. Unless otherwise specified, combined tension and shear shall be evaluated according to an interaction formula in which each term equals the square of actual force divided by the square of allowable force. Sum of terms shall not exceed 1.0.

2. Allowable stresses for aluminum fasteners shall comply with Aluminum Design Manual.

K. Glass:

1. Wind pressure shall be treated as short duration load and gravity loads shall be treated as long term load, as defined by ASTM E 1300.

2. Probability of breakage upon first application of design pressures shall not exceed 8/1000 for vertical glass, and 1/1000 for sloped and horizontal glass. Glass strength and size shall conform to code and ASTM E 1300.

3. Provide heat treated glass where annealed glass would be vulnerable to thermal breakage.

4. Spandrel glass units where shown or indicated on the Drawings to comply with adjacent glazing criteria. Color and tint to match adjacent glazing; tint color shall be bronze or color as selected by the Architect from full range of glass colors. Spandrel glasss will not be an acceptable substitute for frosted glass, where shown or required by the contract documents.

L. System shall be designed to support its own weight in combination with other specified pressures and loads.

M. Movements:

1. Provide movable joints (specific and defined provisions acceptable to the Architect), where required, to accommodate all specified building movements, as well as manufacturing tolerance, field tolerance, irregularities in adjacent surfaces, thermal movement, wind sway, floor sag, beam sag and column shortening. Except where otherwise specifically defined by the Structural Engineer, the design allowance for differential beam and/or floor edge sag, live load floor deflection and creep shall be not less than 0.5 inch.

   The manufacturer shall confirm with the Building Structural Engineer the live load deflection criteria, before submitting the shop drawings for approval.

2. Theoretical and as-built glass bite relative to metal frame shall not be less than 0.375 inch and theoretical and as-built glass edge clearance to nearest metal shall not be less than 0.25 inch. Provide minimum 3/16 inch face clearance (glass-to-metal).

3. Thermal component of joint movement shall be based on minimum material temperature increase of 100 degrees F and decrease of 60 degrees F relative to nominal condition. Assume entire cross section has uniform temperature.

Design summer surface temperature is 180 degrees F. All components including adhesives and sealants shall be capable of withstanding without failure design temperatures with simultaneous specified loads.

4. At any floor, in-plane displacement shall be assumed to occur while floors immediately above and below remain stationary. There shall be no failure or gross permanent distortion of anchors, frames, glass, or stone; gaskets and weatherstrips shall not disengage; weather seals shall not fail.

N. Systems which rely upon a single line of defense against water infiltration are not acceptable. Provide integral or secondary gutters and weep systems inboard of the primary line of weather-seal to collect and drain water leakage to the exterior. Window walls, and windows which are internally drained to the sill utilizing integral weeping sill, shall have continuous (permanently spliced and sealed) sill flashing gutters with water-tight, fully sealed (from front to back) to the adjacent building structure at all terminal conditions (or provided with fully sealed metal end caps) and shall have a head rail which collects and contains infiltration at each glazed opening, drained, either directly to exterior or, in a contained and concealed manner, within the system to the flashed and externally drained sill gutter.

Segmented (curved in plan) areas of the work require specific attention to assure both adequate provision for the specified movements and long term provision for the water-tight performance of the segmented wall mullions, heads, sills and their splice details.

Glazing details shall permit glass replacement after initial construction, shall permit reuse of original gaskets, shall permit replacement glass of same nominal size as original glass, and shall not require cutting of framing members or removal of interior finishes.

O. Vision glass exterior, and spandrel glass shall be replaceable from the exterior.

P. Snap engaged or slide on components shall be mechanically secured against migration. Snap engaged components shall not serve any primary structural function, such as retention of glass or panels. Snap engaged plastic components are not permitted, except as nonstructural thermal improvement for interior trim. Joints in continuous snap covers and other continuous trim shall have splice sleeves of same material and finish as cover or trim and the locations of all such joints shall be clearly shown on the shop drawings.

1.8 PERFORMANCE REQUIREMENTS

A. Structural Criteria:

1. At pressures and loads from zero to 150 percent of design values:

a. Framing member residual deflection after pressure or load is removed shall not exceed 1/1000 times distance between supports or 2/1000 times cantilever length.

b. At anchors, framing member deflection relative to building structure shall not exceed 0.187 inch, nor 0.125 inch after pressure or load is removed.

c. Upon reversal of pressure or load direction, relative movement between two components that are fastened or clamped together shall not exceed 0.187 inch.

d. There shall be no disengagement, failure or significant permanent distortion of any component, including glass and gaskets.

2. At 100 percent of design pressures and loads :

a. Unless otherwise stated by code, net deflection perpendicular to enclosure surface for framing members supporting glass or metal panels shall not exceed: L/180 pursuant to Florida Building Code.

b. Net deflection of framing members parallel to enclosure surface shall not exceed smallest of: 0.125 inch due to dead load; 0.125 inch change in opening size at any point; 1/360 times distance between supports, not to exceed 0.375 inch.

c. Net deflection parallel and perpendicular to enclosure surface for framing members at perimeter sealant joints shall not exceed smallest of values specified above; 50 percent of joint width; movement capacity of sealant.

d. Where applicable, metal panel center deflection shall not exceed 1/100 of the shorter panel dimension.

B. Sealants used as weather seals shall not experience adhesive or cohesive failure. Sealants shall withstand movements up to the limits prescribed by manufacturers. Exposed sealant surface shall not crack or bubble. Sealant and primers shall not stain adjacent materials. Sealants shall be used only if manufacturers' adhesion, compatibility and stain tests yield favorable results. Sealants shall not be placed against edge of laminated glass interlayer

C. Glass:

1. Glass shall not experience spontaneous breakage.

2. Glass coating shall not crack, peel, stain or discolor.

3. Glass center deflection relative to supported glass edges at 50 percent of specified design pressures shall not exceed one inch. Glass deflection at 1.5 times design pressures shall be limited to prevent disengagement from frame, unless the deflection criteria may be reduced by FBC approved NOA (or FBC product approval) certification of the assembly.

4. Laminated glass shall not delaminate, stain or discolor.

5. Glass shall comply with all window wall assembly NOA certification and

FBC requirements.

D. Snap engaged components shall not disengage when subjected to a concentrated force of 10 pounds or during mock-up structural tests.

E. Window Systems

1. U factor < 0.45; SHGC <= 0.25.

1.9 PRODUCT TESTING

A. At all exterior building envelope conditions, as mandated by Florida Building Code, pay all costs and make all necessary arrangements for Small and/or Large Missile Impact Testing, related detailing, testing, or other actions as may be required to obtain current Product Approval for NOA (or FBC product approval) certification, as required and approved by the State of Florida, and/or Product Labeling from the agencies having authority.

1. Submit complete documentation verifying current Product- Notice of Approval (NOA) (or FBC product approval) certification, for all such products proposed for use on this building.

B. Refer to Part 3 of this specification for requirements for field testing of the assembly. Payment for labor and materials shall not exceed the limitations outlined in division one, unless quality assurance testing has been satisfactorily completed, at the time payment request is submitted.

C. Glass Visual Mock-ups:

1. Prior to ordering glass, the Contractor shall provide, glass samples a minimum of 12 inch x 12 inch. Provide production thickness, tint, coating and heat treatment.

2. Owner and Architect shall inspect glass samples for acceptability, as evidenced by color, color consistency, match and appearance of reflected image. If acceptable, glass samples shall be retained as an acceptance standard for production material. If not acceptable, provide additional samples for inspection until acceptable color and appearance is obtained

1.10 DELIVERY, STORAGE, AND HANDLING

A. Deliver fabricated units and component parts to project site completely identified in accordance with erection diagrams prepared by this contractor.

B. Store materials in accordance with manufacturer's instruction, above grade on dunnage, properly protected from the weather and construction activities and so located as to facilitate access to, and handling of, all materials, and in accordance

with Section 01600 – Materials and Equipment and Section 01620 – Storage and Protection.

C. Replace all damaged materials.

1.11 SEQUENCING

A. Coordinate with requirements of material and personnel hoists. Defer installation at obstructed areas, and install materials when obstructions are removed.

1.12 WARRANTY

A. Provide written warranty agreeing to repair or replace defective materials and workmanship during warranty period. Defective materials and workmanship include, but are not limited to:

1. Abnormal deterioration, aging or weathering.

2. Water leakage.

3. Air leakage exceeding specified limits.

4. Failure of operating parts to function normally.

5. Structural failure.

6. Sealant loss of adhesion, loss of cohesion, cracking or discoloration.

7. Disengagement of gaskets, weatherstrips, trim or other accessories

8. Deterioration or discoloration of aluminum finish.

9. Glass breakage including: secondary breakage caused by falling glass; spontaneous breakage of heat treated glass.

10. Delamination or discoloration of laminated glass.

11. Loss of glass bite due to shifting of glass.

12. Loss of glass bearing on setting blocks due to shifting of glass and/or blocks.

B. Warranty does not include damage caused by vandalism, or by natural conditions exceeding the performance requirements. Warranty and its enforcement shall not deprive Owner of other action, right or remedy.

C. Warranty period for entire system shall be three (3) years from date of substantial completion, unless otherwise noted; i.e. paint finish warranty. System warranty includes materials and labor.

D. Certain materials are required to have special warranties. Special warranties shall not limit or reduce requirements of system warranty. Special warranties may originate, in part or in whole, with manufacturers or fabricators and pass through Contractor to Owner. Warranties as written or interpreted by manufacturers or fabricators shall not limit or reduce special warranty requirements of this specification.

1. Painted finish on aluminum which cracks, peels, fades in excess of specified limits or chalks in excess of specified limits shall be replaced at no charge (material and labor) for minimum ten (10) year period beginning on date of manufacture. Coating manufacture shall provide written confirmation of applicator approval prior to initiation of fabrication.

2. The paint manufacturer shall provide written approval of the paint applicator and ten (10) year warranty; prior to initiation of any fabrication work.

3. Laminated glass which delaminates shall be replaced at no charge (materials and labor) for a minimum five (5) year period beginning on date of manufacture.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Steel:

1. Hot rolled shapes and plates shall conform to ASTM A 36.

2. Tubing shall conform to ASTM A 500 or A 501.

3. Stainless steel bars and sheet shall be AISI Type 302 or 304 and/or consistent with an FBC approved NOA (or FBC product approval) certification. Minimum thickness is: 0.062 inch for frames; 0.031 inch for trim covers; 0.012 inch for concealed flashing.

4. Non tubular cold formed carbon steel with thickness 0.168 inch or less shall conform to ASTM A 653.

B. Aluminum:

1. Acceptable alloy and temper combinations for extrusions subject to fabrication, finish and structural requirements are: 6063-T5; 6063-T6; 6061-T6. Other alloys of the 6xxx series and other tempers may be submitted for approval. Nominal wall thickness of 0.125 inch or greater is acceptable for structural extrusions; wall thickness less than 0.125 inch may be acceptable and is subject to approval. Minimum nominal wall thickness for nonstructural interior trim shall be 0.062 inch.

2. Acceptable alloy and temper combinations for sheet and plate subject to fabrication, finish and structural requirements are: 3003-H14; 5005-H14.

Other alloys of the 3xxx, 5xxx and 6xxx series and other tempers may be submitted for approval. Minimum nominal thickness is 0.04 inch for flashings and 0.125 inch for all other applications.

C. Glass:

1. For consistency of quality, appearance and performance throughout the work, glass materials shall be the product of a single manufacturer or fabricator for each kind or condition of product indicated, and shall be composed of primary glass from a single source.

2. Glass shall conform, as a minimum, to the following standards.

   a. Flat glass shall conform to ASTM C 1036, quality q3

   b. Heat-treated flat glass shall conform to ASTM C 1048, except that surface compression of heat strengthened glass shall be 3500 to 8500 PSI.

   c. Tempered and laminated glass shall conform to ANSI Z97.1.

   d. Laminated glass shall conform to ASTM C 1172.

3. Provide safety glass at the following locations.

   a. Doors.

   b. Fixed and operable glazing where nearest exposed edge of glazing is within a 24 inch arc of either vertical edge of the door in a closed position and where exposed bottom edge of glazing is less than 60 inches above walking surface.

   c. Fixed glazing and operable glazing with exposed area exceeding 9 square feet, with exposed bottom edge less than 18 inches above a walking surface, exposed top edge more than 36 inches above walking surface, with a walking surface within 36 inches horizontally of glazing; Safety glass is not required if there is a protective bar with minimum 1.5 inch width located between 34 and 38 inches above walking surface on accessible side of glazing, with bar capable of supporting a horizontal load of 50 pounds per linear foot without contacting glass.

   d. Additional locations required by code.

4. Provide heat strengthened glass where required by design pressures, anticipated thermal stress, or use in spandrel area. Provide fully tempered glass only where safety glass is mandatory or where design pressures exceed capacity of heat strengthened glass.

5. Glass Edge Quality:

   a. Annealed Face Glass:

(1) Shark teeth shall not penetrate more than half of glass thickness.

(2) Serration hackle shall not penetrate more than 10 percent of glass thickness.

(3) Flare shall not exceed 0.062 inch as measured perpendicular to glass surface across edge.

(4) Bevel shall not exceed 0.062 inch.

(5) Flake chip depth shall not exceed 0.031inch and length or diameter shall not exceed 0.25 inch.

(6) Rough chips are not permitted. Rough chips are those which exceed dimensional limits for flake chips.

b. Heat treated face glass shall have seamed edges, free from shark teeth, serration hackle, flare and chips.

6. Laminated glass shall consist of two layers of heat strengthened glass of equal thickness and DuPont Butacite or Solutia Saflex interlayer of thickness required, but not less than 0.060 inch nominal thickness.

7. In addition to conforming to ASTM C 1048, heat treated glass shall conform to the following flatness tolerances.

a. Bow and warp are defined as deviation of a glass surface from a true plane, with glass free-standing or installed in a frame and positioned in a vertical plane.

b. Localized bow refers to any straight line segment on a glass surface with length of 12 inches.

c. Overall bow refers to any straight line segment on a glass surface which extends between opposite edges and is perpendicular to at least one edge. Length of line segment is gage length.

d. Localized bow shall not exceed 0.0625 inch.

e. Overall bow shall not exceed: 0.041 inch per foot for gage length zero to 36 inches; 0.031 inch per foot for gage length 36 to 60 inches; one half of the values listed in ASTM C 1048, Table 2 for gage lengths exceeding 60 inches.

f. Where heat treating results in parallel ripples or waves, maximum peak-to-valley deviation shall not exceed 0.005 inch. Requirements for localized bow and overall bow shall also be satisfied. Direction of ripples shall be consistent throughout building and shall be parallel to the glass width edge.

g. Specified bow and ripple tolerances are intended as manufacturing quality control limits and are subject to acceptance of the glass visual mockup, if provided

h. During the manufacture and the fabrication of glass for this project, heat treated glass shall be subjected to those quality control measures recommended by the glass manufacturer to identify and to minimize inclusions within the glass which could result in spontaneous breakage. Inclusions causing spontaneous breakage are defined as material defects by this specification. Heat treated glass which experiences spontaneous breakage after installation shall be replaced (material and labor) under the provisions of the warranty for this project.

8. Insulating glass shall have double edge seals. Primary seal shall be extruded polyisobutylene continuously bonded to glass surface and to dessicant filled metal spacer, including corners. Minimum width of the primary seal shall be 0.125 inches. Secondary seal shall be silicone (GE/GS 3725 or Dow Corning 982). Secondary seal shall completely cover spacer without gaps or voids and shall be continuously bonded to both plates of glass. The insulating glass units shall have been tested in accordance with ASTM E774, and compliance with classes C, B and A shall be indicated by a permanent label (visible after installation) with a minimum height of 0.05 inches. All muffins shall be aluminum and internal to insulated glazing units; refer to drawings for muffin locations and patterns.

9. Glass types, except where otherwise mandated by Code, shall be as follows:

<u>Type #1</u> (Within 30 ft or less – of Grade)

At window walls, windows, and doors (where insulated glass is available for impact rated assemblies or other areas requiring Code - compliant large and small missile impact testing shall be glazed with, insulating laminated assemblies (of thickness required, but not less than 1-5/16 inch), made up of:

1/4 inch (minimum) match PPG Azuri at outer light, with Solarban 70XL on #2 surface
1/2 inch airspace
1/4 inch Clear H/S
.090 Interlayer per FPA/NOA
1/4 Inch Clear H/S

All lights to be heat strengthened (exterior monolithic light to be safety tempered, where code required)
(Provide 9/16” tempered laminated glass to match insulated glass at doors if insulated glass is not available for design wind loading).

D. Glazing System:

1. Window glazing system shall, at the option of the Contractor, be:

a. Option #1, a dense gasket against one face and a cellular gasket against the other glass face.

b. Option #2, a dense gasket against the interior glass face and a recessed compatible spacer with a continuous silicone cap seal against the exterior face.

2. At locations which are, by Code, subject to impact resistance criteria and testing, provide a continuous interior cap bead of silicone, or other method as may be approved, to assure the retention of glass within the framed opening.

3. All low “E” coatings shall adhere to glass surfaces in order to ensure that edge deletion does not occur for the life of the glass assembly.

4. All glass will be manufactured and fabricated domestically, unless written approval is given by the Owner and the Architect as part of the preliminary product approval.

E. Elastomeric Gaskets, Weatherstrips and Blocks:

1. Gaskets and weatherstrips:

a. Cellular gaskets shall be extruded black neoprene or EPDM with a hardness of 40 +/- 5 durometer Shore A and conforming to ASTM C509, flame propagation test not required. Design cellular gaskets to provide 20 to 35% compression.

b. Dense gaskets shall be black extrusions (neoprene, EPDM or silicone) with a Shore A hardness of 75 +/- 5 for hollow profiles and 60 +/- 5 for solid profiles, and conforming to ASTM C1115, Type C or to ASTM C 864.

c. Injection mold corners of all exterior gaskets unless shown to be incompatible with the installation procedures.

d. Gaskets shall be designed to produce glass edge pressure of 4 to 10 pounds per linear inch.

e. All gaskets shall be UV resistant.

2. Silicone gaskets and sheet, where used to absorb movements at framing expansion joints, shall conform to ASTM C 1115, Type T

3. Gaskets and weatherstrips shall have a continuous spline or a continuous groove engages a matching groove or leg on the aluminum frame

4. Setting Blocks:

   a. Setting blocks shall be dense extruded neoprene, silicone or EPDM with hardness of 85 +/- 5 durometer Shore A, minimum length of 4 inches and minimum width corresponding to glass thickness. Setting blocks shall be equidistant from glass centerline (location of setting blocks at quarter points is acceptable). Distance from vertical glass edge to nearest edge of setting block shall not be less than six inches (or 0.125 times glass width, whichever is greater). **PVC setting blocks will not be acceptable.**

   b. Shims used in conjunction with setting blocks shall be of the same material, hardness, length and width as the blocks.

   c. Setting blocks and chairs shall be secured against migration.

5. Side Blocks:

   a. Provide side blocks at both jambs, between mid-height and top corner of glass. Blocks shall be 55 +/- durometer Shore A dense neoprene, silicone or EPDM. Block width shall be 0.125 inch less than nominal glass edge clearance.

   b. Side blocks are not required where glass is continuously sealed with silicone at two or more edges

F. Anchors in Concrete and Masonry:

1. Anchors embedded in concrete and masonry shall be prime painted rolled steel, or hot dip galvanized cold formed steel.

2. Strength of embedded anchors shall be developed by integral projections, welded deformed bars, or headed studs.

3. At masonry, through bolts are acceptable provided that bearing plates are used at both masonry surfaces. Expansion bolts are acceptable provided they are designed for use in masonry.

4. Expansion bolts are acceptable at concrete.

5. Self drilling, self threading screws are not acceptable. Screws in plugs and powder actuated fasteners are not acceptable.

G. Fasteners:

1. Fastener requirements are applicable to screws, bolts, nuts, washers, rivets and pins.

2. Fasteners shall comply with FBC approved NOA certification and cut-sheets or documentation shall be provided to Architect.

3. Stainless steel fasteners (alloy type 302 or 304 only), or aluminum fasteners if acceptable to manufacturer, are required at the following locations, and are acceptable at all locations:

   a. Locations with exposure to outdoor air

   b. Joinery of aluminum frames, regardless of exposure

   c. Glazing pockets

   d. Internal cavities that act as gutters, or that may potentially contain water resulting from leakage or condensation

4. Carbon steel fasteners with zinc plating or cadmium plating are acceptable at other locations; with silicone sealant encapsulation at locations where fasteners will be subject to corrosion if primary sealant joint fails, and when approved in writing by the Architect and the Owner.

5. Provide lock washer or other locking device at all bolted connections.

6. Powder actuated fasteners are not acceptable.

H. Shims:

1. At connections subject to movement, separate moving surfaces with friction reducing pads. Pads shall have minimum 0.062 inch thickness, shall sufficiently reduce friction to permit movement, shall be resistant to wear, and shall be positively retained in position (open ended slots are not acceptable). Pads shall not be subjected to heat damage from welding or cutting, or to excessive pressure from overtightening of bolts.

2. Shims which transfer shear forces (tending to slide one shim against another) shall be steel plates, set in a staggered pattern and fillet welded to each other and to adjacent steel surfaces. Shims and welds shall be structurally designed to support applied loads.

3. Plastic shims are acceptable at static connections for which shims transfer only compressive forces.

4. Wood shims are not acceptable.

I. Weep hole filters shall be 20 to 45 pore per inch PVC coated open cell urethane foam.

J. Sealants:

1. Acceptable products (subject to tests) for seals to substrates other than stone are: Dow Corning 790, 795 and 995. A primary and secondary perimeter seal shall be provided at the jamb, head end sill of framed assemblies abutting masonry or concrete surfaces.

2. Data sheets for and samples of other sealants may be submitted for approval. Oil base sealants are not acceptable.

3. Sealant back-up materials shall be closed cell, non-gassing and non-absorptive. Acceptable materials include: polyethylene foam, urethane foam or extruded silicone as recommended by sealant manufacturer. Back-up shall not absorb water.

4. Coordinate with other sections to assure compatibility of intersecting sealants, and that porous or stone materials shall not be stained.

K. Primers:

1. Coat aluminum surfaces in contact with masonry, concrete or unpainted steel with prime paint (non-wetted only) or bituminous paint (wetted areas) where required.

2. Prime paint steel parts of anchors, embedded anchors, exposed reinforcement and supports. After field welding, remove weld slag and touch up primed surface.

3. Provide minimum dry film thickness of one mil for paint and 30 mils for bituminous paint. Prime paint shall conform to GSA specification TT-P-645. Bituminous paint shall conform to SSPC-Paint 12.

L. Product Source:

1. Solely for the purpose of designating type and quality for the work described in this section, drawing details and specifications are based upon the products of YKK AP America or approved equal. Upon written request and submission of preliminary submittal requirements, alternate products will be reviewed for acceptance by the Architect.

2. For consistency of quality, appearance and performance throughout the work on window walls, windows, and operating hardware shall be the product of a single manufacturer or fabricator for each kind or condition of product indicated.

M. Window Wall Framing:

1. Where required to comply with structural design criteria, aluminum framing shall be YKK AP 50FI Impact Resistant Storefront System with insulated glass or approved equal, including product(s) by Sun Metal Systems, PGT, Inc., EFCO Corporation; a Pella Company, fitted to receive glass types shown and specified. It shall be adapted to the adjacent building construction and shall be anchored and reinforced as required to withstand specified impact and design wind loads.

2. Segmented aluminum framing shall be YKK AP America YHS 50 FI or approved equal, including product(s) by Sun Metal Systems, PGT, Inc., EFCO Corporation; a Pella Company, or YKK AP America, modified to suit hardware and glazing conditions shown and shall be provided with full length spliced and sealed flashed sill, installed and sealed water-tight to the adjacent building structure prior to the installation of framing and glazing work and shall be anchored and reinforced as required to withstand specified design wind loads. All Fixed systems shall have FPA/NOA extruded sill pan.

N. Windows: Fixed windows shall be YKK AP America 50 FI (non-thermal) or approved equal, including product(s) by PGT, Inc., EFCO Corporation; a Pella Company.

1. Comply with Glazing System requirements

2. Required test specimen size is largest size for this project, not the size required by AAMA/NWDA 101/1.S.2.

3. Locks and strikes shall be type 302 or 304 stainless steel or white bronze. Provide, at a minimum, cam locks with handles and strikes per vent, in compliance with NOA certification and FBC approvals.

4. Vent frames shall be extruded tubular aluminum not less than 2 inches in depth. Tube perimeter shall be continuous aluminum and shall not be interrupted by a thermal break.

5. Weather strips shall have a continuous spline engaged in a continuous groove in the frame.

6. Balance arms shall be four-bar stainless steel type 302 or 304 with adjustable friction shoe. Provide two balance arms per vent.

7. Provide two limit stops per vent. Material shall be 302 or 304 stainless steel. Stops shall restrict clear opening to four inches and shall provide for deactivation by the Building Custodian to allow screen removal/installation

O. Entrance Doors: Glazed entrance doors for manual-swing operation shall be YKK AP American 50H Entrances or approved equal, including products by PGT, Inc., EFCO Corporation; a Pella Company.

1. Door Construction: Monumental; 2-1/4-inch overall thickness, with minimum 0.125-inch- thick, extruded-aluminum tubular rail and stile members. Mechanically fasten corners with reinforcing brackets that are deeply penetrated and fillet welded or that incorporate concealed tie rods.
2. Door Design: As indicated Wide stile; 5-inch nominal width.

a. Bottom Rail with weatherstrip; 10-inch nominal height.
b. Accessible Doors: Smooth surface for width of door in area within 10 inches above floor or ground plane.

3. Glazing Stops and Gaskets: Beveled, snap-on, extruded-aluminum stops and preformed gaskets.

    a. Provide nonremovable glazing stops on outside of door.

P. Entrance Door Hardware:

1. General: Provide entrance door hardware and entrance door hardware sets indicated in door and frame schedule for each entrance door to comply with requirements in this Section. The door hardware shall be provided in accordance with the manufacturer's Florida Product Approval testing criteria or provided with an Engineered Assessment Report per the Florida Building Code.

    a. Entrance Door Hardware Sets: Provide quantity, item, size, finish or color indicated.
    b. Sequence of Operation: Provide electrified door hardware function, sequence of operation, and interface with other building control systems indicated.
    c. Opening-Force Requirements:

        1) Egress Doors: Not more than 15 lbf to release the latch and not more than 30 lbf to set the door in motion and not more than 15 lbf to open the door to its minimum required width.
        2) Accessible Interior Doors: Not more than 5 lbf to fully open door.

2. Opening-Force Requirements:

    a. Latches and Exit Devices: Not more than 15 lbf required to release latch.

3. Panic Exit Devices: BHMA A156.3, Grade 1, listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for panic protection, based on testing according to UL 305, as specified in Division 8 Section "Door Hardware."
4. Cylinders: As specified in Division 8 Section "Door Hardware."
5. Strikes: Provide strike with black-plastic dust box for each latch or lock bolt; fabricated for aluminum framing. Electric Access controls with CVR's shall be provided at doors scheduled to be "secured" or electrically access controlled.
6. Weather Stripping: Manufacturer's standard replaceable components.

    a. Compression Type: Made of ASTM D 2000, molded neoprene, or ASTM D 2287, molded PVC.

7. Silencers: BHMA A 156.16, Grade 1.

Q. Accessory Materials:

1. Joint Sealants: For installation at perimeter of aluminum-framed systems, as specified in Division 7 "Caulking and Sealants."

2. Bituminous Paint: Cold-applied, asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos; formulated for 30-mil thickness per coat.

R. Concealed Flashing:

1. Acceptable materials are neoprene or silicone (type “T” only) sheet, stainless steel sheet and mill finish aluminum sheet. Minimum thickness for flashing is 0.062 inch for neoprene or silicone, 0.012 inch for stainless steel, and 0.040 inch for aluminum. Aluminum, where in contact with dissimilar materials, is required to have a bituminous coating.
2. Provide sealed interior glass stops, flashing adapters, and gutters with sealed lap joints, end dams and transitions or fully welded joints where required to assure control and drainage of infiltration to gutters.

2.2 FABRICATION

A. As far as practicable, fabrication, glazing and assembly shall be completed in the shop.

B. Exposed work shall be carefully matched to produce continuity of line and design. Joints in exposed work, unless otherwise shown or specified, shall be accurately fitted and rigidly secured. Remove burrs from cut edges. Ease corners and edges.

C. Except where otherwise shown, specified or directed, method of assembly and joining shall be at manufacturer's discretion as shown on the approved shop drawings.

D. Welding shall be in accordance with recommendations of the American Welding Society and shall be done with electrodes and by methods recommended by suppliers of alloys being welded. Welds behind finished surfaces shall be done as to minimize distortion and/or discoloration on finished side. Weld spatter and welding oxides on finished surfaces shall be removed by descaling and/or grinding.

E. Unless otherwise shown or specified, weld beads on exposed surfaces shall be ground and finished to match and blend with finish on adjacent metal. Grinding and polishing of nonferrous metal shall be done only with clean wheels and compounds free from iron and iron compounds. Soldering and/or brazing are not acceptable.

F. Provide exposed fasteners only where shown on approved shop drawings. Exposed fasteners shall be countersunk. Fastener heads shall be finished to match fastened material and shall be sealed or gasketed as required to prevent water entry.

G. Provide specified finishes on exposed surfaces. Provide specified galvanized finish on all concealed carbon steel parts or reinforcements potentially exposed to water infiltration.

H. Sealant work performed in the shop shall be done in strict conformance with the sealant manufacturer's written instructions. Excess sealant in visible areas shall be cleaned off immediately upon completion of assembly work and prior to shipment.

I. Aluminum-Framed Entrances:

1. Form or extrude aluminum shapes before finishing.
2. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld splatter and welding oxides from exposed surfaces by descaling or grinding.
3. Framing Members, General: Fabricate components that, when assembled, have the following characteristics:

    a. Profiles that are sharp, straight, and free of defects or deformations.
    b. Accurately fitted joints with ends coped or mitered.
    c. Means to drain water passing joints, condensation within framing members, and moisture migrating within the systems to exterior.
    d. Physical and thermal isolation of glazing from framing members.
    e. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
    f. Provisions for field replacement of glazing.
    g. Fasteners, anchors, and connection devices that are concealed from view to greatest extend possible.

4. Mechanically Glazed Framing Members: Fabricate for flush glazing without projecting stops.
5. Structural-Sealant-Glazed Framing Members: Include accommodations for using temporary support device to retain glazing in place while structural sealant cures.
6. Storefront Framing: Fabricate components for assembly using head-and-sill-receptor system with shear blocks at intermediate horizontal members.
7. Entrance Door Frames: Reinforce as required to support loads imposed by door operation and for installing entrance door hardware.

    a. At exterior doors, provide compression weather stripping at fixed stops.
    b. At interior doors, provide silencers at stops to prevent metal-to-metal contact. Install three silencers on strike jamb of single-door frames and two silencers on head of frames for pairs of doors.

8. Entrance Doors: Reinforce doors as required for installing entrance door hardware.

    a. At pairs of exterior doors, provide sliding-type weather stripping retained in adjustable strip and mortised into door edge.
    b. At exterior doors, provide weather sweeps applied to door bottoms.

9. Entrance Door Hardware Installation: Factory install entrance door hardware to the greatest extent possible. Cut, drill, and tap for factory-installed entrance door hardware before applying finishes.

10. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

J. Aluminum Sun Shades:

1. Basis of Design
   a. Curtain Wall System: YKK AP ThermaShade® Aluminum Sun Shade System, or Architect approved equal.
2. Sun Shade System:
   a. Description: All structural components and attachment hardware shall be concealed.
   b. Thermally improved anchor: Sunshade anchor must provide a continuous thermal barrier by means of a poured and debridged pocket consisting of a two-part, chemically curing high density polyurethane which is bonded to the aluminum. Anchors employing non-structural thermal barriers are not acceptable.
   c. Style: Wedge Outrigger with wedge fascia, with 6’ airfoils, with concealed anchors, 30-inch projection with internal subframe integral with the store front system.
3. **MATERIALS**
   a. Extrusions: ASTM B 221 (ASTM B 221M), 6063-T5 and 6063-T6 Aluminum Alloys.
4. Manufacturer’s Standard Accessories:
   a. Fasteners: AISI 300 series stainless steel fasteners.
5. Shop Assembly: Fabricate and assemble units with joints only at intersection of aluminum members with hairline joints; rigidly secured, in accordance with manufacturer’s recommendations.
6. Finish to Match Storefront

2.3 TOLERANCES

A. Tolerances in current edition of Aluminum Association "Aluminum Standards and Data" are applicable to finished, fabricated and assembled materials, except that flatness tolerance for aluminum sheet panels shall be half of standard sheet tolerance. Maintain stricter tolerances where required for proper fit of components.

2.4 ALUMINUM FINISH

A. General Requirements:

1. Exposed aluminum surfaces shall be finished with a factory oven cured finish. Paint shall be supplied by a licensed formulator.

2. Application of finish shall be performed under specifications issued by licensed formulator, by an applicator specifically approved by formulator.

3. Color shall be custom color to be adonized aluminum or “Bone White or” for frames and sun shades to match Owner's sample. Samples submitted for approval shall show extremes of color range.

3. Pretreatment of metal surfaces shall be done in accordance with procedures recommended by formulator.

5. Field touch-up of painted aluminum is permitted only with written permission from the Architect. Unless such touch-up is authorized, replace damaged material with new material.

B. Outdoor Surfaces:

1. Painted aluminum finish shall be an electrostatically applied high performance powder coating complying with AAMA 2605 and based on PPG's "Kynar" coating system or approved equal.

2. Pigmented organic coatings for extrusions, structural shapes, sheet or plate, spray applied in the factory, shall meet requirements of AAMA 2605.

3. Exterior exposed aluminum surfaces shall be finished with a factory oven cured three coat (minimum) finish based on Kynar 500 or Hylar 5000 fluoropolymer resin. Formulation shall have at least 70% Kynar 500 or Hylar 5000 resin in residual solids.

4. Pigmented organic coatings for extrusions, structural shapes, sheet or plate, spray applied in the factory, shall meet the requirements of AAMA 2605 for basis of design Kynar coating system.

5. Warranty:

a. Color changes shall not exceed 5E NBS units as defined by ASTM D 2244 for the specified special warranty period.
b. Chalking shall not exceed a number 8 rating as defined by ASTM D 4214.
c. Paint film shall not crack or peel during the specified special warranty period.
d. Coating manufacture shall provide written certification that the applicator is approved in order to provide a ten (10) year warranty for the coating.
e. Anodized Finishing shall be a minimum of AAMA 612, meeting warranty of 10 years

6. Adonized Finishing: Prepare aluminum surfaces for specified finish; apply shop finish in accordance with the following:

a. of AAMA 612. Aluminum extrusions shall be produced from quality controlled billets meeting AA-6063-T5.
b. Exposed Surfaces shall be free of scratches and other serious blemishes.
c. The anodized coating shall comply with all of the requirements of AAM 612: Voluntary Specifications, mortar, salt spray, and chemicals commonly found on construction sites, and to resist the loss of color and gloss.
d. Overall coating thickness for finishes shall be a minimum of 0.7 mils.

C. Indoor Surfaces:

1. Specified finish for outdoor surfaces is acceptable for indoor surfaces.

2. Where outdoor and indoor parts can be finished separately, factory oven cured acrylic or polyester paint is acceptable for indoor surfaces.

3. Acrylic and polyester pigmented organic coatings for extrusions, structural shapes, sheet or plate, spray applied in the factory, shall meet requirements of AAMA 2604.

2.5 STEEL FINISHES

A. Cold formed carbon steel with thickness 0.168 inch or less shall be hot dip galvanized to meet or exceed requirements of classification G 90 of ASTM A 653.

B. Cold formed carbon steel with thickness exceeding 0.168 inch and hot rolled steel shall be prime painted in accordance with GSA specification TT-P-645 or hot dip galvanized in conformance with ASTM A 123

C. Concealed carbon steel reinforcement potential exposed to water infiltration shall receive hot dip galvanized finish in conformance with ASTM A123.

D. After fabrication of painted steel, all cut ends and holes shall be degreased and prime painted. Galvanized finish shall be applied after fabrication.

2.6 SOURCE QUALITY CONTROL

A. Adhesion, Compatibility and Stain Tests

1. Provide to sealant manufacturers samples of all substrates which are in contact with sealant, regardless of whether adhesion must be achieved.

2. For substrates which must support adhesion, submit for record only sealant manufacturers' reports of adhesion tests conducted in accordance with ASTM C 794. Metal screen is an acceptable substitute for airplane cloth.

3. For substrates which are in contact with sealant, submit for record only sealant manufacturers' reports of compatibility tests for sealants and primers conducted in accordance with ASTM C 1087.

B. Inspect materials and workmanship to assure compliance with Contract Documents. Provide access to storage and manufacturing facilities for observation by Owner and Architect.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify, prior to start of work, that structure and site conditions are ready to receive work of this section. Establish offset lines and bench marks as required for this purpose and for installation.

1. Verify location, alignment and position of embed anchors installed by others.

2. Verify that concrete openings into which work by this contractor is to be installed are level, square and sized to allow this work to proceed in accordance with the approved drawings installation tolerances specified herein.

3. Notify the General Contractor in writing of any openings which do not comply with requirements specified below.

3.2 INSTALLATION

A. Install materials in accordance with approved drawings. Provide labor, material, equipment and supervision necessary for complete installation.

1. Glass installation shall comply with GANA (Glass Association of North America) “Glazing Manual” except as specifically recommended otherwise by the glass manufacturer.

2. All framing joints shall be accurately and securely fitted and properly sealed for a weather-tight installation. All cut and machined ends and recesses shall be true, accurate and free of burrs and rough edges.

B. Metal Protection:

1. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or applying sealant or tape, or by installing nonconductive spacers as recommended by manufacturer for this purpose.
2. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

C. Install components to drain water passing joints, condensation occurring within framing members, and moisture migrating within the system to exterior.

D. Set continuous sill members and flashing in full sealant bed as specified in Division 7 Section “Caulking and Sealants” to produce weathertight installation.

E. Install components plumb and true in alignment with established lines and grades, and without warp or rack.

F. Tolerances:

1. Provide anchor adjustment capability for full range of specified tolerances for building structure.

2. Work of this section shall be within the following tolerances.

a. Deviation from plumb, level or dimensioned angle shall not exceed 0.125 inch per 12 feet of length of any member, 0.25 inch in any total run in any line.

b. Deviation from theoretical position in plan or elevation, including deviation from plumb, level or dimensioned angle, shall not exceed 0.375 inch total at any location. Change in deviation shall not exceed 0.125 inch for any 12 foot run in any direction.

c. Maximum offset from true alignment between two consecutive members placed end to end shall not exceed 0.062 inch.

d. Maximum offset between glass framing members at corners of glazing pocket shall not exceed 0.031 inch.

G. Anchorage:

1. Anchor component parts by bolting and welding. Install slip pads between moving parts in accordance with FBC - NOA certification or manufacture's requirements.

2. Provide non-corrosive separators between dissimilar materials.

3. Perform field welding in accordance with AWS standards. Prepare surfaces as specified for shop welding. Remove weld slag and apply prime paint over welds. Prime paint exposed portions of embedded anchors. Touch up shop applied primer that is damaged by welding or other causes. Do not perform welding where discoloration or other damage would result on exposed surfaces, including glass and finished metal.

4. Where slots or oversize holes are provided for adjustment only, secure connection after final adjustment. Interlocking serrations in extruded aluminum brackets and washers are acceptable. Steel weld washers with 0.25 inch minimum thickness are acceptable with steel brackets. Special washers or nuts which rely on friction and/or surface indentation of fastened part are not acceptable.

H. Internal Gutters and Drainage:

1. Seal water and air tight all interior joints between window framing members and glazing adapters or removable glass stops, in accordance with FBC - NOA (or FBC product approval) certification or manufacture's requirements.

2. Provide and install flashed sill gutters at all window walls and at windows where shown or where required by specification, or compliance with FBC - NOA (or FBC product approval) certification or manufacture's requirements. Sill gutters shall be installed with integral end dams at each jamb.

3. Flashed gutters shall be continuous for the full length of each building structure opening and fitted with permanently sealed splice joints where required. Gutter shall slope to drain to exterior and shall be closed at ends with metal closures shop welded or mechanically attached and sealed to the gutter assembly, in accordance with FBC - NOA (or FBC Product Approval) certification or manufacture's requirements.

4. End closures for the flashed sill gutters shall be fully weather sealed (front to back depth of gutter) to adjacent building structure. Weather seal shall direct all infiltration, including drainage from adjacent building elements, into the flashed sill gutter for drainage to the exterior, in accordance with FBC - NOA (or FBC product approval) certification or manufacture's requirements.

5. Remove any temporary shims and fasteners, leaving all moving joints free to accommodate building movements as designed.

I. Entrance Doors: Install doors to produce smooth operation and tight fit at contact points:

1. Exterior Doors: Install to produce weathertight enclosure and tight fit at weather stripping.
2. Field-Installed Entrance Door Hardware: Install surface-mounted entrance door hardware according to entrance door hardware manufacturer’s written instructions using concealed fasteners to greatest extent possible.

K. Install perimeter joint sealants as specified in Division 7 Section “Caulking and Sealants” to produce weathertight installation.

K. Clean surfaces to be sealed. Install backers, primers and sealant in accordance with drawings, test results and manufacturer recommendations. Tool sealants as a separate operation after application. Immediately remove masking.

3.3 GLAZING

A. Inspect frame for proper dimensions, square, freedom from obstructions within glass pockets, and proper joinery seals and drainage provisions. Adjust frame and/or glass size as required to meet specified requirements.

B. Clean glazing pocket before setting glass. Solvents shall be compatible with finished aluminum, glass and glazing materials. Setting blocks shall be provided at all lights, including doors, and shall be equidistant from glass centerline. Location of setting blocks at glass quarter points is acceptable. Distance from vertical glass edge to nearest edge of setting block shall not be less than six inches, or 0.125 times glass width, whichever is greater. Side blocks shall be located between mid-height and top corner of glass. Side blocks, setting blocks and chairs shall be positively retained in position.

C. Install gaskets with injection molded corners on exterior (and interior where practicable). Where gasket corners cannot be molded, provide excess gasket lengths as required for “crowd in” of gasket to assure permanently tight corners. Tightly butt ends of gaskets and seal all non-molded gasket corners with compatible sealant. Gasket joints shall not occur at locations other than corners.

D. Inspect glass before installation. Glass not conforming to specification shall not be installed. Replace any glass lights broken or damaged on face or edge surfaces.

E. Except as otherwise specified, comply with GANA Glazing Manual. Provide minimum nominal glass bite of 0.5 inch. Where designed joint movement will result in variable glass bite, increase nominal bite to provide not less than 0.375 inch bite and not less than 0.25 inch minimum edge clearance under full range of specified movements.

F. Remove and replace stops and apply sealants at joints as required for complete and water/air tight glass installation.

G. Coordinate sequencing of glazing with General Contractor and defer glazing of openings obstructed during construction. Glaze such openings when obstructions are removed.

3.4 FIELD QUALITY CONTROL

A. Field Check for Water Leakage:

1. Method for field check for water leakage shall be by "static pressure" box test (modified AAMA 502) at a pressure of 8 PSF. There shall be no unacceptable water leakage as defined herein. Refer to procedures outlined below for specific testing criteria.

2. The water leakage field check and sealant adhesion tests shall be monitored by an independent testing agency approved by the Architect and Owner.

3. Provide powered scaffold, hose, water supply, test enclosure, instrumentation and manpower to perform at least two successful groups of tests, plus repeat of any unsuccessful tests. The test areas shall be selected by the Architect and shall be completely representative of the intended construction, including all operating hardware, locks, handles, perimeter sealants, and surrounding construction.

4. Initial water testing shall be conducted within 1 week of start of glazing. Construction sequence shall be accelerated, where necessary, to allow for timely completion of any surrounding areas affecting the conducting of this initial test. General Contractor and Glazing Subcontractor shall advise Architect, approved testing agency, Owner, and glazing consultant in writing when installation testing shall be conducted only when a floor area of the building is completed and ready to be tested, test area shall be randomly selected from the competed work area. Scheduling of the testing shall be conducted so as to not to delay construction and within an adequate time to identify any problem area with window wall installation.

5. Remedial measures, if required as a result of these tests, shall be subject to approval prior to installation, shall be applied to all previously installed work and shall maintain the standards of quality and durability for the project. A third group of tests may be required if, in the opinion of the Architect, necessary to verify the maintenance of quality. Costs of all such tests, and remedial action (if necessary) are the responsibility of the contractor.

B. Field test for sealant adhesion: Periodically test sealants in place for adhesion, using methods recommended by sealant manufacturer. Promptly replace any sealant failing to adhere or to cure.

C. Field test for wall drainage gutter:

1. Where applicable, test the internal gutters on the initial two floors by temporarily plugging the weeps and filling the gutters with water to a depth of about 2 inches. After not less than 15 minutes, inspect the gutters for leakage.

2. Correct any deficiencies observed and retest until successful tests are achieved. If deficiencies occur, continue testing 100% of the gutters until at least one complete floor has been tested without failure.

3. Continue testing at the rate of not less than 10% of all gutters, randomly selected. If deficiencies recur, resume test program as described.

D. Field test performance criteria for assembly:

1. The Contractor and window manufacturer and/or installer shall complete the work and prepare an area of the building to be tested, which shall be a minimum of one floor level representative of the project conditions. Testing will not be conducted without written notification in accordance with Part 3 of this specification that the test area is ready for field testing from the Contractor.

2. Test Sequence:

a. Water infiltration under static pressure (10 PSF).

3. Condensation is acceptable during water infiltration tests. Water leakage is acceptable only if all of the following conditions are satisfied: (a) water is contained and drained to exterior; (b) there is no wetting of a surface that would be visible to building occupants; (c) there would be no staining or other damage to completed building or its furnishings. This definition of water leakage governs over any other definition appearing in referenced documents.

4. Where test sequence or test failure requires successive water infiltrationtests, the only means used to drain water from internal cavities shall be gravity drainage through weep system for a minimum of 15 minutes. Air pressure, removal of parts or other means of draining water shall not be used.

5. Static water infiltration test shall conform to ASTM E 331. Differential test pressure shall be 10 PSF. There shall be no unacceptable water leakage as defined herein. Sources of water leakage shall be identified.

3.5 ADJUSTMENT

A. Adjust operating components for proper fit within fixed frame.

B. Adjust weather-strips for continuous contact and seal in closed position.

C. Adjust hardware for proper operation.

D. Adjust operating entrance door hardware to function smoothly as recommended by manufacturer.

1. For entrance doors accessible to people with disabilities, adjust closers to provide a 3-second closer sweep period for doors to move from a 70-degree open position to 3 inches from the latch, measured to the leading door edge.

3.6 MAINTENANCE - REPLACEMENT

A. Provide Owner glazing details applicable to replacement glass, with outline of procedure for glass replacement.

3.7 PROTECTION AND CLEANING

A. Protect materials against damage and contamination. Maintain installed work in reasonably clean condition and clean surfaces as required to remove dirt, stains and corrosive substances, during and at conclusion of construction.

B. Periodically remove from the site debris, excess materials and unused tools and equipment resulting from this work. At conclusion of construction, leave premises in clean condition.

END OF SECTION 08905

SECTION 09110 – METAL FURRING AND LATHING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes metal furring and lathing for portland cement plasterwork.

B. Furnish all labor, materials, tools, equipment, etc. and services necessary and incidental to the complete fabrication, furnishing and erection of this Section as shown, noted, detailed, necessary and reasonably implied on the drawings and in the specifications.

C. Related Sections:

1. Division 7 Section “Weather Barriers” for secondary weather/vapor barrier at framed and lath stucco assemblies.
2. Division 9 Section “Portland Cement Plaster (Stucco)” for exterior portland cement plasterwork (stucco).
3. Division 9 Section “Gypsum Board Assemblies” for interior gypsum board assemblies.
4. Division 6 Section “Miscellaneous Carpentry” for exterior sheathing.

1.3 SUBMITTALS

A. Submit product data under provisions of Division 1 Section “Submittal Procedures.”

B. Submit properly identified manufacturer's literature including material specifications for each product specified, installation recommendations and other data as may be required to show compliance with the specifications.

C. Manufacturer's certificate that materials meet specification requirements.

D. Submit Quality Assurance data per Article 1.4, this Section and Certification per Article 1.3e, this Section.

E. For furred / suspended ceiling areas subject to wind uplift, provide the following:

1. Submit shop drawings showing complete information for fabrication and installation of furred/suspended ceiling area framing. Indicate

dimensions, location, size, spacing and gauge.

2. Provide installation layout including location and details of anchorage devices to be embedded in other construction.
3. Fabricate elements to limit finish surface deflection to L:360.
4. Wind pressures act perpendicular to flat surfaces, regardless of surface orientation. Wind pressures act perpendicular to tangents of curved surfaces. At corners and changes in plane, adjacent surfaces shall be assumed to experience the worst case combination of inward pressure simultaneously, outward pressure simultaneously, and simultaneous occurrence of inward pressure on one surface and outward pressure on adjoining surface.
5. Provide manufacturers complete design calculations and shop drawings signed and sealed by a professional engineer registered in the State of Florida.

1.4 QUALITY ASSURANCE

A. This subcontractor shall have been engaged with the installation of metal furring, and performed this work in at least three (3) projects equal in scope to this work.

1.5 CODES AND STANDARDS

A. Comply with applicable requirements of governing codes and authorities.

B. Perform Work in accordance with the following standards:
1. ASTM C841 - Standard Specification for Installation of Interior Lathing and Furring.
2. ASTM C847 - Standard Specification for Metal Lath.
3. ASTM C926 - Standard Specification for Portland Cement-Based plaster (stucco).
4. ASTM C933 - Standard Specification for Welded Wire Lath.
5. ASTM C1063 - Standard Specification for Installation of Lathing and Furring for Portland Cement-Based Plaster.

1.6 DELIVERY, STORAGE AND HANDLING

A. Deliver products to site under provisions of Sections 01600 and 01620.

B. All materials shall be delivered and stored per manufacturer's instructions.

PART 2 - PRODUCTS

2.1 PROTECTIVE FINISHES

A. Exterior Work: Galvanize all metal lath, furring and steel studs including hangers unless otherwise shown or specified.

B. Where shown or specified to be galvanized, fabricate metal lath, furring, and

steel studs from galvanized sheet steel complying with ASTM A525. Galvanize inserts, hangers and channels by the hot-dip process in compliance with ASTM A123.

C. Materials specified by weight do not include the weight of protective finishes.

2.2 FURRING MATERIALS

A. Rolled Steel Channels:

1. Hot or cold-rolled type with a minimum weight per thousand L.F. of not less than the following: 300 lbs. for 3/4" size, 475 lbs. for 1-1/2" cold-rolled, and 1120 lbs. for 1-1/2" hot-rolled size.

2.3 ATTACHMENTS AND FASTENERS

A. Hangers:

1. Wire, of rigid steel of the type and minimum size (10 gauge) or as required to comply with the requirements of ANSI 641, ASTM C841, for the maximum ceiling areas to be supported in the work.

B. Wire Ties:

1. Soft annealed galvanized steel wire, not less than 16 gauge for tying furring channels to runner channels, and not less than 18 gauge for other ties.

C. Fasteners:

1. Fasteners shall be corrosion resistant of size, length and type as recommended by manufacturer.

2.4 METAL LATH

A. Metal lath shall be Self-furring expanded metal lath with staggered indentations spaced 3-1/2" apart horizontally and 2" apart vertically with indentations of depth to hold lath a minimum of 1/4" away from back-up material. Lath shall weigh 3.4 pounds per square yard.

B. Metal lath to be used where supports are spaced not more than 16" on centers shall be expanded metal lath and weighing 3.4 pounds per square yard. Metal lath to be used where supports are spaced over 16" on centers shall be expanded metal lath stiffened with 3/8" ribs spaced 4" on center, weighing 3.4 pounds per square yard.

C. Asphalt paper-backed metal lath shall be 3.4 pounds per square yard, diamond mesh lath factory bonded on the back with asphalt impregnated paper, conforming to Federal Specification UU-B-790a; Type 1, Grade D.

2.5 ACCESSORIES

A. For all metal and rigid PVC plaster (stucco) accessories see Section 09180 of these specifications.

B. For secondary vapor barrier (in addition to felt backed lath) provide Dupont's Tyvek commercial wrap system, or approved equal, for all framed and metal lath assemblies. Refer to Section 07250 – Weather Barriers.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. All items in this Section shall be installed by experienced skilled mechanics in the best workmanlike manner and in this trade's best standard practice, plumb, square, level, true and in strict accordance with manufacturer's printed instructions.

3.2 INSTALLATION

A. Metal Furring:

1. Provide metal furring where shown, as specified, and as required to provide support for plaster bases. Where size and spacing of furring members is not shown for support of lath, do not exceed the maximum requirements of ASTM C841 for the type of lath to be used in the work. Where control or expansion joints are shown, provide separate supports on each side of joint. Do not bridge joints with metal furring.
2. Attach metal furring channels vertically, spaced 16" o.c. to masonry or concrete surfaces with hammer-set or power driven fasteners or concrete stub nails staggered 24" o.c. on opposite flanges.

B. Suspended ceilings:

1. Provide complete engineered suspension systems, including hangers, attachments, main runners and cross-furring. Use components of the sizes and locate at the spacings required by ANSI A42.4 for the maximum ceiling areas to be supported, unless otherwise shown or specified.
2. Suspend hangers for structural supporting members or intermediate framing members only by attaching to metal clips designed for the type of member involved, or where possible by looping and wire-tying directly to members. Secure to concrete by wire-tying to cast-in-place hanger wires or hanger inserts, installed prior to placing of concrete. Advise concrete installer of specific requirements for his placement of wire hangers or inserts.
3. Provide extra hangers within 6" of end of main runners and as required to support light fixtures, ceiling diffusers and grilles, access panels and other items resting in or on the ceilings. At control or expansion joints, provide extra hangers as required to support discontinuous runners.

4. Support main runners from hangers by saddle tying wire hangers to runners, or wrapping rod hangers around runners. If flat steel hangers are used, bolt hangers to channels or bend around runner and bolt to hanger above runner, using 3/8" stove bolts.
5. Locate main runners within 6" of parallel walls to support ends of cross-furring.
6. Locate cross-furring perpendicular to main runners and not more than 2" from parallel walls. Attach to main runners at each intersection with not less than 16 gauge wire or a double strand of 18 gauge wire.
7. Do not abut runners or furring into masonry or concrete construction; allow no less than 1" clearance between such construction and ends of runners or furring.
8. Splice main runners and furring channels by overlapping (with flanges of channels interlocked) and wire tie each end of splice with not less than double loops of 16 gauge wire. Overlap not less than 12" for main runner splices and not less than 8" for cross-furring splices. Provide additional ceiling framing as required to form openings and to frame openings. Coordinate support framing with the work of other trades.
9. At control or expansion joints, provide discontinuous lap in main runners occurring over joints. Do not bridge joints with cross-furring, provide furring to support each side of joint.

C. Suspension Systems for Metal Lath Applications:

1. Provide 1-1/2" cold-rolled steel channels to comply with the applicable requirements of ASTM C841 for sizes and spacing of components used in the work, unless otherwise shown. Space 3/4" channel cross-furring not to exceed the maximum span requirements of ASTM C841 for the type and weight of metal lath to be supported in the work.

D. Metal Lath:

1. Use metal lath of the type and weight required to comply with the maximum support spacing requirements of ASTM C841 and ASTM C847 for the various applications required in the work. Provide intermediate metal furring supports to reduce distance between supports to maximum permissible spans, as required.
2. Provide self-furring lath where shown and where plaster is to be applied over solid surfaces which do not provide adequate mechanical or chemical bond.
3. Apply lath with long dimension at right angles to supports, unless otherwise specified. Where ribbed or sheet type laths are used, apply with projections against supports.
4. Attach lath to supports in accordance with the requirements of ASTM C841 for the kinds of supports shown, but do not exceed 6" o.c. spacing between attachments.
5. Lap sides of diamond mesh not less than 1/2". Nest edge ribs of ribbed lath except flat-rib lath (1/8" ribs) may be lapped 1/2" in lieu of nesting ribs. Locate all end laps over supports and lap not less than 1". Stagger end laps over different supports wherever possible. Wire tie side laps at

intervals not to exceed 9" o.c. and lace end laps occurring between supports.

6. At internal corners, butt lath at vertex of angle and reinforce with cornerite strip reinforcing. Wire the cornerite to lath along edges at not more than 12" o.c. Where diamond mesh metal lath is used, cornerite may be omitted if lath is not less than 6" down partitions/walls; at vertical internal angles, extend bent lath to not less than one support away from corner.
7. Where lath abuts load-bearing walls or partitions, structural columns, or structural decks or ceilings, terminate lath to allow for casing bead isolation joint between plaster and abutting surface.
8. Where control or expansion joints are shown, terminate lath on each side of joint. Do not bridge joints with lath.
9. Extend lath eight (8) inches minimum, across concrete block and concrete beam and concrete block and concrete column joints.
10. At corners of openings provide metal lath "Butterflies" at 45 degree angles to corners.
11. Paper-backed metal lath shall be installed at exterior frame walls, ceilings, columns and where indicated, shown or called for on the drawings. Provide second under or base layer of vapor barrier, “Tyvek” or approved equal to all framed and lath stucco assemblies.

E. Accessories: For location and installation of accessories see Section 09180.

3.3 CLEANING

A. The Contractor shall be responsible for keeping all working areas clean of his materials and kept stacked and/or stored in a neat orderly dry manner during the work.

3.4 MATERIAL AND WORKMANSHIP

A. All damaged material and faulty workmanship shall be removed and be replaced with new material in the best workmanlike manner at NO EXTRA COST to the Owner.

END OF SECTION 09110

SECTION 09180 - CEMENT PLASTER - STUCCO

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Furnish all labor, materials, tools, equipment, etc. and services necessary and incidental to the complete fabrication, furnishing and erection of this Section as shown, noted, detailed and reasonably implied on the drawings and in the specifications.

1.3 RELATED SECTIONS

A. Coordinate work of this Section with work of other Sections as required to properly execute the work and as necessary to maintain satisfactory progress of the work of other Sections, including:

1. Division 9 Section 09110 “Metal Furring and Lathing.”

1.4 SUBMITTALS

A. Submit shop drawings and product data under provisions of Section 01300 – Shop Drawings, Product Data and Samples.

B. Submit properly identified manufacturer's literature including material specifications for each product specified, installation recommendations and other data as may be required to show compliance with the specifications.

C. Manufacturer's certificate that materials meet specification requirements.

D. Submit quality assurance data per Article 1.6, this Section and engineering calculations per Article 1.4 E, this Section.

E. For furred and, metal stud framed wall and ceiling, or suspended ceilings (as shown or scheduled.) areas subject to wind pressure, provide the following:

1. Submit shop drawings showing complete information for fabrication and installation of furred / suspended ceiling area framing. Indicate dimensions, location, size, spacing and gauge.

2. Provide installation layout, including stucco control joints.

3. Provide location and details of anchorage devices to be embedded in other

construction.

4. Provide manufacturer's complete design calculations and shop drawings signed and sealed by a professional engineer registered in the State of Florida, indicating compliance with the Design Criteria.

1.5 DESIGN CRITERIA

A. Comply with the Florida Building Code – Latest Edition in effect, Florida Building Code – Latest Edition in effect – Test Protocols for High Velocity Hurricane Zones, NFPA 101 – Current Edition. Nothing in this Section shall be construed as allowing or requiring noncompliance with the Code.

B. Design wind pressures, uplift loads and design wind speed shall be per the Structural Drawings.

C. Wind pressures act perpendicular to flat surfaces, regardless of surface orientation. Wind pressures act perpendicular to tangents of curved surfaces. At corners and changes in plane, adjacent surfaces shall be assumed to experience the worst case combination of inward pressure simultaneously, outward pressure simultaneously, and simultaneous occurrence of inward pressure on one surface and outward pressure on adjoining surface.

D. Design units to accommodate construction tolerances, deflection of building structural members, and clearances of intended openings.

E. Design component connections to accommodate building movement and thermal movement. Provide adjustment to accommodate misalignment of structure without unit distortion or damage.

1.6 QUALITY ASSURANCE

A. Unless otherwise specified comply with applicable requirements of governing codes and authorities, ASTM C926 (Stucco) and ASTM C1063 for accessories and ASTM C841 for Metal Lath and Furring.

B. This subcontractor shall have been engaged with the installation of cement plaster work, and performed this work on at least 3 projects equal in scope to this work. Submit data in writing showing compliance with these requirements to the Architect before starting of any work. See Section 00950 - Quality Assurance.

C. Allowable tolerances: maximum deviation from true plane 1/4 inch in 10 feet as measured by straight edge placed at any location on surface. Provide Architect with lightweight straight edge for checking. Architect will pierce, puncture walls for checking thickness and this subcontractor shall patch same.

D. Comply with applicable fire resistance ratings of governing codes and authorities. In fire resistant assemblies, materials, accessories and installation procedures shall have been tested and listed by Underwriters' Laboratories, ASTM E119.

1.7 SAMPLE PANEL

A. Prior to installation of exterior cement plaster work, provide portable sample mock-up panels using materials specified for final work. Build sample panels at the site, as directed, and of full thickness and approximately 3' x 3', unless otherwise shown. Demonstrate the proposed range of color, texture and workmanship to be expected in the completed work.

B. Obtain the Owner and Architect's acceptance, in writing, of visual qualities of the sample panels before start of the cement plaster work. Retain sample panels during construction as A standard for judging completed plaster work. Do not alter, move or destroy sample panels until plastering work is completed. Provide 2 sample panels for each type of exposed cement plaster.

1.8 DELIVERY, STORAGE AND HANDLING

A. Deliver products to site under provisions of Sections 01600 and 01620.

B. All manufactured materials shall be delivered to the project site in their original unbroken containers bearing the manufacturer's label intact and legible.

C. Store cement and lime per manufacturer's instructions.

1.9 PROJECT CONDITIONS

A. Examine metal plaster bases, backing, attachments and accessories to receive plaster and determine if the applicable requirements of ASTM C1063 have been met.

B. Hot weather requirements:

1. Protect cement plaster from uneven and excessive evaporation during hot, dry weather, in strict accordance with ASTM C926.

C. Protection:

1. Protect all finished surfaces installed prior to plastering.

2. Maintain protection in place until completion of all plaster work.

PART 2 – PRODUCTS

2.1 CEMENT PLASTER (STUCCO) MATERIALS

A. Portland Cement: In accord with ASTM C150, Type 1, Gray.

B. Masonry Cement: In accord with ASTM C91.

C. Aggregate: In accord with ASTM C897; clean, sharp washed sand free from salt and foreign material, or Lake Wales (Florida) Mineral Free Sand with written approval of stucco manufacturer.

D. Water: Clean, fresh, potable and free from minerals and organic substances that would affect the set of the stucco.

E. Lime: In accord with ASTM C206-88.

F. Conventional mix or Broco Stucco Cement manufactured by Florida Mining and Materials Corp.

G. Bonding agent shall be Lambco Primer or Acrylbond by Lambert Corp., or Bonsal Acrylic Additive by W. R. Bonsal Co.

H. Sealants and Backing Material: See Section 07900 - Caulking and Sealants.

2.2 ACCESSORIES

A. Casing Beads:

1. No. 1038, 1050, 1058, or 1078 casing bead PVC by "Vinyltech", Plastic Components, Inc., or rigid vinyl No. 6638, 6650, 6658, or 6678 by Vinyl Corp.

B. Corner Beads:

1. Nos. 1A and 2 manufactured by Plastic Components, Inc.; all vinyl, or rigid vinyl Nos. 1 and 2 by Vinyl Corp.

C. Corner Reinforcement: 3 inch "Cornerite" manufactured by Unimast.

D. Channel Reveals:

1. Channel screeds Nos. CS38-75, CS50-75, CS58-75, or CS78-75 of rigid vinyl by Vinyl Corp.

E. Control Joints:

1. Joint Nos. 2038, 2050, 2058, or 2078 PVC by "Vinyltech", Plastic Components, Inc., or rigid vinyl Nos. 1538, 1550, 1558, or 1578 with connector clips by Vinyl Corp.

F. Expansion Joints:

1. Expansion joints PVC by Vinyl Corp., Nos. 4038, 4050, 4058, or 4078, as required by paragraphs: 3.3 D. and 3.4 F.

G. Strip Reinforcing: Expanded self-furring metal lath, 6 inch wide min., weighing not less than 3.4 pounds per square yard.

H. Tie Wire: 18 gauge minimum galvanized wire. Refer also to Section 09110, Metal Furring and Lathing.

I. Fry Reglet column collar of extruded aluminum alloy 6063-T5, 0.050 inch thick with

painted finish, color as selected by Architect, or an approved equal. Spacer component shall be extruded PVC of white color.

J. Special rigid vinyl shape for intersections of channel screeds (crosses, T's, L's, etc.), with grounds and reveals dimensions to match adjacent reveals, by Vinyl Corp.

K. Soffit vent by Vinyl Corp. w/ connectors.

1. V-400: 4 inch soffit vent.

2. V-200: 2 inch soffit vent.

3. 300VF: VF clip.

4. SV58-400F.

5. SV58-200F.

L. Architectural Accents, i.e., stucco bands, etc. shall meet requirements of Florida Building Code.

M. Other manufacturers" products of Amico Alabama Metals Industries Corp. will be acceptable as a substitute for the above-listed accessory.

2.3 MATERIAL PROPORTIONS

A. Three Coat Work - Metal Lath Base:

1. Scratch Coat: 1 part Portland cement; 2 parts masonry cement; 2-1/2 to 4 parts sand, or an approved equal Factory Blend Stucco mix.

2. Brown Coat: 1 part Portland cement; 2 parts masonry cement; 3 to 5 parts sand, or an approved equal Factory Blend Stucco mix.

3. Finish Coat: 1 part Portland cement; 2 parts masonry cement; 3 parts sand, or an approved equal Factory Blend Stucco mix.

B. Two Coat Work - Concrete and Masonry:

1. Bonding agent.

2. Brown Coat: 1 part Portland cement; 2 parts masonry cement; 3 to 5 parts sand, or an approved equal Factory Blend Stucco mix.

3. Finish Coat: 1 part Portland cement; 2 parts masonry cement; 3 parts sand, or an approved equal Factory Blend Stucco mix.

C. All stucco work shall have finish coat applied uniformly to produce a texture as approved by the Architect.

D. Three Coat Work - Suspended Ceiling or Soffit – (where shown or scheduled):

1. Scratch Coat: 1 bag Portland cement, 3/4 to 1 bag lime, 5 to 6 cu. ft. sand, or an approved equal Factory Blend Stucco mix.

2. Brown Coat: 1 bag Portland cement, 1 bag lime, 6 to 7 cu. ft. sand, or an approved equal Factory Blend Stucco mix.

3. Finish Coat: 1 bag Portland cement, 2 bags lime, 7 to 10 cu. ft. sand, or an approved equal Factory Blend Stucco mix.

2.4 MIXING

A. General:

1. Prepare all plaster in a mechanical mixer, using sufficient water to produce a workable consistency and uniform color.

2. After all ingredients are in the mixer, mix the plaster for 3 to 5 minutes or until the requirements of 10.2.1 are met.

3. The amount of water used in the plaster mix should be determined by the plasterer. Factors such as the suction of the base, or of the previous coat, water content of the aggregate, drying conditions, and finishing operations should be considered in determining water usage. Use of excessive water may result in dropouts, fall or slide off, excessive shrinkage, high porosity, and lower strength.

4. Plaster mixes for either base coat that has stiffened because of evaporation of water, may be re-tempered one time by remixing with additional water to restore the required consistency. Discard plaster not used within 2-1/2 hours from start of initial mixing. Severe hot, dry climatic conditions accelerate the stiffening of plaster. Such severe conditions may require this limit to be reduced.

5. Finish-Coat plaster shall not be tempered.

B. Mechanical Mixing:

1. Clean mixer of set or hardened materials before loading for new batch.

2. Maintain mixer in continuous operation while adding materials.

3. Conform to mixing sequence, cycle of operations, and time recommended by manufacturer of plaster materials.

C. Hand Mixing:

1. Do not hand mix unless authorized by Architect/Engineer.

2.5 PAINTING

A. See Section 09900 - PAINTING for stucco paint finishes.

PART 3 – EXECUTION

3.1 INSTALLATION, GENERAL

A. All items in this Section shall be installed by experienced skilled mechanics in the best workmanlike manner and in this trade's best standard practice, plumb, square, level, true and in strict accordance with manufacturer's printed instructions, ASTM C926 (Stucco) and ASTM C1063 for accessories and ASTM C841 Metal Lath and Furring.

B. Examine construction, grounds, and accessories to insure that finished plaster surfaces will be true to line, level, and plumb, without requiring additional thickness of plaster.

C. All metal, or PVC, or CPVC plastic members shall be free of rust, oil or other foreign matter, which could cause bond failure or unsightly discoloration.

D. Surfaces of solid bases to receive plaster, such as masonry, stone, cast-in-place or pre-cast concrete shall be straight and true within 1/4 inch in 10 feet and shall be free of form oil or other elements, which would interfere with proper bonding. Form ties or other metal obstructions and projecting joint mortar shall be removed or trimmed back even with the surface of the solid base by others.

E. Solid surfaces shall have the suction (ability to absorb water) or surface roughness, or both, to provide the bond required for the plaster.

F. Prepare smooth or nonabsorbent solid surfaces, such as cast-in-place or pre-cast concrete, to receive Portland cement plaster by one of the following methods:

1. Pressure washing, sandblasting, wire brushing, acid etching, or chipping, or a combination of these.

2. Application of a dash-bond coat applied forcefully against the surface, left untroweled, undisturbed, and moist cured for at least 24 hours.

3. Application of a bonding compound suitable for exterior or interior exposure solid surfaces in accordance with the manufacturer's written directions.

4. Where bond cannot be obtained over the entire surface to receive plaster by one or more of the methods or where total plaster thickness will exceed the maximum thickness specified for types of solid bases, install furred or self-furring metal plaster base in accordance with ASTM. C1063.

3.2 INSTALLATION OF ACCESSORIES

A. Attach plaster accessories per manufacturer's instructions. Use not less than 18 gauge wire tie for attachment to metal lath.

B. Use single length of beads wherever length of run does not exceed longest standard stock length available. Miter or cope at corners.

C. Set beads and plaster accessories level, plumb and true to line with A tolerance of not more than 1/8 inch in 10'-0" from plumb or level. Shim as required and align joints with concealed splices or tie plates.

D. Corner beads shall be installed on all external corners and edges of corner openings. Corner beads shall extend the full height of the corners on which they are applied and shall act as a ground.

E. Cornerite shall be applied to all internal corners of surfaces to be plastered.

F. Casing beads shall be applied where stucco stops and another material begins, or where stucco abuts metal door frames, exposed concrete block walls, at all exposed terminations, and/or where indicated. Secure casing beads to metal lath with No. 16 gauge wire at 6 inches o.c. minimum. Secure casing beads to masonry with galvanized concrete stub nails at 8 inches o.c.

G. Control Joints - Expansion Joints: At exterior walls, soffits and canopies of stucco on metal lath, space one-piece control joints not exceeding 12 feet in either direction. Where there is an intersection of vertical and horizontal joints, use factory made joints. Caulk splices and intersections exposed to the elements with a sealant approved by the accessories manufacturer. In soffits and canopies, break lath and channel behind control joints.

H. Install prefabricated sheet metal items required to be "plastered-in" flush, as shown and in accordance with manufacturer's instructions. Coordinate with installation of other work so that plaster will finish plumb and flush.

I. Where dissimilar plaster bases meet, reinforce juncture with continuous strip of self-furring metal lath securely attached to each base. Use strips not less than 6 inches wide.

J. PVC casing beads, channel reveals, expansion joints and control joints - caulk ALL intersections, butt joints and ends, conforming to ASTM D1784 Cell Classification 13244C.

K. Install Fry reglet collars at all columns where stucco ceilings abut to form a neat juncture.

L. Install ceiling and soffit vent molding around entire perimeter of all suspended stucco ceilings, or as shown on the drawings.

3.3 CEMENT PLASTER (STUCCO) - GENERAL APPLICATION

A. Apply bonding agent over concrete bases in strict accordance with printed recommendations of manufacturer's instructions.

B. Proper consistency for hand-applied plaster may be determined by slump testing. Material to be tested shall be taken from the mixer of the plastering hose. The

maximum allowable slump shall be 2-1/2 inches using a 2-inches by 4-inches by 6 inches high slump cone.

C. Curing shall mean that sufficient moisture shall be retained or intermittently applied as required to the plaster surface to permit the hydration process of the cementitious materials to continue. Climatic and job conditions will determine the most effective procedure for curing and time between coats. The contractor shall be responsible for curing.

D. Stucco which is excessively cracked or crazed will not be accepted. Remove and replace unacceptable stucco including base material if damaged.

E. Plaster thickness is measured from the back plane of metal reinforcement, exclusive of ribs or dimples and from the face of solid backing or support, with or without metal reinforcement to the finished plaster surface, inclusive of moderate texture variations.

F. Do not apply Portland cement-based plaster directly to the surface of solid backing consisting of gypsum board, gypsum plaster, wood, or rigid foam board-type products without the application of metal plaster base.

G. Apply each plaster coat to an entire wall or ceiling panel without interruption to avoid cold joints and abrupt changes in the uniform appearance of succeeding coats. Wet plaster shall abut set plaster at naturally occurring interruptions in the plane of the plaster, such as corner angles, rustications, openings, and control joints where this is possible. Cut joinings, where necessary, square and straight and at least 6 inches away from a joining in the preceding coat.

H. Use three-coat work over all metal plaster base, with or without solid backing. The combined total thickness shall be as shown. A dash-bond coat shall not replace one of the specified number of coats.

I. Two-coat work may be used only over solid bases. The combined total thickness shall be as shown or specified herein. A dash-bond coat shall not replace one of the specified number of coats.

J. Apply a back plaster coat, where required, only after the coat on the opposite side has set sufficiently to resist breaking or cracking the plaster keys.

K. Permit each coat to cure before the next coat is applied.

l. Dampen plaster coats that have become dry evenly with water prior to applying subsequent coats to obtain uniform suction. There shall be no visible water on the surface when plaster is applied.

3.4 APPLICATION TO METAL LATH

A. First coat shall be applied with sufficient material and pressure to form full keys through and to embed the metal reinforcement and with sufficient depth of material over the metal reinforcement to allow for scratching (scoring) of the surface.

1. As soon as the first coat has become firm, its entire surface shall be scratched (scored) in one direction only, to provide mechanical bond with the second coat. On vertical surfaces the scratching or scoring shall be horizontal.

2. The first coat shall become sufficiently rigid to support the application of the second coat without damage to the monolithic continuity of the first coat or it's key.

B. Second coat shall be applied with sufficient material and pressure to insure tight contact with the scratch coat and to bring the combined thickness of the first and second coats to the thickness specified.

1. The surface shall be brought to a true, even plane by rodding and surface defects and scratches shall be filled with plaster.

2. Float the surface uniformly to promote densification of the coat and to provide a surface receptive to bonding of the finish coat.

C. Finish coats shall be applied by machine or hand with sufficient material and pressure to completely cover and ensure tight contact with the base coat.

D. Thickness: per ASTM C926 - 3 coats.

1. Exterior:

a. Vertical Surfaces: 3/8 inch, 3/8 inch, 1/8 inch, total of 7/8 inch.

b. Horizontal Surfaces: 1/4 inch, 1/4 inch, 1/8 inch, total of 5/8 inch.

3.5 APPLICATION TO SOLID BASES

A. Before the application of stucco to concrete or masonry, all surfaces shall be clean, free from defect, and all accessories installed. The plane tolerance shall not exceed 1/4 inch in 10 feet.

B. Concrete surfaces to receive stucco shall be coated with a bonding agent to insure proper bond.

C. Dampen high-suction bases with clean water prior to the application of plaster. Do not dampen low-suction solid bases, such as dense concrete.

D. First coat shall be applied with sufficient pressure and material to ensure tight contact with and complete coverage of the solid base to the thickness specified.

1. Score this coat immediately.

2. Score vertical surfaces horizontally.

E. Finish coat shall be applied as specified above for the first coat, except that it shall be brought to the specified finish. Where any previous plaster has become dry,

the surface shall be evenly dampened with water to obtain uniform suction. Finish coats shall be applied by machine or hand with sufficient material and pressure to completely cover and ensure tight contact with the base coat.

F. Thickness: Per ASTM C926 - 2 coats.

1. Exterior:

a. Vertical surfaces:

(1). Unit masonry: 3/8 inch, 1/8 inch, total of 1/2 inch.

(2). Cast-in-place concrete: 1/4 inch, 1/8 inch, total of 3/8 inch.

b. Horizontal surfaces:

(1). Unit masonry: 1/4 inch, 1/8 inch, total of 3/8 inch.

(2). Concrete: 1/4 inch, 1/8 inch, total of 3/8 inch.

3.6 CURING AND TIME BETWEEN COATS

A. The timing between coats will vary with climatic conditions and types of plaster base. Temperature and relative humidity extend or reduce the time between consecutive operations. Cold or wet weather lengthens and hot or dry weather shortens the time period. Moderate changes in temperature and relative humidity can be overcome by providing additional heating materials during cold weather and by reducing the absorption of the base by pre-wetting during hot or dry weather.

B. To provide more intimate contact and bond between coats and to reduce rapid water loss, as soon as the first coat is sufficiently rigid to resist cracking, the second coat should be applied.

C. The amount of water and the timing for curing Portland cement plaster will vary with the climatic conditions, the type of base, and use or non-use of water-retentive admixtures.

D. Some moisture must be retained in or added back to freshly applied plaster. If the relative humidity is relatively high (above 75 percent relative humidity), the frequency for rewetting a surface may be reduced. It is hot, dry, and windy, the frequency of rewetting must be increased.

E. The method of curing selected should consider the physical characteristics of the structure as well as the previously mentioned conditions. The methods can be one or a combination of the following:

1. Moist curing is accomplished by applying a fine fog spray of water as frequently as required, generally twice daily in the morning and evening. Care must be exercised to avoid erosion damage to plaster surfaces. Except for severe drying conditions, the wetting of finish coat should be

avoided, that is, the basecoat prior to application of the finish coat.

2. Plastic film, when taped or weighted down around the perimeter of the plastered area, can provide a vapor barrier to retain the moisture between the membrane and plaster. Care must be exercised in placing the film: if too soon, the film may damage surface texture; if too late, the moisture may have already escaped.

3. Canvas, cloth, or sheet material barriers can be erected to deflect sunlight and wind, both of which will reduce the rate of evaporation. If the humidity is very low, this option may not provide adequate protection.

3.7 PATCHING

A. All defects and damaged areas shall be cut out and replaced to match adjacent surfaces at no extra cost to the Owner.

B. Repair cracks and indented surfaces by moistening plaster and filling with new material, troweled or tamped flush with adjoining surfaces.

C. Point-up finish plaster surfaces around items that are built into or penetrate plaster surfaces.

3.8 CLEANING AND PROTECTION

A. After completion of work, remove all scaffolding, tools and other equipment from the building, taking care not to damage work of other trades. Remove all plaster from glass, trim and other finishes. All plaster and stucco rubbish shall be removed and the building left broom clean.

B. Installer shall advise Contractor of requirements for protection of plaster from deterioration and damage until time of acceptance of the work.

3.9 MATERIAL AND WORKMANSHIP

A. All damaged material and faulty workmanship shall be removed and be replaced with new material in the best workmanlike manner at no extra cost to the Owner and to the full satisfaction of the Architect and Owner.

END OF SECTION 09180

SECTION 09260 – GYPSUM BOARD ASSEMBLIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Interior gypsum wallboard.
2. Gypsum board panels for ceilings and soffits.
3. Tile backing panels.
4. Non-load-bearing steel framing.

B. Related Requirements:

1. Division 5 Section “Structural Metal Studs” for heavy gauge metal stud framing at load bearing and exterior walls.

2. Division 7 Section “Caulking and Sealants” and “Fire Resistive Joint Systems.”

1.3 REFERENCES

A. ASTM C36 – Standard Specification for Gypsum Wallboard.

B. ASTM C79 – Standard Specification for Gypsum Sheathing Board.

C. ASTM C442 – Standard Specification for Gypsum Backing Board and Coreboard.

D. ASTM C475 – Standard Specification for Joint Compound and Joint Tape for Finishing Gypsum Board.

E. ASTM C630 – Standard Specification for Water-Resistant Gypsum Backing Board.

F. ASTM C645 – Standard Specification for Non-Load (Axial) bearing Steel Studs, Runners (Track), and Rigid Furring Channels for Screw Application of Gypsum Board.

G. ASTM C754 – Standard Specification for Installation of Steel Framing Members to Receive Screw-Attached Gypsum Board.

H. ASTM C840 – Standard Specification for Application and Finishing of Gypsum Board.

I. ASTM C1002 – Standard Specification for Steel Drill Screws for the Application of Gypsum board or Metal Plaster Bases.

J. ASTM E90 – Standard Test Method for Laboratory measurement of Airbourne-Sound Transmission Loss of Building Partitions.

K. ASTM E119 – Standard Test Methods for Fire Tests of Building Construction and Materials.

L. GA-201 – Using Gypsum Board for Walls and Ceilings.

M. GA-214 – Recommended Specification: levels of Gypsum Board Finish.

N. GA-216 – Recommended Specification for the Application and Finishing of Gypsum Board.

O. GA-600 – Fire Resistance Design Manual.

P. UL – Fire Resistance Design Manual.

Q. WH (Warnock Hershey) – Certification Listings.

1.4 PERFORMANCE REQUIREMENTS

A. Delegated Design: Design non-load-bearing steel framing, including comprehensive engineering analysis by a qualified professional engineer licensed in the State of Florida, using performance requirements and design criteria indicated.

1.5 SUBMITTALS

A. Product Data: For each product indicated.

B. Samples: For each textured finish indicated and on same backing indicated for Work.

C. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed structural design of framing, and sealed by the qualified professional engineer, licensed in the State of Florida, responsible for their preparation.

1. Submit shop drawings showing complete information for fabrication and installation of furred / suspended ceiling area framing. Indicate dimensions, location, size, spacing and gauge.
2. Provide installation layout.
3. Provide location and details of anchorage devices to be embedded in other construction.

D. Submit a manufacturer’s certificate that materials meet specification and project requirements.

1.6 QUALITY ASSURANCE

A. Qualification Data: For qualified professional engineer.

B. Fire-Test-Response Characteristics: For gypsum board assemblies with fire-resistance ratings, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing and inspecting agency acceptable to authorities having jurisdiction.

C. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency.

D. This subcontractor shall have been engaged with the installation of gypsum wallboard work and performed this work on at least three (3) projects equal in scope to this work. Submit data in writing showing compliance with these requirements to the Architect before starting of any work. See Section 00950 – Quality Assurance.

E. Gypsum Board Finish – Level 5 finish at all public areas per GA-214. The surface shall be uniform light skip trowel. Any horizontal or vertical GWB area scheduled to receive wall covering or a faux finish is to receive a level 4 finish, unless noted or scheduled otherwise.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to site under provisions of Sections 01600 and 01620.

B. Deliver all materials in their original unopened containers with manufacturer’s label intact and legible.

C. Store materials per manufacturer’s instructions.

1.8 SAMPLE PANELS

A. Provide on-site erected samples each of the following:
1. Vertical taped joints.
2. Horizontal taped joints.
3. Inside corner.
4. Outside corner.

B. Obtain Owner’s and Architect’s acceptance of visual qualities of the sample panels before start of the gypsum wallboard work. Retain sample panels during construction as a standard for judging completed wallboard work. Do not alter, move, or destroy sample panels until wallboard work is complete.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where subparagraph titles below introduce lists, the following requirements apply for product selection:

1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the products specified.

2. Refer to Section 01600 materials and Equipment for product substitution requirements and approvals.

2.2 INTERIOR STEEL FRAMING

A. Steel Framing, General: Comply with ASTM C 754 for conditions indicated.

1. Steel Sheet Components: Metal complying with ASTM C 645 requirements.

a. Protective Coating:

1) Interior Applications: ASTM A 653/A 653M, G40, hot-dip galvanized zinc coating.
2) Exterior Applications: ASTM A 653/A 653M, G60, hot-dip galvanized zinc coating

2. Light gauge steel framing: Unimast Corp., Dietrich Industries, Inc., Dale/Incor Industries of Florida, or approved equivalent.

3. Refer to specification Section 05410 for exterior and heavy gauge structural framing.

B. Suspended Ceiling and Soffit Framing:

1. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.0625-inch-diameter wire, or double strand of 0.0475-inch- diameter wire.
2. Wire Hangers: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.162-inch diameter.
3. Carrying Channels: Cold-rolled, commercial-steel sheet with a base metal thickness of 0.0538 inch, a minimum 1/2-inch- wide flange, and 1-1/2” in depth.
4. Furring Channels (Furring Members):

a. Cold Rolled Channels: 0.0538-inch bare steel thickness, with minimum 1/2-inch- wide flange, 3/4 inch deep.
b. Steel Studs: ASTM C 645, in depth indicated.

1) Minimum Base Metal Thickness: 0.0179 inch.

c. Hat-Shaped, Rigid Furring Channels: ASTM C 645, 7/8 inch deep.

1) Minimum Base Metal Thickness: 0.0179 inch.

C. Partition and Soffit Framing:

1. Steel Studs and Runners: ASTM C 645, in depth indicated.

a. Minimum Base Metal Thickness: 0.0179 inch.0312 inch.

2. Deep-Leg Deflection Track: ASTM C 645 top runner with 2-inch- deep flanges.
3. Cold-Rolled Channel Bridging: 0.0538-inch bare steel thickness, with minimum 1/2-inch- wide flange, and in depth indicated.

a. Clip Angle: 1-1/2 by 1-1/2 inch, 0.068-inch- thick, galvanized steel.

4. Z-Shaped Furring: With slotted or nonslotted web, face flange of 1-1/4 inches, wall attachment flange of 7/8 inch, minimum bare metal thickness of 0.0179 inch, and 2 inches deep.
5. Fasteners for Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.

2.3 PANEL PRODUCTS

A. Recycled Content of Gypsum Panel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than (75%) seventy five percent.

B. Regional Materials: Gypsum panel products shall be manufactured within 500 miles of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles of Project site.

C. Panel Size, General: Provide in maximum lengths and widths available that will minimize joints in each area and correspond with support system indicated.

D. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. American Gypsum.
2. Georgia-Pacific Gypsum LLC.
3. Lafarge North America Inc.
4. National Gypsum Company.
5. USG Corporation.
6. Certainteed.

E. Gypsum Wallboard: ASTM C 1396/C 1396M.

1. Type X: 5/8 inch and with long edges tapered.

F. Sag-Resistant Gypsum Wallboard: ASTM C 1396/C 1396M, manufactured to have more sag resistance than regular-type gypsum board, 5/8 inch thick, and with long edges tapered. Apply on ceiling surfaces.

G. Water/Moisture Resistance Gypsum Board:

1. Core: Mold and moisture resistant gypsum core.
2. Surface Paper: Mold and moisture resistant paper on front, back, and along edges.
3. Long Edges – Tapered.
4. Overall Thickness – 5/8 inches.
5. Panel to comply with requirements of ASTM C1396.
6. Mold/Mildew Resistance: Score of 10 when tested in accordance with ASTM D3273.

H. Tile Backing Panels:

1. Cementitious Backer Units: Durock Board (Cement Board) complying with ANSI A118.9.
2. Size and Thickness: 5/8 inch.
3. Corrosion resistant fasteners.
4. Joint reinforcement: 2 inch wide Imperta Glass – fiber; open weave tape, Type P
5. Accessories: manufacturer's standard.

2.4 TRIM ACCESSORIES

A. Interior Trim: ASTM C 1047.

1. Cornerbead: Use at outside corners.
2. LC-Bead: Use at exposed panel edges.
3. Expansion (Control) Joint: Use where indicated or where unbroken panel lengths exceed 30 feet.

B. Aluminum Trim: Alloy and temper with not less than the strength and durability properties of ASTM B 221, Alloy 6063-T5.

2.5 JOINT TREATMENT MATERIALS

A. General: Comply with ASTM C 475.

B. Joint Tape:

1. Interior Gypsum Wallboard: Paper.
2. Exterior Gypsum Soffit Board: Paper.
3. Tile Backing Panels: As recommended by panel manufacturer.

C. Joint Compound for Interior Gypsum Wallboard: For each coat use formulation that is compatible with other compounds applied on previous or for successive coats.

1. Prefilling: At open joints, rounded or beveled panel edges, and damaged surface areas, use setting-type taping compound.
2. Embedding and First Coat: For embedding tape and first coat on joints, flanges of trim accessories, and fasteners, use drying-type, all-purpose compound.

    a. Use setting-type compound for installing paper-faced metal trim accessories.

3. Fill Coat: For second coat, use drying-type, all-purpose compound.
4. Finish Coat: For third coat, use drying-type, all-purpose compound.

D. Joint Compound for Tile Backing Panels:

1. Cementitious Backer Units: As recommended by backer unit manufacturer.

2.6 METAL FRAMING

A. Studs shall be screw type, roll-formed channel studs and tracks, of sizes shown on Drawings, fabricated from 25 gauge steel unless otherwise shown or specified, with stud flanges not less than 1-1/4 inch wide, of galvanized steel. Provide 20 gauge bottom track, typical.

B. At all hollow metal doorframes, cased openings, and end of walls, provide one 20 gauge metal stud. Headers up to 4’-0” wide shall be made of same. Headers from 4’-1” to 6’-0” shall be two 3-5/8 inch 20 gauge metal studs on edge. Headers 6’-1” to 8’-0” shall be two 6 inch 20 gauge metal studs on edge.

C. Studs shall meet or exceed ASTM C645 requirements with a minimum thickness of 0.0179 inch.

D. Use 20 gauge metal furring or metal studs at all locations scheduled to receive Durcok Board as shown/scheduled. Also, frame all outside corners using 20 gauge metal studs.

E. C. R. channel stiffeners formed of 16 gauge galvanized steel shall be installed in 25 gauge stud walls above the manufacturers specified limiting heights (10’-0” of higher).

F. RC-1 resilient channels of corrosion-resistant steel, fastened to framing per manufacturer’s recommendations.

2.7 DROPPED/FURRED DOWN CEILINGS

A. Shall be Steel Stud Furring and Steel Stud framing systems made up of 6 inches, 4 inches, 3-5/8 inches, 2-1/2 inches, and 1-5/8 inch vertical and horizontal framing or hangers. Design loads per Table for Typical Limiting Spans – Steel Stud Ceiling Systems, Deflections are not to exceed L/360.

2.8 DRYWALL SOFFITS

A. Braced soffit assembly consists of galvanized steel channel runners and studs faced with gypsum board, screw attached.

B. Maximum depth of 48 inches (vertically) and widths to 72 inches (horizontally) per requirements of Maximum Width and depth Dimensions Table of USG Systems Folder SA-923.

2.9 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that comply with referenced installation standards and manufacturer's written recommendations.

B. Acoustical Sealant for Exposed and Concealed Joints: Nonsag, paintable, nonstaining, latex sealant complying with ASTM C 834 that effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.

1. Available Products:

    a. Pecora Corp.; AC-20 FTR Acoustical and Insulation Sealant.
    b. United States Gypsum Co.; SHEETROCK Acoustical Sealant.

C. Steel Drill Screws: ASTM C 1002, unless otherwise indicated.

1. Use screws complying with ASTM C 954 for fastening panels to steel members from 0.033 to 0.112 inch thick.
2. For fastening cementitious backer units, use screws of type and size recommended by panel manufacturer.

D. Isolation Strip at Exterior Walls:

1. Foam Gasket: Adhesive-backed, closed-cell vinyl foam strips that allow fastener penetration without foam displacement, 1/8 inch thick, in width to suit steel stud size.

E. Fire Stopping / Penetration Seals

1. Refer to Section 07844 Fire resistive Joint Systems for rated assemblies and additional requirements.

PART 3 - EXECUTION

3.1 METAL FRAMING INSTALLATION

A. All items in this section shall be installed by experienced skilled mechanics in the best workmanlike manner and in this trade's best standard practice in strict accordance with manufacturer's printed specifications and installation recommendations.

B. Height of Partitions: Refer to Drawings for termination height of all partitions.

C. Install metal partitions system plumb, level and true. All joints, connections, etc. shall be fastened securely with proper fasteners as recommended by manufacturer's printed instructions. Fastening surface of any framing or furring shall not vary more than 1/8 inch from plane of faces of adjacent framing, bridging or furring members.

D. Metal partitions shall be erected by aligning floor and ceiling track to ensure plumb partition. Secure track with suitable fasteners at a maximum of 24-onch o.c. provide continuous tracks sized to match studs.

E. Provide fasteners at all corners and ends of runner tracks.

F. Provide additional studs to support inside corners at partition intersections and corners and to support outside corners, terminations of partitions, both sides of control joints (if any) and adjacent to all openings. For gypsum plaster base applications, Keep studs not less than 2 inch or more than 6 inch from inside corners.

G. Use full-length studs between runner tracks wherever possible. If necessary splice studs by nesting with a minimum lap of 8 inch and fasten laps with 2 screws through each flange.

H. Friction fit studs to runner tracks by positioning and rotating into place. Provide positive attachment to runner tracks for all studs using 7/16 inch self-tapping screws or stud clinching tool on both flanges of studs.

I. Provide rough framing at openings using full-length studs adjacent to jambs and horizontal header and sill tracks. Cut horizontal tracks to length, split flanges, bend webs at end of flange overlap, and screw attachment to jamb studs. Install cut to length, intermediate studs between jamb studs at head and sill sections at same spacing as full-length studs.

J. Stiffen drywall partitions horizontally with ¾ inch cold-rolled steel channel stiffeners. Install channels horizontally through stud knockouts at 4'-0" on center vertical spacing. Wire tie to each stud or secure as recommended by stud manufacturer. The 25 gauge metal stud walls, 16 inch o.c. up to and including the manufacturers specified limiting height, are not required to have C.R. channels unless required in specific areas due to extra loading requirements and/or fire rating requirements.

K. At plumbing chase walls provide two 1/2 inch by 12 inch high by thickness of wall wallboard stiffeners as per manufacturer's printed instructions, or 6" minimum width 25 gauge metal studs.

L. For extra heavy loads, shelf brackets, TV's, wall mounted furnishings, millwork, fixture brackets, handicap accessories, etc. provide proper supports as recommended by the manufacturer's printed instructions.

3.2 NON-LOAD-BEARING STEEL FRAMING INSTALLATION

A. General: Comply with ASTM C 754, and ASTM C 840 requirements that apply to framing installation.

B. Suspended Ceiling and Soffit Framing:

1. Suspend ceiling hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or ceiling suspension system. Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
2. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with the location of hangers required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards.
3. Attach hangers to structural members. Do not support ceilings from or attach hangers to permanent metal forms, steel deck tabs, steel roof decks, ducts, pipes, or conduit.
4. Wire-tie furring channels to supports.

C. Partition and Soffit Framing:

1. Where studs are installed directly against exterior walls, install isolation strip between studs and wall.
2. Extend partition framing full height to structural supports or substrates above suspended ceilings, except where partitions are indicated to terminate at suspended ceilings. Continue framing over frames for doors and openings and frame around ducts penetrating partitions above ceiling to provide support for gypsum board.
3. Frame door openings to comply with GA-600 and with gypsum board manufacturer's applicable written recommendations, unless otherwise indicated. Screw vertical studs at jambs to jamb anchor clips on door frames; install runner track section (for cripple studs) at head and secure to jamb studs.

    a. Install two studs at each jamb, unless otherwise indicated.
    b. Extend jamb studs through suspended ceilings and attach to underside of floor or roof structure above.

4. Frame openings other than door openings the same as required for door openings, unless otherwise indicated. Install framing below sills of openings to match framing required above door heads.

D. Z-Furring Members: Erect insulation vertically and hold in place with Z-furring members.

1. Until gypsum board is installed, hold insulation in place with 10-inch staples fabricated from 0.0625-inch- diameter, tie wire and inserted through slot in web of member.

3.3 PANEL PRODUCT INSTALLATION

A. Gypsum Board: Comply with ASTM C 840 and GA-216.

1. Space screws a maximum of 12 inches o.c. for vertical applications.
2. Space fasteners in panels that are tile substrates a maximum of 8 inches o.c.
3. On ceilings, apply gypsum panels before wall/partition board application to the greatest extent possible and at right angles to framing, unless otherwise indicated.
4. On partitions/walls, apply gypsum panels vertically (parallel to framing), unless otherwise indicated or required by fire-resistance-rated assembly, and minimize end joints.
5. On Z-furring members, apply gypsum panels vertically (parallel to framing) with no end joints. Locate edge joints over furring members.
6. Single-Layer Fastening Methods: Apply gypsum panels to supports with steel drill screws.
7. Laminating to Substrate: Comply with gypsum board manufacturer's written recommendations and temporarily brace or fasten gypsum panels until fastening adhesive has set.
8. Meet applicable requirements of governing authorities. Install to meet fire rating, STC requirements as indicated.
9. Comply with applicable recommendations, requirements of “Specifications of Application, Finishing of Gypsum Wallboard”; GA-216 and ASTM C840.
10. All gypsum wallboard to be sound, free of cracks, breaks, broken edges and corners. Precautions will be taken to prevent delamination and exposure to sunlight or ultra-violet radiation.
11. Cut wallboard by scoring, breaking or sawing. Work from face side. Scribe wallboard to fit abutting surfaces.
12. At radius walls, dampen both sides of wallboard; allow time for penetration of moisture to core before bending. Bend to give smooth, even curve on finish side.
13. Cut openings for electrical outlets, fixtures, piping and other penetrations. Maintain close tolerances for accurate fit to allow for covering of edges with plates and escutcheons. Patch all penetrations at fire or sound walls with penetration seal – see Section 07900 for additional requirements.
14. Apply wallboard to ceilings, horizontal surfaces, before applying to vertical surfaces.
15. Stagger joints between gypsum base sheets on opposite side of partitions. Do not location vertical joints within 8 inches from corners of door frames and other openings.
16. Use maximum practical length base sheets required to minimalize end joints and stagger end joints over studs.
17. Butt joints loosely, maximum gap 1/4 inch. Sand edges that have been cut.

18. Wallboard surfaces, corners of columns, walls and partitions shall be accurately aligned, level, plumb, true to line without any deflection, bow or twist, ready to receive without adjustments subsequent interior finishes.
19. Provide fasteners of the type and size recommended by the gypsum plaster base manufacturer for the applications shown and specified. Set heads slightly below surface of base, but do not break paper face.
20. Fasten to metal studs or metal furring with self-tapping screws. Comply with manufacturer's instructions for fastening, but do not exceed 12 inch o.c. spacing for screws; except in vertical applications, space screws from edge joints not more than 9 inches o.c.
21. Joints: Apply joint compound and tape according to Gypsum Wallboard System used in strict accordance with manufacturer's written instructions.
22. Thickness: Wallboard thickness shall be as required and shown on Drawings to fulfill compliance with the total wallboard system and its intended use.

B. Tile Backing Panels (Cement Board):

1. Cementitious Backer Units: ANSI A108.11, at wet wall locations indicated to receive tile or as scheduled.

C. Moisture Resistant Gypsum Board:
1. Install Moisture Resistant Board at all wet walls whether or not scheduled or shown (adjacent to or within 8 feet of plumbing fixtures) not scheduled to receive tile. Tiles walls to receive cement board backer.

3.4 FINISHING

A. Installing Trim Accessories: For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.

1. Aluminum Trim: Install in locations indicated on Drawings and where recommended in writing by ceiling suspension system manufacturer for trim for suspended ceilings.

B. Finishing Gypsum Board Panels: Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare gypsum board surfaces for decoration. Finish level as specified or scheduled.

1. Prefill open joints, rounded or beveled edges, and damaged surface areas.
2. Apply joint tape over gypsum board joints, except those with trim having flanges not intended for tape.

C. Gypsum Board Finish Levels: Finish panels to levels indicated below, according to ASTM C 840, for locations indicated:

1. Level 1: Embed tape at joints in ceiling plenum areas and concealed areas.
2. Level 2: Embed tape and apply separate first coat of joint compound to tape, fasteners, and trim flanges where panels are substrate for tile.

3. Level 3: Where panels are substrate for vinyl wallcovering (VWC) as recommended by VWC manufacturer.
4. Level 4: Embed tape and apply separate first, fill, and finish coats of joint compound to tape, fasteners, and trim flanges at panel surfaces that will be exposed to view, unless otherwise indicated.
5. Level 5: A level 4 finish with an additional level of surface treatment, such as a thin skim coat of joint compound applied to the entire surface.

D. Cementitious Backer Units: Finish according to manufacturer's written instructions.

3.5 PERIMETER CAULKING INSTALLTION

A. Caulk perimeter of indicated applications as follows:
1. At all sound insulated partitions provide continuous beads of sealant at juncture of both faces of runners or plates with floors, walls and ceiling construction and wherever gypsum wallboard abuts dissimilar materials.
2. At control joints provide continuous bead of sealant at faces of control joints. Caulk prior to installation of surface-applied control joint accessories and locate at proper depth in joint to allow for insertion of expansion portion of control joint accessory.
3. At openings and cutouts, fill open spaces between gypsum base and fixtures, cabinets, ducts and other flush or penetrating items, with continuous bead of sealant.
4. Caulk sides and backs of electrical boxes to completely seal openings and joints at sound insulated walls and fire rated walls.

3.6 SUSPENDED CEILINGS

A. The Contractor shall furnish and install the suspended ceiling system in strict accordance with ASTM C636 and the manufacturer’s printed instructions.

B. The ceiling suspension system shall be leveled to within 1/8 inch in 12 feet prior to placing drywall and the deflection of any component shall not exceed 1/360 of span.

C. The ceiling system shall be supported from the structure above the metal stud framing or No. 9 gauge hanger wire minimum. The supporting of wires from mechanical or electrical equipment, piping, ductwork or other equipment above ceiling SHALL NOT BE PERMITTED.

D. Additional supports shall be provided for light fixtures, A/C grilles, panel access doors, etc.

3.7 CUTTING AND PATCHING

A. Cut, patch, repair and point-up plaster as required and as directed by the Architect. Repair cracks and indented surfaces by moistening plaster and filling with new material, troweled or tamped flush with adjoining surfaces.

3.8 CLEANING AND PROTECTION

A. All finish materials and finish surfaces must be protected from contact with veneer – other surfaces that have been stained, marred or otherwise damaged during the plastering work.

B. When work is completed, remove unused materials, containers and equipment and clean floors of all debris and leave room broom clean. Installer shall advise Contractor of requirements for protecting the work from deterioration and damage until time of acceptance.

3.9 MATERIAL AND WORKMANSHIP

A. All damaged material and faulty workmanship shall be removed and be replaced with new material in the best workmanlike manner at NO EXTRA COST to the Owner.

END OF SECTION 09260

SECTION 09310 – CERAMIC TILE

PART 1 - GENERAL

1.1 RELATED DOCUMENT

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Porcelain floor and wall tile.
2. Glazed ceramic mosaic wall tile.

B. Related Sections include the following:

1. Division 7 Section “Membrane Waterproofing” for membrane waterproofing (showers).
2. Division 15 for floor drains.
3. Division 9 Section “Gypsum Board Assemblies” for cement backerboards within drywall assemblies for all wall tile applications and ceramic wall boards porcelain panels.

1.3 SUBMITTALS

A. Product Data: For each product indicated.

B. Compatibility Certification: Provide certification of compatibility of sealer, grout and tile surfaces.

C. Maintenance and cleaning information for care tile floor and sealer.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Such products include, but are not limited to; porcelain tile, setting material, grout, sealant, noise transference products, transition strips, and expansion joint hardware.

B. Shop drawings indicating tile patterns and locations of widths of expansion, contraction, control and isolation joints in tile substrates and finished tile surfaces.

C. Submit list of all subcontractors that will be used on the specified project. Proof of Workman's Compensation insurance must be provided for each subcontracted worker

D. Samples: 2 Sets- 1 for Architect/Owner, 1 kept on site in a safe location through project completion.

1. Each type, composition, color, and finish of tile, Schluter Schiene transition strips and Rondec tile cap and grout.

2. Manufacturer's certifications and installation procedures.

1.5 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Tile and Trim Units: Furnish quantity of full-size units equal to 5 (Five) percent of amount installed, but not less than one box for each type, composition, color, pattern, and size indicated. Label boxes to indicate room location and application and mfg's contact information.

1.6 REFERENCE STANDARDS

A. American National Standards Institute (ANSI) A137.1 American National Standard Specifications for Ceramic Tile.

B. American National Standards Institute (ANSI) A108.1A - A108.13 American National Standard Specifications for the Installation of Ceramic Tile.

C. American National Standards Institute (ANSI) A118.1 - A118.12 American National Standard Specifications for the Installation of Ceramic Tile.

D. American National Standards Institute (ANSI) A136.1 American National Standard Specifications for the Installation of Ceramic Tile.

1.7 QUALITY ASSURANCE

A. Tile Manufacturer: Company or Affiliate Company specializing in ceramic tile, trim units and/or thresholds. Obtain tile from a single source with resources to provide products of consistent quality in appearance and physical properties.

B. Installation System Manufacturer: Company specializing in adhesives, mortars, grouts and/or other installation materials including ISO 9001 certification unless noted otherwise by Architect.

C. Installer qualifications: company specializing in installation of ceramic tile, mosaics, with documented experience with similar installations of similar scope, materials and design; or written certification and approval of the installers qualifications from the material supplier.

1.8 MOCK-UPS

A. Provide mock-up of each type/style/finish/size/color of ceramic tile, trim unit and threshold, along with respective installation adhesives, mortars, grouts and other installation materials. Mock ups for floor tile shall be a minimum of 3 tiles wide x 3 tiles high and include both polished and unpolished versions of the tile as scheduled.

B. For patterned wall tile, layout a measured profile of the tile pattern and obtain Architect's and Owner's approval prior to placing the tile. The pattern shall be continuous at adjoining and intersecting walls.

1.9 PRE-INSTALLATION CONFERENCE

A. Pre-installation conference: At least three weeks prior to commencing the work attend a meeting at the jobsite to discuss conformance with requirements of the Drawings, Specification and job site conditions. Representatives of Owner or Owner's designated representative, Architect, General Contractor, , tile subcontractor, and any other parties who are involved in the scope of this installation must attend the meeting.

B. Layout and field verify wall tile pattern prior to placing tile and as part of pre-installation meeting.

1.10 SEQUENCING AND SCHEDULING

A. Coordinate installation of tile work with related work.

B. Proceed with tile work only after curbs, vents, drains, piping, and other projections through substrate have been installed and when substrate construction and framing of openings have been completed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles, where titles below introduce lists, the following requirements apply for product selection:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the manufacturers specified as the Basis of Design.

2. Product Source Reference: Mike Hubert – Garden State Tile @ 1-407-982-0430. Carolina Coelho – Tilebar @ 1-888-541-3840

2.2 TILE PRODUCTS

A. Manufacturers: The Basis-of-Design shall be:

1. As scheduled and shown on the drawings, or as selected by the Architect and the Owner. The pattern, size and material designations are shown on the drawings.
2. Tile components shall include, but are not limited to, field tile, tile borders, wall tile, wainscot tile, tile base, accent tile and other elements shown on the drawings.

B. Subject to compliance with requirements for matching the color match, texture, and tile specifications, manufacturers offering products that match the color samples and tile size scheduled, or that are approved as substitutions by the Architect and the Owner or Owner's designated representative may include the following manufacturers:

1. Garden State Tile
2. Tilebar
3. Emser Tile

C. ANSI Ceramic Tile Standard: Provide Standard grade tile that complies with ANSI A137.1, "Specifications for Ceramic Tile," for types, compositions, and other characteristics indicated.

D. Porcelain Floor Tile:

1. Composition: Porcelain.
2. Surface: >250, per ASTM C501, Matte and polished finishes.
3. Module Size: Reference Drawings for module size No substitutions or changes to tile sizes will be authorized.
4. Nominal Thickness: 3/8 inch nominal (MIN). unless otherwise defined Face: Factory Rectified For Flatness, Squareness and Consistent Thickness.
5. Color and Pattern: As selected by the Architect and the from manufacturer's full range and to match the tile colors and finished shown in the drawings.
6. Trim Units: Coordinated with sizes and coursing of adjoining flat

tile where applicable and matching characteristics of adjoining flat tile.

a. Provide shapes and borders as shown on the Drawings and as, selected from manufacturer's standard shapes. All corners should be mitered.

7. Tile Floor Base

a. At public restrooms, provide square edge module size same as adjoining floor tile with Schluter Rondec cap #80 trim continuous at all base tile; 1-Tile high tile base – (6 inches high), unless noted otherwise, color to match the adjoining floor tile scheduled & vertical edges or adjoining corners. Provide metal cove at the base of all tiled walls, with matching preformed corners and trim.

b. Mech. areas and Back of House (non-public areas)
Areas provide cove tile base only 4" inches high where scheduled.

c. At non-public areas the base and wainscot tile where scheduled color to match wall tile color.

d. Provide metal square edge cap at public areas, lobby & corridors at the top of tile base; metal cove trim is not required at tile base and floor tile intersection at the lobby & corridor.

2.2 ACCESSORY MATERIALS

A. Metal Trim: Schluter "Rondec" bullnose type profile with symmetrically rounded visible surface with ¼" (6mm) radius, integrated trapezoid perforated anchoring leg, and integrated grout joint spacer. Finish to be Satin Nickel Anodized aluminum. Thickness to match tile thickness. Metal trim system shall include preformed inside and outside corners and concealed connectors at splice joints where trim cannot be run continuously. Schluter (Schiene" square corner type profile for tile base cap. Schluter "cove" for restroom & locker rooms tile wall & base intersection with wall tile. Provide preformed corners & joints for all metal trim.

B. Recessed Soap Dishes: "Recess-it" Tile Backer: Aluminum – prefabricated waterproofing soap dish & floating shelf.

1. One Recess-It with optional floating shelf (Rec 1418) and one Recess-It (Rec 614) at each shower.

2.3 SETTING AND GROUTING MATERIALS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Bostick

2. C-Cure
3. Custom Building Products
4. DAP, Inc.
5. Laticrete International, Inc.
6. MAPEI Corporation
7. Southern Grouts & Mortars, Inc.
8. Summitville Tiles, Inc.
9. TEC Specialty Products, Inc.

B. Latex-Portland Cement Mortar (Thin Set Tile/Thick Set Bed): ANSI A118.4.

1. Prepackaged dry-mortar mix containing dry additive to which only water must be added.
2. Prepackaged dry-mortar mix combined with liquid-latex additive.
3. For wall applications, provide nonsagging mortar.
4. Approved by the selected manufacturer for specific applications.
   a. Available Products.
   b. Modified non-sagging dry-set cement mortar for large and heavy tile thin-set applications complying with ANSI A118.4, A118.11 and ISO 13007 C2TES1P1: MAPEI “Ultraflex LFT” or Architect approval equal.
5. Manufacturers standard cementitious setting bed at tile floors with a thick set setting bed.

C. Standard Unsanded Cement Grout: ANSI A118.6, color selected by Architect.

1. Unsanded Grout: Unsanded polymer-modified Portland cement ceramic tile grout, complying with ANSI A118.6 and ISO 13007 CG2WA, for joints less than 1/8 inch (3 mm) wide; MAPEI “Keracolor U” or Architect approved equal.

D. Polymer-Modified Tile Grout: ANSI A118.7, color as selected from manufacturers full range.

1. Polymer Type: Liquid-latex form for addition to prepackaged dray-grout mix.

2. Sanded Grout: Fast-setting sanded polymer-modified grout, complying with ANSI A118.7 and ISP 13007 CG2WAF, for joints between 1/16 inch and 1 inch (1.5 mm and 25 mm) wide; MAPEI “Ultracolor Plus” or Architect approved equal.

E. Epoxy Tile Adhesives: (Restroom floors & walls)

1. ANSI 118.3: Where indicated on the Drawings or where scheduled or specified for setting tile as specified by ANSI A108.6 Chemical Resistant, Water Cleanable tile setting and grouting epoxy over proper substrates. Kerpoxy by Mapai or Architect approved equal.

2.4 MISCELLANEOUS MATERIALS

A. Elastomeric Sealants: Elastomeric sealants of base polymer and characteristics indicated that comply with applicable requirements in Division 7 Section "Joint Sealants."

1. One-Part, Mildew-Resistant Silicone: ASTM C 920; Type S; Grade NS; Class 25; Uses NT, G, A, and, as applicable to nonporous joint substrates indicated, O; formulated with fungicide, intended for in-service exposures of high humidity and extreme temperatures.

a. Available Products:

1. Dow Corning Corporation; Dow Corning 795.
2. GE Silicones; Sanitary 1700.
3. Pecora Corporation: Pecora 898 Sanitary Silicone Sealant.

a. Grout Sealer: DuPont – "Stone Tech" professional grout sealer for ceramic and porcelain tile and grout, water based, low solids coating, clear sealer **No sealer shall be applied to the face of the tile, base or wainscot; sealer shall be applied to grout only at Public areas and factory applied sealer/finish is scheduled or specified.**

PART 3 - EXECUTION

3.1 SUBSTRATE EXAMINATION

A. Verify that surfaces to be covered with ceramic tile, mosaics, pavers, brick, stone, trim or waterproofing are:
1. Sound, rigid and conform to good design/engineering practices;
2. With maximum deflection under all live, dead and impact loads, including concentrated loads, of L/360 for ceramic tile, mosaics, pavers or brick;
3. Clean and free of dust, dirt, oil, grease, sealers, curing compounds, laitance, efflorescence, form oil or loose plaster, paint and scale;
4. Level and true to within ¼" in 10', and not more than 1/16" in 1" Variation from substrate high points, for applications by the thin bed method over substrate, thin waterproof membrane or think crack isolation membrane;
5. Not leveled with gypsum or asphalt based compounds;
6. Dry as per American Society for Testing and Materials (ASTM) D4263 **"Standard Test for Determining Moisture in Concrete by the Plastic Sheet Method."**

B. Concrete surfaces shall also be:
1. Cured a minimum of 28 days at 70°F, including an initial (7) day period of wet curing;
2. Wood float finished, or better, if the installation is to be done by the thin bed method;
3. Advise General Contractor and Architect of any surface or

substrate conditions requiring correction before tile work commences

3.2 PREPARATION

A. Remove coatings, including curing compounds and other substances that contain soap, wax, oil, or silicone, that are incompatible with tile-setting materials.

B. Fill cracks, holes, and depressions with trowelable leveling and patching compound according to tile-setting material manufacturer's written instructions.

C. Remove protrusions, bumps, and ridges by sanding or grinding.

D. Blending: For tile exhibiting color variations, use factory blended tile or blend tiles at Project site before installing.

E. Feathering: Where tile meets carpet, feather the tile up to and flush with the carpet, no transition strips will be accepted between carpet and new tile. For thresholds, all threshold locations must be approved prior to installation. Anchor guards to substrate.

3.3 INSTALLATION, GENERAL

A. ANSI Tile Installation Standards: Comply with parts of ANSI A108 Series "Specifications for Installation of Ceramic Tile" that apply to types of setting and grouting materials and to methods indicated in ceramic tile installation schedules.

B. TCA Installation Guidelines: TCA's "Handbook for Ceramic Tile Installation" latest edition. Comply with TCA installation methods indicated in ceramic tile installation schedules.

C. Cut and fit ceramic tile, brick or stone neatly around corners, fittings, and obstructions. Perimeter pieces to be minimum half tile, brick or stone. Chipped, cracked, split pieces and edges are not acceptable. Make joints even, straight, plumb and of uniform width to tolerance +- 1/16” over 8’. Install divider strips at junction of flooring and dissimilar materials.

D. Extend tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions, unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.

E. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Grind cut edges of tile abutting trim, finish, or built-in items. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.

F. Jointing Pattern: Lay tile in grid patterns exactly as shown on the Interior Design Drawings Align joints when adjoining tiles on floor, base, walls, and trim are same size. Lay out tile work and center tile fields in both directions in each space or on each wall area. Adjust to minimize tile cutting. Provide uniform joint widths, unless otherwise indicated. Grout joints shall not exceed 1/8" in width.

G. Grout tile to comply with requirements of ANSI A108.10, unless otherwise indicated.

H. Install tile on floors with the following joint widths:
1. Porcelain Tile 1/8 inch.
2. Install floor leveling material as required to achieve floor flatness value to meet mfgs. and TCA handbook, latest edition requirements for grout joint width specified.
3. Confirm tile cutting and joint pattern with Architect at sloped floors and drains.

I. Stone Thresholds: Install stone thresholds at tile floor transitions at doorways or locations specified, indicated or scheduled; set in same type of setting bed as abutting field tile, unless otherwise indicated.

1. Set thresholds in latex-portland cement mortar for locations mortar bed would otherwise be exposed above adjacent non-tile floor finish.

J. Install tile on walls with the following joint widths: grout joints shall not exceed 1/8".

1. Porcelain Tile Trim Units: Match mfgs. joint width of field tile.

K. Metal Trim: Install metal trim profile as specified, scheduled or shown on the Drawings in accordance with the manufacture's installation requirements. Furnish and install preformed metal joints at inside and outside corners. Butt joints shall be installed with concealed internal splices. Joints shall be kept to a minimum and the trim profiles shall be installed with the longest run of material available without butt joints.

L. Setting Bed: Install cementitious setting bed at all sloped floors where scheduled or indicated. Coordinate recessed floor requirements prior to cement slab floor placement.

3.4 CLEANING

A. Clean excess mortar/epoxy from veneer surfaces with water before they harden and as work progresses. Do not contaminate open grout/caulk joints while cleaning. Sponge and wash veneers diagonally across joints. Do not

use acids for cleaning. Polish with clean dry cloth. Remove surplus materials and leave premises broom clean.

3.5 PROTECTION

A. Protect finished installation under provisions of Division 1 Section “Temporary Facilities and Controls.” Close areas to other trades and traffic until tile being installed has set firmly. Keep traffic off horizontal Portland cement thick bed mortar installations for at least 72 hours at 70°F.

B. Keep floors installed with epoxy adhesive closed to traffic for 24 hrs. at 70°F, and to heavy traffic for 48 hours @ 70°F unless instructed differently by manufacturer. Use kneeling boards, or equivalent, to walk/work on newly tiled floors. Cure tile work in restrooms for 7 days for epoxy based grout and 14 days for latex-Portland cement based grout @ 70°F before walking on the surface. Extend period of protection of tile work at lower temperatures, below 60°F and at high relative humidity (>70% R.H.) due to retarded set times of mortar/adhesives. Replace or restore work of other trades damaged or soiled by work under this section.

3.6 FLOOR TILE INSTALLATION SCHEDULE

A. Interior floor installation on concrete; thin-set mortar; TCA F113:

1. Prep walls as required for application of new tile work.
2. Thin-Set Mortar: Latex portland cement mortar.
3. Thick-Set Mortar: Where shown, or noted, or scheduled or required for floor leveling areas.
4. Grout: Polymer-modified unsanded grout, epoxy grout at the restrooms.
5. Refer to schedule and drawings for extent and location of tile.

3.7 WALL TILE INSTALLATION SCHEDULE

A. Interior wall installation; thin-set mortar; over cement board; TCA W243:

1. Thin-Set Mortar: Latex portland cement mortar.
2. Grout: Polymer-modified unsanded grout.
3. Refer to schedule and drawings for extent and location of tile.

B. GC to supply and install cement backer board for all “wet” wall tile and mosaic tile areas. Reference Specification Section 09260, Gypsum Board Assemblies for cement backer board requirements and products.

C. **PRE-FLOAT METHOD (*FOR FLOOR LEVELING AS REQUIRED)***

B. Over clean, dimensionally stable and sound concrete or masonry substrates, apply latex-Portland cement mortar as scratch/leveling coat in compliance with

current revision of ANSI A108.1 (A-1 through A-3; A-4.1a.1.4). Float surface of scratch/leveling coat plumb, true and allow mortar to set until firm. For installation of ceramic tile, mosaic, follow *Wall Tile Installation Schedule* (3.7).

3.8 MATERIAL AND WORKMANSHIP

A. All damaged material and faulty workmanship shall be removed and be replaced with new material in the best workmanlike manner at NO EXTRA COST to the Owner.

END OF SECTION 09310

(INTENTIONALLY LEFT BLANK)

SECTION 09325 - NATURAL STONE GRANITE

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract including General and Supplementary Conditions and Division 1 Specifications, apply to this Section.

1.2 SUMMARY

A. Furnish all labor, materials, tools, equipment, etc. and services necessary and incidental to the complete fabrication, furnishing and erection of this Section as shown, noted, detailed and reasonably implied on the drawings and in the specifications.

B. Stonework includes but is not limited to the following:
   1. Reception desk countertop and lobby countertop and splashes in the reception area.
   2. Flight Crew Break Area countertop and splashes.

1.3 RELATED SECTIONS:

A. Division 6 Section “Interior Architectural Woodwork”.

B. Division 7 Section “Caulking and Sealants”.

1.4 SUBMITTALS

A. Submit shop drawings and product data under provisions of Section 01330

B. Product Data: Submit manufacturer's technical data for each type of stone, stonework accessory and other manufactured product required.

C. Samples: Submit 3 samples for each color, grade, finish, type and variety of stone consisting of units not less than 12 inches by 6 inches. Include 2 or more units in each set of samples showing the full range of appearance characteristics to be expected in completed work.

D. Submit shop drawings showing locations, elevations and details, drawn to scale.

1.5 QUALITY ASSURANCE

A. Single Source Responsibility for Stone: Obtain each color, grade, finish, type and variety of stone from a single source with resources to provide materials of consistent quality in appearance and physical properties, including the capacity to cut and finish material without delaying the progress of the work.

B. Single Source Responsibility for Setting Materials: Obtain mortar ingredients of uniform quality and from one manufacturer for each cementitious and admixture component and from one source or producer for each aggregate.

C. Installer Qualifications: Engage an Installer who has successfully completed interior stonework similar in material, design and extent to that indicated for this project. List in writing (5) five projects and furnish with submittals.

1.6 DELIVERY, STORAGE AND HANDLING

A. Deliver products to site under provisions of Section 01600.

B. Deliver materials to project in undamaged condition.

C. Store and handle stone and related materials to prevent their deterioration or damage due to moisture, temperature changes, contaminants, corrosion, breakage, chipping, or other causes.

D. Store cementitious materials off the ground, under cover, and in a dry location.

1.7 WARRANTY

A. Section 01740 Warranties and Bonds.

PART 2 – PRODUCTS

2.0 MATERIALS

A. Stone material: Refer to Room Finish Schedule and Drawings for locations.

B. Comply with referenced standards and other requirements indicated applicable to each type of material required.

2.1 INTERIOR MARBLE / GRANITE

A. Granite building stone standards:
1. Granite: ASTM C615, classification as selected.

B. Finish of all granite slabs and components as follows:

1. Polished - as indicated on drawings, schedules and approved samples by the Owner and Architect. Exposed countertop visible-edges to receive full bullnose; eased edge at splashes where not abutting drywall.

C. Color:

1. Basis Design: Black Granite – “Blue in the Night” by Mystic Granite or Architect and Owner approved equal.

D. Manufacturer/Supplier of granite slab: Subject to compliance with requirements, provide marble tile of following distributors (or approved equal):
   1. Mystic Granite
   2. International Granite & Marble
   3. Tile & Marble Collection Inc.
   4. Associated Imports
   5. Demarco Tile Inc.

2.2 THIN-SET PRODUCTS

A. Latex-Portland Cement Mortar: ANSI A118.4, of the following composition:
   1. Latex additive (water emulsion) of type described below, serving as a replacement for part or all of gauging water, added at job site to prepackaged dry mortar mix supplied or specified by latex manufacturer.
      a. Latex type: Manufacturer's standard

B. Manufacturers: Subject to compliance with requirements, provide products of one of the following manufacturers:
   1. American Olean Tile Co., Inc.
   2. Laticrete International Inc.
   3. W. R. Bonsal Co.

2.3 GROUTS

A. Grout colors: Provide colors to comply with the following requirements:
   1. Provide color as selected by Architect from manufacturer’s standard colors.

B. Latex-Portland Cement Grout: ANSI A118.6, of the following composition:
   1. Latex additive (water emulsion) serving as a replacement for part or all of gauging water, added at job site to prepackaged dry grout mix, with type of latex and dry grout mix complying with requirements indicated below:
      a. Latex type: Manufacturer's standard.
      b. Grout type: Commercial Portland cement grout specified or supplied by latex manufacturer.

C. Manufacturers: Subject to compliance with requirements, provide products of one of the following manufacturers:
   1. Manufacturers of Commercial Portland Cement Grouts:
      a. American Olean Tile Co., Inc.
      b. Laticrete International Inc.
      c. W. R. Bonsal Co.

   2. Manufacturers of Latex-Portland Cement Grouts:
      a. American Olean Tile Co., Inc.
      b. Laticrete International Inc.
      c. W. R. Bonsal Co.

2.4 STONE ACCESSORIES

A. Cleaner: Provide stone cleaners of proper formulation for kinds of stones, finishes and applications indicated, as recommended by stone producer and, if sealer specified, by sealer manufacturer. Do not use acid-type-cleaning agents or other cleaning compounds containing caustic or harsh fillers, except where expressly approved by stone producer for type of condition involved.

B. Sealer for granite: Colorless, stain resistant sealer which will not affect color or physical properties of stone surface, such as Ceramaseal, or as recommended by sealer and by stone producer for application indicated.

2.5 MORTAR AND GROUT MIXES

A. General: Do not add admixtures including coloring pigments, air-entraining agents, accelerators, retarders, water repellent agents, anti-freeze compounds, or calcium chloride, unless otherwise indicated.

B. Mixing: Combine and thoroughly mix cementitious materials, water and aggregates in a mechanical batch mixer; comply with referenced ASTM or ANSI standard, as applicable, for mixing time and water content, unless otherwise indicated.

C. Setting Mortar for Wall Facing and Trim: Type N complying with ASTM C270, Proportion Specification.

2.6 FABRICATION

A. General: Fabricate interior stonework in sizes and shapes required to comply with requirement indicated, including details on drawings and final shop drawings.

B. For granite comply with recommendations of Marble Institute of America Inc. (MIA) as published in "Dimensional Stone - Design Manual III".

C. Cut stones to produce pieces of thickness, size and shape indicated or required and within fabrication tolerances recommended by applicable stone association or stone source, for faces, edges, beds, and backs.
   1. Thickness of granite counter tops: 3 cm and as indicated on drawings. All backsplashes: 4” high x 2 cm thick.

D. Dress joints (bed and vertical) straight and at 90 degree angle to face, unless otherwise indicated.
   1. Countertops to have tight joints, maximum 1/16 inch width filled with clear silicone.

E. Finish exposed faces and edges of stones to comply with requirements indicated for finish under each type and application of stone required and to match approved samples and field-constructed mock-ups.

PART 3 – EXECUTION

3.1 INSTALLATION GENERAL

A. All items in this Section shall be installed by experienced skilled mechanics in the best workmanlike manner and in this trade's best standard practice.

3.2 EXAMINATION

A. Require Installer to examine surfaces to receive stonework and conditions under which stonework will be installed and to report in writing any conditions, which are not in compliance with requirements. Do not proceed with installation until surfaces and conditions comply with requirements indicated or for execution of other work which affects stonework.

3.3 PREPARATION

A. Advise Installers of other work above specific requirements relating to placement of inserts, reglets and similar items that will be used by stonework installer for anchoring, supporting and flashing of stonework. Furnish Installers of other work with drawings or templates showing location of these items.

3.4 SETTING STONE, GENERAL

A. Execute stonework by skilled mechanics, and employ skilled stone fitters at the site to do necessary field cutting, as stones are set.
   1. Use power saws to cut stones; for exposed edges, produce edges that are cut straight and true.

B. Set stones to comply with requirements indicated on drawings and final shop drawings. Install anchors, supports, fasteners and other attachments indicated or necessary to secure stonework in place. Shim and adjust anchors, supports and accessories to set stones accurately in locations indicated with uniform joints of widths indicated and with edges and faces aligned according to established relationships and indicated tolerances.

3.5 INSTALLATION OF INTERIOR WALL SPLASH AND TRIM

A. Erect interior wall facing and trim plumb and true with joints uniform in width and accurately aligned. Provide setting buttons as required to maintain joint width.

B. Position backsplashes to maintain a 1/4 inch or less setting bed.

3.6 ADJUSTING, CLEANING AND SEALING

A. Remove and replace stonework of the following description:
   1. Broken, chipped, stained or otherwise damaged stones

2. Defective joints
3. Stonework not complying with other requirements indicated.

B. Replace in manner, which results in stonework matching approved samples, complying with other requirements, and showing no evidence of replacement.

C. Clean interior stonework after setting, pointing, grouting and curing is complete; use procedures recommended by stone producer for types of application indicated.

D. Apply sealer to cleaned interior stone countertops in compliance with sealer manufacturer's instructions.

E. Protect interior stone during construction period with Kraft paper or other heavy covering of type that will not stain or discolor stone.

F. Before inspection for substantial completion, remove protective covering and clean sealed surfaces using procedures and materials recommended by sealer manufacturer.

3.7 MATERIALS AND WORKMANSHIP

A. All damaged material and faulty workmanship shall be removed and be replaced with new material in the best workmanlike manner at NO EXTRA COST to the Owner.

END OF SECTION 09325

SECTION 09400- TERRAZZO FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Thin-set, epoxy-resin terrazzo flooring, custom patterned graphic and metal inserts.

B. Related Sections:

1. Division 3 Section "Cast-In-Place Concrete" for requirements for concrete slabs and to confirm coordination of terrazzo flooring edge trim installations that are to be concurrent with concrete slab construction.
2. Division 7 Section “Vapor Retarder” for vapor barriers and accessories installed under concrete slabs.

1.3 DEFINITIONS

A. Aggregate: Multiple colored Marble chips, Mother of Pearl and Glass or other types of aggregate. Multiple colors to achieve graphic effect per the Drawings

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to terrazzo including, but not limited to, the following:

a. Inspect and discuss condition of substrate and other preparatory work performed by other trades.
b. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
c. Review special terrazzo designs and patterns and schedule of installation.

B. Conduct a pre-construction meeting and prepare a mock up with the Architect to ensure proper distribution and application of aggregate broad cast.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: Include terrazzo installation requirements. Include plans, elevations, sections, component details, and attachments to other work. Show layout of the following:

1. Divider strips.
2. Control-joint strips.
3. Abrasive strips.
4. Precast terrazzo jointing and edge configurations.
5. Terrazzo patterns.

C. Samples: For each exposed product and for each color and texture specified:

1. Samples for Initial Selection: NTMA color plates showing the full range of colors and patterns available for each terrazzo type; a minimum of 6 inches square in size.
2. Samples for Verification: For each type, material, color, and pattern of terrazzo and accessory required showing the full range of color, texture, and pattern variations expected. Label each terrazzo sample to identify manufacturer's matrix color and aggregate types, sizes, and proportions. Prepare (3) Three Samples of same thickness and from same material to be used for the Work, in size indicated below:

a. Terrazzo: 2’-0”X2’-0”- square Samples.
b. Accessories: 6-inch- long Samples of each exposed strip item required.

D. Schedule of installation with key milestone dates.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Material Certificates: For each type of terrazzo material or product, from manufacturer.

C. Installer Certificates: Signed by manufacturers certifying that installers comply with requirements.

D. LEED Submittals:

1. Product Data for Credit MR 4.1: for aggregates, indicating percentages by weight of pre-consumer recycled content.
   a. Include statement that indicates cost for each product having recycled content.
2. Product Data for Credit MR 5.1: For products manufactured within a 500 mile (804.7 km) radius of the project.
3. Product Data for Credit EQ 4.1: For adhesives, including printed statement of VOC content and chemical components.

1.7 CLOSEOUT SUBMITTALS

A. Maintenance Data: For terrazzo to include in maintenance manuals.

1.8 QUALITY ASSURANCE

A. Installer Qualifications:

1. Engage an installer who is a contractor member of NTMA.
2. Engage an installer who is certified in writing by terrazzo manufacturer as qualified to install manufacturer's products.

B. Source Limitations: Obtain primary terrazzo materials from single source from single manufacturer. Provide secondary materials including patching and fill material, joint sealant, and repair materials of type and from source recommended by manufacturer of primary materials.

C. Source Limitations for Aggregates: Obtain each color, grade, type, and variety of granular materials from single source with resources to provide materials of consistent quality in appearance and physical properties.

D. Pre-installation Conference: Conduct conference at project site to comply with requirements in Section 01310 Project management and Coordination. Prior to concrete substrate placement, review methods and procedures related to terrazzo including, but not limited to, the following:

1. Inspect and discuss installation procedures, joint details, job site conditions, substrate specifications, vapor barrier details and coordination with other trades.
2. Review and finalize construction schedule and verify availability of materials, installer’s personnel, equipment and facilities needed to make progress and avoid delays.
3. Review special terrazzo designs and patterns.
4. Review plans for concrete curing and site drying to enable timely achievement of suitable slab moisture conditions.

E. NTMA Standards: Comply with NTMA’s “Terrazzo Specifications and Design Guide” and with written recommendations for terrazzo type indicated unless more stringent requirements are specified.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to Project site in supplier's original wrappings and containers, labeled with source's or manufacturer's name, material or product brand name, and lot number if any.

B. Store materials in their original, undamaged packages and containers, inside a well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.

1.10 FIELD CONDITIONS

A. Environmental Limitations: Comply with manufacturer's written instructions for substrate temperature, ambient temperature, concrete curing period, moisture, ventilation, and other conditions affecting terrazzo installation.

B. Field Measurements: Verify actual dimensions of construction contiguous with precast terrazzo by field measurements before fabrication.

C. Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during terrazzo installation.

D. Close spaces to traffic during terrazzo application and for not less than 24 hours after application unless manufacturer recommends a longer period.

E. Control and collect water and dust produced by grinding operations. Protect adjacent construction from detrimental effects of grinding operations.

F. Provide temporary power and water as required for operation of installation equipment.

G. Acceptable Substrates:

1. Level tolerance: Concrete subfloor shall be level with a maximum variation from level of ¼” in 10 feet (6.4 mm in 3.1m). Any irregularity of the surface requiring patching and/or leveling shall be done using Terroxy® Fill and selected aggregates as recommended by Terroxy® Resin Systems.
2. Concrete floor shall be prepared mechanically by shot blasting in accordance with ICRI Guideline No. 03732. Specifically, surface preparation results should achieve a CSP3-CSPS profile.
3. Saw cutting of control joints must be done between 12 and 24 hours after placement of the structural concrete and at a frequency compatible to ACI recommendations.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. NTMA Standards: Comply with NTMA's "Terrazzo Specifications and Design Guide" and with written recommendations for terrazzo type indicated unless more stringent requirements are specified.

2.2 EPOXY-RESIN TERRAZZO

A. Epoxy-Resin Terrazzo : Comply with NTMA's "Terrazzo Specifications and Design Guide" and manufacturer's written instructions for matrix and aggregate proportions and mixing.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Key Resin Company; Key Epoxy Terrazzo or comparable product by one of the following:

    a. General Polymers Corporation; Terrazzo 1100.
    b. TEC Specialty Construction Brands, Inc.; Tuff-Lite Epoxy Terrazzo.

2. Thickness: 3/8 inch (9.5 mm) nominal.
3. Formulated Mix Color and Pattern: As selected by Architect from full range of industry colors.

B. Materials:

1. Flexible Reinforcing Membrane: Key Resin Co. KR 580 or Manufacturer's resinous membrane for substrate-crack preparation and reflective-crack reduction.
2. Primer: Key Resin Co. KR 502 or Manufacturer's product recommended for substrate and use indicated.
3. Epoxy-Resin Matrix: Key Resin Co. KR 108 or Manufacturer's standard recommended for use indicated and in color required for mix indicated.

    a. Physical Properties without Aggregates:

        1) Hardness: 60 to 85 per ASTM D 2240, Shore D.
        2) Minimum Tensile Strength: 3000 psi per ASTM D 638 for a 2-inch specimen made using a "C" die per ASTM D 412.
        3) Minimum Compressive Strength: 10,000 psi per ASTM D 695, Specimen B cylinder.
        4) Chemical Resistance: No deleterious effects by contaminants listed below after seven-day immersion at room temperature per ASTM D 1308.

            a) Distilled water.
            b) Mineral water.
            c) Isopropanol.
            d) Ethanol.
            e) 0.025 percent detergent solution.
            f) 1.0 percent soap solution.
            g) 10 percent sodium hydroxide.
            h) 10 percent hydrochloric acid.
            i) 30 percent sulfuric acid.
            j) 5 percent acetic acid.

    b. Physical Properties with Aggregates: For resin blended with Georgia white marble, ground, grouted, and cured per requirements in NTMA's "Terrazzo Specifications and Design Guide"; comply with the following:

        1) Flammability: Self-extinguishing, maximum extent of burning 1/4 inch per ASTM D 635.

2) Thermal Coefficient of Linear Expansion: 0.0025 inch/inch per deg F for temperature range of minus 12 to plus 140 deg F per ASTM D 696.

4. Aggregates: Comply with NTMA gradation standards for mix indicated and contain no deleterious or foreign matter. The aggregates shall be signed and blended to achieve the graphic image shown on the Drawings.

   a. Abrasion and Impact Resistance: Less than 40 percent loss per ASTM C 131.
   b. 24-Hour Absorption Rate: Less than 0.75 percent.
   c. Dust Content: Less than 1.0 percent by weight.
   d. Finishing Grout: Resin based.

2.3 STRIP METAL MATERIALS

A. Thin-Set Divider Strips: L-type angle, 1/4 inch deep.

1. Material: Aluminum, 16 gauge.
2. Top Width: 1/8 inch.
3. Mitered corners.

B. Control-Joint Strips: Separate, double L-type angles, positioned back to back, that match material and color of divider strips and in depth required for topping thickness indicated.

C. Custom Cut Letters: Factory cut aluminum letters to match. Thin-set divider strips, set into resinous coating.

2.4 MISCELLANEOUS ACCESSORIES

A. Strip Adhesive: Epoxy-resin adhesive recommended by adhesive manufacturer for this use.

1. Adhesives shall have a VOC content of 70 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. Anchoring Devices:

1. Strips: Provide mechanical anchoring devices or adhesives for strip materials as recommended by manufacturer and required for secure attachment to substrate.
2. Precast Terrazzo: Provide mechanical anchoring devices as recommended by fabricator for proper anchorage and support of units for conditions of installation and support.

C. Patching and Fill Material: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.

D. Resinous Matrix Terrazzo Cleaner: Chemically neutral cleaner with pH factor between 7 and 10 that is biodegradable, phosphate free, and recommended by sealer manufacturer for use on terrazzo type indicated.

E. Sealer: Slip- and stain-resistant, penetrating-type sealer that is chemically neutral; does not affect terrazzo color or physical properties; is recommended by sealer manufacturer; and complies with NTMA's "Terrazzo Specifications and Design Guide" for terrazzo type indicated.

1. Surface Friction: Not less than 0.6 according to ASTM D 2047.
2. Acid-Base Properties: With pH factor between 7 and 10.
3. Sealers shall have a VOC content of 200 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions, including levelness tolerances, have been corrected.

3.2 PREPARATION

A. Clean substrates of substances, including oil, grease, and curing compounds, that might impair terrazzo bond. Provide clean, dry, and neutral substrate for terrazzo application.

B. Concrete Slabs:

1. Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with terrazzo.

a. Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
b. Repair damaged and deteriorated concrete according to terrazzo manufacturer's written recommendations.
c. Use patching and fill material to fill holes and depressions in substrates according to terrazzo manufacturer's written instructions.

C. Verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to manufacturer's written instructions.

1. Moisture Testing: Perform tests indicated below.

    a. In-Situ Probe Test: Perform relative-humidity test using in-situ probes per ASTM F 2170. Proceed with installation only after substrates have a maximum 75 percent relative-humidity-level measurement.
    b. Calcium Chloride Test: Perform calcium chloride test per ASTM F-1869.
    c. Proceed with installation only after substrates have been tested and, subsequently, verified that the moisture vapor emission rate does not exceed that as recommended by the manufacturer at time of installation of the flooring or any future date.
    d. If test results show excessive levels of moisture content or vapor emission rate, apply manufacturer's recommended moisture vapor emission control material based on the highest test readings, Key Resin Co. Key Epocon SL or alternate manufacturer's approved equal.

D. Protect other work from water and dust generated by grinding operations. Control water and dust to comply with environmental protection regulations.

1. Erect and maintain temporary enclosures and other suitable methods to limit water damage and dust migration and to ensure adequate ambient temperatures and ventilation conditions during installation.

E. Coordinate installation timing with the Architect to ensure an on site meeting can be conducted to allow assistance by the Architect for aggregate broadcast for custom "cloud" pattern.

3.3 EPOXY-RESIN TERRAZZO INSTALLATION

A. Comply with NTMA's written recommendations for terrazzo and accessory installation.

B. Mix place, rough grind, grout, cure grout, fine grind, and finish terrazzo according to manufacturer's written instructions and NTMA's "Terrazzo Specifications and Design Guide."

C. Installation Tolerance: Limit variation in terrazzo surface from level to 1/4 inch in 10 feet; noncumulative.

D. Random Crack Detail: For cracks over 1/16" width before surface preparations, fill saw cut with 100% solids epoxy, followed by application of Terroxy® Iso-Crack membrane (40 mils/1.0mm) with fiberglass mesh reinforcement embedded into the membrane. Note: Movement from the substrate may reflect through the finished flooring.

E. Rough Grinding: grind with 24 grit silicon carbide or 24 grit turbo diamonds until all terrazzo strips and marble chips are uniformly exposed.

F. Polishing: Polish with Resin pads or equivalent stones until all grout is removed from surface. Produce surface with a minimum of 70 percent aggregate exposure, and high polished appearance is achieved.

G. Ensure that matrix components and fluids from grinding operations do not stain terrazzo by reacting with divider and control-joint strips.

H. Delay fine grinding until heavy trade work is complete and construction traffic through area is restricted.

I. Flexible Reinforcing Membrane:

1. Prepare and prefill substrate cracks with membrane material.
2. Install membrane to produce full substrate coverage in areas to receive terrazzo.
3. Prepare membrane according to manufacturer's written instructions before applying substrate primer.

J. Primer: Apply to terrazzo substrates according to manufacturer's written instructions.

K. Strip Materials:

1. Divider and Control-Joint Strips:

a. Install control-joint strips back to back directly above concrete-slab control joints.
b. Install control-joint strips with 1/4-inch gap between strips, and install sealant in gap.
c. Install strips in adhesive setting bed without voids below strips, or mechanically anchor strips as required to attach strips to substrate, as recommended by strip manufacturer.

2. Perimeter of the compass rosette elements will have an aluminum edge band, with mitered corners.
3. Perimeter of the terrazzo insert will have an aluminum edge band, with mitered corners

L. Aggregate Broadcast: Ensure that the aggregates are broad cast and applied at the density and rates as per the graphic effect per the Drawings. This will be coordinated with the Architect or designated representative on site during the application of the aggregate & background color.

3.4 REPAIR

A. Cut out and replace terrazzo areas that evidence lack of bond with substrate. Cut out terrazzo areas in panels defined by strips and replace to match adjacent terrazzo, or repair panels according to NTMA's written recommendations, as approved by Architect.

3.5 CLEANING AND PROTECTION

A. Cleaning:

1. Remove grinding dust from installation and adjacent areas.

2. Wash surfaces with cleaner according to NTMA's written recommendations and manufacturer's written instructions; rinse surfaces with water and allow them to dry thoroughly.

B. Sealing:

1. Seal surfaces according to NTMA's written recommendations.
2. Apply sealer according to sealer manufacturer's written instructions.

C. Protection: Provide final protection and maintain conditions, in a manner acceptable to Installer, that ensure that terrazzo is without damage or deterioration at time of Substantial Completion.

END OF SECTION 09400

SECTION 09500 – LINEAR ACOUSTICAL METAL CEILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Provisions and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes strip linear metal-wood grained arch'd ceiling and suspension systems for ceilings.

1. Wire hangers, fasteners, main runners, cross tees, and wall angle moldings
2. Perimeter Trim

B. Related Sections include the following:

1. Division 5 Section 05312 Architectural (Acoustial) Ceiling Deck System for structural metal deck and finished acoustical metal ceilings.
2. Division 9 Section "Acoustical Panel Ceilings" for ceilings consisting of mineral-base and glass-fiber-base acoustical panels and exposed suspension systems.
3. Divisions 13, 15, and 16 Sections for light fixtures, sprinklers, and air-distribution components.
4. Products installed, but not furnished, under this Section include the products listed below.
    a. Suspension systems and components for ceilings, other than linear wood ceiling system manufacturer's cliprail system.

1.3 REFERENCES

A. American Society for Testing and Materials (ASTM):

1. ASTM A 1008 Standard Specification for Steel, Sheet, Cold Rolled, Carbon, Structural, High-Strength Low-Alloy and High-Strength Low-Alloy with Improved Formability
2. ASTM A 641 Standard Specification for Zinc-Coated (Galvanized) Carbon Steel Wire

3. ASTM A 653 Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) by the Hot-Dip Process

10. ASTM E 1111 Standard Test Method for Measuring the Interzone Attenuation of Ceilings Systems
11. ASTM E 1414 Standard Test Method for Airborne Sound Attenuation Between Rooms Sharing a Common Ceiling Plenum
12. ASTM E 1264 Classification for Acoustical Ceiling Products

B. Florida Building Code

C. ASHRAE Standard 62 1 2004 Ventilation for Acceptable Indoor Air Quality

D. NFPA 70 National Electrical Code

E. ASCE 7 American Society of Civil Engineers, Minimum Design Loads for Buildings and Other Structures

1.4 QUALITY ASSURANCE

A. Installer Qualifications: The installer must be a firm with a minimum of two (2) years of successful experience in installation of suspended wood ceilings of similar requirements to this project. The installer must be acceptable to Owner and Architect.

B. Fire Performance Characteristics: The wood ceiling boards shall conform to Class 1, or A flame spread rating, when tested according to ASTM E-84.

C. Environmental Standards: The wood ceiling shall originate from well managed forests as certified by accredited and recognized industry certifying organizations.

1.5 PROJECT CONDITIONS

A. Installation shall be done only when the temperature and humidity closely approximate the interior conditions that will exist when the building is occupied. The heating and cooling systems shall be operating before, during, and after installation, with the humidity of the interior spaces maintained between 25% and 55%.

B. There shall be no excessive build up of heat in the ceiling areas.

C. Prior to the start of installation, all exterior windows and doors are to be in place, glazed, and weather-stripped. The roof is to be watertight, and all wet trades' work is to be completed, and thoroughly dry.

D. Mechanical, electrical, and other utility service installations above the ceiling plane shall have been completed. No materials should rest against, or wrap around, the ceiling suspension components or connecting hangers.

1.6 COORDINATION OF WORK

A. Layout and installation of the linear ceiling and its suspension system shall be coordinated with other work penetrating through the ceiling. This includes light fixtures, HVAC equipment, and fire suppression system components.

1.7 SUBMITTALS

A. Product Data: Provide product specifications and installation instructions for all supplied ceiling materials.

B. Shop Drawings: Supply shop drawings showing the placement of hangers, the location of cliprails, and other details pertinent to proper installation.

C. Samples: A 9" wide x 12" long wood sample shall be submitted for approval. The sample shall be made of the wood specie selected, with the selected finish applied; and installed on cliprails.

1.8 DELIVERY, STORAGE, and HANDLING

A. All materials shall be delivered to the project site in the original, labeled, unopened packages.

B. Materials shall be stored flat and level in a fully enclosed space. For a minimum of seventy-two (72) hours immediately prior to ceiling installation, the linear wood strips shall be stored in the room(s) in which they will be installed. The temperature and humidity of the room(s) shall closely approximate those conditions that will exist when the building is occupied. Linear wood strips shall be stored off the floor.

C. Care in handling must be exercised to avoid damage.

1.9 WARRANTIES

A. Manufacturer: All materials supplied by the linear wood ceiling system manufacturer shall be guaranteed against manufacturing defects for one (1) year.

B. Contractor: All work shall be guaranteed for one (1) year from final acceptance of completed work.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Armstrong World Industries

B. Manufacturer shall furnish a suspension cliprail system with attached clips and basis-of-design wood strips necessary to complete installation, in accordance with plans and specifications. The ceiling system is arch'd as indicatd on the drawings. All components required for a finished ceiling system are to be furnished and installed.

1. Acoustical Panels -Wood Grained Finished-Micro Perforated Linear Meal Ceiling:

a. Surface Texture: Smooth

b. Composition: Metal

c. Color: Effects Cherry

d. Size: 4 in x 96 in

e. Edge Profile: Square with extended flange

f. Perforation Option: Round - Diagonal

g. Noise Reduction Coefficient (NRC): ASTM C 423; Classified with UL label on product carton 0.70

h. Ceiling Attenuation Class (CAC):

i. Sabin: N/A

j. Articulation Class (AC):

k. Flame Spread: ASTM E 1264; Class A (FM).

l. Light Reflectance (LR) White Panel: ASTM E 1477; 0.61.

m. Dimensional Stability: Standard

n. Recycle Content: Post-Consumer - 0% Pre-Consumer - 25%

q. Acceptable Product: METALWORKS Linear - Classics, 5492 No added formaldehyde as manufactured by Armstrong World Industries

2. Metal Panel Accessories:

1. 5494 - Contrasts Filler Strip
2. XL8945P - 4ft Drywall Cross Tee
3. 5574 Carrier molding

C. All work shall be completed in accordance with the manufacturer's instructions, and in a manner satisfactory to the Owner and Architect.

2.2 SUSPENSION SYSTEMS

A. The suspension system shall consist of manufacturer’s cliprails, installed on #12-gauge wire hangers.

2.3 EDGES, BORDERS, AND PERIMETER TRIMS

A. Edges, borders, and perimeter trims shall be manufacturer’s standard unless indicated otherwise. All wood ceiling products specified shall be supplied by the ceiling manufacturer.

2.4 FINISHES AND COLORS

A. All linear wood strips shall be factory-finished with wood stain to match architect control sample. All finishes shall be selected by the Owner and Architect.

B. Variations in grain, texture, and color – ranging from light to dark – affecting the surface look, will be determined by Owner and Architect.

PART 3 - EXECUTION

3.1 PREPARATION

A. Ceiling Layout: Measure ceiling areas and establish the layout of the hangers and cliprails, in accordance with installation instructions.

B. Coordination: Furnish the layout for supports that shall be installed for suspension of ceilings. Furnish steel deck hanger clips, or similar devices for installation, in time to coordinate the work.

3.2 INSTALLATION

A. General: Install materials in accordance with linear metal ceiling manufacturer’s international printed instructions. Comply with applicable regulations and industry standards.

B. Perimeters: Using a leveling device, lay out and install perimeter trim, as per linear wood ceiling manufacturer's recommendations.

C. Suspensions: Install suspension systems to comply with appropriate industry standards. Locate linear wood ceiling cliprails perpendicular to wood direction, 4" from one wall for the first cliprail, continuing 24" maximum, on center, ending within 4" of the opposite wall.

1. #12-Gauge Wire hangers shall be installed 4' on center, along each cliprail. The wire hangers shall be attached to inserts, screw eyes, or other connecting devices that are secure and appropriate for suspending the ceiling and that will not deteriorate or fail with age or elevated temperatures.

D. HVAC and Light Fixture Suspensions: Electrical and mechanical installations must be supported independently of the linear wood ceiling system.

E. Measure each ceiling area and establish layout of acoustical units to balance border widths at opposite edges of each ceiling. Avoid use of less than half width units at borders, and comply with reflected ceiling plans. Coordinate panel layout with mechanical and electrical fixtures.

F. Coordination: Furnish layouts for preset inserts, clips, and other ceiling anchors whose installation is specified in other sections.

3.3 ADJUSTING AND CLEANING

A. Make final adjustments to level or contours.

B. Upon completion of ceiling installation, all Linear Metal Strips and borders shall be cleaned free of dirt, dust, grease, oils, and fingerprints.

C. All work that cannot be successfully cleaned or repaired, shall be removed and replaced.

D. Comply with manufacturer's instructions for cleaning and touch up of minor finish damage. Remove and replace work that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

3.4 INSPECTION

A. Upon completion of ceiling installation, the Owner and Architect shall inspect all finished surfaces to ensure that the work has been completed in a manner satisfactory to the Owner. Any deficiencies in the installed ceiling system shall be corrected at no additional cost to the Owner.

END OF SECTION 09570

SECTION 09511 – ACOUSTICAL PANEL CEILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes acoustical panels and exposed suspension systems for ceilings.

B. Related Sections:

1. Division 7 Section “Building Insulation” for sound batt insulation.
2. Division 7 Section “Joint Sealants” for sealants.
3. Division 9 Section “Linear Metal Ceilings” for strip linear metal ceilings, and suspension systems for ceilings.

1.3 DEFINITIONS

A. AC: Articulation Class.

B. CAC: Ceiling Attenuation Class.

C. LR: Light Reflectance coefficient.

D. NRC: Noise Reduction Coefficient.

1.4 SUBMITIALS

A. Product Data: For each type of product indicated.

B. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

1. Ceiling suspension system members.
2. Method of attaching hangers to building structure.
3. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, smoke detectors, Unistrut, Owner Furnished Equipment, sprinklers, access panels, special moldings, and starting point for ceiling layout & grid spacing.
4. Note extent of acoustical clg’s on plan layout.
5. Minimum Drawing Scale: 1/8 inch = 1 foot.

C. Qualification Data: For testing agency.

D. Field quality-control test reports.

E. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each acoustical panel ceiling.

F. Maintenance Data: For finishes to include in maintenance manuals.

G. MFG's Certifications: Confirmation that light fixtures specified will fit into grid without special clips or hardware.

1.5 QUALITY ASSURANCE

A. Source Limitations:

1. Acoustical Ceiling Panel: Obtain each type through one source from a single manufacturer.
2. Suspension System: Obtain each type through one source from a single manufacturer.

B. Fire-Test-Response Characteristics: Provide acoustical panel ceilings that comply with the following requirements:

1. Fire-Resistance Characteristics: Where indicated, provide acoustical panel ceilings identical to those of assemblies tested for fire resistance per ASTM E 119 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.

a. Fire-Resistance Ratings: Indicated by design designations from UL's "Fire Resistance Directory" or from the listings of another testing and inspecting agency.
b. Identify materials with appropriate markings of applicable testing and inspecting agency.

2. Surface-Burning Characteristics: Provide acoustical panels with the following surface-burning characteristics complying with ASTM E 1264 for Class A materials as determined by testing identical products per ASTM E 84:

a. Smoke-Developed Index: 450 or less.
b. Flame-Spread Index: Comply with ASTM E 1264 for Class A materials.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver acoustical panels, suspension system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.

B. Before installing acoustical panels, permit them to reach room temperature and a stabilized moisture content.

C. Handle acoustical panels carefully to avoid chipping edges or damaging units in any way.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

1.8 COORDINATION

A. Coordinate layout and installation of acoustical panels and suspension system with other construction that penetrates ceilings or is supported by them, including but not limited to light fixtures, HVAC equipment, fire-suppression system, speakers, smoke detectors, Unistrut, Owner Furnished Equipment and partition assemblies.

1.9 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Deliver to location designated by Owner; obtain signed receipt.
2. Acoustical Ceiling Panels: Full-size panels equal to 3 percent of quantity installed for each acoustical tile utilized (2 boxes minimum labeled by space).
3. Suspension System Components: Quantity of each exposed component equal to 3 percent of quantity installed.

PART 2 - PRODUCTS

2.1 ACOUSTICAL PANELS, GENERAL

A. Acoustical Panel Standard: Provide manufacturer's standard panels of configuration indicated that comply with ASTM E 1264 classifications as designated by types, patterns, acoustical ratings, and light reflectances, unless otherwise indicated.

1. Mounting Method for Measuring NRC: Type E-400; plenum mounting in which face of test specimen is 15-3/4 inches away from test surface per ASTM E 795.

B. Acoustical Panel Colors and Patterns: As indicated in Finish Listing.

C. Broad Spectrum Antimicrobial Fungicide and Bactericide Treatment: Provide acoustical panels treated with manufacturer's standard antimicrobial formulation that inhibits fungus, mold, mildew, and gram-positive and gram-negative bacteria and showing no mold, mildew, or bacterial growth when tested according to ASTM D 3273 and evaluated according to ASTM D 3274 or ASTM G 21.

2.3 ACOUSTICAL PANELS FOR ACOUSTICAL PANEL CEILING:

A. ACT-1-Basis-of-Design Product (where moisture resistant tile is scheduled): Subject to compliance with requirements, provide the following:

1. Armstrong World Industries, Inc.; "Ceramaguard 605," Square Edge, 2’ X 2’ x

5/8” Prelude XL 15/16” exposed Tee Grid.

B. Color: White.

C. Light Reflectance (LR): Not less than 0.88.

D. Ceiling Attenuation Class (CAC): Not less than 40.

E. Edge/Joint Detail: Square.

F. Antimicrobial Treatment: Humiguard Max.

G. ACT-2-Basis-of-Design Product: Subject to compliance with requirements, provide the following:

2. Armstrong World Industries, Inc.; "Cirrus," High NRC- medium texture, Angled Tegular Edge, 2’ X 2’ x 3/4” except where noted Prelude XL 15/16” exposed Tee Grid.

H. Color: White.

I. Light Reflectance (LR): Not less than 0.85.

J. Noise Reduction Coefficient (NRC): Not less than 0.55.

K. Ceiling Attenuation Class (CAC): Not less than 35.

L. Edge/Joint Detail: Angled Tegular.

M. Antimicrobial Treatment: Broad spectrum fungicide and bactericide based.

2.4 METAL SUSPENSION SYSTEMS, GENERAL

A. Basis-of-Design Product: Subject to compliance with requirements, provide the following:

B. Armstrong World Industries, Inc.; “Prelude XL,” 15/16,” High Recycled Content (HRC), Exposed Tee. Finishes and Colors, General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes. Provide manufacturer's standard factory-applied finish for type of system indicated.

1. High-Humidity Finish: Comply with ASTM C 635 requirements for "Coating Classification for Severe Environment Performance" where high-humidity finishes are indicated or required.

C. Attachment Devices: Size for five times the design load indicated in ASTM C 635,

Table 1, "Direct Hung," unless otherwise indicated. Comply with seismic design requirements.

D. Wire Hangers, Braces, and Ties: Provide wires complying with the following requirements:

1. Zinc-Coated, Carbon-Steel Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft tem per.
2. Size: Select wire diameter so its stress at 3 times hanger design load (ASTM C 635, Table 1, "Direct Hung") will be less than yield stress of wire, but provide not less than 0.1 06-inch diameter wire.

E. Hanger Rods: Mild steel, zinc coated or protected with rust-inhibitive paint.

F. Hold-Down Clips: Where indicated, provide manufacturer's standard hold-down clips spaced 24 inches o.c. on all cross tees. Provide clips where required @ light fixtures to ensure fit & securement within grid.

2.7 ACOUSTICAL SEALANT

A. Products: Subject to compliance with requirements, provide one of the following:

1. Acoustical Sealant for Exposed and Concealed Joints:

a. Pecora Corporation; AC-20 FTR Acoustical and Insulation Sealant.
b. USG Corporation; SHEETROCK Acoustical Sealant.

B. Acoustical Sealant for Exposed and Concealed Joints: Manufacturer's standard nonsag, paintable, nonstaining latex sealant complying with ASTM C 834 and effective in reducing airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, including structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

2. Do not proceed with installation until all wet work such as concrete, plastering and painting has been completed and thoroughly dried out, unless expressly permitted by manufacturer's printed recommendations.

3.2 PREPARATION

A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders, and comply with layout shown on reflected ceiling plans & Architect approved shop drawings. Coordinate panel layout with mechanical and electrical fixtures.

3.3 INSTALLATION

A. General: Install acoustical panel ceilings to comply with ASTM C 636, per manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."

1. Fire-Rated Assembly: Install fire-rated ceiling systems according to tested fire-rated design.

B. Suspend ceiling hangers from building's structural members and as follows:

1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, counter-splaying, or other equally effective means.
3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
4. Secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
5. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both structure to which hangers are attached and type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
7. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
8. Do not attach hangers to steel roof deck. Attach hangers to structural members.
9. Space hangers not more than 48 inches o.c. along each member supported directly from hangers, unless otherwise indicated; provide hangers not more than 8 inches from ends of each member.
10. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.

C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or post installed anchors.

D. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.

1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
2. Screw attach moldings to substrate at intervals not more than 16 inches o.c. and not more than 3 inches from ends, leveling with ceiling suspension system to a tolerance of 1/8 inch in 12 feet. Miter corners accurately and connect securely.
3. Do not use exposed fasteners, including pop rivets, on moldings and trim.

E. Install suspension system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.

F. Install acoustical panels with undamaged edges and fit accurately, with no visible gaps, into suspension system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide a neat, precise fit.

1. For square-edged panels, install panels with edges fully hidden from view by flanges of suspension system runners and moldings.
2. Paint cut edges of panel remaining exposed after installation; match color of exposed panel surfaces using coating recommended in writing for this purpose by acoustical panel manufacturer.
3. Install hold-down clips in areas indicated, in areas required by authorities having jurisdiction, and for fire-resistance ratings; space as recommended by panel manufacturer's written instructions, unless otherwise indicated.

3.5 CLEANING

A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION 09511

SECTION 09651 – RESILIENT FLOOR TILE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes Composite resilient flooring tile - VCT.

B. Related Sections include the following:

1. Section 09653 “Rubber Wall Bases and Accessories”.
2. Section 09656 “Static Dissipative Resilient Flooring”.

1.3 SUBMITTALS

A. In addition to product data, submit the following.

1. Maintenance data for products specified in this Section, to include in Operating and Maintenance Manual specified in Division 01.
2. Extra Materials: Deliver to Owner not less than one box for each 50 boxes or fraction thereof, of each class, wearing surface, color, pattern, and size of resilient floor tile installed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the products of the following:

1. Vinyl Composition Tile (VCT)

a. Armstrong World Industries, Inc.
b. Azrock Commercial Flooring, DOMCO
c. Mannington Mills, Inc.
d. Tarkett Inc.

2.2 VINYL COMPOSITION FLOOR TILE

A. Products complying with ASTM F 1066, Composition 1 (nonasbestos formulated), and with requirements specified below:

1. Vinyl Composition Floor Tile Product Data:

a. Class: 2
b. Thickness: 1/8"
c. Size: 12" x 12"
d. Surface: Smooth
e. Color(s): As selected by Architect from manufacturer’s full range.

2.3 CONCRETE SLAB PRIMER

A. Nonstaining type recommended by flooring manufacturer.

2.4 TROWELABLE UNDERLAYMENTS AND PATCHING COMPOUNDS

A. Latex-modified, portland-cement-based formulation provided or approved by tile manufacturer for applications indicated.

2.5 ADHESIVES (CEMENTS)

A. Water-resistant type recommended by tile manufacturer to suit resilient floor tile products and substrate conditions indicated.

PART 3 - EXECUTION

3.1 PREPARATION

A. Examine areas where installation of tiles will occur, with Installer present, to verify that substrates and conditions are satisfactory for tile installation and comply with tile manufacturer's requirements.

B. Concrete Subfloors: Verify that concrete slabs comply with ASTM F 710 before beginning installation:

C. Comply with manufacturer's installation specifications to prepare substrates indicated to receive tile.

3.2 INSTALLATION

A. Comply with tile manufacturer's installation directions and other requirements indicated.

B. Lay out tiles from center marks established with principal walls, discounting minor offsets, so tile widths at opposite edges of room are equal to one another and are not less than one-half of a tile.

C. Match tiles for color and pattern by selecting tiles from cartons in same sequence as manufactured and packaged.

1. Lay tiles with grain running in one direction.

D. Where demountable partitions and other items are indicated for installing on top of finished tile floor, install tile before these items are installed.

3.3 CLEANING

A. Clean resilient tile floors after installation and 4 days prior to date scheduled for inspections intended to establish date of Substantial Completion. Apply protective polish according to floor tile manufacturer's directions.

END OF SECTION 09651

SECTION 09653 - RUBBER WALL BASE AND ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Resilient base.
2. Resilient molding accessories.

1.3 RELATED SECTIONS

A. Coordinate work of this Section with work of other Sections that are required to properly execute the work and as necessary to maintain satisfactory progress of work of other Sections, including:

1. Section 09650 Rubber Flooring Tile Specification.
2. Section 09651 Resilient Floor Tile – VCT
3. Section 09680 Carpet for metal transition strips at floor material changes.
4. Section 09656 Static Dissipative Resilient Flooring for anti-static flooring

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Samples for Initial Selection: For each type of product indicated.

C. Samples for Verification: For each type of product indicated, in manufacturer's standard-size Samples but not less than 12 inches long, of each resilient product color, texture, and pattern required.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Furnish not less than 10 linear feet for every 500 linear feet or fraction thereof, of each type, color, pattern, and size of resilient product installed.

1.6 QUALITY ASSURANCE

A. Fire-Test-Response Characteristics: As determined by testing identical products according to ASTM E 648 or NFPA 253 by a qualified testing agency.

1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.

B. Mockups: Provide resilient products with mockups specified in other Sections.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store resilient products and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F or more than 90 deg F.

1.8 PROJECT CONDITIONS

A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F or more than 95 deg F , in spaces to receive resilient products during the following time periods:

1. 48 hours before installation.
2. During installation.
3. 48 hours after installation.

B. Until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F or more than 95 deg F .

C. Install resilient products after other finishing operations, including painting, have been completed.

PART 2 - PRODUCTS

2.1 RESILIENT BASE

A. Resilient Base:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following :

a. Johnsonite
b. Burke Mercer Flooring Products; Division of Burke Industries, Inc.
c. Flexco, Inc.
d. Roppe Corporation, USA.

B. Resilient Base Standard: ASTM F 1861.

1. Material Requirement: Type TS (rubber, vulcanized thermoset).
2. Manufacturing Method: Group I (solid, homogeneous).
3. Style: Cove (base with toe) .

C. Minimum Thickness: 0.125 inch.

D. Height: Four inches w/cove base at non-public or back of house areas (Offices, data room, mechanical rooms, storage rooms, etc.) as shown on the Drawings or as scheduled.

1. At public areas of the building (lobbies, hallways, corridors and alcoves adjacent to the public areas, the base shall be Roppe 700 Series or Architect and Owner approved equivalent.

2. Straight edge at carpeted areas and coved bas at non-carpeted and tiled areas or where scheduled or noted on the drawings.

E. Lengths: Coils in manufacturer's standard length.

F. Outside Corners: Preformed.

G. Inside Corners: Job formed or preformed.

H. Finish: Matte.

I. Colors and Patterns: As selected by Architect and Owner (or Owner’s designated representative) from Manufacturer’s full range of industry colors.

2.2 RESILIENT MOLDING ACCESSORY

A. Resilient Molding Accessory:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Johnsonite
b. Burke Mercer Flooring Products: Division of Burke Industries, Inc.
c. Flexco, Inc.
d. Roppe Corporation, USA

B. Description: Nosing for resilient floor covering, Reducer strip for resilient floor covering, and Transition strips at all VCT and concrete floor transitions and openings. Refer to Section 09680 “Carpet” for transition strip requirements for carpet termination at flooring material transitions including tiled and non-tiled surfaces.

C. Material: Rubber.

D. Profile and Dimensions: As indicated or specified Owner (or Owner’s designated representative).

E. Colors and Patterns: As selected by Architect and from full range of industry colors.

2.3 INSTALLATION MATERIALS

A. Trowelable Leveling and Patching Compounds: Latex-modified, portland cement based or blended hydraulic-cement-based formulation provided or approved by manufacturer for applications indicated.

B. Adhesives: Water-resistant type recommended by manufacturer to suit resilient products and substrate conditions indicated.

1. Adhesives shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24), except that adhesive for rubber stair treads shall have a VOC content of 60 g/L or less.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

B. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of resilient products.

B. Concrete Substrates for Resilient Accessories: Prepare according to ASTM F 710.

1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
3. Alkalinity and Adhesion Testing: Perform tests recommended by manufacturer.

a. Perform relative humidity test using in situ probes, ASTM F 2170. Proceed with installation only after substrates have maximum 75 percent relative humidity level measurement.

C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate.

D. Do not install resilient products until they are same temperature as the space where they are to be installed.

1. Move resilient products and installation materials into spaces where they will be installed at least 48 hours in advance of installation.

E. Sweep and vacuum clean substrates to be covered by resilient products immediately before installation.

3.3 RESILIENT BASE INSTALLATION

A. Comply with manufacturer's written instructions for installing resilient base.

B. Apply resilient base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.

C. Install resilient base in lengths as long as practicable without gaps at seams and with tops of adjacent pieces aligned.

D. Tightly adhere resilient base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates.

E. Do not stretch resilient base during installation.

F. On masonry surfaces or other similar irregular substrates, fill voids along top edge of resilient base with manufacturer's recommended adhesive filler material.

G. Preformed Corners: Install preformed corners before installing straight pieces.

H. Job-Formed Corners:

1. Inside Corners: Use straight pieces of maximum lengths possible, minimum 1’-0” length.

3.4 RESILIENT ACCESSORY INSTALLATION

A. Comply with manufacturer's written instructions for installing resilient accessories.

B. Resilient Molding Accessories: Butt to adjacent materials and tightly adhere to substrates throughout length of each piece. Install reducer strips where specified or indicated at edges of concrete and resilient floor covering that would otherwise be exposed at flooring transitions and openings.

3.5 CLEANING AND PROTECTION

A. Comply with manufacturer's written instructions for cleaning and protection of resilient products.

B. Perform the following operations immediately after completing resilient product installation:

1. Remove adhesive and other blemishes from exposed surfaces.
2. Sweep and vacuum surfaces thoroughly.
3. Damp-mop surfaces to remove marks and soil.

C. Protect resilient products from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.

D. Cover resilient products until Substantial Completion.

END OF SECTION 09653

SECTION 09656 – STATIC DISSIPATIVE RESILIENT FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
1. Static Dissipative Resilient Flooring for all IT and Data Rooms.

1.3 RELATED SECTIONS

A. Other Division 9 sections for floor finishes related to this section but not the work of this section.

B. Division 3 Concrete; not the work of this section.

C. Division 6 Wood and Plastics; not the work of this section.

D. Division 7 Thermal and Moisture Protection; not the work of this section.

1.4 REFERENCES

A. ASTM International:

1. ASTM E 648 Standard Test Method for Critical Radiant Flux of Floor-Covering Systems Using a Radiant Heat Energy Source.

1.4 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Samples for Initial Selection: For each type of product indicated.

C. Samples for Verification: For each type of product indicated, in manufacturer's standard-size samples of each resilient product color, texture, and pattern required.

D. Product Schedule: For resilient products: Use same designations indicated on Drawings.

E. Closeout – Closeout Submittals: Submit the following:
1. Operation and Maintenance Data: Operation and maintenance data for installed products in accordance with Division 1 Closeout Submittals (Maintenance Data and precautions against cleaning materials and methods detrimental to finishes and performances.
2. Warranty: Warranty documents specified herein.

1.4 QUALITY ASSURANCE

A. Performance Requirements:
Provide flooring which has been manufactured, fabricated and installed to performance criteria certified by manufacturer without defects, damage, or failure.

B. Administrative Requirements
1. Pre-installation Meeting: Conduct an on-site pre-installation meeting to verify project requirements, substrate conditions, manufacturer’s installation instructions and manufacturer’s warranty requirements. Comply with Division 1 Project Management and Coordination (Project Meetings) Section
2. Pre-installation Testing: Conduct pre-installation testing as follows: [Specify Testing (i.e. moisture tests, bond test, pH test, etc.)].

C. Responsibility
Single-Source Responsibility: provide types of flooring and accessories supplied by one manufacturer, including leveling and patching compounds, and adhesives.

D. Select Installer
Select an installer who is competent in the installation of Armstrong resilient vinyl composition tile flooring.

1. Engage installers certified as Armstrong Commercial Certified Installers.
2. Confirm installer's certification by requesting their credentials.

E. Fire Performance
Fire Performance Characteristics: Provide resilient vinyl composition tile flooring with the following fire performance characteristics as determined by testing material in accordance with ASTM test methods indicated below by a certified testing laboratory or other testing agency acceptable to authorities having jurisdiction:

1. ASTM E 648 Critical Radiant Flux of 0.45 watts per sq. cm. or greater, Class I
2. ASTM E 662 (Smoke Generation) Maximum Specific Optical Density of 450 or l

1.5 DELIVERY, STORAGE, AND HANDLING

A. Delivery:
Delivery materials in good condition to the jobsite in the manufacturer’s original unopened containers that bear the name of the manufacturer, project identification, and shipping and handling instructions.

B. Store resilient products and installation materials in dry spaces protected from the weather, with ambient temperatures adhesives maintained within range recommended by the manufacturer, but not less than 55 deg F (13 deg C) or more than 85 deg F (29 deg C).

1.6 PROJECT CONDITIONS

A. Install resilient products after other finishing operations, including painting, have been completed.

B. Maintain ambient temperatures within range recommended by the manufacturer, but not less than 65 deg F (18 deg C) or more than 85 deg F (29 deg C) in spaces to receive resilient products during the following time periods:
1. 48 hours before installation.
2. During installation.
3. 48 hours after installation.

C. Maintain the ambient relative humidity between 40% and 60% during installation.

D. Until Substantial Completion, maintain ambient temperatures within range recommended by the manufacturer, but not less than 55 deg F (13 deg C) or more than 85 deg F (29 deg C).

E. Protect all materials from the direct flow of heat from hot-air registers, radiators, or other heating fixtures and appliances. Refer to the manufacturer’s installation manual, on project conditions and requirements.

1.8 WARRANTY

A. Resilient Flooring: Submit a written warranty executed by the manufacturer, agreeing to repair or replace resilient flooring that fails within the warranty period.

B. Warranty Period: 5 years

C. Rights:
The Warranty shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and will be in addition to and run concurrent with other warranties made by the Contractor under the requirements of the Contract Documents.

D. Validation:
For the Warranty to be valid, this product is required to be installed using the appropriate Armstrong Guaranteed Installation System. Product installed not using the specific instructions from the Guaranteed Installation System will void the warranty.

1.9 MAINTENANCE

A. Extra Materials:
Deliver extra materials to Owner. Furnish extra materials from same production run as products installed. Packaged with protective covering for storage and identified with appropriate labels.
1. Quantity: Furnish quality of flooring units not less than one box for each 50 boxes or fraction thereof of amount installed.
2. Delivery, Storage and Protection: Comply with Owner's requirements for delivery, storage and protection of extra material.

PART 2 – PRODUCTS

2.1 MANUFACTURERS/PRODUCT DESCRIPTION:

A. Conductive Resilient Flooring: Basis of Design Manufacturer:
Armstrong Flooring Phone: (888) 276-7876
2500 Columbia Avenue
Lancaster, PA 17604
Web: www.armstrongflooring.com

Alternate manufacturers shall products approved by the Architect.

B. Static Dissipative Resilient Tile Flooring: Basis of Design
Static-Dissipative Resilient Tile Flooring with the following physical characteristics:

1. Complies with requirements for ASTM F 1700 Standard Specification for Solid Vinyl Tile.
2. Backing coated with pure carbon for increased and consistent conductivity.
3. Tile size: 24" X 24" (61 X 61 cm).
4. Wear layer/Overall thickness: .080" (2.0 mm).
5. ASTM D 2047, Standard Test Method for Static Coefficient of Friction of Polish- Coated Flooring of 0.5 or greater.
6. ASTM F 970, Standard Test Method for Static Load Limit – 250 PSI.
7. ASTM E 648, Standard Test method for Critical Radiant Flux of 0.45 watts/cm^2 or greater, Class I.
8. ANSI/ESD S7.1: 7.5×10^8, 12% RH, tested surface to ground
9. Meet OSHA/NFPA (> 2.5×10^4 ohms): 6.2×10^7 ohms.
10. Meet ASTM F 150, 10^6 to 10^9 ohms (50% RH, 100v): 6.2×10^7 ohms
11. ESD-approval (IEC 61340 / 100v): 10^7.
12. Manufacturer offers a RESTART reclamation program for returning jobsite scrap.
13. Contains 25% pre consumer recycled content.
14. Phthalate-free *(except for recycled materials).*
15. 100% Recyclable.
16. Color to be selected by Architect from manufacturer's full range of colors.

2.2 INSTALLATION MATERIALS

A. Trowelable Leveling and Patching Compounds: Latex-modified, Portland cement based or blended hydraulic-cement-based formulation.

B. Adhesives: As recommended by manufacturer to meet site conditions.

1. Conductive adhesive.
2. Copper grounding strips.

2.3 ACCESSORIES

A. Patching:
For patching, smoothing, and leveling monolithic subfloors (concrete, terrazzo, quarry tile, ceramic tile, and certain metals), provide Manufacturer's approval Fast-Setting Cement-Based Patch and Underlayment.

B. Sealing:
For sealing joints between the top of wall base or integral cove cap and irregular wall surfaces such as masonry, provide plastic filler applied according to the manufacturer's recommendations.

C. Transition:
Provide transition/reducing strips tapered to meet abutting materials.

D. Resilient Edge Strips:
Provide resilient edge strips of width shown on the drawings, of equal gauge to the flooring, homogeneous vinyl or rubber composition, tapered or bullnose edge, with color to match or contrast with the flooring, or as selected by the Architect from standard colors available.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the work. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare substrates according to manufacturer written instruction to adhesion of Conductive Resilient Flooring.
1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
2. Remove substrate paint, coatings and other substances that are incompatible with adhesives or contain soap, wax, oil, solvents, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
3. Mechanically remove contamination on the substrate that may cause damage to the Conductive Resilient Flooring material. Permanent and non-permanent markers, pens, crayons, paint, etc., must not be used to write on the back of the flooring material or used to mark the substrate as they could bleed through and stain the flooring material.
4. Prepare Substrates according to ASTM F 710 including the following:

a. Moisture Testing: Perform tests recommended by manufacturer. Proceed with installation only after substrates pass testing.
1) Perform anhydrous calcium chloride test, ASTM F 1869. Results must not exceed 5 lbs. Moisture Vapor Emission Rate per 1,000 sq. ft. in 24 hours.

–
or
–

2) Perform relative humidity test using in situ probes, ASTM F 2170. Must not exceed 80%.

b. A pH test for alkalinity must be conducted. Results should range between 7 and 9. If the test results are not within the acceptable range of 7 to 9, the installation must not proceed until the problem has been corrected.
c. Alkalinity and Adhesion Testing: Perform tests recommended by manufacturer.

B. Fill cracks, holes, depressions and irregularities in the substrate with good quality Portland cement based underlayment leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate.

C. Floor covering shall not be installed over expansion joints.

D. Do not install resilient products until they are same temperature as the space where they are to be installed.
1. Move resilient products and installation materials into spaces where they will be installed at least 48 hours in advance of installation.

E. Sweep and vacuum clean substrates to be covered by resilient products immediately before installation.

3.3 FLOORING INSTALLATION

A. Comply with manufacturer's written instructions for installing resilient sheet flooring.

B. Conductive Resilient Flooring:

1. Install with manufacturer’s approved adhesive as recommended in manufacturer Installation:
a. Instructions and specified for the site conditions and follow adhesive label for proper use.
2. Install with manufacturer’s approved copper grounding strips per the manufacturer’s installation instructions.
3. Roll the flooring in both directions using a 100 pound three-section roller.

3.4 CLEANING AND PROTECTION

A. Comply with manufacturer's written instructions for cleaning and protection of resilient products.

B. Perform the following operations immediately after completing resilient product installation:

1. Remove adhesive and other blemishes from exposed surfaces.
2. Sweep and vacuum surfaces thoroughly.
3. Damp-mop surfaces to remove marks and soil.

C. Protect resilient products from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.

1. No traffic for 24 hours after installation.
2. No heavy traffic, rolling loads, or furniture placement for 72 hours after installation.

D. Wait 72 hours after installation before performing initial cleaning.

E. A regular maintenance program must be started after the initial cleaning.

END OF SECTION 09656

SECTION 09672 – RESINOUS FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes chemical moisture resistant aliphatic urethane epoxy flooring for the following applications:

1. Hangar floor.

1.3 RELATED SECTIONS

A. Division 3 Sections “Cast-in-Place Concrete and Concrete Curing”

1.4 REFERENCES

A. ASTM C579, Standard Test Methods for Compressive Strength of Chemical-Resistant Mortars, Grouts, Monolithic Surfacings, and Polymer Concretes.

B. ASTM D2240, Standard Test Method for Rubber Property—Durometer Hardness.

C. ASTM D2369, Standard Test Method for Volatile Content of Coatings.

D. ASTM D4060, Standard Test Method for Abrasion Resistance of Organic Coatings by the Taber Abraser.

E. ASTM D4541, Standard Test Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers.

F. For additional standards please refer to Product Data Sheets

1.5 SUBMITTALS

A. Product Data: For each product indicated, including physical properties and colors available.

B. Shop Drawings: Show extent of each floor coating. Include details for treating substrate joints and cracks, and other termination conditions. Include layout of traffic striping and markings.

C. Samples: For each type of coating required, prepared on rigid backing. Provide stepped samples on backing large enough to illustrate build-up of coatings.

D. Material certificates and Installer certifications. Provide list of 5 completed projects of similar size and complexity utilizing coating system.

E. Maintenance data and instructions, including procedures for stain removal, surface repair and cleaning.

F. Compatibility Statement / Certification: Manufacturer's compatibility statement that epoxy flooring bonding surfaces and materials are acceptable surfaces for the proposed flooring coating and surfaces preparation requirements, including priming, moisture content and cleaning surfaces preparation criteria.

1.6 QUALITY CONTROL

A. Installer (Applicator) Qualifications: Applicator who is certified by manufacturer.

1. Pre-Qualification: Each bidder for this project shall be pre-qualified and approved in writing by the material manufacturer.

2. Experience: Minimum 5 years' experience on projects of similar size and complexity. Contractor shall submit a list of five projects of similar size, scope and complexity.

B. Source Limitations: Use traffic coatings of a single manufacturer.

C. Mock-Up:

1. Construct one 100 sq.ft. (10 sq.m.) mock-up of each type and color of resinous flooring in location acceptable to Architect/Engineer to demonstrate quality of finished system, complying with manufacturer's instructions.

2. Arrange for Architect/Engineer's review and acceptance, obtain written acceptance before proceeding with Work.

3. Upon acceptance, mock-up shall serve as a minimum standard of quality for the balance of the work of this Section. Mock-up shall be left in place for the duration of the work.

D. Pre-installation Conference: Conduct conference at Project site to comply with requirements in Division 1 prior to installation of the concrete slab.

1.7 DELIVERY, STORAGE AND HANDLING

A. Deliver materials to site in manufacturer's original and unopened containers and packaging, with labels clearly identifying product name, batch or lot number, and date of manufacture.
   1. Material should be delivered to job site and checked for completeness and shipping damage prior to job start.

B. Storage:
   1. Store materials in accordance with manufacturer's written instructions.
   2. Keep containers sealed until ready for use. Material should be stored in a dry, enclosed, protected area from the elements.
   3. Do not subject material to excessive heat or freezing.
   4. Shelf life: Established based on manufacturer's written recommendation for each material being used.

C. Condition materials for use according to manufacturer's instructions for 24 hours (minimum) prior to application.

D. Handling: Protect materials during handling and application to prevent damage or contamination.

E. Record material lot number and quantity delivered to jobsite/storage.

1.8 PROJECT CONDITIONS

A. Do not install the Work of this Section outside of the following environmental ranges without Manufacturers' written acceptance:
   1. Material Temperature: Precondition material for at least 24 hours between 65° to 75°F (18° to 24°C)
   2. Ambient Temperature: Minimum/Maximum 50˚/85˚F (10˚/30˚C)
   3. Substrate Temperature: Minimum/Maximum 50˚/85˚F (10˚/30˚C). Substrate temperature must be at least 5˚F (3˚C) above measured Dew Point.
   4. Mixing and Application attempted at Material, Ambient and/or Substrate Temperature conditions less than 65˚F (18˚C) will result in a decrease in product workability and slower cure rates.
   5. Relative Ambient Humidity: Minimum ambient humidity 30%, maximum ambient humidity 75% (during application and curing)
   6. Measure and confirm Substrate Moisture Content, Ambient Relative Humidity, Ambient and Surface Temperature and Dew Point.

B. Substrate moisture:
   1. Moisture content of concrete substrate must be ≤ 4% by mass as measured with a Tramex® CME/CMExpert type concrete moisture meter.
   2. Additionally, relative humidity tests may be conducted per ASTM F2170 and values must be ≤ 85%.
   3. If moisture content of concrete substrate is > 4% by mass as measured with Tramex® CME/CMExpert type and/or if relative humidity tests per ASTM F2170

exceed values > 85%, consider moisture mitigation systems or moisture tolerant primer.

C. Maintain constant ambient room temperature of plus or minus 15ºF (plus or minus 7ºC) with a minimum temperature of 50ºF (10ºC) and maximum temperature of 85ºF (30ºC). Maintain constant ambient room temperature for 48 hours before, during and after installation, or until cured. Do not apply while ambient and temperatures are rising.

D. Erect suitable barriers and post legible signs at points of entry to prevent traffic and trades from entering the work area during application and cure period of the floor.

E. Ensure adequate ventilation and air flow.

1.9 WARRANTY

A. Manufacturer’s warranty covering the resinous flooring against defects in materials for one year from date of installation.

B. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace epoxy floor coating that fails in materials and workmanship within five years from date of Substantial Completion.

1. Warranty does not include deterioration or failure due to unusual weather phenomena, failure of prepared and treated substrate, formation of new substrate cracks exceeding 1/16 inch in width, fire, vandalism, or abuse by maintenance equipment, and truck traffic.
2. Failure includes, but is not limited to, the following:

a. Adhesive or cohesive failures.
b. Abrasion or tearing failures.
c. Surface crazing or spalling.
d. Intrusion of water, oils, gasoline, grease, salt, or acids into substrate.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Material Compatibility: Provide primers; base, intermediate, and top coats; and miscellaneous materials that are compatible with one another and with substrate under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.
1. All materials must come from single manufacturer.

B. VOC Content: Provide materials that comply with VOC content limits established by ASTM D2369-07.

2.2 EPOXY FLOOR COATING

A. Basis-of-Design Product: The design for the hangar floor coating is based on the products indicated below, installed for a complete system. Products by other listed manufacturers may be considered provided deviations from specifications of the product named are minor as judged by the Architect.
   1. Primer: Sikafloor 161 is a two part, epoxy resin for priming and leveling mortars with the following properties:
      a. Pull-off Strength (ASTM D4541): > 400 psi (2.7 MPa) with 100% concrete failure.
      b. Shore D Hardness (ASTM D2240): 76 at 7 days.
      c. Solid Content: ~ 100% (by volume) / ~ 100% (by weight).
      d. VOC Content (ASTM D2369): ≤ 50 g/L.
      e. Permeability (ASTM E96): 9.0 g/m² (24 hours / +75°F).
      f. Water Absorption (ASTM D570): 0.14 g/h - m2.
      g. Viscosity (approximately) of Components A + B: 775 (SP2/100).
   2. Body Coat and Top Coat: Sikafloor 264 is a pigmented two part, low viscosity, self-priming, epoxy coating binder in [*Refer to Sikafloor color chart*] color with the following properties:
      a. Pull-off Strength (ASTM D4541): > 400 psi (2.7 MPa) with 100% concrete failure.
      b. Shore D Hardness (ASTM D2240): 76 at 7 days.
      c. Solid Content: ~ 100% (by volume) / ~ 100% (by weight).
      d. VOC Content (ASTM D2369): ≤ 50 g/L.
      e. Compressive Strength (ASTM C579): 7,250 psi (50 N/mm²) at 28 days.
      f. Flexural Strength (ASTM C580): 2,900 psi (20 N/mm²) at 28 days.
   3. Slurry Aggregate: Sikadur-504.
   4. Broadcast Aggregate: Sikadur-508.
      a. Furnish and evenly distribute as required to achieve a slip-resistant finish.

B. Top Coat: Sikafloor 316N is a high solids, low VOC abrasion resistant, aliphatic polyurethane coating of Architect-selected color from full range of manufacture's colors, with the following properties:

   1. Pull-off Strength to Primed Concrete (ASTM D4541): > 400 psi (2.76 MPa) with 100% concrete failure.

   2. Hardness (ASTM D 3363 Pencil): 2H to 3H concrete failure.

   3. VOC Content (ASTM D2369): With Wear Aggregate ≤ 89 g/L

   4. Tensile Strength (ASTM D638): 4,641

   5. Elongation: 85%

   6. Abrasion Resistance (ASTM D4060): 18 mg (CS-17 Wheel, 1000 gm load, 1000 cycles).

   7. Coefficient of Friction ANSI 326.3 = .56

C. Aggregate: Uniformly graded washed silica sand of particle sizes, shape, and minimum hardness recommended in writing by coating manufacturer.

1. Spreading Rate: As recommended by manufacturer for substrate and service conditions indicated, but not less than the following:

a. Top Coat: As required to achieve slip-resistant finish.

2.3 MISCELLANEOUS MATERIALS

A. Joint Sealants: Multicomponent urethane sealant recommended in writing by manufacturer for substrate and joint conditions indicated and for compatibility with epoxy floor coatings; complying with ASTM C 920.

PART 3 - EXECUTION

3.1 EXAMINATION

A. General: Comply with manufacturer's written recommendations.

B. Verify compatibility with and suitability of substrates and that substrates are visibly dry and free of moisture.

1. Application of coating indicates acceptance of surfaces and conditions.

C. Concrete Substrates: Begin coating application only after minimum concrete curing and drying period recommended by epoxy floor coating manufacturer has passed and after surfaces are dry.

1. Test for moisture by method recommended in writing by manufacturer at multiple locations within area to be coated.
2. Apply temporary moisture barrier if test results exceed acceptable application requirements.

D. Mechanical abrasion produces a uniform substrate that is generally in acceptable condition to receive coatings. See "ASTM C 1127 Requirements" Article in the Evaluations.

E. Examine surfaces to receive flooring system. Notify Architect, General Contractor and Owner if surfaces are not acceptable. Do not begin surface preparation or application until unacceptable conditions have been corrected. Do not apply to substrate treatments for moisture, repair, or leveling not of the same Manufacturer.

F. Surface must be clean, sound and dry. Remove dust, laitance, grease, curing compounds bond inhibiting impregnations, waxes and any other contaminants. All projections, rough spots, etc. should be dressed off to achieve a level surface prior to the application.

G. Concrete substrate to have a minimum compressive strength of 3,500 psi (24 MPa) at 28 days and a minimum of 215 psi (1.5 MPa) in tension at time of application.

H. Substrate moisture:

1. Measure and confirm Substrate Moisture Content, Ambient Relative Humidity, Ambient and Surface Temperature and Dew Point.

2. Confirm and record above values at least once every 3 hours during installation, or more frequently whenever conditions change (e.g. Ambient Temperature rise/fall, Relative Humidity increase/decrease, etc.).

I. Ensure concrete substrate conforms to the minimum requirements of the flooring manufacturer.

J. Flooring system shall not be applied to sand-cement setting beds. Sand-cement beds shall be removed to structural concrete substrate and re-leveled/sloped as necessary to achieve grade and/or adequate drainage.

K. Flooring system shall not be applied to asphaltic or bitumen membranes, soft wood, aluminum, copper or fiberglass reinforced polyester/vinyl ester composites.

L. Application to glazed or vitrified brick and tile, structural wood, steel shall only be permitted with Manufacturer’s written recommendation.

3.2 SURFACE PREPARATION

A. Prepare surface to receive flooring systems in accordance with manufacturer's written instructions.

B. Remove dirt, oil, grease, wax, laitance, curing compounds, water-soluble concrete hardeners, and other surface contaminants. Remove sealers, finishes, and paints. Remove unsound concrete by appropriate mechanical means.

C. Concrete: Shall be cleaned and prepared to achieve laitance-free and contaminant-free, open textured surface by shot blasting or equivalent mechanical means (CSP level as per ICRI guidelines and manufacturer’s written recommendation).

D. Chemical Surface Preparation: Chemical surface preparation (acid etching) is unacceptable and will void Manufacturer’s warranty.

E. Control joints and cracks: Provide repair and treatment of control joints and surface cracks utilizing manufacturer’s standard materials and installation details. Before coating surfaces, remove dust and dirt from joints and cracks according to ASTM D 4258.

F. Mask adjoining surfaces not receiving floor coating including floor drains, hangar door rails and other substrate penetrations to prevent spillage, leaking, and migration of coatings.

G. Prepare, treat, rout, and fill joints and cracks substrates. Before coating surfaces, remove dust and dirt from joints and cracks according to ASTM D 4258.

H. Start epoxy floor coating application in presence of manufacturer's technical representative.

1. Verify that wet film thickness of each component coat complies with requirements every 100 sq. ft.
2. Prevent contamination and damage during application and curing stages.

3.3 APPLICATION

A. Mix and apply material with strict adherence to manufacturer’s written installation procedures and coverage rates.

B. Follow Manufacturer’s written recommendations on terminations and connections to walls, drains, doorways, columns, and floor-to-floor transitions.

C. Do not apply while ambient and substrate temperatures are rising.

D. Apply resinous flooring with care to ensure that no laps, voids, or other marks or irregularities are visible, and with an appearance of uniform color, sheen and texture, all within limitations of materials and areas concerned.

E. Match colors and textures of approved samples.

F. Install cove base 4” high with a coved-radius in accordance with manufacturer’s written instructions.

3.4 CLEAN UP

A. Disposal of this product, solution and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements.

B. Empty containers should be taken to an approved waste handling site for recycling or disposal.

3.5 PROTECTION

A. Freshly applied material should be protected from dampness, condensation, and water for at least 72 hrs.

B. Beware of air flow and changes in air flow. Introduction of dust, debris, and particles, etc. may result in surface imperfections and other defects.

C. Follow manufacturer’s written recommendation with respect to cure, wait time and return to service.

END OF SECTION

SECTION 09681 – CARPET TILE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes modular carpet tile at walk off areas of the entries or as scheduled.

B. Related Requirements:
1. Division 9 Section "Resilient Base and Accessories" for resilient wall base and accessories installed with carpet tile.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
1. Review methods and procedures related to carpet installation including, but not limited to, the following:
   a. Review delivery, storage, and handling procedures.
   b. Review ambient conditions and ventilation procedures.
   c. Review subfloor preparation procedures.

1.4 ACTION SUBMITTALS

A. Product Data: For the following, including installation recommendations for each type of substrate:
1. Carpet: For each type indicated. Include manufacturer's written data on physical characteristics, durability, and fade resistance.

1.5 SUBMITTALS

A. Product Data: For each product indicated.

B. Samples: For each carpet, and exposed accessory and for each color and pattern required.

C. Maintenance data.

D. Layout drawings at 1/8” scale minimum.

E. Dyelots: All carpet of the same type in continuous areas should be from the same dye lots.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: A qualified installer who is certified by the Floor Covering Installation Board or who can demonstrate compliance with its certification program requirements.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Comply with CRI 104.

1.8 PROJECT CONDITIONS

A. General: Comply with CRI 104, Section 6.1, "Site Conditions; Temperature and Humidity."

B. Environmental Limitations: Do not install carpet until wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

C. Do not install carpet over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended by manufacturer.

D. Comply with CRI 104 for temperature, humidity, and ventilation limitations.

E. Do not install carpet over concrete slabs until slabs have cured, are sufficiently dry to bond with adhesive, and have pH range recommended by carpet manufacturer.

F. Where demountable partitions or other items are indicated for installation on top of carpet, install carpet before installing these items.

1.9 WARRANTY

A. Carpet Warranty: Provide manufacturer’s standard form in which manufacturer agrees to replace carpet that does not comply with requirements or that fails within ten (10) years from date of Substantial Completion. Warranty does not include deterioration or failure of carpet from unusual traffic, failure of substrate, vandalism, or abuse. Failures include, but are not limited to, more than 10 percent loss of face fiber, edge raveling, snags, runs, and delamination.

1.10 CLOSEOUT SUBMITTALS

A. Maintenance Data: For carpet to include in maintenance manuals. Include the following:

B. Methods for maintaining carpet, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.

C. Precautions for cleaning materials and methods that could be detrimental to carpet.

1.11 EXTRA MATERIALS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Carpet Tile: Full-size units equal to 5 percent of amount installed for each type indicated, but not less than 10 sq. yd. Carpet tile attic stock shall be provided in original shipping boxes or wrapping and labeled for each area of use/installation.

2. Deliver all required overages and maintenance stock to Owner’s specified location prior to beginning installation. Attic stock shall be from the same dye lot as installed material.

PART 2 - PRODUCTS

2.1 CARPET TILE

A. Basis-of-Design Product: Subject to compliance with requirements, provide Milliken Floor covering, or comparable product by one of the following:

1. Shaw.
2. Tandus.

B. Color and Pattern:
1. As scheduled and shown on the drawings or as selected by the Architect and Owner.

C. Pile Characteristic:
1. Milliken-Certified Wearon – Tufted-textured loop; 14.4 stitches/ inch

D. Primary Backing/Backcoating: PVC-Free WellBAC™ Comfort Cushion

E. Secondary Backing: Manufacturer's standard fiberglass reinforced thermo plastic composite material.

F. Size: 19.7 inches by 19.7 inches.

G. Stain Resistance/Soil Release: Soil and stain resistance shall be integral to carpet fiber or shall be applied per manufacturer standards.

H. Static Control: 3.5 KV when tested under Standard Shuffle test (70 degrees, 20% RH)

I. Flammability:

1. DOC-FF-1-70 Pill Test: Self Extinguishing.

2. Floor Radiant Panel: Meets NFPA Class 1 when tested per ASTM-E-648 glue down.

J. NBS Smoke Chamber NFPA 258: Less than 450 Flaming Mode.

K. Color Fastness:

1. Lightfastness - AATCC 16E-1982 - Dark color: Gray scale rating of 4.0 or better after 80 standard fading hours as compared to AATCC Gray Scale for evaluation change in color.

2.2 INSTALLATION ACCESSORIES

A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by carpet tile manufacturer.

B. Adhesives: Water-resistant, mildew-resistant, nonstaining, pressure-sensitive type to suit products and subfloor conditions indicated, that complies with flammability requirements for installed carpet tile and is recommended by carpet tile manufacturer for releasable installation.

1. Adhesives shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

C. Edge/Transition Strips: Johnsonite – Vinyl “C” or “D” adaptor, or “T” molding for transition between carpet and flooring material transition, or extruded aluminum with mill finish of profile and width shown, of height required to protect exposed edge of carpet, and of maximum lengths to minimize running joints. Carpet to be flush with adjoining tile surface.

1. Schluter – “Reno-T” at equal height flooring transitions.

2. Schluter – “SCHIENE” at carpet to tile transitions.

3. Johnsonite CTA-XX-J 1/4” high x 2½” at perimeter of carpet tile, with mitered corners, between transition of polished concrete and carpet.

or

3. Johnsonite EG-XX-H 1/4” high x 2⅛” at perimeter of carpet tile, with mitered corners, between transition of hard surface, vinyl tile or sealed concrete.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, alkalinity range, installation tolerances, and other conditions affecting carpet tile performance. Examine carpet tile for type, color, pattern, and potential defects.

B. Concrete Subfloors: Verify that concrete slabs comply with ASTM F 710 and the following:

1. Slab substrates are dry and free of curing compounds, sealers, hardeners, and other materials that may interfere with adhesive bond. Determine adhesion and dryness characteristics by performing bond and moisture tests recommended by carpet tile manufacturer.
2. Subfloors are free of cracks, ridges, depressions, scale, and foreign deposits.
3. Raise subfloors at lobby areas to ensure the carpet is flush with finish floor of tile.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

D. General: Do not start work until work of other trades are substantially completed. Inspect surfaces to receive carpet and verify that all such work is complete to the point where this installation may properly commence. In the event of discrepancy, notify the Contractor. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved. Start of carpet installation indicates acceptance of subfloor conditions and full responsibility for completed work.

E. Materials: Inspect all goods to verify all goods uniformity, quality, color and texture against the approved samples prior to installation. Any discrepancy should be brought to the attention of the Contractor.

3.2 PREPARATION

A. General: Comply with CRI 104, Section 6.2, "Site Conditions; Floor Preparation," and with carpet tile manufacturer's written installation instructions for preparing substrates indicated to receive carpet tile installation.

B. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions 1/8 inch wide or wider and protrusions more than 1/32 inch unless more stringent requirements are required by manufacturer's written instructions.

C. Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by carpet tile manufacturer.

D. Broom and vacuum clean substrates to be covered immediately before installing carpet tile.

3.3 INSTALLATION

A. General: Comply with CRI 104, Section 14, "Carpet Modules," and with carpet tile manufacturer's written installation instructions. Sequence tile installation per manufacturer's instructions to ensure a uniform appearance.

B. Installation Method: As recommended in writing by carpet tile manufacturer.

C. Maintain dye lot integrity. Do not mix dye lots in same area.

D. Cut and fit carpet tile to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet tile manufacturer.

E. Extend carpet tile into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.

F. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on finish flooring as marked on subfloor. Use nonpermanent, nonstaining marking device.

G. Install pattern parallel to walls and borders.

H. Roll floor with 75 to 100 pound roller per manufacturer's requirements.

I. Blend and enhance the seams, and trim face yarn as required.

J. General: In addition to the requirements and recommendations of the Carpet Manufacturer, the following criteria shall be adhered to:

1. Installation layout shall enable future replacement, especially in large open areas and traffic paths, unless specifically indicated in writing by owner or owner's representative.
2. No carpet tile pieces smaller than 6" in width or length shall be used.
3. Seams occurring at doors of different types of carpet shall be parallel to closed door, and be centered directly under the closed door.
4. Flooring Trade Contractor is responsible for trimming all loose yarn and fuzzy edges of carpet tiles.
5. All cutting of carpet for telephone and electrical outlets shall be the responsibility of the Flooring Trade Contractor.

3.4 CLEANING AND PROTECTION

A. Perform the following operations immediately after installing carpet tile:

1. Remove excess adhesive, seam sealer, and other surface blemishes using cleaner recommended by carpet tile manufacturer.
2. Remove and dispose of debris and unusable scraps.

3. Vacuum carpet using two motor, top loading, upright commercial machine with brush-only element, utilizing a high filtration dust bag. Remove spots in accordance with carpet manufacturer's guidelines and replace carpet where spots cannot be removed. Remove any protruding face yarn using sharp scissors. Be certain to trim any loose yarns or fibers at all seams.
4. Following cleaning and vacuum, carefully protect the carpeting from soiling and damage until final acceptance. Protection shall be accomplished by using approved protection paper. Edges shall be lapped 6 inches and secured with non-asphaltic tape. Covering shall be kept in repair and damaged portions replaced during the construction and move-in period.
5. Maintenance Materials: Deliver usable, uncut carpet tiles to Owner's designated storage space, properly packaged and identified. Dispose of smaller pieces as construction waste.

B. Protect installed carpet tile to comply with CRI 104, Section 16, "Protecting Indoor Installations".

C. Protect carpet tile against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet tile manufacturer.

END OF SECTION 09681

(INTENTIONALLY LEFT BLANK)

SECTION 09700 – GRAPHIC MURAL WALL FINISHES

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 Summary

A. Section Includes: Pre--engineered graphic mural wall system including wall panels, mounting extrusions, bases and frame. Wall system comes “ready to install” with fasteners, adhesives, and other materials required for a complete assembly. Fasteners shall be concealed type.

B. Related Sections:

1. Section Rough Carpentry

1.3 References

A. ASTM E84 – Surface Burning Characteristics of Building Materials.

1.4 Submittals

A. Provide submittals in accordance with Section– Submittal Procedures.

B. Submit manufacturer’s shop drawings, installation drawings, installation instructions and maintenance instructions, including images, sizes of panels, glass joints, and photographic proofs and image blocking.

C. Submit environmental impact data for all materials.

D. Submit samples no less than 4" x 4" for all specified material finishes.

E. Submit panel edge extrusion samples no less than 4” of specified finish.

F. Submit mock--up of wall system and photographic image no less than 12” x 12”.

G. Manufacturer information:

1. Provide overview literature describing manufacturer’s overall scope of products and manufacturing capabilities.
2. Provide URL for manufacturer’s web site; web site must provide access to technical data, images and general product information.
3. Cleaning and maintenance data.

1.5 Quality Assurance

A. Manufacturer Qualifications

1. Minimum 10 years’ experience in the manufacture of architectural surface materials.
2. Minimum 10 years’ experience in the fabrication of wall systems.

3. Provide reference list of at least 20 public space projects currently using walls fabricated by the manufacturer.

B. Installer Qualifications

1. Minimum three years' experience in the installation of wall systems.

1.6 Delivery, Storage and Handling

A. Deliver materials to installation site in manufacturer's original packaging. Handle products in accordance with manufacturer's instructions. Store in dry, secure location, protected against direct sunlight and excessive heat. Protect finished surfaces with strippable film.

1.7 Warranty

A. Provide manufacturer's standard warranty.

1. Warranty terms: two years against defects in materials and workmanship.

Part 2 PRODUCTS

2.1 Manufacturer

A. Basis of Design Custom Photographic Image-Glass Wall System manufactured by:

1. Skyline Design Architectural Glass & Products
2. Contact: Dale Ginger
   1240 N. Homan
   Avenue
   Chicago, IL 60651
   Phone: 773-208-6400
   Fax: 773-278-3548
   or, Architect and other approved equal

2.2 Wall Panels

A. General

1. Provide interlocking grid panel system with inset panels mounted to extruded aluminum frames on structural backer. The recommended substrate is 3/4″ fire rated plywood.
2. Panel configuration: Wall System (standalone panel and Custom Photographic Image Glass Wall Systems) with Minimal style panel frames. Reference drawings for panel layout and reveal spacing.
3. Provide inset panels in the finishes specified.
4. Weight per square foot: average 2.40 lbs. to 3.04 lbs.
5. Frames are extruded aluminum.
6. Panels shall have an ASTM E84, class A flame spread rating.
7. Panels shall not harbor bacteria and shall withstand use of disinfectants.

B. Inset Materials

1. Laminated Glass Panels

a. Material: PPG Starfire glass comparable to UL 723, ANSI/NFPA No. 255, and UBC No. 8--1.

C. Base

1. a. Stainless Steel Panels

b. Material: Stainless Steel.

D. Panel Frames and Outside Corner Extrusion

1. Material: Extruded, anodized aluminum
2. Finish: Clear

E. Reveals

1. Material: Extruded, anodized aluminum
2. Finish: Black

Part 3 EXECUTION

3.1 Preparation

A. Protect wall finishes, fixtures and equipment from damage caused by work of this Section.

3.2 Installation

A. Install in accordance with wall system manufacturer's instructions.

3.4 Cleaning and Protection

A. Remove strippable film. Clean exposed surfaces in accordance with manufacturer's instructions.

B. Protect exposed surfaces from damage by subsequent construction.

END of SECTION 09700

(INTENTIONALLY LEFT BLANK)

SECTION 09911 – EXTERIOR PAINTING

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes surface preparations, painting, and finishing of exposed exterior items and surfaces.

1. Surface preparation, priming and finish coats specified in this Section are in addition to shop priming and surface treatment specified under other Sections.

B. Paint exposed surfaces whether or not colors are designated in “schedule” except where a surface or material is indicated not to be painted or is to remain natural. Where an item or surface is not mentioned, paint the same as similar adjacent materials or surfaces. If color or finish is not designated, the Architect and Owner will select from standard colors or finishes available.

1. Painting includes field painting exposed bare and covered pipes and ducts (including color coding), hangers, exposed steel and iron work, and primed metal surfaces of mechanical and electrical equipment.

C. Painting is not required on pre-finished items, finished metal surfaces, concealed surfaces, operating parts, or labels.

1. Labels: Do not paint over Underwriter’s Laboratories, Factor Mutual or other code-required labels, or equipment name, identification, performance rating, or nomenclature plates.

D. The Contractor shall apply damp proofing to the interior face of the perimeter new exterior CMU (where walls are to be concealed) walls to reduce moisture intrusion during the course of construction, until the final exterior paint system is applied.

E. Non-Galvanized Structural Steel to receive fire proofing as scheduled, shown, or required by the FBC, shall be primed by the fabricator but not finished painted.

F. Coating Maintenance Manual: upon conclusion of the project, the Contractor or paint manufacture/supplier shall furnish a coating maintenance manual, such as Sherwin-Williams “Custodian Project Color and Product Information” report or equal. Manual shall include an Area Summary with finish schedule, Area Detail designating where each product/color/finish was used, product data pages,

Material Safety Data Sheets, care and cleaning instructions, touch-up procedures, and color samples of each color and finish used.

1.3 GENERAL

A. Furnish all labor, materials, tools, equipment, etc. and services necessary and incidental to the complete fabrication, furnishing and erection of this Section as shown, noted, detailed and reasonably implied on the drawings and in the specifications.

B. Note that warranty requirements are an integral part of the work in this Section and all criteria listed per Article 1.9 of this Section apply.

C. Note that the requirement for prime and finish painting may be included in various Mechanical, Electrical, Plumbing, Fire Protection, and Structural sections of this specification. Coordination is required.

D. The Paint Manufacturer shall also provide their own company paint and coatings specifications accompanied by Product Data and Material Safety Data sheets as part of Article 1.6 Submittals below. It is the intent of these Specifications to establish quality and workmanship detail, and define both generic systems and the extent of the caulking and coatings applications in a general way. It shall then be the responsibility of the Paint Manufacturer to attach and comply with their own company paint and coatings specifications for the precise primers and finish coats and application procedure and methods to ensure this criteria is followed.

E. In the event of discrepancy, the Paint Manufacturer’s specifications shall take precedence over these specifications. Notify the Architect in writing for each and every specific situation as it occurs prior to application of any material.

F. The Paint Manufacturer shall exercise rights of approval in the selection of a competent applicator, which meets their standards for quality workmanship and levels of experience.

G. Although the Paint Manufacturer may not actually manufacture caulking compounds equivalent to these specified herein, they shall be responsible for this phase of work as described in Article1.9 of this Section.

1.4 RELATED SECTIONS

A. Coordinate work of this Section with work of other Sections as required to properly execute the work and as necessary to maintain satisfactory progress of the work of other Sections, including:

1. Division 5 Section “Metal Fabrications” for shop priming ferrous metal.
2. Division 7 Section “Sprayed Fire-Resistive Materials.”
3. Division 8 Section “Steel Doors and Frames” for shop priming steel doors and frames.
4. Division 9 Section “High Performance Coatings”

1.5 DEFINITIONS

A. “Paint” includes coating system materials, primers, emulsions, enamels, stains, sealers and fillers, and other applied materials whether used as prime, intermediate or finish coats.

1.6 SUBMITTALS

A. Data: Submit product data under provisions of Section 01300 – Shop Drawings, Product Data and Samples to include the Paint Manufacturer's application instructions for all products intended for work in this Section.

B. Painting Schedule: Shall include, but not limited to the following:

1. Pretreatment requirements for each paint system.

2. Spread Rate - gallons per square foot.

3. Wet film thickness in mils.

4. Dry film thickness in mils.

5. Total dry film thickness in mils.

6. Format identical to Article 3.9 PAINT SCHEDULE

C. Samples:

1. Submit manufacturer's standard color chips. Architect and Owner will select colors from manufacturer's color chip brochures. Contractor to prepare color chip samples specified herein before using selected colors. Architect and Owner will make final selection from such color chips and prepare color schedule for Contractor's use.

2. Do not proceed with any painting work until field sample panels of each paint system specified are applied and reviewed by the Architect and Owner.

D. Applicator Certification: Written acceptance of the applying company per Article 1.9 D. of this section.

1.7 DELIVERY, STORAGE AND HANDLING

A. Deliver products to site under provisions of Section 01600 – Materials and Equipment and Section 01620 – Storage and Protection.

B. Deliver all materials to the job site in original, new and unopened packages and containers bearing the manufacturer's name and label, and the following

information:

1. Product name or title of material,

2. Product description (generic classification or binder type).

3. Manufacturer's name, stock number and date of manufacture.

4. Contents by volume, for major pigment and vehicle constituents,

5. Thinning instructions,

6. Application instructions,

7. Color name and number,

8. No materials other than types specified or approved may be delivered to project site. Unapproved materials shall be removed from project site immediately.

C. Storage and Use of Premises:

1. The applicator shall confine his apparatus, materials storage and operations of his workers to limits indicated by Contractor. All materials used on the job shall be stored in a single place designated by the Contractor. Such storage shall be kept clean and the applicator shall be liable for damage to surrounding areas.

2. Inflammable material and/or fire hazard waste shall be stored, handled and used in an approved manner and shall be removed from the site daily.

D. Store materials not in use in tightly covered containers in a well ventilated area at a minimum ambient temperature of 45 degrees F., or as required by the manufacturer. Maintain containers used in storage in a clean condition, free of foreign materials and residue.

1. Protect from freezing. Keep storage area neat and orderly. Remove oily rags and waste daily.

2. Take necessary measures to ensure that workers and work areas are protected from fire and health hazards resulting from handling, mixing, and application.

1.8 JOB CONDITIONS

A. Paint only in dry weather when temperature is 50 degrees F or higher. Stop exterior work early to permit paint film to set up before condensation, caused by night temperature drops, occur. Do not begin painting until surfaces are moisture free.

B. Do not varnish or enamel in direct sunlight.

C. Keep paint at room temperature.

D. Sweep dust, dirt and debris away before painting.

E. Execute work in accordance with label directions. Coating applications shall be made in strict conformance to this specification and to the manufacturer's paint instructions on the labels and product data sheets.

F. Paint only dry wood (less than 15 percent moisture). Defer painting until moisture content meets manufacturer's recommendations.

G. Environmental Requirements:

1. Measure moisture content of surfaces using an electronic moisture meter. Do not apply coating unless moisture content of surfaces is below the manufacturer’s recommendations.

2. Paint PH tests shall be taken prior to painting subcontractor beginning his work. PH level to be acceptable to paint manufacturer and subcontractor prior to paint application. Costs of tests to be paid by painting contractor. Provide written documentation of all test results immediately to on-site General Contractor’s superintendent.

3. Strictly follow manufacturer’s recommendations pertaining to environmental conditions.

H. All work shall be accomplished by skilled workmen familiar with and trained to do this type of work and they shall be further qualified to operate or use the equipment and rigging needed to accomplish this work.

I. Materials shall be applied evenly and free of runs, sags, or pinholes.

J. Type and amount prescribed for thinners, solvents, cleaners, etc. to be confirmed by and based on the Paint Manufacturer's written recommendation and approval.

K. All application tools and equipment shall be in good working order and suitable for proper application. All surrounding areas shall be fully protected against damage during each stage of the painting project. All exterior and interior substrates designated not to receive paint coatings shall be kept free of paint residue, e.g. windows, etc.

L. Normal safety signs, necessary lighting and temporary fencing around work areas shall be installed and maintained in accordance with OSHA requirements while work is in progress.

M. Where spray painting has been approved by the Architect, this applicator shall protect all adjacent materials and surfaces by covering entire said areas with approved protective materials. Overspray will not be accepted and, if it occurs,

shall be cleaned up properly and promptly.

N. The applicator shall submit written evidence of insurance coverage of an adequate amount to cover the cost of cleaning and/or repairing vehicles and other property which may be damaged by his work. The applicator shall use all precautions to avoid paint movement and shall notify the Contractor to have vehicles removed from susceptible areas.

O. A progress schedule shall be furnished by the applicator for approval and shall be based on the contract completion date. Applicator shall advise the Contractor of those areas in which work is to be performed 1 week in advance of the work schedule to permit the Contractor to prepare for the work, advise employees, move vehicles, etc.

1.9 QUALITY ASSURANCE

A. Paint Coordination: Provide finish coats which are compatible with prime paints used. Review other sections of these specifications in which prime and/or finish paints are to be provided to ensure compatibility of total coatings system for various substrates. Upon request from other trades, furnish information on characteristics of finish material proposed for use, to ensure compatible prime coats are used. Provide barrier coats over incompatible primers or remove and prime as required. Notify the Contractor in writing of any anticipated problems using specified coating systems with substrates primed by others.

B. Examine specification sections of their trades for painting requirements, provisions therein affecting work of this Section.

C. Materials or work left unfinished by requirements of such other specifications but which are required to be painted shall be painted, finished to completion as part of work of this Section.

D. The applicator's qualifications, experience, etc., require the written approval and acceptance by the Paint Manufacturer.

E. Material Quality: Provide the manufacturer’s best quality paint material of the various coating types specified. Paint material containers not displaying manufacturer’s product identification will not be acceptable.

1.10 INSPECTION

A. Applicator must examine the areas and conditions under which painting work is to be applied and notify the Contractor in writing of conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions have been corrected in a manner acceptable to the Applicator.

B. Starting of painting work will be construed as the Applicator's acceptance of the surfaces and conditions within any particular area.

C. Do not paint over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions otherwise detrimental to the formation of a durable paint film.

D. Dry film thickness will be checked with a properly calibrated Nordson Mikrotest Dry Film Thickness Gauge or by other specifically approved instruments.

E. It will be the Applicator's responsibility to own and use a wet film thickness gauge to check his application thickness as he proceeds.

F. Small sample areas of each phase of work shall be done and checked by the Paint Manufacturer's representative. This will serve upon acceptance by the Architect and Owner as the job standard for remainder of that phase of work. This will also prevent misunderstanding as to interpretation of this specification's standards.

G. The Applicator shall advise the Paint Manufacturer's representative and Architect with enough lead-time prior to beginning each phase of work in order for inspection to not cause a delay in the work of the Applicator.

H. The Paint Manufacturer's representative shall be required to submit written reports to the Architect, Owner, Applicator and Contractor on the progress of satisfactory applications that will include initial job sample applications, and at least bi-weekly reports, that all work is being accomplished in accordance with his approval. These reports shall be a required attachment to each applicable Application for Payment. (Note that they apply to painting work only.) Refer to Section 00950 – Quality Assurance.

I. A final report to the Architect shall notify all parties that the completed work has been done in accordance with the manufacturer's recommendations, and the warranty period commences at the date of substantial completion. Acceptance must be in writing and presented no later than 10 days from receipt of final report, unless a written notice of specification deficiencies is necessary. Under such circumstances, the deficiencies shall then be corrected and new letters of completion and acceptance shall be exchanged.

1.11 SURFACE PREPARATION

A. Each surface shall be cleaned and prepared as specified in accordance with the Paint Manufacturer's surface preparation recommendations and requirements. The applicator is responsible for the finish of his work. Should any surface be found unsuitable to produce a proper paint or sealant finish, the Contractor shall be notified in writing and no material shall be applied until the unsuitable surfaces have been made satisfactory.

B. All exterior surfaces to be painted shall be cleaned to remove dirt, mildew, chalked paint and any foreign materials deterrent to the new finish and allowed to completely dry before painting.

C. Cracking that cannot be bridged by the paint film shall be brought to the attention of the Contractor who shall then direct repairs by the proper party.

D. Unprimed metals shall be mechanically hand tooled to bright metal and primed with a universal rust inhibitive primer as recommended by the Paint Manufacturer.

E. Painted wood surfaces shall be carefully inspected for evidence of deterioration or surface imperfections. Sandpaper any hard, glossy surface to ensure proper adhesion. Fill nail holes, imperfections and cracks with putty. Edges, corners, and raised grain shall be eased by sanding. Each coat required shall be sanded except the last. For surfaces scheduled to receive a prime coat only, sand, and re-prime after initial coat as required to conceal any defects due to insufficient sealing. Wood trim that is scheduled to be painted shall be spray painted; brush painting will not be acceptable.

F. Any loose and scaling shop painted item shall be cleaned by hand wire brushing or other suitable power tool cleaning as per SSPC-SP2 “Hand Tool Cleaning” or SSPC-SP3 “Power Tool Cleaning” standards then spot primed per the paint manufacturer's instructions.

G. Masonry and Stucco Repair, Patching and Caulking/Sealant Procedure:

1. Prior to any caulking or crack repair, all substrates must be cleaned to remove all mildew, dirt, loose or peeling paint, or any other foreign matter. Allow proper drying time of substrates before application of the products. Cracks shall be primed with a thinned solution of Pigmented Bonding Coat before any patching or caulking material is applied.

2. All construction joints and expansion joints shall be carefully inspected and cleaned prior to painting to assure desired adhesion to both surfaces.

3. Sound out all masonry/stucco cracks to determine bond to substrate. If hollow sound or disbonding is evident, immediately notify the Contractor in writing and proceed per Article 1.7 A. of this Section.

4. Concrete primer and concrete patching materials shall be approved by The Paint Manufacturer's representative and Architect before application.

5. Determine the alkalinity and moisture content of the surfaces to be painted by performing appropriate tests. If the surfaces are found to be sufficiently alkaline, to cause blistering and burning of the finish paint, correct this condition before application of paint. Do not paint over surfaces where the moisture content exceeds that permitted in the manufacturer's printed directions. Plaster shall be neutralized with manufacturer's Plaster Surface Conditioner; burned spots shall be touched up.

H. Galvanized Metal Surfaces: Galvanized metal surfaces shall be pretreated and wiped with a biodegradable cleaner to remove any dirt, oil or grease. The galvanized surfaces shall be prepared and primed prior to application of the finish coat(s) of paint as recommended by the paint manufacturer.

I. Hollow Metal Exterior Door Frames: The back of all exterior door frames shall be

primed with a bituminous mastic primer, from the bottom of the door to 18 inches above finish floor.

1.12 WARRANTY

A. Work performed to Specifications will be warranted as follows:

1. The Paint Manufacturer warrants to the building Owner and to the Contractor that for five (5) years after the date of substantial completion for the application of all coatings scheduled in Article 3.9 "Painting Schedule", Section 09911 – Exterior Painting of the project specifications and installed by the Painting Contractor, these coatings will be free from defects in manufacture and will conform to manufacturer's specifications for these products. In addition, if the Contractor applies each coating in accordance with the manufacturer's specification for application as noted below, the Paint Manufacturer warrants to the building Owner and to the Contractor that the product so applied will perform satisfactorily for three (3) years under installed conditions and will provide normal and customary protection of the substrate and will not crack, peel or blister for five (5) years under installed conditions. The warranty applies only to above-grade coated surfaces and does not apply to conditions caused by structural defect, building settlement or building movement as determined and certified by the project Structural Engineer, vandalism, negligence or other causes beyond the Paint Manufacturer's control.

2. The Paint Manufacturer representative will be given full and complete access to the job site during all stages of the construction. The paint manufacturer's representative will:

a. Inspect all surfaces prior to paint application.
b. Provide detailed written specifications for surface preparation, sealing, curing time, temperature, coatings specifications, or special application procedures for each scheduled coating.
c. Provide all reports, testing, monitoring, checking, etc. as listed in the project specification Section 09911 - Exterior Painting for this project.

4. Any claim made under this warranty must be in writing within thirty (30) days of the alleged product failure. "The paint manufacturer makes no other warranties, express or implied," including without extending or limiting the duration provided by law of any implied warranty or warranty of fitness for purpose or use." In the event that the installed product fails to conform to the above warranties, written notification will be forwarded to the Paint Manufacturer as noted above.

Within thirty (30) days, a response detailing the Paint Manufacturer's analysis and recommendations including the Contractor's schedule for required remedial actions will be provided for coordination with the Architect and Owner. Any recoated areas will be warranted only for the remainder of the original warranty period, which shall not be extended as a

result of the supply of replacement materials or labor.

Provide a signature element that includes the name and title of the signatories for the Paint Manufacturer, the building Owner, the Contractor, the date of substantial completion/warranty effective date, and the project name and address.

By issuing this warranty, the Paint Manufacturer and this contractor confirm that said warranty shall include and cover the Paint Manufacturer's costs relating to corrective or replacement paint, coatings or sealant work needed to re-establish the integrity of the paint for this project. This includes all labor and materials. This warranty shall apply to excessive cracking, chipping, peeling, or disbonding of the paint from any substrate. It is understood that minor fading is expected; however, any catastrophic discoloration or loss of color shall also be covered by said warranty.

1.13 MOCK-UPS

A. Prepare a field sample application of each scheduled paint color (mock-up) at locations approved by the Architect. Each mock-up shall cover approximately 4 square feet of area (2'-0" by 2'-0"). Apply mock-ups in quantities of paint colors selected and furnished by the Owner or Architect. Upon approval of preliminary colors by the Owner and the Architect, furnish final mock-ups.

B. At finished construction locations as directed and approved by the Architect, provide final painting field mock-ups to cover approximately 100 square feet of area (10'-0" by 10'-0") using final colors per Article 1.10 above. Mock-ups are to represent conditions of finished work including one typical horizontal to vertical interface for both interior and exterior conditions as well as typical wall surfaces.

C. Mock-ups approved by the Owner shall constitute standard of acceptance for remaining work. Do not disturb or alter mock-ups during remaining construction.

PART 2 – PRODUCTS

2.1 MATERIALS

A. Basis of Design Product: Subject to compliance with requirements, provide Sherwin-Williams Company (The) or comparable product by one of the following:

1. PPG Paints.
2. Porter Paints
3. Devoe/ICI Paints

B. Manufacturers: Subject to compliance with the project requirements and specifications, provide products specified below or an Architect approved equal. The burden of proof of equality is on the proposer.

C. Substitutions: Where a selected manufacturer or product has been specified, and equal or superior product or change in manufacturer may be accepted only upon

review and written acceptance by the Architect. All such proposed changes or substitutions shall be submitted to the Architect with appropriate manufacturer's specifications and literature, environmental compliance assurance and independent laboratory testing data, and side by side comparative for each product type. The Architect's decision whether a product or manufacturer is equal or superior to the one specified shall be final. Refer to Division 01 for additional product substitution requirements.

A. All materials used in this paint contract shall be as manufactured and delivered on the job in original, sealed containers.

B. The paints herein specified are known to be suitable and will be enforced as the required standards of quality of this work.

C. Extra Materials: Provide 10-gallons of each selected color for maintenance stock to the Owner.

D. Provide a final typed painting schedule to be included in Section 01700 – Project Closeout with maintenance manuals.

E. All coatings shall contain the mildewcide M-1 additive, or paint manufacturer's approved equal, as manufactured by Jomaps, Inc. The quantity of the additive shall be per the manufacturer's requirements in order to provide mildew resistance.

F. Damp proofing to be applied to the interior face of the perimeter exterior CMU walls shall be "Dry-Lock", or approved equal.

2.2 COLORS

A. Colors of the exterior building envelope shall be as selected by the Owner, and the Architect, Color schedules shall be furnished to the Applicator before application of prime coats. Prime coats will be tinted to be a slightly different shade compared to the succeeding coat.

B. Colors of the storage and mechanical rooms will be a single color; antique white or similar to be approved by the Owner and Architect.

PART 3 -EXECUTION

3.1 INSPECTION

A. Prior to installation of the work of this Section, carefully inspect the installed work of all other trades and verify that all such work is complete to the point where this installation may properly commence. Painting contractor shall notify the General Contractor in writing if repair or replacement of any damaged or otherwise unacceptable substrates exist or is necessary. Verify that painting may be completed in strict accordance with the project requirements/specifications and with the manufacturer's recommendations. Do not proceed until all such discrepancies have been fully resolved.

B. All work will be inspected and approved in writing, on a regular basis by the paint manufacturer's representative. A schedule of inspections required of the manufacturer will be reviewed and coordinated with the General Contractor prior to the commencement of the painting work.

1. The minimum inspection requirements prior to start of each area or drop are:

a. Verify that surfaces are ready to receive work.

b. Examine surfaces scheduled to be finished prior to commencement of work. Report any condition that may potentially effect proper application.

c. Verify that substrate moisture content and PH do not exceed recommended conditions as predetermined by all parties involved.

d. Examine all caulk joints for use of appropriate sealant, adequate application and adequate adhesion.

2. Minimum testing during application:

a. Moisture.

b. PH test.

c. Wet mil test of base application.

d. Dry mil test of base application.

e. Wet mil test of finish coat(s).

3. Minimum upon completion:

a. Dry mil test of completed application.

b. Summary report of all testing and copies of all field testing reports.

3.2 SURFACE PREPARATION

A. General: Clean and prepare surfaces to be painted in accordance with manufacturer's printed instructions and current recommendations for each particular substrate condition and as specified.

1. Notify the Architect and General Contractor in writing of problems anticipated using specified finish coat material with substrates primed by others.

2. Remove hardware and hardware accessories, plates, machined surfaces, lighting fixtures, and items in place that are not to be painted, or provide suitable protection prior to surface preparation and painting. Remove items if necessary for complete painting of the items and adjacent surfaces. Following completion of painting operations in each space or area, reinstall items removed using workmen skilled in the trades involved.

3. Clean surfaces before applying paint or surface treatment. Schedule cleaning and painting so that dust and other contaminants from the cleaning process will not fall on wet, newly painted surfaces.

B. Cementitious Surfaces: Prepare concrete, concrete masonry, and similar surfaces to be painted by removing efflorescence, chalk, dust, dirt, grease, oils, and release agents. Roughen as required to remove glaze. Use abrasive blast cleaning if recommended by paint manufacturer.

1. Determine alkalinity and moisture content of surfaces where moisture content exceeds that permitted in manufacturer's printed directions.

C. Wood: Clean surfaces of dirt, oil, or other foreign substances with scrapers, mineral spirits, and sandpaper as required. Sand surfaces exposed to view smooth, and dust off.

1. Scrape and clean, small, dry, seasoned knots and apply a thick coat of white shellac or other recommended knot sealer, before application of primer. After priming, fill holes and imperfections in finish surfaces with putty or plastic wood filler. Sand smooth when dried.

2. Prime, stain, or seal wood to be painted immediately upon delivery. Prime edges, ends, faces, undersides, and backsides of wood.

3. When transparent finish is required, use spar varnish for back priming.

4. Seal tops, bottoms, ends and cutouts of unprimed wood doors and pre-engineered wood beams with heavy coat of varnish or sealer immediately upon delivery.

D. Ferrous Metals: Clean non-galvanized ferrous metal surfaces that have not been shop-coated; remove oil, grease, dirt, loose mill scale and other foreign substances. Use solvent or mechanical cleaning methods that comply with recommendations of the Steel Structures Painting Council (SSPC).

1. Touch-up bare areas and shop-applied prime coats that have been damaged. Wire-brush, clean with solvents recommended by paint manufacturer, and touch up with the same primer as the shop coat.

E. Galvanized Surfaces: Clean galvanized surfaces with non-petroleum-based solvents so that the surface is free of oil and surface contaminants. Remove pre-treatment from galvanized sheet metal fabricated from coil stock by mechanical methods.

G. Doors: Door bottoms and tops shall be primed and painted prior hanging the doors. The Contractor shall coordinate the timing of the work to ensure that this process is completed prior to hanging the doors within the frame.

3.3 GENERAL

A. Protect work of other trades, whether to be painted or not, from damage by painting work. Mask hardware as required to protect, i.e. brass door butts, etc.

B. Provide “Wet Paint” signs where appropriate to protect uncured finishes.

C. Spray applications, when used, shall produce the equivalent hiding quality per coat as brush or roller-applied coats. Do not double back with spray equipment for the purpose of building up film thickness of two coats in one pass. All spray applied paint shall be “back rolled” to assure proper coverage and uniformity.

D. The first and second coats of paint will be of slightly different shades for inspection purposes.

E. Viscosity and thickness tests may be taken by the General Contractor or manufacturer. Cost of tests will be borne by the subcontractor if found to be below specification requirements.

F. Painter to protect floors from over-spray and to clean if necessary.

G. All weather stripping around doors, windows and other openings shall not be painted. Special care shall be taken to properly “mask” and protect these components from all painting operations.

H. Subcontractor shall provide adequate painting protection for all of the trades work throughout the painting operations. Once surrounding services have been painted and protection is no longer needed, temporary protection shall be removed.

J. Clean all surfaces of foreign matter prior to any paint application.

3.4 MATERIALS PREPARATION

A. Mix and prepare paint in accordance with manufacturer’s directions. Maintain containers used in mixing and application of paint in a clean condition, free of foreign materials and residue.

B. Use factory mixed colors, shade, and tints. Job mixing permitted only with specific written approval of the Paint Manufacturer's representative and the Architect.

C. Store materials not in actual use in tightly covered containers. Maintain containers used in storage, mixing, and application of paint in a clean condition, free of foreign materials and residue.

D. Stir materials before application to produce a mixture of uniform density, and stir as required during the application of the materials. Do not stir surface film into the material. Remove the film and if necessary, strain the material before using.

E. Use only thinners approved by manufacturer, and only within recommended limits.

3.5 APPLICATION

A. Apply paint of consistency recommended by and in accordance with the paint manufacturer's data sheets. Use tools and techniques best suited for the substrate and type of material being applied per manufacturer's data sheets.

B. Paint interior surfaces of ducts where visible through registers or grilles, with a flat, non-specular black paint as per paint schedule.

C. Finish exterior and interior doors on tops, bottoms and side edges the same as the exterior faces, unless otherwise indicated.

D. Exposed pipes and ductwork on or near walls or ceilings that are to be painted shall be painted, unless otherwise indicated.

E. Orange peel/rough finish on metal or wood surfaces shall not be permitted.

F. Provide primer coats for all walls and trim to receive a faux finish. Faux finishes are not included in this contract.

G. The number of coats and film thickness required is the same regardless of application method. Do not apply succeeding coats until previous coat has cured as recommended by the manufacturer. Sand between applications where sanding is required to produce a smooth, even surface, in accordance with the manufacturer’s directions.

H. Apply additional coats when undercoats show through final coat of paint, until paint film is of uniform finish, color, and appearance. Give special attention to ensure that surfaces, including edges, corners, crevices, welds, and exposed fasteners, receive a dry-film-thickness equivalent to that of flat surfaces.

I. The term “exposed surfaces” includes areas visible when permanent or built-in fixtures, convector covers, grilles and similar components are in place. Extend coatings in these areas to maintain system integrity and provide desired protection.

J. Paint surfaces behind movable equipment and furniture same as similar exposed surfaces. Paint surfaces behind permanently fixed equipment or furniture with prime coat only before final installation of equipment.

K. Paint back sides of access panels and removable or hinged covers to match exposed surfaces.

L. Finish exterior doors on tops, bottoms, and side edges same as exterior faces. The back of hollow metal-exterior door frames shall be finished with a mastic primer, from the bottom of the door to 18 inches above the finish floor.

M. Omit primer on metal surfaces that have been shop-primed and touch up painted.

N. Sand lightly between each succeeding enamel or varnish coat.

O. Scheduling Painting: Apply first-coat to surfaces that have been cleaned, pretreated, or otherwise prepared for painting as soon as practicable, and before subsequent surface deterioration. Allow sufficient time between successive coats to permit proper drying. Do not recoat until paint has dried to where it feels firm, and does not deform or feel sticky under moderate thumb pressure and where application of another coat of paint does not cause lifting or loss of adhesion of the undercoat.

P. Minimum Coating Thickness: Apply materials at the manufacturer's recommended spreading rate. Provide total dry film thickness of the entire system as recommended by the manufacturer.

Q. Block Fillers: Apply block fillers to concrete masonry unit at a rate to ensure complete coverage with pores filled.

R. Prime Coats: Before application of finish coats, apply a prime coat of material as recommended by the manufacturer to material required to be painted or finished, and has not been prime coated by others.

1. Recoat primed and sealed substrates where evidence of suction spots or unsealed areas in the first coat appears, to assure a finish coat with no burn-through or other defects due to insufficient sealing.

S. Brush Application: Brush-out and work brush coats into surfaces in an even film. Eliminate cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections. Draw neat glass lines and color breaks.

1. Apply primers and first coats by brush unless manufacturer's instructions permit use of mechanical applicators.

T. Mechanical Applications: Use mechanical methods for paint application when permitted by manufacturer's recommendation, governing ordinances, and trade union regulations.

1. Wherever spray application is used, apply coat to provide the equivalent hiding of brush-applied coats. Do not double-back with spray equipment building-up film thickness of two coats in one pass unless recommended by the manufacturer.

U. Completed Work: Match approved samples for color, texture and coverage. Remove, refinish or repaint work not in compliance with specified requirement.

3.6 FIELD QUALITY CONTROL

A. The Owner reserves the right to engage the services of an independent testing laboratory to sample and test paint material being used. Samples of material delivered to the project will be taken, identified, sealed, and certified in the presence of the Contractor.

1. The testing laboratory will perform appropriate tests as required by the Owner.

2. If tests show material being used does not comply with specified requirements, the Contractor may be directed to stop painting pay for testing, repaint surfaces coated with reject paint, remove rejected paint from previously painted surfaces if, upon repainting with the specified paint, the two coatings are non-compatible.

3.7 CLEAN UP AND PROTECTION

A. During the progress of the work, remove from the site all discarded paint materials, rubbish, cans, and rags at the end of each workday.

B. Remove splashed, dropped, spattered, and spilled paint from hardware, fixtures, glass, and building parts.

C. Protect work of other trades, whether to be painted or not, against damage by painting and finishing work. Correct any damage by cleaning, repairing, or replacing, and repainting as acceptable to the Architect.

D. Provide "Wet Paint" signs as required to protect newly painted finishes. Remove temporary protective wrappings provided by others for protection of their work, after completion of painting operations.

E. At the completion of work of other trades, and after notification in writing to the Contractor, touch-up and restore all damaged or defaced painted surfaces. A touch-up allowance will be included in final contract.

3.9 PAINT SCHEDULE

3.9.1 COLOR SCHEDULE EXTERIOR PAINTING

Exterior Building Colors to be selected by the Architect
Color “A” To Be Determined
Color “B” To Be Determined
Color “C” To Be Determined
Color “D” To Be Determined
Color “E” To Be Determined
Color “F” To Be Determined
Color “G” To Be Determined
Color “H” To Be Determined

Color “I” To Be Determined
Color “HA” To Be Determined
Color “HB” To Be Determined
Color “HC” To Be Determined

3.9.2 PAINT SYSTEMS AND COATING SCHEDULE

Refer to the Exterior Elevations for the color scheme and various painted material types (letter designation) scheduled below. Provide finish scheduled below if not indicated on the drawings and/or finish schedule.

A. THE SHERWIN WILLIAMS COMPANY: Attached are the Material Supplier's detailed prime and finish coats specifications. This defines primer and finish coat names, product number designations, and thickness. Because this supplier is providing a warranty, strict adherence to product Data Sheet and label instructions shall be followed. The following schedule shall not be considered as entirely inclusive, but construed as a general guide for complete painting of buildings, structures, etc., including, but not limited to, storage spaces, recesses, returns, reveals, soffits, haunches, forming part of a particular surface, room or space, pipes, conduits, duct work, panels, mechanical equipment, etc.

FINISH TYPE		Wet Film Thickness MILS	Dry Film Thickness MILS	Spread Rate SF/Gal.
A1. Concrete Floor Stain				
1st coat	H&C Concrete Sealer Solid Color Solvent Based Thinned 25%			175
2nd coat	H&C Concrete Sealer Solid Color Solvent Based Full Strength			200
A2. Parking Stripes				
1st coat	Sherwin Williams Pro/Mar Traffic Marking Paint B29 Series 4” Stripe	14.0	7.0	350
2nd coat	Sherwin Williams Pro/Mar Traffic Marking Paint B29 Series	14.0	7.0	350
	TOTAL DRY MILS		14.0	
A3. Exterior Concrete				
1st coat	Sherwin Williams Loxon Concrete & Masonry Primer/Sealer A24W300	8.0	3.2	200
2nd coat	Sherwin Williams Loxon Acrylic Coating A24W300	8.0	3.8	200
	TOTAL DRY MILS		7.0	

C1. Exterior Plaster (Stucco) and Ceilings

1st coat	Sherwin Williams Loxon Concrete & Masonry Primer/Sealer A24W300	8.0	3.2	200
2nd coat	Sherwin Williams Loxon Acrylic Coating A24W300	8.0	3.8	200

TOTAL DRY MILS 7.0

D1. Exterior Gypsum Board Ceilings

1st coat	Sherwin Williams Loxon Concrete & Masonry Primer/Sealer A24W300	8.0	3.2	200
2nd coat	Sherwin Williams A-100 Exterior Gloss Latex, A8 Series	4.0	1.3	300

TOTAL DRY MILS 4.5

E1. Structural Steel

1st coat	Sherwin Williams Kern Komick Universal Metal Primer B50 Series	6.0	3.0	200
2nd coat	Sherwin Williams A-100 Exterior Gloss Latex, A8 Series	4.0	3.0	200

TOTAL DRY MILS 4.3

E2. Structural Steel Touch-Up

1st coat	Sherwin Williams Kern Komick Universal Metal Primer B50	6.0	3.0	200

E3. Unfinished Ferrous Metals

1st coat	Sherwin Williams Kern Komick Universal Metal Primer B502	6.0	3.0	200-250
2nd coat	Sherwin Williams Pro Industrial High Performance Acrylic, B66-650 Series	6.0	2.5	200

TOTAL DRY MILS 5.5

E4. Exterior Galvanized Metal
(If Galvanized Metal is Surface Treated, must Solvent Clean with Biodegradable Cleaner)

1st coat	Sherwin Williams Pro Industrial Pro-Cryl Universal Primer, B66-310 Series	7.5	3.0	264
2nd coat	Sherwin Williams Pro Industrial High Performance Acrylic, B66-650 Series	6.0	2.5	200

TOTAL DRY MILS 5.5

E5. <u>Galvanized</u>

1st coat	Sherwin Williams Pro Industrial Pro-Cryl Universal Primer, B66-310 Series	7.5	3.0	264
2nd coat	Sherwin Williams A-100 Gloss A-8 Series	4.0	1.3	3
3 rd coat	Sherwin Williams A-100 Gloss A-8 Series	4.0	1.3	300

TOTAL DRY MILS 5.6

E6. Galvanized Surface touch-up

1st coat	Sherwin Williams Pro Industrial Pro-Cryl Universal Primer, B66-310 Series	7.5	3.0	264

E7. Unprimed Ferrous Metal and Overhead Grille Brackets

Pretreatment: Clean in accordance with Paragraph 1.11D.

1st coat	Sherwin Williams Kern Komick Universal Metal Primer B50	6.0	3.0	200
2nd coat	Sherwin Williams Pro Industrial High Performance Acrylic, B66-600	6.0	2.5	200

TOTAL DRY MILS 5.5

H1. Wood Stain/Sealer-Semi Transparent

Pretreatment: Prepare surface in accordance with mfg. requirements.

1st coat	Sherwin Williams WoodScapes® Semi-Transparent Stain-Color TBD, A15 Series			200
2nd coat	Sherwin Williams WoodScapes Semi-Transparent Stain-Clear, A15 Series			200

S1. Exterior Sealant

Stampede-Acrylic Urethane Sealant

END OF SHERWIN WILLIAMS COMPANY PAINT SYSTEMS SCHEDULE

END OF SECTION 09911

SECTION 09912 – INTERIOR PAINTING

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes surface preparations, painting, and finishing of exposed interior items and surfaces.

1. Surface preparation, priming and finish coats specified in this Section are in addition to shop priming and surface treatment specified under other Sections.

B. Paint exposed surfaces whether or not colors are designated in “schedule” except where a surface or material is indicated not to be painted or is to remain natural. Where an item or surface is not mentioned, paint the same as similar adjacent materials or surfaces. If color or finish is not designated, the Architect and Owner will select from standard colors or finishes available.

1. Painting includes field painting exposed bare and covered pipes and ducts (including color coding), hangers, exposed steel and iron work, and primed metal surfaces of mechanical and electrical equipment.

C. Painting is not required on pre-finished items, finished metal surfaces, concealed surfaces, operating parts, or labels.

1. Labels: Do not paint over Underwriter’s Laboratories, Factor Mutual or other code-required labels, or equipment name, identification, performance rating, or nomenclature plates.

D. The Contractor shall apply damp proofing to the interior face of the perimeter New exterior CMU walls to (where concealed) reduce moisture intrusion during the course of construction, until the final exterior paint system is applied.

E. Non-Galvanized Structural Steel to receive fireproofing as scheduled, shown, or required by the FBC shall be primed by the fabricator but not finished painted.

F. Coating Maintenance Manual: upon conclusion of the project, the Contractor or paint manufacture/supplier shall furnish a coating maintenance manual, such as Sherwin-Williams “Custodian Project Color and Product Information” report or equal. Manual shall include an Area Summary with finish schedule, Area Detail designating where each product/color/finish was used, product data pages,

Material Safety Data Sheets, care and cleaning instructions, touch-up procedures, and color samples of each color and finish used.

1.3 GENERAL

A. Furnish all labor, materials, tools, equipment, etc. and services necessary and incidental to the complete fabrication, furnishing and erection of this Section as shown, noted, detailed and reasonably implied on the drawings and in the specifications.

B. Note that warranty requirements are an integral part of the work in this Section and all criteria listed per Article 1.9 of this Section apply.

C. Note that the requirement for prime and finish painting may be included in various Mechanical, Electrical, Plumbing, Fire Protection, and Structural sections of this specification. Coordination is required.

D. The Paint Manufacturer shall also provide their own company paint and coatings specifications accompanied by Product Data and Material Safety Data sheets as part of Article 1.6 Submittals below. It is the intent of these Specifications to establish quality and workmanship detail, and define both generic systems and the extent of the caulking and coatings applications in a general way. It shall then be the responsibility of the Paint Manufacturer to attach and comply with their own company paint and coatings specifications for the precise primers and finish coats and application procedure and methods to ensure this criteria is followed.

E. In the event of discrepancy, the Paint Manufacturer’s specifications shall take precedence over these specifications. Notify the Architect in writing for each and every specific situation as it occurs prior to application of any material.

F. The Paint Manufacturer shall exercise rights of approval in the selection of a competent applicator, which meets their standards for quality workmanship and levels of experience.

G. Although the Paint Manufacturer may not actually manufacture caulking compounds equivalent to these specified herein, they shall be responsible for this phase of work as described in Article1.9 of this Section.

1.4 RELATED SECTIONS

A. Coordinate work of this Section with work of other Sections as required to properly execute the work and as necessary to maintain satisfactory progress of the work of other Sections, including:

1. Division 5 Section “Metal Fabrications” for shop priming ferrous metal.
2. Division 7 Section “Sprayed Fire-Resistive Materials” and “Caulking and Sealants.”
3. Division 8 Section “Steel Doors and Frames” for shop priming steel doors and frames.

4. Division 9 Section “Exterior Painting” for surface preparation and the application of paint systems on exterior substrates.

1.5 DEFINITIONS

A. “Paint” includes coating system materials, primers, emulsions, enamels, stains, sealers and fillers, and other applied materials whether used as prime, intermediate or finish coats.

1.6 SUBMITTALS

A. Data: Submit product data under provisions of Section 01300 – Shop Drawings, Product Data and Samples to include the Paint Manufacturer's application instructions for all products intended for work in this Section.

B. Painting Schedule: Shall include, but not limited to the following:

1. Pretreatment requirements for each paint system.

2. Spread Rate - gallons per square foot.

3. Wet film thickness in mils.

4. Dry film thickness in mils.

5. Total dry film thickness in mils.

6. Format identical to Article 3.8 PAINT SCHEDULE

C. Samples:

1. Submit manufacturer's standard color chips. Architect and Owner will select colors from manufacturer's color chip brochures. Contractor to prepare color chip samples specified herein before using selected colors. Architect and Owner will make final selection from such color chips and prepare color schedule for Contractor's use.

2. Do not proceed with any painting work until field sample panels of each paint system specified are applied and reviewed by the Architect and Owner.

D. Applicator Certification: Written acceptance of the applying company per Article 1.9 D. of this section.

1.7 DELIVERY, STORAGE AND HANDLING

A. Deliver products to site under provisions of Section 01600 – Materials and Equipment and Section 01620 – Storage and Protection.

B. Deliver all materials to the job site in original, new and unopened packages and

containers bearing the manufacturer's name and label, and the following information:

1. Product name or title of material,

2. Product description (generic classification or binder type).

3. Manufacturer's name, stock number and date of manufacture.

4. Contents by volume, for major pigment and vehicle constituents,

5. Thinning instructions,

6. Application instructions,

7. Color name and number,

8. No materials other than types specified or approved may be delivered to project site. Unapproved materials shall be removed from project site immediately.

C. Storage and Use of Premises:

1. The applicator shall confine his apparatus, materials storage and operations of his workers to limits indicated by Contractor. All materials used on the job shall be stored in a single place designated by the Contractor. Such storage shall be kept clean and the applicator shall be liable for damage to surrounding areas.

2. Inflammable material and/or fire hazard waste shall be stored, handled and used in an approved manner and shall be removed from the site daily.

D. Store materials not in use in tightly covered containers in a well ventilated area at a minimum ambient temperature of 45 degrees F., or as required by the manufacturer. Maintain containers used in storage in a clean condition, free of foreign materials and residue.

1. Protect from freezing. Keep storage area neat and orderly. Remove oily rags and waste daily.

2. Take necessary measures to ensure that workers and work areas are protected from fire and health hazards resulting from handling, mixing, and application.

1.8 JOB CONDITIONS

A. Paint only in dry weather when temperature is 50 degrees F or higher. Stop exterior work early to permit paint film to set up before condensation, caused by night temperature drops, occur. Do not begin painting until surfaces are moisture free.

B. Do not varnish or enamel in direct sunlight.

C. Keep paint at room temperature.

D. Sweep dust, dirt and debris away before painting.

E. Execute work in accordance with label directions. Coating applications shall be made in strict conformance to this specification and to the manufacturer's paint instructions on the labels and product data sheets.

F. Paint only dry wood (less than 15 percent moisture). Defer painting until moisture content meets manufacturer's recommendations.

G. Environmental Requirements:

1. Measure moisture content of surfaces using an electronic moisture meter. Do not apply coating unless moisture content of surfaces is below the manufacturer’s recommendations.

2. Paint PH tests shall be taken prior to painting subcontractor beginning his work. PH level to be acceptable to paint manufacturer and subcontractor prior to paint application. Costs of tests to be paid by painting contractor. Provide written documentation of all test results immediately to on-site General Contractor’s superintendent.

3. Strictly follow manufacturer’s recommendations pertaining to environmental conditions.

H. All work shall be accomplished by skilled workmen familiar with and trained to do this type of work and they shall be further qualified to operate or use the equipment and rigging needed to accomplish this work.

I. Materials shall be applied evenly and free of runs, sags, or pinholes.

J. Type and amount prescribed for thinners, solvents, cleaners, etc. to be confirmed by and based on the Paint Manufacturer's written recommendation and approval.

K. All application tools and equipment shall be in good working order and suitable for proper application. All surrounding areas shall be fully protected against damage during each stage of the painting project. All exterior and interior substrates designated not to receive paint coatings shall be kept free of paint residue, e.g. windows, etc.

L. Normal safety signs, necessary lighting and temporary fencing around work areas shall be installed and maintained in accordance with OSHA requirements while work is in progress.

M. Where spray painting has been approved by the Architect, this applicator shall protect all adjacent materials and surfaces by covering entire said areas with approved protective materials. Overspray will not be accepted and, if it occurs,

shall be cleaned up properly and promptly.

N. The applicator shall submit written evidence of insurance coverage of an adequate amount to cover the cost of cleaning and/or repairing vehicles and other property which may be damaged by his work. The applicator shall use all precautions to avoid paint movement and shall notify the Contractor to have vehicles removed from susceptible areas.

O. A progress schedule shall be furnished by the applicator for approval and shall be based on the contract completion date. Applicator shall advise the Contractor of those areas in which work is to be performed 1 week in advance of the work schedule to permit the Contractor to prepare for the work, advise employees, move vehicles, etc.

1.9 QUALITY ASSURANCE

A. Paint Coordination: Provide finish coats which are compatible with prime paints used. Review other sections of these specifications in which prime and/or finish paints are to be provided to ensure compatibility of total coatings system for various substrates. Upon request from other trades, furnish information on characteristics of finish material proposed for use, to ensure compatible prime coats are used. Provide barrier coats over incompatible primers or remove and prime as required. Notify the Contractor in writing of any anticipated problems using specified coating systems with substrates primed by others.

B. Examine specification sections of their trades for painting requirements, provisions therein affecting work of this Section.

C. Materials or work left unfinished by requirements of such other specifications but which are required to be painted shall be painted, finished to completion as part of work of this Section.

D. The applicator's qualifications, experience, etc., require the written approval and acceptance by the Paint Manufacturer.

E. Material Quality: Provide the manufacturer’s best quality paint material of the various coating types specified. Paint material containers not displaying manufacturer’s product identification will not be acceptable.

1.10 INSPECTION

A. Applicator must examine the areas and conditions under which painting work is to be applied and notify the Contractor in writing of conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions have been corrected in a manner acceptable to the Applicator.

B. Starting of painting work will be construed as the Applicator's acceptance of the surfaces and conditions within any particular area.

C. Do not paint over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions otherwise detrimental to the formation of a durable paint film.

D. Dry film thickness will be checked with a properly calibrated Nordson Mikrotest Dry Film Thickness Gauge or by other specifically approved instruments.

E. It will be the Applicator's responsibility to own and use a wet film thickness gauge to check his application thickness as he proceeds.

F. Small sample areas of each phase of work shall be done and checked by the Paint Manufacturer's representative. This will serve upon acceptance by the Architect and Owner as the job standard for remainder of that phase of work. This will also prevent misunderstanding as to interpretation of this specification's standards.

G. The Applicator shall advise the Paint Manufacturer's representative and Architect with enough lead-time prior to beginning each phase of work in order for inspection to not cause a delay in the work of the Applicator.

H. The Paint Manufacturer's representative shall be required to submit written reports to the Architect, Owner, Applicator and Contractor on the progress of satisfactory applications that will include initial job sample applications, and at least bi-weekly reports, that all work is being accomplished in accordance with his approval. These reports shall be a required attachment to each applicable Application for Payment. (Note that they apply to painting work only.) Refer to Section 00950 – Quality Assurance.

I. A final report to the Architect shall notify all parties that the completed work has been done in accordance with the manufacturer's recommendations, and the warranty period commences at the date of substantial completion. Acceptance must be in writing and presented no later than 10 days from receipt of final report, unless a written notice of specification deficiencies is necessary. Under such circumstances, the deficiencies shall then be corrected and new letters of completion and acceptance shall be exchanged.

1.11 SURFACE PREPARATION

A. Each surface shall be cleaned and prepared as specified in accordance with the Paint Manufacturer's surface preparation recommendations and requirements. The applicator is responsible for the finish of his work. Should any surface be found unsuitable to produce a proper paint or sealant finish, the Contractor shall be notified in writing and no material shall be applied until the unsuitable surfaces have been made satisfactory.

B. All interior surfaces to be painted shall be cleaned to remove dirt, mildew, chalked paint and any foreign materials deterrent to the new finish and allowed to completely dry before painting.

C. Cracking that cannot be bridged by the paint film shall be brought to the attention of the Contractor who shall then direct repairs by the proper party.

D. Unprimed metals shall be mechanically hand tooled to bright metal and primed with a universal rust inhibitive primer as recommended by the Paint Manufacturer.

E. Painted wood surfaces shall be carefully inspected for evidence of deterioration or surface imperfections. Sandpaper any hard, glossy surface to ensure proper adhesion. Fill nail holes, imperfections and cracks with putty. Edges, corners, and raised grain shall be eased by sanding. Each coat required shall be sanded except the last. For surfaces scheduled to receive a prime coat only, sand, and re-prime after initial coat as required to conceal any defects due to insufficient sealing. Wood trim that is scheduled to be painted shall be spray painted; brush painting will not be acceptable. Wood floors shall receive (4) four coats of sealer.

F. Any loose and scaling shop painted item shall be cleaned by hand wire brushing or other suitable power tool cleaning as per SSPC-SP2 “Hand Tool Cleaning” or SSPC-SP3 “Power Tool Cleaning” standards then spot primed per the paint manufacturer's instructions.

G. Galvanized Metal Surfaces: Galvanized metal surfaces shall be pretreated and wiped with a biodegradable cleaner to remove any dirt, oil or grease. The galvanized surfaces shall be prepared and primed prior to application of the finish coat(s) of paint as recommended by the paint manufacturer.

1.12 WARRANTY

A. Work performed to Specifications will be warranted as follows:

1. The Paint Manufacturer warrants to the building Owner and to the Contractor that for five (5) years after the date of substantial completion for the application of all coatings scheduled in Article 3.8 "Painting Schedule", Section 09912 – Interior Painting of the project specifications and installed by the Painting Contractor, these coatings will be free from defects in manufacture and will conform to manufacturer's specifications for these products. In addition, if the Contractor applies each coating in accordance with the manufacturer's specification for application as noted below, the Paint Manufacturer warrants to the building Owner and to the Contractor that the product so applied will perform satisfactorily for three (3) years under installed conditions and will provide normal and customary protection of the substrate and will not crack, peel or blister for five (5) years under installed conditions. The warranty applies only to above-grade coated surfaces and does not apply to conditions caused by structural defect, building settlement or building movement as determined and certified by the project Structural Engineer, vandalism, negligence or other causes beyond the Paint Manufacturer's control.

2. The Paint Manufacturer representative will be given full and complete access to the job site during all stages of the construction. The paint manufacturer's representative will:

a. Inspect all surfaces prior to paint application.

b. Provide detailed written specifications for surface preparation, sealing, curing time, temperature, coatings specifications, or special application procedures for each scheduled coating.
c. Provide all reports, testing, monitoring, checking, etc. as listed in the project specification Section 09912 – Interior Painting for this project.

4. Any claim made under this warranty must be in writing within thirty (30) days of the alleged product failure. "The paint manufacturer makes no other warranties, express or implied," including without extending or limiting the duration provided by law of any implied warranty or warranty of fitness for purpose or use." In the event that the installed product fails to conform to the above warranties, written notification will be forwarded to the Paint Manufacturer as noted above.

Within thirty (30) days, a response detailing the Paint Manufacturer's analysis and recommendations including the Contractor's schedule for required remedial actions will be provided for coordination with the Architect and Owner. Any recoated areas will be warranted only for the remainder of the original warranty period, which shall not be extended as a result of the supply of replacement materials or labor.

Provide a signature element that includes the name and title of the signatories for the Paint Manufacturer, the building Owner, the Contractor, the date of substantial completion/warranty effective date, and the project name and address.

By issuing this warranty, the Paint Manufacturer and this contractor confirm that said warranty shall include and cover the Paint Manufacturer's costs relating to corrective or replacement paint, coatings or sealant work needed to re-establish the integrity of the paint for this project. This includes all labor and materials. This warranty shall apply to excessive cracking, chipping, peeling, or disbonding of the paint from any substrate. It is understood that minor fading is expected; however, any catastrophic discoloration or loss of color shall also be covered by said warranty.

1.13 MOCK-UPS

A. Prepare a field sample application of each scheduled paint color (mock-up) at locations approved by the Architect. Each mock-up shall cover approximately 4 square feet of area (2'-0" by 2'-0"). Apply mock-ups in quantities of paint colors selected and furnished by the Owner or Architect. Upon approval of preliminary colors by the Owner and the Architect, furnish final mock-ups.

B. At finished construction locations as directed and approved by the Architect, provide final painting field mock-ups to cover approximately 100 square feet of area (10'-0" by 10'-0") using final colors per Article 1.10 above. Mock-ups are to represent conditions of finished work including one typical horizontal to vertical interface for both interior and exterior conditions as well as typical wall surfaces.

C. Mock-ups approved by the Owner shall constitute standard of acceptance for remaining work. Do not disturb or alter mock-ups during remaining construction.

PART 2 – PRODUCTS

2.1 MATERIALS

A. Basis of Design Product: Subject to compliance with requirements, provide Sherwin-Williams Company (The) or comparable product by one of the following:

1. PPG Paints.
2. Porter Paints
3. Devoe/ICI Paints

B. Manufacturers: Subject to compliance with the project requirements and specifications, provide products specified below or an Architect approved equal. The burden of proof of equality is on the proposer.

C. Substitutions: Where a selected manufacturer or product has been specified, and equal or superior product or change in manufacturer may be accepted only upon review and written acceptance by the Architect. All such proposed changes or substitutions shall be submitted to the Architect with appropriate manufacturer's specifications and literature, environmental compliance assurance and independent laboratory testing data, and side by side comparative for each product type. The Architect's decision whether a product or manufacturer is equal or superior to the one specified shall be final. Refer to Division 01 for additional product substitution requirements.

D. All materials used in this paint contract shall be as manufactured and delivered on the job in original, sealed containers.

E. The paints herein specified are known to be suitable and will be enforced as the required standards of quality of this work.

F. Extra Materials: Provide 10-gallons of each selected color for maintenance stock to the owner.

G. Provide a final typed painting schedule to be included in Section 01700 – Project Closeout with maintenance manuals.

H. Damp proofing to be applied to the interior face of the perimeter New exterior CMU walls (where concealed) walls are to be "Dry-Lock", or approved equal.

2.2 COLORS

A. Colors of the interior of the project shall be as selected by the Owner and the Architect. Color schedules shall be furnished to the Applicator before application of prime coats. Prime coats will be tinted to be a slightly different shade compared to

the succeeding coat. Refer to the Drawings for the paint colors and location.

B. Colors of the storage and mechanical rooms will be a single color; antique white or similar color based on the Airport standard to be approved by the Owner and Architect.

PART 3 EXECUTION

3.1 INSPECTION

A. Prior to installation of the work of this Section, carefully inspect the installed work of all other trades and verify that all such work is complete to the point where this installation may properly commence. Painting contractor shall notify the General Contractor in writing if repair or replacement of any damaged or otherwise unacceptable substrates exist or is necessary. Verify that painting may be completed in strict accordance with the project requirements/specifications and with the manufacturer's recommendations. Do not proceed until all such discrepancies have been fully resolved.

B. All work will be inspected and approved in writing, on a regular basis by the paint manufacturer's representative. A schedule of inspections required of the manufacturer will be reviewed and coordinated with the General Contractor prior to the commencement of the painting work.

1. The minimum inspection requirements prior to start of each area or drop are:

   a. Verify that surfaces are ready to receive work.

   b. Examine surfaces scheduled to be finished prior to commencement of work. Report any condition that may potentially effect proper application.

   c. Verify that substrate moisture content and PH do not exceed recommended conditions as predetermined by all parties involved.

   d. Examine all caulk joints for use of appropriate sealant, adequate application and adequate adhesion.

2. Minimum testing during application:

   a. Moisture.

   b. PH test.

   c. Wet mil test of base application.

   d. Dry mil test of base application.

e. Wet mil test of finish coat(s).

3. Minimum upon completion:

a. Dry mil test of completed application.

b. Summary report of all testing and copies of all field testing reports.

3.2 SURFACE PREPARATION

A. General: Clean and prepare surfaces to be painted in accordance with manufacturer's printed instructions and current recommendations for each particular substrate condition and as specified.

1. Notify the Architect and General Contractor in writing of problems anticipated using specified finish coat material with substrates primed by others.

2. Remove hardware and hardware accessories, plates, machined surfaces, lighting fixtures, and items in place that are not to be painted, or provide suitable protection prior to surface preparation and painting. Remove items if necessary for complete painting of the items and adjacent surfaces. Following completion of painting operations in each space or area, reinstall items removed using workmen skilled in the trades involved.

3. Clean surfaces before applying paint or surface treatment. Schedule cleaning and painting so that dust and other contaminants from the cleaning process will not fall on wet, newly painted surfaces.

B. Cementitious Surfaces: Prepare concrete, concrete masonry, and similar surfaces to be painted by removing efflorescence, chalk, dust, dirt, grease, oils, and release agents. Roughen as required to remove glaze. Use abrasive blast cleaning if recommended by paint manufacturer.

1. Determine alkalinity and moisture content of surfaces where moisture content exceeds that permitted in manufacturer's printed directions.

C. Wood: Clean surfaces of dirt, oil, or other foreign substances with scrapers, mineral spirits, and sandpaper as required. Sand surfaces exposed to view smooth, and dust off.

1. Scrape and clean, small, dry, seasoned knots and apply a thick coat of white shellac or other recommended knot sealer, before application of primer. After priming, fill holes and imperfections in finish surfaces with putty or plastic wood filler. Sand smooth when dried.

2. Prime, stain, or seal wood to be painted immediately upon delivery. Prime edges, end, faces, undersides, and backsides of wood.

3. When transparent finish is required, use spar varnish for back priming.

4. Seal tops, bottoms, and cutouts of unprimed wood doors with heavy coat of varnish or sealer immediately upon delivery.

5. Wood floors to receive (4) four coats of sealer; refer to specification Section - Wood Flooring for field finishing requirements. Initial coats shall be thinned for maximum penetration of sealer.

D. Ferrous Metals: Clean non-galvanized ferrous metal surfaces that have not been shop-coated; remove oil, grease, dirt, loose mill scale and other foreign substances. Use solvent or mechanical cleaning methods that comply with recommendations of the Steel Structures Painting Council (SSPC).

1. Touch-up bare areas and shop-applied prime coats that have been damaged. Wire-brush, clean with solvents recommended by paint manufacturer, and touch up with the same primer as the shop coat.

E. Galvanized Surfaces: Clean galvanized surfaces with non-petroleum-based solvents so that the surface is free of oil and surface contaminants. Remove pre-treatment from galvanized sheet metal fabricated from coil stock by mechanical methods.

E. Doors: Door bottoms and tops shall be primed and painted prior to hanging the doors. The Contractor shall coordinate the timing of this work to ensure that this process is completed prior to hanging the doors within the frame.

3.3 GENERAL

A. Protect work of other trades, whether to be painted or not, from damage by painting work. Mask hardware as required to protect, i.e. brass door butts, etc.

B. Provide “Wet Paint” signs where appropriate to protect uncured finishes.

C. Spray applications, when used, shall produce the equivalent hiding quality per coat as brush or roller-applied coats. Do not double back with spray equipment for the purpose of building up film thickness of two coats in one pass. All spray applied paint shall be “back rolled” to assure proper coverage and uniformity.

D. The first and second coats of paint will be of slightly different shades for inspection purposes.

E. Viscosity and thickness tests may be taken by the General Contractor or manufacturer. Cost of tests will be borne by the subcontractor if found to be below specification requirements.

F. Painter to protect floors from over-spray and to clean if necessary.

G. All weather stripping around doors, windows and other openings shall not be painted. Special care shall be taken to properly “mask” and protect these components from all painting operations.

H. All finished drywall surfaces shall be coated with a primer/sealer to highlight any imperfection in the drywall surface, which shall be repaired before the final application of paint is applied.

I. Subcontractor shall provide adequate painting protection for all of the trades work throughout the painting operations. Once surrounding services have been painted and protection is no longer needed, temporary protection shall be removed.

J. Clean all surfaces of foreign matter prior to any paint application.

3.4 MATERIALS PREPARATION

A. Mix and prepare paint in accordance with manufacturer’s directions. Maintain containers used in mixing and application of paint in a clean condition, free of foreign materials and residue.

B. Use factory mixed colors, shade, and tints. Job mixing permitted only with specific written approval of the Paint Manufacturer's representative and the Architect.

C. Store materials not in actual use in tightly covered containers. Maintain containers used in storage, mixing, and application of paint in a clean condition, free of foreign materials and residue.

D. Stir materials before application to produce a mixture of uniform density, and stir as required during the application of the materials. Do not stir surface film into the material. Remove the film and if necessary, strain the material before using.

E. Use only thinners approved by manufacturer, and only within recommended limits.

3.5 APPLICATION

A. Apply paint of consistency recommended by and in accordance with the paint manufacturer's data sheets. Use tools and techniques best suited for the substrate and type of material being applied per manufacturer's data sheets.

B. Paint interior surfaces of ducts where visible through registers or grilles, with a flat, non-specular black paint as per paint schedule.

C. Finish exterior and interior doors on tops, bottoms and side edges the same as the exterior faces, unless otherwise indicated.

D. Exposed pipes and ductwork on or near walls or ceilings that are to be painted shall be painted, unless otherwise indicated.

E. Orange peel/rough finish on metal or wood surfaces shall not be permitted.

F. Provide primer coats for all walls and trim to receive a faux finish. Faux finishes are not included in this contract.

G. The number of coats and film thickness required is the same regardless of application method. Do not apply succeeding coats until previous coat has cured as recommended by the manufacturer. Sand between applications where sanding is required to produce a smooth, even surface, in accordance with the manufacturer's directions.

H. Apply additional coats when undercoats show through final coat of paint, until paint film is of uniform finish, color, and appearance. Give special attention to ensure that surfaces, including edges, corners, crevices, welds, and exposed fasteners, receive a dry-film-thickness equivalent to that of flat surfaces.

I. The term "exposed surfaces" includes areas visible when permanent or built-in fixtures, convector covers, grilles and similar components are in place. Extend coatings in these areas to maintain system integrity and provide desired protection.

J. Paint surfaces behind movable equipment and furniture same as similar exposed surfaces. Paint surfaces behind permanently fixed equipment or furniture with prime coat only before final installation of equipment.

K. Paint interior surfaces of ducts, where visible through registers or grilles, with a flat, nonspecular black paint.

L. Paint back sides of access panels and removable or hinged covers to match exposed surfaces.

M. The back of hollow metal-exterior door frames shall be finished with a mastic primer, from the bottom of the door to 18 inches above the finish floor.

N. Omit primer on metal surfaces that have been shop-primed and touch up painted.

O. Sand lightly between each succeeding enamel or varnish coat.

P. Scheduling Painting: Apply first-coat to surfaces that have been cleaned, pretreated, or otherwise prepared for painting as soon as practicable, and before subsequent surface deterioration. Allow sufficient time between successive coats to permit proper drying. Do not recoat until paint has dried to where it feels firm, and does not deform or feel sticky under moderate thumb pressure and where application of another coat of paint does not cause lifting or loss of adhesion of the undercoat.

Q. Minimum Coating Thickness: Apply materials at the manufacturer's recommended spreading rate. Provide total dry film thickness of the entire system as recommended by the manufacturer.

R. Block Fillers: Apply block fillers to concrete masonry unit at a rate to ensure complete coverage with pores filled.

S. Prime Coats: Before application of finish coats, apply a prime coat of material as recommended by the manufacturer to material required to be painted or finished, and has not been prime coated by others.

1. Recoat primed and sealed substrates where evidence of suction spots or unsealed areas in the first coat appears, to assure a finish coat with no burn-through or other defects due to insufficient sealing.

T. Brush Application: Brush-out and work brush coats into surfaces in an even film. Eliminate cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections. Draw neat glass lines and color breaks.

1. Apply primers and first coats by brush unless manufacturer's instructions permit use of mechanical applicators.

U. Mechanical Applications: Use mechanical methods for paint application when permitted by manufacturer's recommendation, governing ordinances, and trade union regulations.

1. Wherever spray application is used, apply coat to provide the equivalent hiding of brush-applied coats. Do not double-back with spray equipment building-up film thickness of two coats in one pass unless recommended by the manufacturer.

V. Completed Work: Match approved samples for color, texture and coverage. Remove, refinish or repaint work not in compliance with specified requirement.

3.6 FIELD QUALITY CONTROL

A. The Owner reserves the right to engage the services of an independent testing laboratory to sample and test paint material being used. Samples of material delivered to the project will be taken, identified, sealed, and certified in the presence of the Contractor.

1. The testing laboratory will perform appropriate tests as required by the Owner.

2. If tests show material being used does not comply with specified requirements, the Contractor may be directed to stop painting pay for testing, repaint surfaces coated with reject paint, remove rejected paint from previously painted surfaces if, upon repainting with the specified paint, the two coatings are non-compatible.

3.7 CLEAN UP AND PROTECTION

A. During the progress of the work, remove from the site all discarded paint materials, rubbish, cans, and rags at the end of each workday.

B. Remove splashed, dropped, spattered, and spilled paint from hardware, fixtures, glass, and building parts.

C. Protect work of other trades, whether to be painted or not, against damage by painting and finishing work. Correct any damage by cleaning, repairing, or replacing, and repainting as acceptable to the Architect.

D. Provide "Wet Paint" signs as required to protect newly painted finishes. Remove temporary protective wrappings provided by others for protection of their work, after completion of painting operations.

E. At the completion of work of other trades, and after notification in writing to the Contractor, touch-up and restore all damaged or defaced painted surfaces. A touch-up allowance will be included in final contract.

3.8 PAINT SCHEDULE

3.8.1 COLOR SCHEDULE

Interior Building Colors (Color numbers based on Sherwin Williams Paints) Refer to schedules for color location; multiple color selections will be used for interior building elements.

A. IP-1 Eggshell Finish – Front Porch SW 7651 (Accent color)
B. IP-2 Eggshell High Performance Finish- Snow Bound SW 7004 (based color)
C. IP-3 Epoxy Eggshell Finish– Egret White SW 7570 (Corridor) (Architect to confirm)
D. IP-4 Eggshell Finish– Sensible Hue SW 6198 (Toilet walls) (Architect to confirm)
E. IP-5 Flat Finish– High Reflective White SW 7757 (Ceiling rooms)
F. IP-6 Semi-gloss High Performance Finish– (Hollow metal door frames)

3.8.2 PAINT SYSTEMS AND COATING SCHEDULE

Refer to the Drawings for the materials for the application of the various interior paint finish types (letter designation) scheduled below. Provide finish scheduled below if not indicated on the Drawings or Finish Schedule on the Drawings.

A. THE SHERWIN WILLIAMS COMPANY: Attached are the Material Supplier's detailed prime and finish coats specifications. This defines primer and finish coat names, product number designations, and thickness. Because this supplier is providing a warranty, strict adherence to product Data Sheet and label instructions shall be followed. The following schedule shall not be considered as entirely inclusive, but construed as a general guide for complete painting of buildings, structures, etc., including, but not limited to, storage spaces, recesses, returns, reveals, soffits, haunches, forming part of a particular surface, room or space, pipes, conduits, duct work, panels, mechanical equipment, etc.

FINISH TYPE	Wet Film Thickness MILS	Dry Film Thickness MILS	Spread Rate SF/Gal.
A1. Interior Concrete - Prime Only			

1st coat	Sherwin Williams Loxon Concrete & Masonry Primer, A24W300	8.0	3.2	200

A2. Interior Concrete - Flat Finish

1st coat	Sherwin Williams Loxon Concrete & Masonry Primer, A24W300	8.0	3.2	200
2nd coat	Sherwin Williams Pro/Mar 700 Latex Flat B30W7700	4.0	1.1	300
	TOTAL DRY MILS		1.4	

A3. Interior Concrete - Semi Gloss Finish

1st coat	Sherwin Williams Loxon Concrete & Masonry Primer, A24W300	8.0	3.2	200
2nd coat	Sherwin Williams Pro/Mar 700 Latex Semi-gloss B31W7700	4.0	1.3	300
	TOTAL DRY MILS		4.5	

A4. Concrete Floor Stain

1st coat	H&C Concrete Sealer Solid Color Solvent Based thinned 25%	175
2nd coat	H&C Concrete Sealer Solid Color Solvent Based full strength	200

A5. Concrete Floor Sealer - Clear

1st coat	Concrete Sealer H & C Concrete & Masonry Waterproofing Sealer

B1. Interior (Face) Concrete Block - Prime Only / Exterior Walls (Dry Lock-Alternate)

1st coat	Sherwin Williams Water Blocking Primer Finish Interior Latex, B72W08010	8.0	3.7	75

B2. Interior Concrete Block - Flat Finish

1st coat	Sherwin Williams Prep Rite Block Filler B25W25	16.0	8.0	87-108
2nd coat	Sherwin Williams Pro/Mar 700 Latex Flat B30W7700	4.0	1.1	300

	TOTAL DRY MILS		9.1	

B3. Interior Concrete Block - Semi Gloss Finish

1st coat	Sherwin Williams Prep Rite Block Filler B25W25	16.0	8.0	87-108
2nd coat	Sherwin Williams Pro/Mar 700 Latex Semi-gloss B31W7700	4.0	1.3	300
	TOTAL DRY MILS		9.3	

C1. Interior Plaster Veneer - Prime Only

1st coat	Sherwin Williams Loxon Concrete & Masonry Primer, A24W300	8.0	3.2	200

C2. Interior Plaster Veneer - Flat Finish

1st coat	Sherwin Williams Loxon Concrete & Masonry Primer, A24W300	8.0	3.2	200
2nd coat	Sherwin Williams Pro/Mar 700 Latex Flat B30W7700	4.5	1.4	300
3rd coat	Sherwin Williams Pro/Mar 700 Latex Flat B30W7700	4.0	1.1	300
	TOTAL DRY MILS		5.7	

C3. Interior Plaster Veneer - Eggshell Finish

1st coat	Sherwin Williams Loxon Concrete & Masonry Primer, A24W300	8.0	3.2	200
2nd coat	Sherwin Williams Pro/Mar 400 Zero VOC Int. Latex Eg-Shel, B20-4600	4.0	1.3	300
3rd coat	Sherwin Williams Pro/Mar 400 Zero VOC Int. Latex Eg-Shel, B20-4600	4.0	1.3	300
	TOTAL DRY MILS		6.8	

C4. Interior Plaster Veneer – Semi-Gloss Finish

1st coat	Sherwin Williams Loxon Concrete & Masonry Primer, A24W300	8.0	3.2	200

2nd coat	Sherwin Williams Pro/Mar 700 Latex Semi Gloss B30W7700	4.5	1.3	300
3rd coat	Sherwin Williams Pro/Mar 700 Latex Semi-Gloss B30W7700	4.5	1.3	300
	TOTAL DRY MILS		6.8	

D1. Interior Gypsum Board - Prime Only

1st coat	Sherwin Williams ProMar 400 Zero VOC Int. Latex Primer, B28W04600	4.0	1.1	300

D2. Interior Gypsum Board - Flat Finish

1st coat	Sherwin Williams ProMar 400 Zero VOC Int. Latex Primer, B28W04600	4.0	1.1	300
2nd coat	Sherwin Williams Pro/Mar 700 Latex B28W7700	4.0	1.1	300
3rd coat	Sherwin Williams Pro/Mar 700 Latex B28W7700	4.0	1.1	300
	TOTAL DRY MILS		3.3	

D3. Interior Gypsum Board - Eggshell Finish

1st coat	Sherwin Williams ProMar 400 Zero VOC Int. Latex Primer, B28W04600 Build Primer B28W601	4.0	1.1	300
2nd coat	Sherwin Williams Pro/Mar 400 Zero VOC Int. Latex Eg-Shel, B20-4600	4.0	1.3	300
3rd coat	Sherwin Williams Pro/Mar 400 Zero VOC Int. Latex Eg-Shel, B20-4600	4.0	1.3	300
	TOTAL DRY MILS		3.7	

D4. Interior Gypsum Walls to Receive Wallcovering

1st coat Multi-Purpose Int/Ext Latex Primer/Sealer, B51-450 Series

E1. Interior Metal Doors and Frames - Prime Only

1st coat	Sherwin Williams Kem Kromik Universal Metal Primer B50 Series	6.0	3.0	200

E2. Interior Metal Doors and Frames - Factory Primed

1st coat	Sherwin Williams Kem Kromik Universal Metal Primer B50 Series (spot prime)	6.0	3.0	200
2nd coat	Sherwin Williams Pro/Mar 200 Alkyd Semi-Gloss B34-200	4.0	1.7	300
3rd coat	Sherwin Williams Pro/Mar 200 Alkyd Semi-Gloss B34-200	4.0	1.7	300
	TOTAL DRY MILS		6.4	

E3. Interior Metal Handrails

1st coat	Sherwin Williams Kem Kromik Universal Metal Primer B50 Series (spot prime)	6.0	3.0	200
2nd coat	Sherwin Williams Industrial Enamel B54 Series	5.0	2.0	300
3rd coat	Sherwin Williams Industrial Enamel B54 Series	5.0	2.0	300
	TOTAL DRY MILS		7.0	

E4. Mechanical and Structural Members Exposed to view

1st coat	Sherwin Williams Macropoxy 646 Fast Cure Epoxy, B58-600 Series	7.0	5.0	136-227
2nd coat	Sherwin Williams Hi-Solids Polyurethane, B65-300 Series	4.0--8.0	3.0-5.0	215-250
	TOTAL DRY MILS		8.0-10.0	

E5. Structural Steel

1st coat	Sherwin Williams Kem Kromik Universal Primer, B50 Series	6.0	3.0	274
2nd coat	Sherwin Williams Pro Industrial High Performance Acrylic, B66-600 Series	6.0	2.5	200
	TOTAL DRY MILS		5.5	

E6. Structural Steel Touch-Up

1st coat	Sherwin Williams Kem Kromik Universal Metal Primer B50 Series	6.0	3.0	300

E7. Interior Ferrous Metal / Exposed to view Fire Sprinkler Piping

(Refer to galvanized metal surface preparation if sprinkler piping is galvanized.)

1st & 2nd coats Each Coat	Sherwin Williams Kem Kromik Universal Metal Primer B50 Series	6.0	3.0	200
3rd coat	Sherwin Williams Pro Industrial High Performance Acrylic, B66-600 Series	6.0	2.5	200
	TOTAL DRY MILS		8.5	

E8. Unfinished Ferrous Metals

1st coat	Sherwin Williams Kem Kromik Universal Metal Primer B50 Series	6.0	3.0	200
2nd coat	Sherwin Williams Pro Industrial High Performance Acrylic, B66-600 Series	6.0	2.5	200
	TOTAL DRY MILS		5.5	

E9. Interior Exposed Mechanical Equipment - Shop Primed

Ferrous Metal Pretreatment: Remove all rust and mill scale prior to coating.

1st coat	Sherwin Williams Kem Kromik Universal Metal Primer B50 Series	6.0	3.0	200
2nd coat	Sherwin Williams Kem Kromik Universal Metal Primer B50 Series	6.0	3.0	200
3rd coat	Sherwin Williams Pro Industrial High Performance Acrylic, B66-600 Series	6.0	2.5	200
	TOTAL DRY MILS		8.5	

E10. Interior Surfaces of Ducts Where Visible Through Registers or Grilles

1st coat	Sherwin Williams Pro Industrial Multi-Surface Acrylic, B66-560 Series Black	3.75	1.5	

E11. Galvanized Metal

(If Galvanized Metal is Surface Treated, must Solvent Clean with Biodegradable Cleaner)

1st coat	Sherwin Williams Pro Industrial Pro-Cryl Universal Primer, B66-310 Series	6.0	3.0	264

2nd coat	Sherwin Williams Pro Industrial High Performance Acrylic, B66-600 Series	6.0	2.5		

E12. Galvanized Surface touch-up

1st coat	Sherwin Williams Pro Industrial Pro-Cryl Universal Primer, B66-310 Series	6.0	3.0	200

E13. Copper Piping Exposed to view

1st coat	Sherwin Williams Multi-Purpose Int/Ext Latex Primer/Sealer, B51-450 Series	4.0	1.4	200
2nd coat	Sherwin Williams Pro Industrial High Performance Acrylic, B66-650 Series	6.0	2.5	200
	TOTAL DRY MILS		3.9	

E14. Exposed (Non-copper) Piping (Except Black Mastic Drain Pipes)

1st coat	Sherwin Williams Macropoxy 646 Fast Cure Epoxy, B58-600 Series	7.0	5.0	136-227
2nd coat	Sherwin Williams Macropoxy 646 Fast Cure Epoxy, B58-600 Series 646 Series	7.0	5.0	136-227
3rd coat	Pro Industrial High Performance Acrylic, B66-660 Series	6.0	2.5	200
	TOTAL DRY MILS		12.5	

E15. Unprimed Ferrous Metal and Overhead Grille Brackets

Pretreatment: Clean in accordance with Paragraph 1.11D.

1st coat	Sherwin Williams Kem Kromik Universal Metal Primer B50 Series	6.0	3.0	200
2nd coat	Sherwin Williams Industrial Enamel, B54 Series, Gloss Enamel Gloss	5.0	2.0	300

F1. Interior Wood Doors, Frames, and Base - Prime Only
Pretreatment: Fill all holes wit Dap Fast & Final Spackle. Caulk all open joints with Sherwin Williams C1050 Acrylic Silicone Latex Caulk.

1st Coat	Sherwin Williams Premium Wall & Wood Primer Int. Latex Primer, B28W8111	4.0	1.8	300

F2. Interior Wood Base and Running Trim Back Primer

1st coat	Sherwin Williams Premium Wall & Wood Primer Int. Latex Primer, B28W8111	4.0	1.8	300

F3. Interior Wood Doors, Frames, Trim and Base – Semi-Gloss

Caulk and Putty Pretreatment: Fill all holes with Dap Fast and Final Spackle. Caulk all open joints with Sherwin Williams C1050 Acrylic Silicone Latex Caulk.

1st coat	Sherwin Williams Premium Wall & Wood Primer Int. Latex Primer, B28W8111	4.0	1.8	300
2nd coat	Sherwin Williams Pro/Mar 200 Alkyd Semi-Gloss B34W200	4.0	1.7	300
3rd coat	Sherwin Williams Pro/Mar 200 Alkyd Semi-Gloss B34W200	4.0	1.7	300
	TOTAL DRY MILS		5.2	

F4. Interior Wood Stain and Sealer

1st coat	Sherwin Williams Wood Classics Interior Oil Stain, A49-200 Series	3.0-3.5	0	450-550
2nd coat	Sherwin Williams Wood Classics Polyurethane Varnish, Gloss A67V1	4.0	1.7	350-400
3rd coat	Sherwin Williams Wood Classics Polyurethane Varnish, Satin A67 Series	4.0	1.7	350-400
	TOTAL DRY MILS		3.4	

* Wood floors to receive (4) four coats of sealer; refer to Section 09640 for coating requirements. Initial coats to be thinned.

F5. Terminal and Telephone Boards

1st coat	Flame Control 20-20	8.5	4.5	190
2nd coat	Flame Control 20-20	8.5	4.5	190
	TOTAL DRY MILS		9.0	

G1. Interior PVC Piping Exposed to view

1st coat	Multi-Purpose Int/Ext Latex Primer/Sealer, B51-450 Series	4.0	1.4	200

2nd coat	Sherwin Williams PM 400 Zero VOC Int. Flat, B30-4600 Series			
		4.0	1.2	300
	TOTAL DRY MILS		2.6	

S2. Interior Sealant

C-950 Acrylic Sealant

END OF SHERWIN WILLIAMS COMPANY PAINT SYSTEMS SCHEDULE

END OF SECTION 09912

SECTION 09960 – HIGH-PERFORMANCE COATINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Provisions and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes surface preparation and painting of exterior metal tube beams and beam support columns and exterior metal components.

B. Related Sections:

1. Division 5 Section “Metal Fabrications.”
2. Division 9 Section “Exterior Painting” for surface preparations, painting, and finishing of all other exposed exterior items and surfaces.

1.3 REFERENCE SPECIFICATIONS AND STANDARDS

A. Without limiting the general aspects of other requirements of these specifications, all surface preparation, coating and painting of surfaces shall conform to the applicable requirements of the Steel Structures Painting Council, NACE, ICRI and the manufacturer's printed instructions.

B. The Architect’s decision shall be final as the interpretation and/or conflict between any of the referenced specifications and standards contained herein.

1.4 APPLICATOR CERTIFICATIONS

A. The Applicator shall have five years practical experience and successful history in the application of specified products in similar projects. This requirement shall be substantiated by furnishing a list of references and job completions.

B. Applicator must successfully demonstrate to the product manufacturer the ability to apply the material correctly and within the confines of the specifications. The Applicator must provide a letter from the manfacture stating their acceptance of the Applicator for this project to apply these products.

C. The Applicator shall possess the applicable license to perform the work as herein described and as specified by local, state and federal laws.

1.5 QUALITY ASSURANCE

A. General: Quality assurance procedures and practices shall be utilized to monitor all phases of surface preparation, application, and inspection throughout the duration of the project. Procedures or practices not specifically defined herein may be utilized provided they meet recognized and accepted professional standards and are approved by the Architect.

B. Surface Preparation: Surface preparation will be based upon comparison with: "Pictorial Surface Preparation Standards for Painting Steel Surfaces", SSPC-Vis-1 and ASTM Designation D2200; "Standard Methods of Evaluating Degree of Rusting on Painted Steel Surfaces" SSPC-Vis-2 and ASTM Designation D610; and ICRI CSP Surface Profile Chips.

C. Application: No coating or paint shall be applied: When the surrounding air temperature or the temperature of the surface to be coated is below the minimum required temperature for the specified product; to wet or damp surfaces or in fog or mist; when the temperature is less than 5 degrees F. above the dewpoint; when the air temperature is expected to drop below 40 degrees F. within six hours after application of coating. Dewpoint shall be measured by use of an instrument such as a Sling Psychrometer in conjunction with U.S. Department of Commerce Weather Bureau Psychrometric Tables. If above conditions are prevalent, coating or painting shall be delayed or postponed until conditions are favorable. The day's coating or painting shall be completed in time to permit the film sufficient drying time prior to damage by atmospheric conditions.

D. Thickness and Holiday Checking: Thickness of coatings and paint shall be checked with a non-destructive, magnetic type thickness gauge. The integrity of coated interior surfaces shall be tested with an approved inspection device. Non-destructive holiday detectors shall not exceed the voltage recommended by the manufacturer of the coating system. For thicknesses between 10 and 20 mils (250 microns and 500 microns), a non-sudsing type wetting agent, such as Kodak Photo-Flo, may be added to the water prior to wetting the detector sponge. All pinholes shall be marked, repaired in accordance with the manufacturer's printed recommendations, and retested. No pinholes or other irregularities will be permitted in the final coating.

E. Inspection Devices: The Contractor shall furnish, until final acceptance of coating and painting, inspection devices in good working condition for detection of holidays and measurement of dry-film thickness of coating and paint. The Contractor shall also furnish U.S. Department of Commerce; National Bureau of Standard certified thickness calibration plates to test accuracy of dry film thickness gauges and certified instrumentation to test accuracy of holiday detectors.

F. All necessary testing equipment shall be made available for the Architect’s use at all times until final acceptance of application. Holiday detection devices shall be operated in the presence of the Architect.

1. 6 SAFETY AND HEALTH REQUIREMENTS

A. General: In accordance with requirements set forth by regulatory agencies applicable to the construction industry and manufacturer's printed instructions and appropriate technical bulletins and manuals, the Contractor shall provide and require use of

personnel protective lifesaving equipment for persons working on or about the project site.

B. Head and Face Protection and Respiratory Devices: Equipment shall include protective helmets, which shall be worn by all persons while in the vicinity of the work. In addition, workers engaged in or near the work during sandblasting shall wear eye and face protection devices and air purifying halfmask or mouthpiece respirators with appropriate filters. Barrier creams shall be used on any exposed areas of skin.

C. Ventilation: Where ventilation is used to control hazardous exposure, all equipment shall be explosion-proof. Ventilation shall reduce the concentration of air contaminant to the degree a hazard does not exist. Air circulation and exhausting of solvent vapors shall be continued until coatings have fully cured.

D. Sound Levels: Whenever the occupational noise exposure exceeds maximum allowable sound levels, the Contractor shall provide and require the use of approved ear protective devices.

E. Illumination: Adequate illumination shall be provided while work is in progress, including explosion-proof lights and electrical equipment. Whenever required by the Architect, the Contractor shall provide additional illumination and necessary supports to cover all areas to be inspected. The Architect shall determine the level of illumination for inspection purposes.

F. Confined Space: When applicable it is mandatory that all work be performed in compliance with OSHA'S rules and regulations for working in confined space. Atmospheres within confined spaces as defined by the Occupational Safety and Health Administration are classified as being either a Class A, Class B or Class C environment.

PART 2 - PRODUCTS

2.1 GENERAL

A. Materials specified are those that have been evaluated for the specific service. Products of the Tnemec Co. are listed to establish a standard of quality. Equivalent materials of other manufacturers may be substituted on written approval of the Architect.

Basis of Design: Tnemec Company, Incorporated –Florida Protective Coatings. Contact is Mr. Chad Holmes (727) 201-6706 or cholmes@tnemec.com.

Requests for substitution shall include manufacturer's literature for each product giving the name' product number, generic type, descriptive information, solids by volume, recommended dry film thickness, cost savings and certified test reports showing results to equal the performance criteria of the products specified herein. No request for substitution shall be considered that will decrease film thickness, the number of coats or offer a change in the generic type of coatings specified. In addition, a list of five similar projects shall be submitted in which each product has been used and rendered satisfactory service.

Requests for product substitution shall be made in accordance with Division 01.

Manufacturer's color charts shall be submitted to the Architect and Owner at least 30 days prior to paint application. Contractor and painting contractor shall coordinate work so as to allow sufficient time (five to ten days) for paint to be delivered to the jobsite.

B. All materials shall be brought to the jobsite in original, sealed containers. They shall not be used until the Architect has inspected contents and obtained data from information on containers or labels. Materials exceeding storage life recommended by the manufacturer shall be rejected.

C. All coatings and paints shall be stored in enclosed structures to protect them from weather and excessive heat or cold. Flammable coatings or paint must be stored to conform to City, County, State and Federal safety codes for flammable coating or paint materials. At all times, coating and paints shall be protected from freezing.

D. A NACE certified technical representative from the paint manufacturer shall visit the job site to support the Contractor's personnel, the Owner and/or the Architect as needed and/or requested. Visits shall be made as needed to help with hold points for the Owner or Architect. Additional visit shall be made as needed and/or requested by Owner, Architect or Contractor. 48 hours' notice is required by the Contractor for each hold point inspection.

E. All parties, to include the owner or Owner's designated representative, Architect, Contractor, installer, any subs and the product manufacture, shall meet prior to any work is started to review the spec and discuss job specific expectations, need and requirements

F. Coating Systems:

Exterior Exposed Surfaces

Structural Steel and all Misc. Metal:

Surface Preparation: SSPC-SP6/NACE 3 Commercial Blast Cleaning. The surface shall be clean and dry.

1st Coat: Tnemec Series 90-97 Tneme-Zinc @ 2.5 – 3.5 dry mils.
2nd Coat: Tnemec Series N69 Hi-Build Epoxoline II applied at 4.0 – 6.0 dry mils.
3rd Coat: Tnemec Series 740 UVX applied at 3.0 – 5.0 dry mils.

Galvanized Metal:

Surface Preparation: SSPC-SP1 Solvent Cleaning. Remove all soluble and insoluble contaminants and corrosion. Remove any storage stains per Section 6.2 of ASTM D6386. Sweep (Abrasive) Blasting per ASTM D 6386 to achieve a uniform anchor profile (1.0 - 2.0 mils).

1st Coat: Tnemec Series N69 Hi-Build Epoxoline II applied at 2.0 – 6.0 dry mils.

2nd Coat: Tnemec Series 740 UVX applied at 3.0 – 5.0 dry mils.

PART 3 - EXECUTION

3.1 GENERAL

A. All surface preparation, coating and painting shall conform to applicable standards of the Steel Structures Painting Council, NACE, ICRI and the manufacturer's printed instructions. Material applied prior to approval of the surface by the Architect shall be removed and reapplied to the satisfaction of the Architect at the expense of the Contractor.

B. All work shall be performed by skilled craftsmen qualified to perform the required work in a manner comparable with the best standards of practice. Continuity of personnel shall be maintained and transfers of key personnel shall be coordinated with the Architect.

C. The Contractor shall provide an English speaking supervisor at the work site during cleaning and application operations. The supervisor shall have the authority of sign change orders, coordinate work, and make decisions pertaining to the fulfillment of the contract.

D. Dust, dirt, oil, grease or any foreign matter that will affect the adhesion or durability of the finish must be removed by washing with clean rags dipped in an approved cleaning solvent and wiped dry with clean rags.

E. The Contractor's coating and painting equipment shall be designed for application of materials specified and shall be maintained in first class working condition. Compressors shall have suitable traps and filters to remove water and oils from the air. Contractor's equipment shall be subject to approval of the Architect.

F. Application of the first coat shall follow immediately after surface preparation and cleaning and before rust bloom or flash rusting occurs. Any cleaned areas not receiving first coat within this period shall be re-cleaned prior to application of first coat.

3.2 SURFACE PREPARATION

A. The latest revision of the following surface preparation specifications of the Steel Structures Painting Council and NACE shall form a part of this specification:

1. Solvent Cleaning (SSPC-SP1): Removal of oil, grease, soil and other contaminants by use of solvents, emulsions, cleaning compounds, steam cleaning or similar materials and methods which involve a solvent or cleaning action.

2. Hand Tool Cleaning (SSPC-SP2): Removal of loose rust, loose mill scale and other detrimental foreign matter to degree specified by hand chipping, scraping, sanding and wire brushing.

3. Power Tool Cleaning (SSPC-SP3): Removal of loose rust' loose mill scale and other detrimental foreign matter to degree specified by power wire brushing, power impact tools or
power sanders.

4. Brush-Off Blast Cleaning (SSPC-SP7/NACE 4): Brush-off blast cleaned surface, when viewed without magnification, shall be free of all visible oil, grease, dirt, dust, loose mill scale, loose rust, and loose coating. Tightly adherent mill scale, rust, and coating may remain on the surface. Mill scale, rust, and coating are considered tightly adherent if they cannot be removed by lifting with a dull putty knife after abrasive blast cleaning has been performed.

5. Commercial Blast Cleaning (SSPC-SP6/NACE 3): Blast cleaning until at least 66 percent of each element of surface area is free or all visible residues.

6. Near White Blast Cleaning (SSPC-SP10/NACE 2): Blast cleaning to nearly white metal cleanliness, until at least 95 percent of each element of surface area is free of all visible residues.

7. Surface Preparation of Concrete (SSPC-SP13/NACE 6): This standard gives requirements for surface preparation of concrete by mechanical, chemical, or thermal methods prior to the application of bonded protective coating or lining systems.

8. Power Tool Cleaning to Bare Metal (SSPC-SP11): This standard covers the requirements for power tool cleaning to produce a bare metal surface and to retain or produce a minimum 25 micrometer (1.0 mil) surface profile. This standard is suitable where a roughened, clean, bare metal surface is required, but where abrasive blasting is not feasible or permissible.

B. Blast cleaning for all surfaces shall be by dry method unless otherwise directed.

C. Particle size of abrasives used in blast cleaning shall be that which will produce a 1.5 – 2.0 mil (37.5 microns - 50.0- microns) surface profile or in accordance with recommendations of the manufacturer of the specified coating or paint system to be applied.

D. Abrasive used in blast cleaning operations shall be new, washed, graded and free of contaminants that would interfere with adhesion of coating or paint and shall not be reused unless specifically approved by the Architect.

E. During blast cleaning operations, caution shall be exercised to insure that surrounding existing coatings or paint are not exposed to abrasion from blast cleaning.

F. The Contractor shall keep the area of his work and the surrounding environment in a clean condition. He shall not permit blasting materials to accumulate as to constitute a nuisance or hazard to the accomplishment of the work, the operation of the existing facilities, or nuisance to the surrounding environment.

G. Blast cleaned surfaces shall be cleaned prior to application of specified coatings or paint. No coatings or paint shall be applied over damp or moist surfaces.

H. Specific Surface Preparation: Surface preparation for the specific system shall be as noted in Section 2.01 Paragraphs D.

3.3 APPLICATION, GENERAL

A. Coating and paint application shall conform to the requirements of the Steel Structures Painting Council Paint Application Specification SSPC-PA1, latest revision, for "Shop, Field and Maintenance Painting," and the manufacturer of the coating and paint materials.

B. Thinning shall be permitted only as recommended by the manufacturer approved by the Architect, and utilizing the thinners stated in Section 2.01 Paragraphs D.

C. Each application of coating or paint shall be applied evenly, free of brush marks, sags, runs, with no evidence of poor workmanship. Care shall be exercised to avoid lapping on glass or hardware. Coatings and paints shall be sharply cut to lines. Finished surfaces shall be free from defects or blemishes.

D. Protective coverings or drop cloths shall be used to protect floors, fixtures, and equipment. Care shall be exercised to prevent coatings or paint from being spattered onto surfaces that are not to be coated or painted. Surfaces from which materials cannot be removed satisfactorily shall be recoated or repainted as required to produce a finish satisfactory to the Architect.

E. When two coats of coating or paint are specified, where possible, the first coat shall contain sufficient approved color additive to act as an indicator of coverage or the two coats must be of contrasting color.

F. Film thickness per coat specified in Section 2.01 Paragraphs F are minimum required. If roller application is deemed necessary, the Contractor shall apply additional coats as to achieve the specified thickness.

G. All material shall be applied as specified, unless approved in writing by the Architect.

H. All welds, edges and other irregular surfaces shall receive a brush coat of the specified product prior to application of the first complete coat.

3.4 COATING SYSTEMS APPLICATION

A. After completion of surface preparation as specified for the specific system, materials shall be applied as noted in Section 2.01 Paragraphs D.

3.5 COLOR SCHEME

A. Colors: Submittals will be made to the Architect and Owner for approval prior to application.

3.6 SOLVENT VAPOR REMOVAL

A. Where appropriate all solvent vapors shall be completely removed by suction-type exhaust fans and blowers before placing in operating service.

3.7 CLEAN UP

A. Upon completion of the work, all staging, scaffolding, and containers shall be removed from the site or destroyed in a manner approved by the Architect. Coating or paint spots and oil or stains upon adjacent surfaces shall be removed and the jobsite cleaned. All damage to surfaces resulting from the work of this section shall be cleaned, repaired, or refinished to the satisfaction of the Architect at no cost to the Owner.

3.8 WARRANTY

A. The Contractor will warrant the work free of defects in material and workmanship for a period of one year from the acceptance of the work. At the end of one year, the Contractor will return for a one-year anniversary inspection of the work. The Contractor will correct any deficiencies found with no cost to the owner. Inspections shall be conducted in to conform to owners spec.

END OF SECTION 09960

SECTION 10101 – VISUAL DISPLAY UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 DESCRIPTION OF WORK

A. Section Includes:

1. Wall-mounted, Coated Acrylic Dry-Erase Markerboards frameless with polished metal standouts.
2. Tack Boards.
3. Pull-Down Map. (Customized for Airport.)

1.3 REFERENCED STANDARDS

A. Underwriter’s Laboratory

1. Flammability – UL 94: Rating = 94HB; Class A

B. American Society for Testing Materials

1. ASTM B221 Standard Specification for Aluminum and Aluminum Alloy Extruded Bars, Rods, Wires, Profiles and Tubes
2. Note: ASTM E84 - Standard Test Method for Surface Burning Characteristics for Building Materials - not applicable to determine smoke density for thermoplastics

C. American National Standards Institute (ANSI)

1. ANSI Z 97.1 Approved for Safety Glazing Materials Used in Buildings

D. Indoor Air Quality

1. Products have extremely low residual monomers – evidenced by the product being used in museum-quality art framing where outgassing would not be acceptable.

1.4 SUBMITTALS

A. Manufacturer's Instructions: Provide manufacturer's installation instructions.

B. Drawings: Provide dimensions for placement of each visual display unit as required.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications:
   1. Manufacturer shall have a minimum of 3 years experience in the manufacture of visual display boards.

B. Operation and Maintenance: Include data on regular cleaning, stain removal, and precautions.

1.6 PROJECT CONDITIONS

A. Field measure prior to installation and/or fabrication to ensure proper fit.

B. Comply with manufacturer's recommendations for acclimating area for interior moisture and temperature to approximate normal occupied conditions.

1.7 DELIVERY, STORAGE AND HANDLING

A. Schedule delivery of visual display boards with area sufficiently complete to allow installation after delivery.

B. Store products in manufacturer's unopened packaging until ready for installation.

C. Store materials protected from exposure to harmful weather conditions and at temperatures and humidity conditions recommended by manufacturer.

1.8 WARRANTY

A. Submit that under normal usage and maintenance, and when installed in accordance with manufacturer's instructions and recommendations, markerboards are warrantied for five years from the date of installation.

PART 2 - PRODUCTS

2.1 CORK BOARD WITH REINFORCEMENT

A. 4’-0” X 6’-0” wood framed cork and remarkaboard combination, as manufactured by Marsh Industries, Inc. Model # CW-406M, with ¼” thick fine grained natural cork and ¼” hardboard and full-length self tray. www.march-ind.com (303) 308-8865.

B. Framed Markerboards

   1. Basis of Design: Pro-Rite Markerboard, by Marsh Industries, Inc.

   2. Face Sheet Material: Porcelain enamel coated 24gauge steel.

   3. Face Sheet Material Standard: Manufactured in accordance with Porcelain Enamel Institute’s S-104 Performance Specification for Porcelain Enamel Markerboards and Chalkboards. Porcelain enamel finish shall be fusion bonded to steel substrate at lowest possible temperature to reduce steel and porcelain stresses and achieve superior enamel bond and hardness.

4. Core Material: ½" (12.7mm) Class"A" Rated Micore.

5. Panel Backing: (92gauge) Mylar Panel.

6. Laminations: Hot-type neoprene contact adhesive applied to both surfaces, each substrate having a minimum of 80% covering with 1.5-2.0 dry milos (0.038-0.051 mm) of adhesive. Panel components shall have uniform pressure applied mechanically over entire area. Laminations shall be made by face sheet manufacturer.

7. Size: As indicated on Drawings- 48" high maximum.

8. Color: White

9. Trim: Clear adonized satin finish.

10. Marker Tray: Continuous, shelf type aluminum tray with rounded edges; clear satin adonized aluminum.

11. Pro-Rite Markers- 1 Dozen assorted colors/ marker bowl.

12. Mar: Kleen Marker Board cleaner for each markerboard.

13. Brush eraser for each markerboard.

2.2 PULL DOWN MAP

A. By Owner.

PART 3 - EXECUTION

3.1 PROJECT CONDITIONS

A. Verify before installation that wall surfaces are true and plumb and are prepared and ready to receive markerboards and are not outside normal conditions (e.g. through dampness or lack of heat).

3.2 INSTALLATION

A. Handle and store markerboards in such a way as to prevent damage prior to installation.

B. Unpack items as near as practical to final installation location(s).

C. Remove markerboards and/or accessories from shipping containers with care to prevent damage to markerboard surfaces and metal frames.

D. Refer to drawings and schedules for mounting heights and locations.

E. Install level and plumb.

F. Coordinate installation with other finishes at mounting locations.

G. Secure framed cork board and markerboards with concealed mechanical fasteners, counter sunk within the frame.

H. Coordinate wood blocking concealed in wall for mounting of visual display units.

3.3 ADJUST AND CLEAN

A. Verify that all accessories are installed as required for each unit.

B. At completion of work, clean surfaces and trim in accordance with manufacturer's recommendations, leaving all materials ready for use.

END OF SECTION 10101

SECTION 10200 - LOUVERS AND DAMPERS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Furnish all labor, materials, tools, equipment, etc. and services necessary and incidental to the complete fabrication, furnishing and erection of this section as shown, noted, detailed and reasonably implied on the Drawings and in the Specifications.

B. Refer to Mechanical Drawings and Specifications for additional louver requirements.

1.3 RELATED SECTIONS

A. Coordinate work of this Section with work of other Sections as required to properly execute the work and as necessary to maintain satisfactory progress of the work of other Sections, including:

1.4 SUBMITTAL DATA AND SAMPLES

A. Submit shop drawings and product data under provisions of Section 01330 – Shop Drawings, Product Data and Samples.

B. Shop drawings showing locations of all louvers, size, shape and gauge of metal, method of anchoring, flashing, bracing and connect to work of other trades.

C. Draw profiles, sections, overall details, dimensions, and views of items at a scale large enough to permit checking for design conformity.

D. Submit manufacturer's printed data describing products, specifications, and their installations.

E. Submit engineering certifications, or FBC approved NOA certification, listed in Article 1.6 of this Section, demonstrating compliance with the wind loads shown on the Structural Drawings.

1.5 DELIVERY, STORAGE AND HANDLING

A. All materials shall be delivered to the project site in their original unbroken containers, bearing manufacturer's name and brand designation and specification number.

B. All materials shall be stored in a secured, dry and protected area, a minimum of 4 inches above concrete slab, and in accordance with Section 01600 – Materials and Equipment and Section 01620 – Storage and Protection.

1.6 DESIGN CRITERIA

A. Comply with the Florida Building Code – Latest Edition in effect and NFPA 101 – Current Edition. Nothing in this Section shall be construed as allowing or requiring noncompliance with the Code.

B. Design wind pressures, uplift loads and design wind speed shall be per FBC.

C. Wind pressures act perpendicular to flat surfaces, regardless of surface orientation. Wind pressures act perpendicular to tangents of curved surfaces. At corners and changes in plane, adjacent surfaces shall be assumed to experience the worst case combination of inward pressure simultaneously, outward pressure simultaneously, and simultaneous occurrence of inward pressure on one surface and outward pressure on adjoining surface.

D. A registered structural Engineer in the State of Florida shall design structural supports and anchors. (Also, the Engineer shall certify structural capacity of the louvers and dampers to be installed meet above design wind pressure.) Submit design calculations for information only.

1.7 WARRANTY

A. Refer to Section 01770 - Closeout Procedures, Detail Requirements and Section 01740 Warranties and Bonds.

B. Louver manufacturer shall supply in writing, at job completion, a ten (10) year warranty against failure of the powder coat finish, Powder Coat complying with AAMA 2604.criteria finish.

PART 2 – PRODUCTS

2.1 MATERIALS

A. The basis of design is Extruded Drainable Blade Louvers and Counterbalanced Relief Dampers (where scheduled) as manufactured by Greenheck .

B. Equivalent products manufactured by Airolite, Mestec Louver Group, Ruskin Louver Co. or approved equal are acceptable.

C. Refer to the Drawings for the Louver sizes and dimensions.

2.2 ALUMINUM LOUVERS - EXTERIOR

A. Impact-resistant exterior louvers shall be Greenheck Model No. EHV-901D Dual Module FBC/ Miami Dade approved Louvers, 9 inches deep, fixed blades at 45-degree angle at 6” o.c. spacing. 54% free area and class A wind driven rain classification.

1. Louvers must conform to Florida Building Code. Louver frames shall be reinforced with rear-mounted heavy gage perimeter steel channel. Louver sections with rough openings greater than 36 inches in width shall be provided with steel blade reinforcing angles concealed from view.

B. Aluminum shall be 6063-T5 extruded.

C. Blades: Minimum 0.125 inches thick by 6 inches deep; louver blade to frame connections shall be both mechanically fastened with 300 series stainless steel threaded fasteners and welded.

D. Jambs: Minimum 0.125 inches (8 gauge) thick.

E. All vertical mullions shall be the exposed type to provide for drainage of water from the blades to the louver sill.

F. Fasteners: Spacing and size per manufacturer, as required to meet required wind loads.

2.3 ACCESSORIES

A. All exterior louvers shall receive an extruded bird screen frame with 1/2 inch mesh, 0.063 inch wire diameter of aluminum material.

B. Extruded aluminum sill extension, extension length as to match assembly width.

C. Furnish and install aluminum subsill flashings and gutter system with end dams, set in full bed of sealant, at louver base. Minimum 12 gauge, color to match louver.

2.4 LOUVER AND DAMPER SIZES AND LOCATION

A. Louver sizes as required for ventilation and mechanical systems.

2.5 FASTENERS

A. Fasteners of sizes required by paragraph 1.6 D. above, shall be stainless steel Type 300 Series.

2.6 FINISHES: LOUVERS AND DAMPERS

A. Aluminum louvers, dampers, and accessories shall be finished with manufacture’s standard ten (10) year warranty powder coating that meets or exceeds AAMA 2604 criteria of custom color to match the building exterior or interior as selected by the Architect.

2.7 FINISHES: STEEL SUPPORTS

A. All steel supports shall be hot-dipped galvanized and shall be painted per Section 09900 - Painting, colors as selected by the Architect.

PART 3 – EXECUTION

3.1 INSTALLATION, GENERAL

A. All items in this Section shall be installed by experienced skilled mechanics in the best workmanlike manner of the trade's best standard practice.

B. All items shall be installed true, level, plumb, and in strict accordance with the manufacturer's printed instructions and approved submittals.

3.2 INSTALLATION

A. Aluminum exterior and interior louvers and dampers shall be installed with stainless steel fasteners and/or anchors.

B. Where aluminum is placed in contact with dissimilar materials, the aluminum shall be back-painted before erection with zinc chromate paint or bituminous coating.

C. After erection, the Contractor shall adequately protect exposed portions of louvers from damage by stucco, lime, cement, welding, or other harmful compounds.

D. All exposed surfaces shall be free from scratches and other serious surface blemishes.

3.3 CLEANING

A. The Contractor shall be responsible for removal of protective materials and subsequent cleaning. The Contractor shall be held responsible for damages resulting from the use of cleaning materials.

3.4 MATERIALS AND WORKMANSHIP

A. All damaged material and faulty workmanship shall be removed and be replaced with new material in the best workmanlike manner at no extra cost to the Owner.

END OF SECTION 10200

SECTION 10350 - FLAGPOLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes ground-mounted flagpoles made from aluminum.

B. Owner-Furnished Material: All flags.

C. Related Sections:

1. Division 16 Section "Exterior Lighting" for site lighting fixtures.

1.3 PERFORMANCE REQUIREMENTS

A. Structural Performance: Flagpole assemblies, including anchorages and supports, shall withstand the effects of gravity loads, and the following loads and stresses within limits and under conditions indicated according to the following design criteria:

1. Wind Loads: 140 mph, Exposure B according to NAAMM FP 1001, "Guide Specifications for Design of Metal Flagpoles." ; Refer to FBC wind speed design criteria.
2. Base flagpole design on polyester flags of maximum standard size suitable for use with flagpole or flag size indicated, whichever is more stringent.

    a. Flag size – Minimum = 6’ X 10’.
    b. Top Diameter of flagpole foundation shall be stepped and not to exceed 9” in diameter and shall extend 6” below grade before widening; the depth of the foundation shall be as required to maintain this dimension and shall be isolated from adjoining paver and seat wall foundations.
    c. Shoe base trim shall be flush with adjoining pavers.

1.4 SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, operating characteristics, fittings, accessories, and finishes for flagpoles.

1. Anchor bolts for flagpole.

2. Manufactured flagpole foundation.
3. Foundation & design analysis to comply with FBC wind speed requirements sealed by a professional engineer licensed in the State of Florida.
4. Concrete mix design and placement criteria for flagpole foundations.
5. Sealant data & Sealant compatibility statement from sealant manufacturer stating Sealant compatible with adjoining substrates to be sealed.
6. Maximum wind speed for flag flying.

B. Shop Drawings: For flagpoles and foundation system. Include plans, elevations, details, and attachments to other work. Show general arrangement, jointing, fittings, accessories, grounding, anchoring, and support.

1. Section and details of foundation system for ground-mounted flagpole.

a. Include reinforcement drawings for flagpole foundation.

b. Isolate foundation of flag pole from event court foundation.

c. Base plate trim to be flush with pavers and shall have weeps for drainage.

d. Refer to details on Drawings for coordination of intergral trim and concrete finishes.

2. Anchor-bolt templates keyed to specific flagpole and certified by manufacturer.
3. Design calculations, certified by the qualified licensed Professional Engineer responsible for their preparation, licensed in the State of Florida.

C. Delegated-Design Submittal: For flagpole assemblies and foundation system indicated to comply with performance requirements and design criteria, including analysis data, project specific-foundation design signed and sealed by the qualified professional engineer responsible for their preparation.

D. Qualification Data: For qualified Licensed Professional Engineer.

E. Recycled content for sustainable design requirements, and other mnfg's certifications per Division 1 Section "Sustainable Design Requirements."

1.5 QUALITY ASSURANCE

A. Source Limitations: Obtain flagpole as complete unit, including fittings, accessories, bases, and anchorage devices, from single source from single manufacturer.

1.6 DELIVERY, STORAGE, AND HANDLING

A. General: Spiral wrap flagpoles with heavy paper and enclose in a hard fiber tube or other protective container.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: American Flagpole; a Kearney-National Inc. company – Basis-of-Design.

B. Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Concord Industries, Inc.
   2. Ewing Flagpoles.
   3. Pole-Tech Company Inc.

2.2 FLAGPOLES

A. Flagpole Construction, General: Construct flagpoles in one piece if possible. If more than one piece is necessary, comply with the following:

   1. Fabricate shop and field joints without using fasteners, screw collars, or lead calking.
   2. Provide flush hairline joints using self-aligning, snug-fitting, internal sleeves.
   3. Provide self-aligning, snug-fitting joints.

B. Exposed Height: 25 feet above finish grade.

C. Metal Foundation Tube: Manufacturer's standard corrugated-steel foundation tube, not less than 0.188-inch- nominal wall thickness. Provide with 3/16-inch steel bottom plate and support plate; 3/4-inch- diameter, steel ground spike; and steel centering wedges welded together. Galvanize steel after assembly. Provide loose hardwood wedges at top of foundation tube for plumbing pole.

   1. Provide flashing collar of same material and finish as flagpole.
   2. Galv. corrugated steel ground sleeve w/ grounding spike.

2.3 FITTINGS

A. Finial Ball: Manufacturer's standard flush-seam ball, sized as indicated or, if not indicated, to match flagpole-butt diameter.

   1. 0.063-inch spun gold anodized aluminum.

B. Internal Halyard, Winch System (IWW): Manually operated winch with control stop device and removable handle, stainless-steel cable halyard, and concealed revolving truck assembly with plastic-coated counterweight and sling. Provide flush access door secured with cylinder lock. Finish truck assembly to match flagpole; Beaded sling assembly. Revolving truck assembly with stainless steel bearings.

1. Halyard Flag Snaps: Provide two stainless-steel swivel snap hooks per halyard.

    a. Provide with neoprene or vinyl covers.

2. Provide one removable winch handle for each flagpole for use on either flagpole.

3. Keys to master keyed to building standard, provide 2 sets of keys for each flagpole.

2.4 MISCELLANEOUS MATERIALS

A. Drainage Material: Crushed stone, or crushed or uncrushed gravel; coarse aggregate.

B. Sand: ASTM C 33, fine aggregate.

C. Elastomeric Joint Sealant: Single-component neutral- and basic-curing silicone joint sealant complying with requirements in Division 07 Section "Joint Sealants" for Use NT (nontraffic) and for Use M, G, A, and, as applicable to joint substrates indicated, for Use O. Sealants shall be compatible with adjoining finishes and substrated.

D. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.5 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.6 ALUMINUM FINISHES

A. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, including foundation; accurate placement, pattern, orientation of anchor bolts, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare uncoated metal flagpoles that are set in foundation tubes by painting below-grade portions with a heavy coat of bituminous paint.

B. Foundation Excavation: Excavate to neat clean lines in undisturbed soil. Remove loose soil and foreign matter from excavation and moisten earth before placing concrete. Place and compact drainage material at excavation bottom.

C. Provide forms where required due to unstable soil conditions and for perimeter of flagpole base at grade. Secure and brace forms to prevent displacement during concreting.

D. Place concrete, In accordance with foundation design Professional Engineer requirements and as specified in Division 3 Section "Cast-in-Place Concrete." Compact concrete in place by using vibrators. Moist-cure exposed concrete for not less than seven days or use nonstaining curing compound.

E. Trowel exposed concrete surfaces to a smooth, dense finish, free of trowel marks, and uniform in texture and appearance. Provide positive slope for water runoff to perimeter of concrete base.

3.3 FLAGPOLE INSTALLATION

A. General: Install flagpoles where shown and according to Shop Drawings and manufacturer's written instructions.

B. Ground Set: Place foundation tube, center, and brace to prevent displacement during concreting. Place concrete. Plumb and level foundation tube and allow concrete to cure. Install flagpole, plumb, in foundation tube.

1. Foundation Tube: Place tube seated on bottom plate between steel centering wedges and install hardwood wedges to secure flagpole in place. Place and compact sand in foundation tube and remove hardwood wedges. Seal top of foundation tube with a 2-inch layer of elastomeric joint sealant and cover with flashing collar.

C. Baseplate: Cast anchor bolts in concrete foundation. Install baseplate on washers placed over leveling nuts on anchor bolts and adjust until flagpole is plumb. After flagpole is plumb, tighten retaining nuts and fill space under baseplate solidly with nonshrink, nonmetallic grout. Finish exposed grout surfaces smooth and slope 45 degrees away from edges of baseplate. Top of flagpole shoe base shall be flush with adjoining pavers; provide weeps and method of drainage to drain away collected water within shoe base cavity.

END OF SECTION 10350

(INTENTIONALLY LEFT BLANK)

SECTION 10426 - BUILDING SIGNAGE

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Furnish all labor, materials, tools, equipment, etc. and services necessary and incidental to the complete fabrication, furnishing and erection of this Section as shown, noted, detailed and reasonably implied on the drawings and in the specifications.

B. The scope of work included in this Section is as follows:

1. Interior and Exterior Building Signs (Owner required and Code required).

1.3 RELATED SECTIONS

A. Coordinate work of this Section with of other Sections as required to properly execute the work and as necessary to maintain satisfactory progress of the work of other Sections, including:

1. Division 15 – Mechanical & Plumbing. Equipment labeling.

2. Division 16 – Electrical. Illuminated exit signs and equipment labeling.

1.4 REFERENCES

A. Publications listed below form a part of this specification to extent referenced. Publications are referenced in text by basic designation only.

i. American National Standards Institute (ANSI)
ii. American Society for Testing & Materials (ASTM)
iii. Federal Specifications
iv. Uniform Sign Code

1.5 SUBMITTALS

A. Submit shop drawings and product data under provisions of Section 01300 – Shop Drawings, Product Data and Samples.

B. Submit manufacturer's printed data describing products, model or series numbers, colors for selection, and finishes of all items in this Section.

1. Samples for Initial Selection: For each sign type and for each color and texture required, for each type of sign material indicated that involves color selection.

C. Submit shop drawings of all items, showing locations, sizes, quantities, methods of supporting, methods of anchoring, markings, finishes and operating hardware.

1. Show sign mounting heights, locations of supplementary supports to be provided by others, and accessories.

2. Provide message list, typestyles, graphic elements, including tactile characters and Braille, and layout for each sign.

3. Provide signed and sealed engineered drawings for securement of the signs to the building exterior.

D. Submit samples of all signs for review, For each type of sign, include the following Samples to verify color selected:

1. Panel Signs: Full-size Samples of each type of sign required.

2. Approved samples will be returned for installation into Project.

E. Submit two (2) complete building signage schedules for review. After review, provide four (4) corrected copies of this schedule for distribution. No factory order shall be placed for materials until this review process has been completed.

F. Maintenance Data: For signage cleaning and maintenance requirements to include in maintenance manuals.

1.6 DELIVERY AND STORAGE

A. Deliver products to site under provisions of Section 01600 – Materials and Equipment.

B. All materials under this Section shall be delivered to the project site in their original unbroken containers bearing the manufacturer's name, brand and specification designation.

C. All materials shall be stored in a dry, protected area and above floor level.

1.7 COORDINATION

A. For signs supported by or anchored to permanent construction, advise installers of anchorage devices about specific requirements for placement of anchorage devices and similar items to be used for attaching signs.

1. For signs supported by or anchored to permanent construction, furnish templates for installation of anchorage devices and coordinate blocking requirements.

2. Field verify dimensions and conditions affecting sign installation.

1.8 CODES

A. All signage shall conform to the Department of Community Affairs, Florida Building Code Latest Edition in effect (FBC), Florida Accessibility Code for Building Construction, and local codes. Signage shall conform to ICC/ANSI A117.1, American National Standard for Accessible and Usable Buildings and Facilities.

1.9 WARRANTY

A. This manufacturer shall warranty against defects in materials and workmanship for a period of one (1) year from the date of substantial completion of the building.

B. Refer to Section - 01700 Project Closeout, Detail Requirements.

1.10 QUALITY ASSURANCE

A. All interior signage in this Section shall be fabricated by a single manufacturer with experience in providing work similar to that specified.

B. Regulatory Requirements: Comply with applicable provisions in ADA-ABA Accessibility Guidelines and ICC/ANSI A117.1

C. The materials used shall have flammability and smoke values that meet the standards for flammability for interior materials.

D. Source Limitations: Obtain each sign type through one source from a single manufacturer.

PART 2 – PRODUCTS

2.1 BUILDING SIGNAGE

A. Building signage includes, but is not limited to: Code Required life safety signage and handicapped accessibility signage, room and/or room identification, Way finding/directional signage, and general informational signage.

2.2 SIGN TYPE - CODE REQUIRED & ROOM IDENTIFICATION SIGNAGE

A. Code required signage, products produced by 2/90 Sign Systms, PH (800) 777-4310, as the Project Basis of Design, shall be two toned acrylic plastic, embossed ADA, wall or door mounted, with tactile and braille graphics, or equal as approved by the Architect or Owner. The room identification signs shall match the graphics and colors of the room identification signs at selected and approved by the Owner.

1. Coordinate with the Owner and the Architect for mounting locations before anchorage to finished substrate. Refer to Florida Building Code, and Florida Accessibility Code for Building Construction.

2. Characters and background of all signs shall have eggshell, non-glare finish. Braille characters shall be same color as background.

3. Sign edges shall be smooth and free of saw marks and imperfections. The corners of the sign shall be square.

4. Mount signs with manufacturer's suggested permanent type mounting. Do not use double-sided vinyl tape.

5. The following manufacturers shall be considered as comparable products.

    a. Mohawk
    b. Andco Industries Corp.
    c. Best Manufacturing Co.
    d. The Super-sine Company
    e. ASI

G. Graphic Content and Style: Provide sign copy that complies with requirements for size, style, spacing, content, mounting height and location.

1. Type style shall be "OPTIMA," upper case, minimum 5/8 inch high. Lettering shall be computer generated, accurately reproducing the letter form.

2. All letters, numbers, and/or symbols shall contrast with the background, either light characters on a dark background or dark characters on a light background. Characters and background will have a non-glare finish.

3. Signage copy shall be accompanied by Grade 2 Braille. Braille shall be separated 12 mm (0.5-inch) from the corresponding raised character symbols. Grade 2 Braille translation to be provided by signage manufacturer.

4. Copy Position: As indicated on drawings, or where not indicated, centered/centered (cc) within the limits of the sign.

5. Text Height: As indicated on drawings or in signage schedule, or as follows:

    a. Lettering for room numbers shall be 25 mm (1-inch).
    b. Lettering for room ID signs shall be 16 mm (5/8-inch) or as noted.
    c. Lettering height for way finding signage shall be as per the Drawings.

6. Where graphic pictograms are indicated, symbol size shall be nominal 100 mm (4-inch) diameter.

H. Changeable Message Inserts: Provide changeable signs at all meeting rooms. Fabricate signs to allow insertion of changeable messages in the form of “IN-USE” slide-in inserts.

I. Tactile and Braille Sign: Manufacturer’s standard process for producing text and symbols complying with ADA-ABA Accessibility Guidelines and with ICC/ANSI A117.1. Text shall be accompanied by Grade 2 Braille. Produce precisely formed characters with square-cut edges free from burrs and cut marks; Braille dots with domed or rounded shape.

1. Panel Material: Opaque acrylic sheet or Photopolymer.

2. Raised-Copy Thickness: Not less than 0.8 mm (1/32 inch).

J. Laminated Interior Signs: Solid phenolic panel core with graphic image covered with thermosetting resin face layer.

1. Surface Finish: Mat.

2. Edge Condition: Manufactured standard.

3. Corner Condition: small radius.

4. Thickness: 3 mm (1/8 inch).

2.3 ACCESSORIES

A. Anchors and Inserts: Provide nonferrous-metal or hot-dip galvanized anchors and inserts for exterior installations and elsewhere as required for corrosion resistance. Use toothed steel or lead expansion-bolt devices for drilled-in-place anchors. Furnish inserts, as required, to be set into concrete or masonry work.

B. Fasteners anchored o aluminum substances or framing shall be stainless steel.

2.4 FINISHES, GENERAL

A. Protect mechanical finishes on exposed surfaces from damage by applying strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of range of approved Samples. Noticeable variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within range of approved Samples and are assembled or installed to minimize contrast.

2.5 ACRYLIC SHEET FINISHES

A. Colored Coatings for Acrylic Sheet: For copy and background colors, provide colored coatings, including inks, dyes, and paints, that are recommended by

acrylic manufacturers for optimum adherence to acrylic surface and that are UV and water resistant for five years for application intended.

2.7 PIN MOUNTED SIGNAGE

A. Stainless Steel 316, pin letters , min. 3/8 inch thick, pin mounted,; font as shown on the drawings; to match the Airport standard.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.

B. Verify that items, including anchor inserts, provided under other sections of Work are sized and located to accommodate signs.

C. Examine supporting members to ensure that surfaces are at the elevations indicated or that may be required to comply with Authorities Having Jurisdiction and are free from dirt and other deleterious matter.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. The Architect and Owner shall have final decision on the location of all items in this Section.

B. After erection, the General Contractor shall adequately protect exposed portions of signage from damage by stucco, lime, cement, or other harmful compounds.

C. Do not mount signage on face of doors.

3.3 INSPECTION

A. Inspect building areas prior to sign(s) installation. Do not install signs until surfaces are acceptable to installer.

B. Notify the Architect and Owner, in writing, if there are any questions as to suitability of sign(s), installation location(s), or surface(s).

C. Locate signs and accessories where indicated, using mounting methods of types described and complying with manufacturer’s written instructions.

1. Install signs level, plumb, and at heights indicated, with sign surfaces free of distortion and other defects in appearance.

2. Interior Wall Signs: Install signs on walls adjacent to latch side of door where applicable. Where not indicated or possible, such as double doors, install signs on nearest adjacent walls. Locate to allow approach within 75 mm (3 inches) of sign without encountering protruding objects or standing within swing of door.

D. Wall-Mounted Signs: Comply with sign manufacturer's written instructions except where more stringent requirements apply.

1. Silicone-Adhesive Mounting: Attach signs to irregular, porous, or vinyl-covered surfaces.

2. Shim Plate Mounting: Provide 3-mm- (1/8-inch-) thick, concealed aluminum shim plates with predrilled and countersunk holes, at locations indicated, and where other mounting methods are not practicable. Attach plate with fasteners and anchors suitable for secure attachment to substrate. Attach panel signs to plate using method specified above.

3. Mechanical Fasteners: Use nonremovable mechanical fasteners placed through predrilled holes. Attach signs with fasteners and anchors suitable for secure attachment to substrate as recommended in writing by sign manufacturer.

3.4 SIGNAGE SCHEDULE

A. A Signage Schedule shall be provided by the signage contractor per Article 1.4 Submittals, of this Section.

3.5 EXECUTION

A. All items in this Section shall be installed by experienced skilled mechanics in the best workmanlike manner of the trade's best standard practice.

B. All items shall be installed true, level, plumb and in strict accordance with the manufacturer's printed instructions and approved submittals.

3.6 GENERAL SIGNAGE

A. Wall mounted signs shall be installed 60 inches above finished floor to centerline of sign, and generally on latch side of door. Location shall be such that a person may approach within 3 inches of sign without encountering protruding objects or standing within swing of door.

B. Signs shall not be installed on the door.

3.7 CLEANING

A. The General Contractor shall be responsible for removal of protective materials and cleaning as recommended by manufacturer. The General Contractor shall be held responsible for damages resulting from the use of other cleaning materials.

3.8 MATERIAL AND WORKMANSHIP

A. All damaged material and faulty workmanship shall be removed and be replaced with new material in the best workmanlike manner at no extra cost to the Owner.

END OF SECTION 10426

SECTION 10507 – SOLID PLASTIC LOCKERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Lockers with doors, frames, sides, tops, bottoms, backs, and shelves made from high impact, high density, polyethylene (HDPE) formed under high pressure into solid plastic components with homogeneous color throughout. The doors will be furnished in an accent color to be selected by the Architect and Owner from manufacturer's full range of colors.

1.3 PERFORMANCE REQUIREMENTS

A. Fire Resistance: Partition materials shall comply with the following requirements, when tested in accordance with the ASTM E 84: Standard Test Method for Surface Burning Characteristics of Building Materials:

1. Smoke Development Index: Not to exceed 450.
2. Flame Spread Index: Not to exceed 75.
3. Material Fire Ratings:

a. National Fire Protection Association (NFPA): Class B.
b. International Code Council (ICC): Class B.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, finishes for solid plastic lockers, and complete instructions.

B. Shop Drawings: For solid plastic lockers. Include plans, elevations, sections, details, and attachments to other work.

1. Show individual locker construction and overall dimensions.
2. Show details full size.

3. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
4. Show locations and sizes of cutouts and holes for items installed in solid plastic lockers.
5. Show solid plastic locker fillers, trim, base, sloping tops, and accessories.
6. Show solid plastic locker numbering sequence.

C. Samples for Initial Selection: For manufacturer's full range of solid plastic colors and finishes.

D. Samples for Verification: For the following:

1. Solid plastic panels, not less than 8 by 10 inches, for each type, color, pattern, and surface finish.
2. Exposed cabinet hardware and accessories, one unit for each type and finish.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer.

B. Warranty: Sample of special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For adjusting, repairing, and replacing solid plastic locker doors and latching mechanisms to include in maintenance manuals.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: A company regularly engaged in manufacture of products specified in this Section, and whose products have been in satisfactory use under similar service conditions for not less than 5 years.

B. Installer Qualifications: A company or individual, regularly engaged in installation of products specified in this Section, with a minimum of 5 years experience.

C. Source Limitations: Obtain solid plastic lockers and accessories from single source from single manufacturer.

D. Regulatory Requirements: Where solid plastic lockers are indicated to comply with accessibility requirements, comply with the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA) and FBC (latest edition adopted) Accessibility Guidelines for Buildings and Facilities."]

E. Contractor to coordinate and verify dimensions for built-in components / lockers.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver solid plastic lockers until painting and similar operations that could damage solid plastic lockers have been completed in installation areas. If solid plastic lockers must be stored in other-than-installation areas, store only in areas where environmental conditions are same as that in final installation location and comply with requirements specified in "Project Conditions" Article.

B. Locker components shall be stored flat until assembly. All finishes shall be protected from soiling and damage during handling.

1.9 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install solid plastic lockers until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature between 60 and 90 deg F and humidity conditions at occupancy levels during the remainder of the construction period, or as required to prevent deformation or warping of the materials in accordance with the manufacturer’s requirements.

B. Field Measurements: Verify actual dimensions of concealed framing, blocking, and reinforcements that support wood lockers by field measurements before fabrication.

1.10 COORDINATION

A. Coordinate sizes and locations of concealed solid plastic support bases.

1. Requirements are specified in Division 6 Section "Miscellaneous Carpentry."

B. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of work specified in other Sections to ensure that solid plastic lockers can be supported and installed as indicated.

1.11 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of solid plastic lockers that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures.
b. Faulty operation of locks or hardware.
c. Breakage, corrosion, and delamination of plastic under normal conditions.
d. Deterioration of other materials beyond normal use.

2. Warranty Period: Three years from date of Substantial Completion for all failures; Fifteen years from date of Substantial Completion for breakage, corrosion, and delamination of plastic.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide Scranton Products; Tufftec Lockers or comparable product by one of the following:

1. ASI Storage Solutions, Inc.
2. General Partitions Mfg. Corp.
3. The Bradley Corporation.

2.2 MATERIALS

A. High Density Polyethylene (HDPE): Formed under high pressure into solid plastic components with homogeneous color throughout.

1. All solid plastic components shall resist deterioration and discoloration, when subjected to any of the following: acetic acid 80%, acetone, ammonia 12%, ammonium phosphate, bleach 12%, borax, brine, caustic soda, chlorine water, citric acid, copper chloride, core oils, hydrochloric acid 40%, hydrogen peroxide 30%, isopropyl alcohol, lactic acid 25%, lime sulfur, nicotine, potassium bromide soaps, sodium bicarbonate, trisodium phosphate, urea, urine and vinegar.

2. Testing in accordance with corrosion testing procedure established by the Unites States Plastic Corporation.

3. All HDPE components shall have a smooth “orange peel” finish. Locker doors and frames shall be two-tone color.

4. Color: As selected by Architect from manufacturer's full range.

a. Doors will be blue, or from manufacturer’s full range of colors as selected by Architect and Owner.
b. Frames and interior will be grey or from manufacturer’s full range of colors, as selected by Architect and Owner.

B. Adhesives: Adhesives shall not contain urea formaldehyde.

C. Furring, Blocking, Shims, and Hanging Strips: Softwood or hardwood lumber, kiln dried to less than 15 percent moisture content.

D. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage.

1. Provide nonferrous-metal or hot-dip galvanized anchors and inserts on inside face of exterior walls and elsewhere as indicated on Drawings.
2. Provide toothed-steel or lead-expansion sleeves for drilled-in-place anchors.

E. Support Base: Manufacturer's standard.

2.3 SOLID PLASTIC LOCKER HARDWARE

A. General: Provide manufacturer's standard solid plastic locker hardware complying with the requirements in this Section. Lockers shall be capable of being locked with Owner furnished pad locks.

B. Continuous Hinges: Heavy duty extruded aluminum with powder coating to match the locker door and frame

1. Door hinge shall be full length assembled onto the door and front.

C. Exposed Hardware Finishes: Manufacturer’s standard.

2.4 CONTINUOUS LATCH

A. General: HDPE plastic latch capable of accepting pad lock.

1. Latch shall be securely fastened to the entire length of the door.

2. Pad locks shall be furnished by Owner.

2.5 SOLID PLASTIC LOCKERS

A. Doors and frames shall be made from HDPE into solid plastic components 1/2” thick.

1. 12”w x 18” d, with lattice mesh louvers.
2. Double tier with lattice mesh louvers, as illustrated in the Drawings, as required for accessibility, with ADA engraved logo.

B. Sides, tops, bottoms, backs, and shelves shall be made from HDPE into solid plastic components 3/8” thick.

1. Components shall have machined edges to accept assembly brackets.

C. Assembly profile shall be full depth, width and height of the lockers. Profiles shall be made from PVC plastic and snapfit assemble onto locker outsides, insides, backs, tops and bottoms.

2.6 LOCKER ACCESSORIES

A. Coat Hooks: Manufacturer's standard, high impact plastic.

1. Provide two-prong hook mounted to bottom of the shelf or divider, one each per door opening.

B. Number Plates: 1-1/2-inch- (38-mm-) diameter, etched, embossed, or stamped, stainless-steel plates with black numbers and letters at least 1/2 inch (13 mm) high. Identify lockers in sequence indicated on Drawings, or as approved by the Architect.

2.7 FABRICATION

A. Fabricate each solid plastic locker with shelves, an individual door and frame, an individual top, a bottom, and a back, and with common intermediate uprights separating compartments.

1. Fabricate solid plastic lockers to dimensions, profiles, and details indicated.
2. Lockers shall be manufactured for assembly in a group of no more than four adjacent lockers.
3. Provide sloped tops at lockers where no soffit is provided and the tops all exposed below the milling.

B. Fabricate components square, rigid, without warp, and with finished faces flat and free of scratches and chips. Accurately machine components for attachments in factory. Make joints tight and true.

1. Solid plastic components shall snap or mechanically fastened together for easy assembly and shall provide a solid and secure construction.

C. Fabricate steel tube frame and plywood decking support bases as required for lockers to be supported from the locker bench frame.

D. The ADA symbol shall be engraved on the lower door of one of the pair of double tier lockers for the ADA accessible locker.

E. Accessible Lockers: Fabricate as follows:

1. Locate bottom shelf no lower than 15 inches above the floor.
2. Where hooks, coat rods, or additional shelves are provided, locate no higher than 48 inches above the floor.

F. Venting: Fabricate lockers with space between doors and locker assembly of not less than **1/4 inch**.

G. Number Plates: Surface mounted or inlay number plates at each locker door, near top, centered.

H. Complete fabrication, including assembly, finishing, and hardware application, to maximum extent possible, before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.

1. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements indicated on Shop Drawings before disassembling for shipment.

I. Shop cut openings, to maximum extent possible, to receive hardware, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand or polish edges of cutouts to remove splinters and burrs.

J. Manufacturer's standard trim or filler panel at abutting wall conditions, to match locker face.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine walls, floors, and support bases, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting wood locker installation.

B. Verify that furring is attached to masonry walls that are to receive wood lockers.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Condition solid plastic lockers to average prevailing humidity conditions in installation areas before installation.

B. Before installing solid plastic lockers, examine factory-fabricated work for completeness and complete work as required, including removal of packing.

3.3 INSTALLATION

A. Install support base.

B. Install solid plastic lockers level, plumb, and true; use concealed shims.

C. Connect groups of solid plastic lockers together with manufacturer's standard fasteners, through predrilled holes, with no exposed fasteners on face frames. Fit solid plastic lockers accurately together to form flush, tight, hairline joints.

D. Install solid plastic lockers at the location shown in accordance with the manufacturer's instructions for plumb, level, rigid and flush installation.

E. Install solid plastic lockers without distortion so doors fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings, providing unencumbered operation. Complete installation of hardware and accessory items as indicated.

1. Installation Tolerance: No more than 1/8 inch in 96-inch sag, bow, or other variation from a straight line. Shim as required with concealed shims.
2. Fasten solid plastic lockers through back, near top and bottom, at ends with manufacturer's standard fasteners and in accordance with manufacturer's instructions for penetration into substrate provided.

F. Scribe and cut corner and filler panels to fit adjoining work using fasteners concealed where practical. Repair damaged finish at cuts.

G. Install number plates after solid plastic lockers are in place.

1. Attach number plate on each solid plastic locker door, near top, centered, with at least two screws with finish matching number plate.

3.4 ADJUSTING, CLEANING, AND PROTECTING

A. Clean, lubricate, and adjust hardware. Adjust doors to operate easily without binding.

B. Protect solid plastic lockers from damage, abuse, dust, dirt, stain, or paint. Do not permit use during construction.

C. Touch up marred finishes, or replace solid plastic lockers that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by wood locker manufacturer.

END OF SECTION 10507

SECTION 10520 – FIRE PROTECTION SPECIALTIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Portable fire extinguishers and mounting brackets for wall-hung fire extinguishers.

2. Fire-protection cabinets for the following:

a. Portable fire extinguishers.

3. Portable Fire Extinguishers.

4. Portable Fire Extinguishers Mounting Brackets.

5. AED Equipment Cabinet.

1.3 SUBMITIALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for fire-protection specialties.

1. Fire Extinguishers: Include rating and classification.
2. Cabinets: Include roughing-in dimensions, details showing mounting methods, relationships of box and trim to surrounding construction, door hardware, cabinet type, trim style, and panel style.

B. Operation and Maintenance Data: For fire extinguishers and cabinets to include in maintenance manuals.

C. Warranty: Sample of special warranty.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain fire extinguishers and cabinets through one source from a single manufacturer.

B. Size Limitations: Provide fire-protection cabinets having dimensions that match or are less than the width, depth and projection from wall dimensions of the specified cabinets.

C. NFPA Compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Standard for Portable Fire Extinguishers."

D. Fire Extinguishers: Listed and labeled for type, rating, and classification by an independent testing agency acceptable to authorities having jurisdiction.

E. Fire-Rated Fire-Protection Cabinets: Listed and labeled to comply with requirements of ASTM E 814 for fire-resistance rating of walls where they are installed.

1.5 COORDINATION

A. Coordinate size of fire protection cabinets to ensure that type and capacity of fire extinguishers indicated are accommodated.

B. Coordinate sizes and location of fire-protection cabinets with wall depths.

1.6 SEQUENCING

A. Apply labels/lettering on field-painted fire-protection cabinets after painting is complete.

1.7 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace fire extinguishers that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Failure of hydrostatic test according to NFPA 10.
b. Faulty operation of valves or release levers.

2. Warranty Period: Six years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 CABINET MATERIALS

A. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B.

B. Aluminum: Alloy and temper recommended by aluminum producer and manufacturer for type of use and finish indicated, and as follows:

1. Sheet: ASTM B 209.
2. Extruded Shapes: ASTM B 221.

C. Tempered Float Glass: ASTM C 1048, Kind FT, Condition A, Type I, Quality q3, 3 mm thick, Class 1 (clear).

2.2 MANUFACTURERS

A. Basis of Design: J. L. Industries model # C1027V10 or # FX C1027V10 (rated walls) semi recessed, powder coated-painted steel 1 and ½" radiused trim (white), contemporary vertical duo – door style, with clear tempered glass, and Futura Embossed "Fire" Handle – Mill finish, with aluminum tub and integral lock, or approved equal by Architect. Furnish and install tamper resistant break away cables.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. J.L. Industries, Inc.
2. Larsen's Manufacturing Company.
3. Potter-Roemer; Div. of Smith Industries, Inc.

2.3 ACCESSORIES

A. Mounting Brackets: Manufacturer's standard steel, designed to secure extinguisher, of sizes required for types and capacities of extinguishers indicated, with plated or black baked-enamel finish.

1. Provide brackets for extinguishers not located in cabinets.
2. Break-Glass Strike: Manufacturer's standard metal strike, complete with chain and mounting clip, secured to cabinet.
3. Lettered Door Handle: One-piece, cast-iron door handle with the word "FIRE" embossed into face.
4. Door Lock: Cylinder Lock, keyed alike to other cabinets and facility standard.
5. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate as indicated by Architect.
    a. Identify fire extinguisher in fire-protection cabinet with the words "FIRE EXTINGUISERS".
        i. Location: Applied to cabinet door.
        ii. Application Process: Silk-screened.
        iii. Lettering Color: Red.
        iv. Orientation: Vertical.

2.4 CABINET FABRICATION

A. Non-rated Fire Protection Cabinets: Provide manufacturer's standard box (tub) with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated.

1. Weld joints and grind smooth.
2. Provide factory-drilled mounting holes.

B. Rated Fire Protection Cabinets (where mounted in rated walls): Provide manufacturer's standard box (tub) with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated.

1. Fire-Rated Cabinets: Construct fire-rated cabinets with double walls fabricated from 0.0428-inch thick, cold-rolled steel sheet lined with minimum 5/8 inch thick,

fire-barrier material. Provide factory-drilled mounting holes.
2. Provide with rating to match wall rating within which cabinet is to be installed.

C. Cabinet Doors: Fabricate doors according to manufacturer's standards, from material indicated and coordinated with cabinet types and trim styles selected.

1. Fabricate door frames with tubular stiles and rails and hollow-metal design, minimum 1/2 inch thick.
2. Miter and weld perimeter door frames.
3. Continuous hinge.

D. Cabinet Trim: Fabricate cabinet trim in one piece with corners mitered, welded, and ground smooth.

2.5 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Finish fire protection cabinets after assembly.

D. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.6 STEEL FINISHES

A. Surface Preparation: Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No.1, "White Metal Blast Cleaning" or SSPCSP 8, "Pickling". After cleaning, apply a conversion coating suited to the organic coating to be applied over it.

B. Factory Prime chromate-free, pretreatment. Finish: Apply manufacturer's standard, fast-curing, lead- and universal primer immediately after surface preparation and

C. Baked-Enamel or Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of 2 mils.
1. Color and Gloss: Matte white.

2.7 AED CABINET

1. AED equipment and AED training provided by Owner.

2. Cabinet Type Basis of Design: JL Industries or Architect approved equal: Semi-recessed with 2 ½” rolled edge, powder coated aluminum - (white) – Model No. 1427F12.

2.8 PORTABLE FIRE EXTINGUISHERS

A. Manufacturers:

1. General Fire Extinguisher Corporation.
2. JL Industries, Inc.
3. Larsen's Manufacturing Company.
4. Potter Roemer; Div. of Smith Industries, Inc.

B. General: Provide fire extinguishers of type, size, and capacity for each fire-protection cabinet and mounting bracket indicated.

1. Instruction Labels: Include pictorial marking system complying with NFPA 10, Appendix b and bar coding for documenting fire extinguisher location, inspections, maintenance, and recharging.

C. Regular Dry-Chemical Type in Steel Container: UL-rated, 10 B:C, 5-lb nominal capacity, with sodium bicarbonate-based dry chemical in enameled-steel container. Provide with recessed cabinets at locations shown on the drawings

D. Multipurpose Dry-Chemical Type in Steel Container: UL-rated 4-A:60-B:C, 10-lb nominal capacity, with monoammonium phosphate-based dry chemical in enameled-steel container. Provide (3) with bracket mounts to be used at non-public spaces such as mechanical equipment rooms.

2.9 MOUNTING BRACKETS

A. Manufacturers:

1. Amerex Corporation.
2. Ansul Incorporated.
3. Badger Fire Protection.
4. Buckeye Fire Equipment Company.
5. Fire End & Croker Corporation.
6. General Fire Extinguisher Corporation.
7. JL Industries, Inc.
8. Larsen's Manufacturing Company.
9. Potter Roemer; Division of Smith Industries, Inc.

B. Mounting Brackets: Manufacturer's standard galvanized steel, designed to secure fire extinguisher to wall or structure, of sizes required for types and capacities of fire extinguishers indicated, with plated or baked-enamel finish.
1. Color: Black.

C. Identification: Lettering complying with authorizes having jurisdiction for letter style, size, spacing, and location. Locate as indicated by Architect.

1. Identify bracket-mounted fire extinguishers with the words "FIRE EXTINGUISHER" in red letter decals applied to mounting surface.
a. Orientation: Vertical

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine roughing-in for hose valves and cabinets to verify actual locations of piping connections before cabinet installation.

B. Examine walls and partitions for suitable framing depth and blocking where recessed cabinets are to be installed.

1. Rated Partitions and Barriers: Examine to confirm construction meets rating requirements and is routed continuously "floor to ceiling." Notify Architect if partition/barrier rating will be compromised by cabinet installation.

C. Examine fire extinguishers for proper charging and tagging.

1. Remove and replace damaged, defective, or undercharged units.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare recesses for recessed fire protection cabinets as required by type and size of cabinet and trim style. Coordinate and verify depth of recess required during framing and rough in of walls.

3.3 INSTALLATION

A. General: Install fire protection cabinets and fire extinguishers in locations.

1. Comply with ADA Guidelines' "reach range" dimensions for maximum mounting heights of cabinets, extinguishers, and other emergency equipment.

2. Coordinate door handle height and cabinet mounting height where cabinets are mounted with non standard manufacture heights.

B. Fire Protection Cabinets: Fasten cabinets to structure and framing, square and plumb provide required blocking to support cabinet and fire extinguisher.

1. Unless otherwise indicated, provide recessed fire-protection cabinets. If wall thickness is not adequate for recessed, provide semi-recessed fire-protection cabinets.

2. Provide inside latch and lock for break-glass panels.

3. Fasten mounting brackets to inside surface of fire-protection cabinets, square and plumb.

C. Identification: Apply labels/lettering at locations indicated.

D. Examine walls and partitions for suitable framing depth and blocking where

recessed cabinets will be installed.

E. Install fire-protection specialties in locations and at mounting heights indicated or, if not indicated, at heights acceptable to Authorities Having Jurisdiction.

3.4 ADJUSTING, CLEANING, AND PROTECTION

A. Remove temporary protective coverings and strippable films, if any, as fire protection cabinets are installed unless otherwise indicated in manufacturers written installation instructions.

B. Adjust fire protection cabinet doors to operate easily without binding.

C. On completion of fire protection cabinet installation, clean interior and exterior surfaces as recommended by manufacturer.

D. Touch up marred finishes, or replace fire protection cabinets that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by fire protection cabinet and mounting bracket manufacturers.

E. Replace fire protection cabinets that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 10520

SECTION 10712 – FIBERGLASS SHUTTERS

PART 1 -- GENERAL

1.1 RELATED WORK

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Functional exterior shutters.
2. Exterior shutter hardware.

1.3 RELATED SECTIONS

A. Section 09900 – Paints and Coatings.

1.4 REFERENCES

A. ASTM E 330 – Structural Performance of Exterior Windows, Curtain Walls and Doors by Uniform Static Air Pressure Difference.
B. ASTM E 1886 – Standard Test method for performance of Exterior Windows, Curtain Walls, Doors and Storm Shutters Impacted by Missiles and Exposed to Cyclic Pressure Differentials.
C. ASTM E 1996 – Standard Specification ofr Performance of Exterior Windows, Curtain Walls, Doors and Strom Shutters Impacted by Windborne Debris in Hurricanes.

1.5 ACTION SUBMITTALS

A. Submit items per the provisions of Section 01300.

B. Product Data: Manufacturer's data sheets on each to be used, including:

1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.

C. Shop Drawings: Show materials, layout, dimensions, profiles, fasteners and anchors, hardware, finishes, and interface with adjacent construction.

D. Selection Samples: For each finish product specified, two complete sets of color chips representing manufacturer's 40 standard colors.

E. Verification Samples: For each finish product specified, two samples, minimum size 6 inches (150 mm) square, representing actual product, color, and textures.

F. Florida Product Approval- NOA or engineered submittal showing compliance with wind speed requirements.

1.6 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.8 QUALITY ASSURANCE

A. Storm Rated Hurricane Shutters: The completed shutter assembly conforms to:
1. ASTM E 330 for Static Air Pressure.
2. ASTM E 1886 and ASTM E 1996 for large missile impact and cyclic pressure loading.

B. Thermal Stability: Fiberglass louvers and side rails thermally stable from minus 100 degrees F (minus 38 C) to 200 degrees F (93 C).

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to site in manufacturer's original, unopened packaging, with labels clearly identifying product name and manufacturer.

B. Store products in manufacturer’s unopened packaging until ready for installation.

C. Store materials in a clean, cool and dry area in accordance with manufacturer’s instructions. Do not leave unopened shutters in direct sunlight.

D. Protect materials during handling and installation to prevent damage.

1.7 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.8 WARRANTY

A. Provide with a limited lifetime warranty on structural components and manufacturers defects and factory applied finish. Warranty is limited to the original purchaser.

B. Provide a limited ten year warranty on structural components and factory applied paint finish.

PART 2 -- PRODUCTS

2.1 MANUFACTURED UNITS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Atlantic Premium Shutters – The Tapco Group
   29797 Beck Rd.
   Wixom, MI 48398-2834
   Tel: 866-288-2726
   Wayne_Sanderson@tapcoint.com

2.2 Requests for substitutions will be considered in accordance with provisions of Section 01600.

2.1 SHUTTERS

A. Bahama Shutters: Atlantic Architectural Collection Bahama Shutters fabricated of pultruded fiberglass for vertical stiles, horizontal rails and horizontal louvers. Finished shutter is 1--1/4 inch (32 mm) thick. Shutters are finished with two part urethane paint, oven cured.
   1. Style:
      a. Additional rails
      b. Standard with Additional vertical mullion
   2. Width:
      a. Double panel with vertical mullion, full width of the window
   3. Height:
      a. As indicated on the Drawings
   4. Colors:
      a. Custom color as selected by Architect

B. Atlantic Architectural Collection Bahama Shutter Hardware only.
   1. Hardware:
      a. Male Hinge:
         1) Plate size -- 1--1/8 inch (28 mm) backplate.
      b. Female Hinge, 3--3/8 inch (86 mm):
         1) Plate size 1--1/4 inch (32 mm) with 1/4 inch (6 mm) lip.
         2) Projection 3--3/8 inch (86 mm).
      c. Tilt Arms:
         1) Black Anodized tilt arms with nylon end caps.
         2) Nylon hinges/eye end sets.

3) Stainless steel clevis pin.

e. Locking bar and mounting brackets.

PART 3 -- EXECUTION

3.1 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

C. Commencement of work will imply acceptance of substrate.

3.2 EXAMINATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.3 INSTALLATION

A. Install in accordance with manufacturer’s instructions and with no fasteners through the face of the shutters.

B. Adjust operable units for smooth unobstructed operation.

3.4 PROTECTION

A. Protect installed products from damage by weather and other work until Date of Substantial Completion.

B. Touch-up and repair damaged products before Date of Substantial Completion.

END OF SECTION 16425

(PAGE INTENTIONALLY LEFT BLANK)

SECTION 10155 - TOILET PARTITIONS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SECTION INCLUDES

A. Overhead Braced and Floor Mounted Toilet Partitions and wall hung Urinary Screens in locations indicated on the Drawings.

B. Related Sections include, but are not limited to:

1. Section 05500 - Miscellaneous Metals
2. Section 06100 - Rough Carpentry.
3. Section 09310 - Ceramic Tile

1.3 REGULATORY REQUIREMENTS

A. Conform to State of Florida Accessibility Code for Building, Latest Edition in effect (or Chapter 11 of Florida Building Code, Latest Edition in effect) for installing work in conformance with ANSI A 117.1.

1.4 SUBMITTALS

A. Product Data: Provide data on toilet partition and urinary screen materials, including catalog cuts of anchors, hardware, fastenings, and accessories.

B. Shop Drawings: Indicate partition plan and elevation views, dimensions, and details of wall supports.

C. Samples: Submit two samples 12 x 12-inches in size illustrating panel finish, color, and sheen.

1.5 QUALITY ASSURANCE

A. Fire-Test-Response Characteristics: Provide phenolic partitions that comply with the following requirements:

1. Fire-Resistance Characteristics: Where indicated, provide toilet partitions identical to those of assemblies tested for fire resistance per ASTM E 119 by UL or another testing and inspecting agency acceptable to authorities

having jurisdiction.

B. Surface-Burning Characteristics: Provide phenolic partitions with the following surface-burning characteristics complying with ASTM E 1264 for Class A materials as determined by testing identical products when tested per ASTM E 84:

1. Smoke-Developed Index: 70 or less for 3/4-inch thick and 85 or less for ½-inch material.

C. Stainless steel hardware shall comply with ASTM A 167, Type 304.

D. Concealed fasteners and leveling devices: galvanized steel; ASTM A 153.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver pre-finished materials to the project site in original, unopened cartons or packaging materials necessary to protect structure and finishes. Label packages clearly with manufacturer’s name and item description.

B. Store compartment components in a vertical position with adequate support to ensure flatness and to prevent damage to pre-finished surface.

1.7 JOB CONDITIONS

A. Field Measurements: Verify actual locations of walls, columns, ceilings, and other construction contiguous with toilet compartments by field measurements before fabrication and indicate measurements on Shop Drawings.

1.8 COORDINATION

A. Furnish inserts and anchorages that must be built into other work for installation of toilet compartments and related items; coordinate delivery with other work to avoid delay.

1.9 WARRANTY

A. General Warranty: The special warranty specified in this Article shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by the Contractor under requirements of the Contract Documents, including but not limited to the Owner’s warranty requirements of the Div. 0 and Div. 1 specification requirements.

B. Submit written agreement on toilet partition manufacturer's standard form, signed by manufacturer, installer, and contractor, agreeing to repair or replace defective parts including, but not limited to doors, panels, and hardware, that do not comply

with referenced quality standards and plastic laminated materials that discolor or delaminate from the partition core.

1. Warranty Period: three years from date of Substantial Completion and Owner Final Acceptance.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Materials are specified by brand names to establish a basis for quality and design, or by performance requirements and general description of product. The Interior Designer or Architect will consider substitutions for brand names of products specified, provided the procedures set forth for substitutions are followed and the substitutions are equal or better than the approved products. The Architect reserves the right to reject any material which, in the Interior Designer's opinion, will not produce the quality of the work specified herein.

B. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products which may be incorporated in the work include the following:

1. Ampco Products Inc. (305) 821-5700 www.ampco.com
2. Bobrick Washroom Equipment (800) 553-1600 www.bobrick.com
3. General Partitions Mfg. (814) 833-1154 www.genpartitions.com

C. One substitute manufacturer may be submitted for each product specified in this section, to Architect for review following procedures established in Section 01631 and upon receipt of completed Substitution Form.

2.2 PRODUCTS

A. Panel Construction: High pressure through color scratch resistant plastic laminate, NEMA LD 3, GP-50, 0.050-inch nominal thickness, color and pattern as selected by Architect; core of 1" thick, APA-Marine-Grade Plywood (exterior grade) with fully waterproof structural adhesive. Pilaster Shoes: ASTM A 167, Type 302/304 stainless steel, not less than 3" high, 20 gage, finished to match hardware.

B. Doors and Panels: 1 inch thick, face pressure bonded to core.

C. Partition Mounting & Style: Standard Overhead Braced and Floor Mounted.

1. Overhead Bracing: Manufacturer's standard continuous, extruded-aluminum head rail with anti-grip profile and in manufacturer's standard finish.

D. Screen Mounting & Style: Continuous – Stainless Steel "C" Channel Wall-Hung.

1. Support Brackets for Urinal Screens: Manufacturer's standard continuous stainless steel "C" channel bracket.

E. Brackets (Fittings):

1. Stirrup Type: Ear or U-brackets, ASTM A 167, Type 302/304 stainless steel, not less than 3" high, 20 gage, finished to match hardware.

F. Anchorages and Fasteners: Manufacturer's standard exposed fasteners of stainless steel finished to match hardware, with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications. For concealed anchors, use hot-dip galvanized or other rust-resistant, protective-coated steel.

G. Hardware: Manufacturer's standard design, heavy-duty operating hardware and accessories of stainless steel.

1. Hinges: Manufacturer's standard self-closing type that can be adjusted to hold doors open at any angle up to 90 degrees and return to pre-set position when not locked. Hinge shall allow emergency access by lifting the door from the bottom.
2. Latch and Keeper: Manufacturer's standard recessed latch unit designed for emergency access and with combination rubber-faced door strike and keeper. Provide units that comply with accessibility requirements of authorities having jurisdiction at compartments indicated to be accessible to people with disabilities.

3. Coat Hook: Manufacturer's standard combination hook and rubber-tipped bumper, sized to prevent door from hitting compartment-mounted accessories.

4. Door Bumper: Manufacturer's standard rubber-tipped bumper at out-swinging doors.

5. Door Pull: Manufacturer's heavy duty-latch-type unit at out-swinging doors that complies with accessibility requirements of authorities having jurisdiction. Provide units on both sides of doors at compartments indicated to be accessible to people with disabilities.

2.3 FABRICATION

A. Fabricate components with plastic laminate finish to faces and edges of core material. Apply laminate to edges before broad surfaces to seal edges and prevent laminate from being pried loose. Seal exposed core material at cutouts to protect core from moisture.

B. Doors: Unless otherwise indicated, provide 24-inch-wide in-swinging doors for

standard toilet compartments and 36-inch-wide out-swinging doors with a minimum 32-inch-wide clear opening for compartments indicated to be accessible to people with disabilities unless noted otherwise on the drawings.

PART 3 EXECUTION

3.1 EXAMINATION AND PREPARATION

A. Verify that opening dimensions and plumbing fixture and rough-in locations are as indicated on shop drawings and have been verified in the field.

3.2 INSTALLATION

A. Install partition components secure, plumb, and level in accordance with manufacturer's instructions.

B. Attached panel brackets securely using anchor devices; anchors for urinal screens shall be set to ensure lateral loads are accommodated.

C. Provide adjustment for height variations with threaded rods through steel saddles. Conceal fastenings with pilaster shoes.

D. Equip each door with three hinges, one door latch, and one coat hook and bumper.

E. Hardware Adjustment: Adjust and lubricate hardware according to manufacturer's written instructions for proper operation. Set hinges on in-swinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on out-swinging doors and doors in entrance screens to return doors to fully closed position.

END OF SECTION 10155

SECTION 10520 – FIRE PROTECTION SPECIALTIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Portable fire extinguishers and mounting brackets for wall-hung fire extinguishers.

2. Fire-protection cabinets for the following:

a. Portable fire extinguishers.

3. Portable Fire Extinguishers.

4. Portable Fire Extinguishers Mounting Brackets.

5. AED Equipment Cabinet.

1.3 SUBMITIALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for fire-protection specialties.

1. Fire Extinguishers: Include rating and classification.
2. Cabinets: Include roughing-in dimensions, details showing mounting methods, relationships of box and trim to surrounding construction, door hardware, cabinet type, trim style, and panel style.

B. Operation and Maintenance Data: For fire extinguishers and cabinets to include in maintenance manuals.

C. Warranty: Sample of special warranty.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain fire extinguishers and cabinets through one source from a single manufacturer.

B. Size Limitations: Provide fire-protection cabinets having dimensions that match or are less than the width, depth and projection from wall dimensions of the specified cabinets.

C. NFPA Compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Standard for Portable Fire Extinguishers."

D. Fire Extinguishers: Listed and labeled for type, rating, and classification by an independent testing agency acceptable to authorities having jurisdiction.

E. Fire-Rated Fire-Protection Cabinets: Listed and labeled to comply with requirements of ASTM E 814 for fire-resistance rating of walls where they are installed.

1.5 COORDINATION

A. Coordinate size of fire protection cabinets to ensure that type and capacity of fire extinguishers indicated are accommodated.

B. Coordinate sizes and location of fire-protection cabinets with wall depths.

1.6 SEQUENCING

A. Apply labels/lettering on field-painted fire-protection cabinets after painting is complete.

1.7 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace fire extinguishers that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Failure of hydrostatic test according to NFPA 10.
b. Faulty operation of valves or release levers.

2. Warranty Period: Six years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 CABINET MATERIALS

A. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B.

B. Aluminum: Alloy and temper recommended by aluminum producer and manufacturer for type of use and finish indicated, and as follows:

1. Sheet: ASTM B 209.
2. Extruded Shapes: ASTM B 221.

C. Tempered Float Glass: ASTM C 1048, Kind FT, Condition A, Type I, Quality q3, 3 mm thick, Class 1 (clear).

2.2 MANUFACTURERS

A. Basis of Design: J. L. Industries model # C1027V10 or # FX C1027V10 (rated walls) semi recessed, powder coated-painted steel 1 and ½” radiused trim (white), contemporary vertical duo – door style, with clear tempered glass, and Futura

Embossed “Fire” Handle – Mill finish, with aluminum tub and integral lock, or approved equal by Architect. Furnish and install tamper resistant break away cables.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. J.L. Industries, Inc.
2. Larsen's Manufacturing Company.
3. Potter-Roemer; Div. of Smith Industries, Inc.

2.3 ACCESSORIES

A. Mounting Brackets: Manufacturer's standard steel, designed to secure extinguisher, of sizes required for types and capacities of extinguishers indicated, with plated or black baked-enamel finish.

1. Provide brackets for extinguishers not located in cabinets.
2. Break-Glass Strike: Manufacturer’s standard metal strike, complete with chain and mounting clip, secured to cabinet.
3. Lettered Door Handle: One-piece, cast-iron door handle with the word “FIRE” embossed into face.
4. Door Lock: Cylinder Lock, keyed alike to other cabinets and facility standard.
5. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate as indicated by Architect.
    a. Identify fire extinguisher in fire-protection cabinet with the words “FIRE EXTINGUISERS”.
        i. Location: Applied to cabinet door.
        ii. Application Process: Silk-screened.
        iii. Lettering Color: Red.
        iv. Orientation: Vertical.

2.4 CABINET FABRICATION

A. Non-rated Fire Protection Cabinets: Provide manufacturer's standard box (tub) with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated.

1. Weld joints and grind smooth.
2. Provide factory-drilled mounting holes.

B. Rated Fire Protection Cabinets (where mounted in rated walls): Provide manufacturer's standard box (tub) with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated.

1. Fire-Rated Cabinets: Construct fire-rated cabinets with double walls fabricated from 0.0428-inch thick, cold-rolled steel sheet lined with minimum 5/8 inch thick, fire-barrier material. Provide factory-drilled mounting holes.
2. Provide with rating to match wall rating within which cabinet is to be installed.

C. Cabinet Doors: Fabricate doors according to manufacturer's standards, from material indicated and coordinated with cabinet types and trim styles selected.

1. Fabricate door frames with tubular stiles and rails and hollow-metal design, minimum 1/2 inch thick.
2. Miter and weld perimeter door frames.
3. Continuous hinge.

D. Cabinet Trim: Fabricate cabinet trim in one piece with corners mitered, welded, and ground smooth.

2.5 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Finish fire protection cabinets after assembly.

D. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.6 STEEL FINISHES

A. Surface Preparation: Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No.1, "White Metal Blast Cleaning" or SSPCSP 8, "Pickling". After cleaning, apply a conversion coating suited to the organic coating to be applied over it.

B. Factory Prime chromate-free, pretreatment. Finish: Apply manufacturer's standard, fast-curing, lead- and universal primer immediately after surface preparation and

C. Baked-Enamel or Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of 2 mils.
1. Color and Gloss: Matte white.

2.7 AED CABINET

1. AED equipment and AED training provided by Owner.

2. Cabinet Type Basis of Design: JL Industries or Architect approved equal: Semi-recessed with 2 ½” rolled edge, powder coated aluminum - (white) – Model No. 1427F12.

2.8 PORTABLE FIRE EXTINGUISHERS

A. Manufacturers:

1. General Fire Extinguisher Corporation.
2. JL Industries, Inc.
3. Larsen’s Manufacturing Company.
4. Potter Roemer; Div. of Smith Industries, Inc.

B. General: Provide fire extinguishers of type, size, and capacity for each fire-protection cabinet and mounting bracket indicated.

1. Instruction Labels: Include pictorial marking system complying with NFPA 10, Appendix b and bar coding for documenting fire extinguisher location, inspections, maintenance, and recharging.

C. Regular Dry-Chemical Type in Steel Container: UL-rated, 10 B:C, 5-lb nominal capacity, with sodium bicarbonate-based dry chemical in enameled-steel container. Provide with recessed cabinets at locations shown on the drawings

D. Multipurpose Dry-Chemical Type in Steel Container: UL-rated 4-A:60-B:C, 10-lb nominal capacity, with monoammonium phosphate-based dry chemical in enameled-steel container. Provide (2) with bracket mounts to be used at non-public spaces such as mechanical equipment rooms.

E. Electrical and Server room extinguishers: JL Industries Halotron or approved equal: UL-rated A:B:C, 10-lb nominal capacity. Provide with bracket mounts.

2.9 MOUNTING BRACKETS

A. Manufacturers:

1. Amerex Corporation.
2. Ansul Incorporated.
3. Badger Fire Protection.
4. Buckeye Fire Equipment Company.
5. Fire End & Croker Corporation.
6. General Fire Extinguisher Corporation.
7. JL Industries, Inc.
8. Larsen’s Manufacturing Company.
9. Potter Roemer; Division of Smith Industries, Inc.

B. Mounting Brackets: Manufacturer’s standard galvanized steel, designed to secure fire extinguisher to wall or structure, of sizes required for types and capacities of fire extinguishers indicated, with plated or baked-enamel finish.
1. Color: Black.

C. Identification: Lettering complying with authorizes having jurisdiction for letter style, size, spacing, and location. Locate as indicated by Architect.

1. Identify bracket-mounted fire extinguishers with the words “FIRE EXTINGUISHER” in red letter decals applied to mounting surface.
a. Orientation: Vertical

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine roughing-in for hose valves and cabinets to verify actual locations of piping connections before cabinet installation.

B. Examine walls and partitions for suitable framing depth and blocking where recessed cabinets are to be installed.

1. Rated Partitions and Barriers: Examine to confirm construction meets rating requirements and is routed continuously "floor to ceiling." Notify Architect if partition/barrier rating will be compromised by cabinet installation.

C. Examine fire extinguishers for proper charging and tagging.

1. Remove and replace damaged, defective, or undercharged units.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare recesses for recessed fire protection cabinets as required by type and size of cabinet and trim style. Coordinate and verify depth of recess required during framing and rough in of walls.

3.3 INSTALLATION

A. General: Install fire protection cabinets and fire extinguishers in locations.

1. Comply with ADA Guidelines' "reach range" dimensions for maximum mounting heights of cabinets, extinguishers, and other emergency equipment.

2. Coordinate door handle height and cabinet mounting height where cabinets are mounted with non standard manufacture heights.

B. Fire Protection Cabinets: Fasten cabinets to structure and framing, square and plumb provide required blocking to support cabinet and fire extinguisher.

1. Unless otherwise indicated, provide recessed fire-protection cabinets. If wall thickness is not adequate for recessed, provide semi-recessed fire-protection cabinets.

2. Provide inside latch and lock for break-glass panels.

3. Fasten mounting brackets to inside surface of fire-protection cabinets, square and plumb.

C. Identification: Apply labels/lettering at locations indicated.

D. Examine walls and partitions for suitable framing depth and blocking where recessed cabinets will be installed.

E. Install fire-protection specialties in locations and at mounting heights indicated or, if not indicated, at heights acceptable to Authorities Having Jurisdiction.

3.4 ADJUSTING, CLEANING, AND PROTECTION

A. Remove temporary protective coverings and strippable films, if any, as fire protection cabinets are installed unless otherwise indicated in manufacturers written installation instructions.

B. Adjust fire protection cabinet doors to operate easily without binding.

C. On completion of fire protection cabinet installation, clean interior and exterior surfaces as recommended by manufacturer.

D. Touch up marred finishes, or replace fire protection cabinets that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by fire protection cabinet and mounting bracket manufacturers.

E. Replace fire protection cabinets that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 10520

SECTION 10801 – TOILET AND BATH ACCESSORIES

PART 1 - GENERAL

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Toilet and bath accessories.
2. Childcare accessories.
3. Under lavatory guards.
4. Custodial accessories.

B. Product Data: Include construction details, material descriptions and thicknesses, dimensions, profiles, fastening and mounting methods, specified options, and finishes for each type of accessory specified.

C. Related Sections:

1. Division 5 Section “Metal Fabrications” for corner guards.
2. Division 6 Section “Miscellaneous Carpentry” for wood blocking.
3. Division 8 Section “Mirrors” for frameless mirrors.
4. Division 9 Section "Ceramic Tile" for ceramic toilet and bath accessories.
5. Division 10 Section "Toilet Compartments" for plastic laminate units.
6. Division 16 Section “Interior Lighting” for lighting and electrical drawings at backlit mirrors.

1.3 QUALITY ASSURANCE

A. Product Options: Accessory requirements, including those for materials, finishes, dimensions, capacities, and performance, are established by specific products indicated in the Toilet and Bath Accessory Schedule.

1. Products of other manufacturers listed in Part 2 with equal characteristics, as judged by Architect and Owner, may be provided.
2. Do not modify aesthetic effects, as judged by Architect and Owner. Where modifications are proposed, submit comprehensive explanatory data to Architect and Owner for review.

1.4 SUBMITTALS

A. Product Data: For each type of product indicated. Include operating characteristics, dimensions of individual toilet and bath accessory, and finishes for each toilet and bath accessory.

B. Toilet and Bath Accessory Schedule: For toilet and bath accessories; use same designations indicated on Drawings or Schedule as specified.

C. Maintenance Data: For each product to include in maintenance manuals.

D. Warranties: Special warranties specified in this Section.

1.5 COORDINATION

A. Coordinate accessory locations with other work to prevent interference with clearances required for access by disabled persons, proper installation, adjustment, operation, cleaning, and servicing of accessories.

B. Deliver inserts and anchoring devices set into concrete or masonry as required to prevent delaying the Work.

C. Field verify depths of wall cavities, mounting heights, blocking requirements, locations do not interfere with door swings or use of accessory, etc. for all accessories.

1.6 WARRANTY

A. General Warranty: Special warranty specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

B. Manufacturer's Mirror Warranty: Written warranty, executed by mirror manufacturer agreeing to replace mirrors that develop visible silver spoilage defects within minimum warranty period indicated.

1. Minimum Warranty Period: 15 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide accessories by one of the following:

1. Toilet, Bath, and Custodial Accessories:

a. Basis-of-Design shall be Bobrick Washroom Equipment, Inc.
b. The following manufacturers shall be acceptable provided products meet or exceed the specified or scheduled accessories; and are approved by the Architect and Owner:

1) American Specialties, Inc.
2) Bradley Corporation.

3) GAMCO Specialty Accessories; a division of Bobrick Washroom Equipment, Inc.

2. Childcare Accessories:

a. Basis-of-Design shall be Koala Kare Products; a division of Bobrick Washroom Equipment, Inc.
b. The following manufacturers shall be acceptable provided products meet or exceed the specified or scheduled accessories; and are approved by the Design Build Architect:

1) American Specialties, Inc.
2) Diaper Deck & Company, Inc.
3) GAMCO Specialty Accessories; a division of Bobrick Washroom Equipment, Inc.

3. Bench Seat:

a. Basis-of Design shall be INVISIA ADA fold down shower seat - Brushed nickel.

b. No substitutions

B. Products: Subject to compliance with requirements, provide products indicated for each designation in the Toilet and Childcare Accessory Schedule at the end of Part 3 or equal approved by the Architect and Owner.

2.2 MATERIALS

A. Metals

1. Stainless Steel: ASTM A 666, Type 304, with No. 4 finish (satin), in 0.0312-inch minimum nominal thickness, unless otherwise indicated.
2. Galvanized Steel Sheet: ASTM A 653/A 653M, G60

B. Mirror Glass: ASTM C 1036, Type I, Class 1, Quality q2, nominal 6.0 mm thick, with silvering, electroplated copper coating, and protective organic coating complying with FS DD-M-411.

C. Accessories:

1. Galvanized Steel Mounting Devices: ASTM A 153/A 153M, hot-dip galvanized after fabrication.
2. Fasteners: Screws, bolts, and other devices of same material as accessory unit, tamper and theft resistant when exposed, and of galvanized steel when concealed.
3. Blocking: Fire retardant or galvanized metal blocking (12 GA) where scheduled or required to support accessory.

2.3 FABRICATION

A. General: One, maximum 1-1/2-inch diameter, unobtrusive stamped manufacturer logo, as approved by Architect, is permitted on exposed face of accessories. On interior surface not exposed to view or back surface of each accessory, provide printed, waterproof label or stamped nameplate indicating manufacturer's name and product model number.

B. Surface-Mounted Toilet Accessories: Unless otherwise indicated, fabricate units with tight seams and joints, and exposed edges rolled. Hang doors and access panels with continuous stainless-steel hinge. Provide concealed anchorage where possible.

C. Framed Glass-Mirror Units: Fabricate frames for glass-mirror units to accommodate glass edge protection material. Provide mirror backing and support system that permits rigid, tamper-resistant glass installation and prevents moisture accumulation.

1. Provide galvanized steel backing sheet, not less than 0.034 inchand full mirror size, with non-absorptive filler material. Corrugated cardboard is not an acceptable filler material.

D. Mirror-Unit Hangers: Provide mirror-unit mounting system that permits rigid, tamper- and theft-resistant installation, as follows:

1. Heavy-duty wall brackets of galvanized steel, equipped with concealed locking devices requiring a special tool to remove.

E. Keys: Provide universal keys for internal access to accessories for servicing and resupplying. Provide minimum of six keys to Owner's representative.

F. Toilet Paper Spindles/Dispensers: All Toilet paper dispensers shall be provided with spindles to accommodate coreless toilet paper rolls; 1-inch minimum diameter. Confirm size of spindle with the Airport prior to ordering materials. Provide left hand or right-hand dispensers depending on toilet configuration and orientation. Through partition units only serving one toilet compartment or stall shall be provided with a solid door panel on the adjacent stall, where no dispenser is required.

G. Paper Towel Dispensers/Guides: Shall be provided with custom plastic guide inserts to prevent multiple paper towel dispensing at each use. The paper towel and mirror units shall be back lit and custom fabricated to match the design and as shown or scheduled.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install accessories according to manufacturers' written instructions, using fasteners appropriate to substrate indicated and recommended by unit manufacturer. Install units level, plumb, and firmly anchored in locations and at heights indicated. Confirm clearances, wall depths, and blocking requirements prior to framing walls. Comply with FBC Accessibility mounting height and spacing requirements.

B. Furnish and install the left-hand toilet paper and toilet seat dispenser unit at left hand configured toilets and the right-hand unit at right hand configured toilets. Provide solid face doors at single-through wall-unit applications, where only one toilet compartment requires

a dispenser. The dispensers shall be flush with the partition at toilet stalls with grad bars. Ensure that the doors to service the units can open when installed and not in conflict with toilet fixtures.

C. Secure mirrors to walls in concealed, tamper-resistant manner with special hangers, toggle bolts, or screws. Set units level, plumb, and square at locations indicated, according to manufacturer's written instructions for substrate indicated.

D. Install grab bars to withstand a downward load of at least 250 lbf, when tested according to method in ASTM F 446. Install shower seats to withstand a downward load of at least 360 Lbs.

E. Under lavatory Guards: Where this designation is indicated at all exposed plumbing pipe locations and/or where needed to prevent direct contact with and burn from piping, provide under lavatory guards complying with the following:

1. Manufacturers: Available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   a. Plumberex Specialty Products, Inc.
   b. Truebro by IPS Corporation.

2. Description: Insulating pipe covering for supply and drain piping assemblies that prevent direct contact with and burns from piping; allow service access without removing coverings.
3. Material and Finish: Antimicrobial, molded plastic, white.
4. Refer to plumbing fixture schedule for sinks with ceramic or porcelain shrouds.

3.2 ADJUSTING AND CLEANING

A. Adjust accessories for unencumbered, smooth operation and verify that mechanisms function properly. Replace damaged or defective items.

B. Remove temporary labels and protective coatings.

C. Clean and polish exposed surfaces according to manufacturer's written recommendations.

3.3 TOILET AND BATH ACCESSORY SCHEDULE

A. **Back Lit Mirror:** (**A01)** provide A02 mirror unit (at all sinks) complying with the following:

1. Products: Available products include the following:

   a. Manufacturer: Bobrick Washroom Equipment, Inc./GAMCO
   b. Product: Backlit mirror with custom (mirror size 18” wide by 37” high) framed-hinged mirror, with custom integral “C” fold-paper towel dispenser and towel mate (262-130) paper dispenser guide.

B. **ADA Sink Mirror: (A02)**

1. Products: Available products to include the following:
   a. Manufacturer: Bobrick (B290 Series)
   b. Product: Surface mounted mirror (mirror size 18” wide by 46” high) framed mirror; align top and bottom with counter mirrors.
   c. Stainless Steel, Welded-frame Mirror: Fabricate frame from stainless-steel angles in manufacturer's standard satin finish with corners welded, edge ground and polished smooth.

C. **Full Height Mirror: (A03)**

1. Products: Available products include the following:
   a. Manufacturer: Bobrick, (B290 Series)
   b. Full height mirror (2’6” x 6’10”) as shown on the drawings, with stainless steel trim.
   c. Stainless Steel, Welded-frame Mirror: Fabricate frame from stainless-steel angles in manufacturer's standard satin finish with corners welded, edge ground and polished smooth.

D. **Sloan Soap Dispenser:** (**A04),** mount at ADA sink and counter sinks (typ).

1. Products: Available products include the following:
   a. Manufacturer: Sloan.
   b. Product: Sloan model SJS-1750.

E. **Countertop:** (**A05),** Solid surface countertop.

1. Products: Quartz Solid Surface Countertop.

F. **Through Counter Trim/ Waste Chute: (A06)**

1. Products: Quartz Solid Surface to match the Countertop.

G. **Robe Hook:** (**A07) (Double Hook)**:

1. Products: Available products include the following:
   a. Manufacturer: Jacknob
   b. Product: model 4290
2. Concealed fasteners; stainless steel

H. **Toilet Partition:** (**A08)**

1. Products: Plastic Laminate with marine grade plywood core, reference Toilet Compartment Specifications:

I. **ADA Toilet Partition Door Bumper: (A09)**

1. Products: Available products include the following:
   a. Manufacturer: Jacknob
   b. Product: Model 4151; stainless steel.
2. Mount at top and bottom of the door; (2) two per door.

J. **Coat Hook and Door Bumper:** (**A10)**, provide coat hook with bumper (at restroom toilet stalls and ADA accessible restrooms) complying with the following:

1. Products: Available products include the following:
   a. Manufacturer: Jacknob
   b. Product: Model 4003
2. Description: Surface-mounted stainless-steel hook and bumper to partition at all toilet stalls and ADA stall; do not mount to door.
3. Materials and Finish: Stainless steel with satin finish.

K. **Urinal Screen Bracket: (A011)**

1. Products: Available products include the following:
   a. Manufacturer: Jacknob
   b. Product: Model 2369; stainless steel
2. Full length of urinal screen; provide treated wood blackening concealed within the wall

L. **Grab Bars: (A12 – 36", A13 – 42" & A25 @ ADA Shower)** provide grab bar (at all accessible toilet stalls, showers, and restrooms) complying with FBC accessibility code and with the following:

1. Products: Available products include the following:
   a. Manufacturer: Bobrick
   b. Product: Model B-6806 Series (by bar length – 36 INCH and 42 INCH) Grab Bar. (A12 & A13)
   c. Toilet Compartment grab bars complying with FBC.
   d. Style and Length
      1) Provide 42" long horizontal and 36" long grab bars at ADA toilets
      2) Provide both horizontal and vertical bars in conformance with ANSI A117.1, 604.5.
      3) At ADA Showers provide horizontal "L" Shaped bars B-58616 (32" x 24") (A25); short leg at back of wall of transfer shower; provide vertical grab bar B5806 x 36" where required by code.
2. Stainless-Steel Nominal Thickness: Minimum .047244 inches.
3. Mounting: Concealed with manufacturer's standard flanges and anchors.
4. Gripping Surfaces: Manufacturer's standard slip-resistant texture.
5. Outside Diameter: 1-1/2 inches for heavy-duty applications.
6. Length: As indicated in Toilet Accessory Schedule on Drawings.
7. Blocking: Fire retardant wood or heavy ga (12 GA) galvanized steel.

M. **Toilet Paper and Seat Cover Dispenser:** (**A14)**, provide recessed dispenser (at wall locations) complying with the following:

1. Products: Available products include the following:
   a. Manufacturer: Bobrick
   b. Product: Model B-347/B-3574 Stainless Steel Toilet Seat Cover Dispenser. Provide napkin disposal for women's restroom.
2. Description: Partition Surface Mounting. Recessed Wall Mounted.
3. Minimum Capacity: 250.

4. Material and Finish: Stainless steel, No. 4 finish (satin).
5. Mounting height: 48” max AFF mounting height. ADA stalls require accessible clear floor area. Do not obstruct required grab bar clearances.
6. Description: Roll-in-reserve dispenser with a flush tumbler lockset.
7. Operation: Spindles (2) – heavy-duty, 1” diameter for coreless toilet paper one-piece, molded ABS. Theft-resistant. Retained in dispensing mechanism when door is locked.
8. Capacity: Unit holds two standard toilet tissue rolls up to 5-1/4” diameter.
9. Provide left- or right-handed unit based on orientation and mount to tissue paper holder close to toilet per FBC requirements.

N. **Toilet Paper and Seat Cover Dispenser: (A15)** Provide toilet partition mounted complying with the following:

1. Products: Available products include the following:
   a. Manufacturer: Bobrick
   b. Product: Model B-357/B-3571 Stainless Steel Toilet Seat Cover Dispenser. Provide napkin disposal for women’s restroom.
2. Description: Partition Surface Mounting. Recessed Wall Mounted.
3. Minimum Capacity: 250.
4. Material and Finish: Stainless steel, No. 4 finish (satin).
5. Mounting height: 48” max AFF mounting height. ADA stalls require accessible clear floor area. Do not obstruct required grab bar clearances.
6. Description: Roll-in-reserve dispenser with a flush tumbler lockset.
7. Operation: Spindles (2) – heavy-duty, 1” diameter for coreless toilet paper one-piece, molded ABS. Theft-resistant. Retained in dispensing mechanism when door is locked.
8. Capacity: Unit holds two standard toilet tissue rolls up to 5-1/4” diameter.
9. Provide left- or right-handed unit based on orientation and mount to tissue paper holder close to toilet per FBC requirements.
10. Provide back to back unites where possible, and single faced units when no framed walls are available.

O. **Diaper-Changing Station:** (**A16)** Provide diaper-changing station (Public ADA accessible toilets) complying with the following:

1. Products: Available products include the following:
   a. Manufacturer: Koala Kare Products; a division of Bobrick Washroom Equipment, Inc.
   b. Product: Model K110-SSRE Horizontal Recessed-Mounted Stainless-Steel Finish Baby Changing Station.

2. Description: Horizontal unit that opens by folding down from stored position and with child-protection strap.
3. Mounting: Recessed mounted, flush with wall when closed.
4. Operation: By pneumatic shock-absorbing mechanism.
5. Material and Finish: Stainless steel, No. 4 finish (satin), exterior shell with rounded plastic corners; HDPE interior in manufacturer's standard color.
6. Liner Dispenser: Built in.
7. Comply with all ADA accessibility clearance and approach requirements.
8. Cover all mounting holes not used for installation

P. **Sanitary Napkin Vendor:** (**A17)** Provide sanitary napkin vendor (at all women's restrooms) complying with the following:

1. Products: Available products include the following:
   a. Manufacturer: Bobrick Washroom Equipment, Inc.
   b. Product: Model B47063 Fully Recessed Napkin/Tampon Vendor. ADA compliant with push button operation.
2. Mounting: Fully recessed.
3. Operation: 50 cents charge; to be confirmed with Owner
4. Exposed Material and Finish: Stainless steel, No. 4 finish (satin).
5. Lockset: Tumbler type with separate lock and key for coin box.
6. Refill: Top fill.

Q. **Combination Recessed Towel Dispenser / Waste Receptacle:** (**A018),** provide combination paper towel dispenser/waste receptacle complying with the following:

1. Products: Available products include the following:
   a. Manufacturer: Bobrick Washroom Equipment, Inc.
   b. Product: Model B-3940/367-60 (12 Gallon Bin) Recessed Paper Towel Dispenser and Waste Receptacle.
2. Mounting: Recessed.
3. Minimum Towel-Dispenser Capacity: 600 C-fold, 800 multifold, or 1100 single fold paper towels.
4. Minimum Waste-Receptacle Capacity: 12 gal.
5. Material and Finish: Stainless steel, No. 4 finish (satin).
6. Waste-Container: Removable, leakproof, rigid molded plastic.
7. Lockset: Tumbler type for towel-dispenser compartment and waste receptacle.

R. **Utility Shelf with Mop and Broom Holders:** (**A19),** provide utility shelf with mop and broom holder (at all janitor's closets with a mop sink) complying with the following:

1. Products: Available products include the following:
   a. Manufacturer: Bobrick Washroom Equipment, Inc.
   b. Product: Model B-224x36 Utility Shelf with Mop/Broom Holders and Rag Hooks.

2. Description: Unit with shelf, hooks, holders, and rod suspended beneath shelf.
3. Length: 36 inches.
4. Hooks: Three.

S. **Chemical Dispenser:** (**A20)**

1. Provided by Owner's maintenance vendor.
2. Provide water hood-up to chemical dispenser
3. Mount over mop sink

T. **Corner Guard: (A21)**

1. Products: Refer to metal fabrications for additional information
2. Full height (U.N.O.), stainless steel 1½" x 1½"- "L" shaped

U. **Under Counter Waste Receptacle:** (**A22),** provide waste receptacle (at all restrooms with sinks) complying with the following:

1. Products: Available products include the following:

   a. Manufacturer: Bobrick Washroom Equipment, Inc.
   b. Product: Model B2260 – 13-gallon capacity, 22-inch-tall stainless steel; open top trash receptacle.

V. **Tens-A-Barrier:** (**A23),** provide complying with the following:

1. Products: Available products include the following:
   a. Manufacturer: Tensabarrier.
   b. Product: Model 896CM Concealed Wall Mini Mount.
2. Mounting: Surface mounted.
3. Exposed Material and Finish: Black and stainless steel, No. 4 finish (satin).

W. **Folding Shower Seat:** (**A24)**, provide folding shower seat (at all transfer showers) complying with the following:

1. Products: Available products include the following:
   a. Manufacturer: Bobrick
   b. Product: Model B5181
2. Configuration: L-shaped seat.
3. Mounting: Wall mounted.
4. Finish: Solid surface seat aluminum frame (brushed).
5. Blocking: Fire Treated Wood or Galvanized Steel (12 GA) blocking concealed within wall.
6. Mount at ht. required by ADA regulations and seal all through wall fasteners

X. **Shower Curtain and Rod:** (**A26)**

1. Products: Available products include the following:
   a. Manufacturer:
   b. Product: Model B-207; including opaque shower curtain and shower curtain hooks
2. Finish: Stainless steel (satin).

Y. **Recessed Soap Shelf: (A27)**

1. Products: Refer to the tile specifications
2. Provide 2 per shower

Z. **Purse Pouch:** (**A29),** provide sanitary napkin vendor (at all women's restrooms) complying with the following:

1. Products: Available products include the following:
   a. Manufacturer: Jacknob
   b. Product: model 110300
2. Concealed fasteners; stainless steel; mount near each toilet.

AA. **Hand Sanitizers:** (**A30)**

1. Provided by Owner installed by General Contractor to meet ADA requirements; align with top of light switch.

END OF SECTION 10801

SECTION 11132 – PROJECTION SCREENS

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Electrically operated, ceiling recessed, front projection screens.

1.2 RELATED SECTIONS

A. Section 05500 - Metal Fabrications: Suspension systems for projection screens and / or projector lifts and mounts.

B. Section 09260 - Ceiling Suspension System: Supports and trim for suspended ceilings; Gypsum Board Assemblies: Ceiling for recessed screen installation.

1.3 ACTION SUBMITTALS

A. Submit under provisions of Section 01330 “Submittal procedures.”

B. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Installation methods.

C. Wiring diagram for electrically operated units.

D. Shop Drawings: Shop drawings showing layout and types of projection screens. Show the following:
   1. Location of screen centerline.
   2. Location of wiring connections.
   3. Seams in viewing surfaces.
   4. Detailed drawings for concealed mounting.
   5. Connections to suspension systems.
   6. Anchorage details.
   7. Accessories.
   8. Frame details.

E. Selection Samples: For each finish product specified, two complete sets of color chips representing manufacturer's full range of available colors and patterns.

F. Verification Samples: For each finish product specified, two samples, minimum size 6 inches (150 mm) square, representing actual product, color, and patterns.

1.4 QUALITY ASSURANCE

A. Single Source Responsibility: Obtain each type of projection screen required from a

single manufacturer as a complete unit, including necessary mounting hardware and accessories.

B. Coordination of Work: Coordinate layout and installation of projection screens with other construction supported by, or penetrating through, ceilings, including light fixtures, HVAC equipment, fire-suppression system, and partitions.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver projection screens until building is enclosed and other construction where screens will be installed is substantially complete.

B. Store products in manufacturer's unopened packaging until ready for installation.

C. Protect screens from damage during delivery, handling, storage, and installation.

1.6 COORDINATION

A. Coordinate work with installation of ceilings, walls, electric service power characteristics, and location.

1.7 CLOSEOUT SUBMITTALS

A. Refer to Section 01770 “Closeout Procedures.”

B. Maintenance data.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Draper, Inc., or Architect approved equal, located at: 411 S. Pearl P. O. Box 425 ; Spiceland, IN 47385-0425; Toll Free Tel: 800-238-7999; Tel: 765-987-7999; Fax: 866-637-5611; Email: request info (drapercontract@draperinc.com); Web: www.draperinc.com

B. Requests for substitutions will be considered in accordance with provisions of Section 01600.

2.2 MOTORIZED, CEILING RECESSED, FRONT PROJECTION SCREENS

A. Draper Signature/Series E: Electric motor operated, extruded aluminum case, independently motorized closure. Extruded aluminum case, finished white. UL approved "Suitable for use in environmental air space." Case size 9-3/4 inches (248 mm) deep and 9-1/8 inches (232 mm) wide for screen sizes through 144 inches wide; 11 inches (279 mm) x 9-1/8 inches (232 mm) for larger screen sizes. Bottom of case fully enclosed by aluminum panels and motorized aluminum trap door with

concealed hinges. Trap door supported entirely along front and back edges without crack around perimeter of door. Trap door opens into case when screen is lowered. Closure panels screw-attached to case and may be removed manually for access to roller and drive assembly. Case shall have white finish.

1. Motor mounted inside screen roller on rubber isolation insulators. Motor UL certified, rated 110-120V AC, 60 Hz, three wire, instantly reversible, lifetime lubricated with pre-set accessible limit switches. Motor with overload protection and electric brake.

2. Motor Screen Controls, UL certified.

    a. Low voltage control unit with three button 24V switches and cover plate to stop or reverse screen at any point. Provide @ 2 locations & coordinate with the projector lift controls; interface the controls to operate together with pre-set stop points for projector lift. Provide infrared wireless controller for remote operation.

3. Projection Viewing Surface:

    a. Matt white, washable surface. For use with any type projector where light can be controlled. GREENGUARD certified.

4. Viewing Area H x W.

    a. Video Format (16:10). Black masking borders standard.

        1) 137 inch diagonal, 72 ½” high x 116” wide.

5. Provide an extra screen drop with an overall screen drop of 12 inches with a black masking top border.

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. Verify rough-in openings are properly prepared.

C. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for

achieving the best result for the substrate under the project conditions.

3.3 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install front projection screens with screen cases in position and relationship to adjoining construction as indicated, securely anchored to supporting substrate, and in manner that produces a smoothly operating screen with plumb and straight vertical edges and plumb and flat viewing surfaces when screen is lowered.

C. Test electrically operated units to verify that screen, controls, limit switches, closure and other operating components are in optimum functioning condition.

3.4 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION 11132

SECTION 11451 - APPLIANCES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Cooking appliances including:
    a. Microwave / Vent.

2. Refrigerator/freezers/refrigerators with ice maker and water dispenser.
3. Cleaning appliances:
    a. Disposal.
    b. Dishwasher.

B. Related Sections include the following:

1. Division 6 Section "Interior Architectural Woodwork" for custom-made cabinets and solid-surfacing-material countertops that receive appliances.
2. Division 15 and 16 Sections for services and connections to appliances.
3. Appendix B – Owner furnished furniture, fixtures, and equipment.

C. FBO warming and refrigerated cabinet appliances shall be provided by the Owner. Receiving, coordination, rough-in, hook-up and installation of the appliances shall be by the Contractor.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated. Include operating characteristics, dimensions of individual appliances, and finishes for each appliance. Energy star rating where available. Shall be provided directly by the appliance manufacturer and not the installation contractor.

B. Appliance Schedule: For appliances; use same designations indicated on Drawings or Schedule as specified. Shall be provided directly by the appliance manufacturer and not the installation contractor.

C. Manufacturer Certificates: Signed by manufacturers certifying that products comply with requirements and are energy star compliant. Provide energy ratings where available and specified. Provide documentation for local utility rebate to be pursued by the Owner.

Product certifications shall be provided directly by the appliance manufacturer and not the installation contractor.

D. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for each product. Product certifications shall be provided directly by the appliance manufacturer and not the installation contractor.

E. Maintenance Data: For each product to include in maintenance manuals. Product certifications shall be provided directly by the appliance manufacturer and not the installation contractor.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: An employer of workers trained and approved by manufacturer for installation and maintenance of units required for this Project.

B. Product Options: Information on Drawings and in Specifications establishes requirements for product's aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods including preconstruction testing, field testing, and in-service performance.

C. Energy Ratings: Provide appliances that carry labels indicating energy-cost analysis (estimated annual operating costs) and efficiency information as required by the FTC Appliance Labeling Rule. Product certifications shall be provided directly by the appliance manufacturer and not the installation contractor.

D. Pre-installation Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Project Management and Coordination."

1.5 WARRANTY

A. Special Warranties: Manufacturer's standard form in which manufacturer of each appliance specified agrees to repair or replace residential appliances or components that fail in materials or workmanship within specified warranty period.

1. Refrigerator/Freezer: Five-year limited warranty for in-home service on the sealed refrigeration system.

B. Warranties for products shall be provided directly by the appliance manufacturer and not the installation contractor.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:

1. Basis-of-Design Product: The design for each residential appliance is based on the product named. Subject to compliance with requirements, provide either the named product or a comparable product by one of the other manufacturers specified.

2.2 REFRIGERATION APPLIANCES

A. Refrigerator/Freezer:

1. Basis-of-Design Product: General Electric Company; Side-By-Side Refrigerator with Ice & Water Dispenser Model# GSS25LSL, energy star compliant, or a comparable product by one of the following:

a. Whirlpool

2. Provide valved water supply and connecting flexible piping to ice maker and chilled water.

B. Dishwasher:

1. Basis-of-Design Product: Bosch 300 Series – 18” Stainless Steel Dishwasher, or Architect and Owner approved equal.

C. Under Counter Refrigerator:

1. Basis-of-Design Product: U-Line; Model number 2224R-GL-INT-OOB, 2000 Series, under counter refrigerator with tempered glass door with integrated wood frame, 4.9 Cu. Ft., digital touch pad controls, (3) three adjustable tempered glass shelves and internal LED lighting.

2.3 CLEANING APPLIANCES

A. Disposal:

1. Basis-of-Design Product: General Electric Company; 3/4 Horsepower Continuous Feed Disposer Model# GFC720V:

a. Badger

b. Salvajor

2.4 COOKING APPLIANCES

A. Micro-wave (Counter Mounted &-Stacked- Units, as indicated on the drawings:

1. Basis-of-Design Product: General Electric Company; 2.2 CU. FT. Countertop Sensor Micro-Wave Oven PES7227SLSS:

B. Coffee Maker-By Owner

2.5 FINISHES, GENERAL

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.

B. Examine roughing-in for piping systems to verify actual locations of piping connections before equipment installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. General: Comply with manufacturer's written instructions.

B. Built-in Equipment: Securely anchor units to supporting cabinets or countertops with concealed fasteners. Verify that clearances are adequate for proper functioning and rough openings are completely concealed.

C. Freestanding Equipment: Place units in final locations after finishes have been completed in each area. Verify that clearances are adequate to properly operate equipment.

D. Utilities: Refer to Divisions 15 and 16 for plumbing, mechanical, and electrical requirements.

3.3 CLEANING AND PROTECTION

A. Test each item of appliances to verify proper operation. Make necessary adjustments.

B. Verify that accessories required have been furnished and installed.

C. Remove packing material from appliances and leave units in clean condition, ready for operation.

3.4 DEMONSTRATION

A. The manufacturer shall provide a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain appliances. Refer to Division 1 Section "Demonstration and Training."

END OF SECTION 11451

SECTION 12481 – WALK OFF ENTRANCE GRILLE & MATTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Aluminum framed walk off grilles and carpeted matts at the entrances to the building.

1.3 REFERENCES

A. ASTM B 221-93 Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Shapes, and Tubes
B. ASTM A 276-92 Standard Specification for Stainless and Heat-Resisting Steel Bars and Shapes.
C. AAMA 606.1 Voluntary Guide Specifications and Inspection Methods for Integral Color Anodic Finishes for Architectural Aluminum
D. AAMA 607.1 Voluntary Guide Specifications and Inspection Methods for Clear Anodic Finishes for Architectural Aluminum.

1.4 COORDINATION

A. Coordinate size and location of recesses in concrete to receive floor grilles and frames.

1.5 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Show fabrication and installation details for horizontal louver blinds based on field verified window opening dimensions.

C. Samples for Verification: For each type and color of horizontal louver blind indicated.

1. Color samples; 12’ x 12”.

2. Perimeter trim samples and grille samples; 12” x 12”.

D. Product Certificates: For each type of grille or matt, signed by product manufacturer.

E. Maintenance Data: For grilles and matts to include in maintenance instructions.

1.6 QUALITY ASSURANCE

A. Source Limitations: Obtain grilles and matts through one source from a single manufacturer.

B. Fire-Test-Response Characteristics: Provide horizontal louver blinds with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify materials with appropriate markings of applicable testing and inspecting agency.

1. Flame-Resistance Ratings: Passes NFPA 701.

C. Product Standard: Provide horizontal louver blinds complying with WCSC A 100.1.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver horizontal louver blinds in factory packages, marked with manufacturer and product name, lead-free designation, and location of installation using same designations indicated on Drawings and in a window treatment schedule.

1.8 PROJECT CONDITIONS

A. Environmental Limitations: Do not grille and matts until construction and wet and dirty finish work in spaces, including painting, is complete. For interior matts finishes and exterior work should be completed, and the building should be dry and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

B. Field Measurements: Where grilles and matts are indicated to be recessed and fit to other construction, verify dimensions of other construction by field measurement and layout confirmation before fabrication and indicate measurements on Shop Drawings. Allow clearances for operable glazed units' operation hardware throughout the entire operating range. Notify Architect of discrepancies. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.9 FIELD CONDITIONS

A. Field Measurements: Indicate measurements on Shop Drawings.

1.10 WARRANTY

A. Provide manufacturer's written warranty.

B. Warrant materials and fabrication against defects after completion and final acceptance of Work.

C. Repair defects, or replace with new materials, faulty materials or fabrication developed during the warranty period at no expense to Owner.

PART 2 - PRODUCTS

2.1 Accessibility Standard:

A. Comply with applicable provisions in [the DOJ's "2010 ADA Standards for Accessible Design"] [and] [ICC A117.1] <Insert regulation>.

2.2 ACCEPTABLE MANUFACTURERS

A. Rigid Floor Grille: 100 percent recycled, nylon-reinforced, buffed-carpet tread strips, alternating with mill finish aluminum divider-bars, 3/4 inches high, with perimeter aluminum trim square edge trim angle, and rubber edge strip at both edges in path of travel,. Model number RGR34. Manufactures full range of color selection.

1. Basis-of-Design Product: American Floor Matts; www. Americanflormatts.com, or Architect approved equal.
2. Rolling Load: 1000 lb. per wheel.
3. Tread Inserts: 100 percent recycled, nylon-reinforced buffed rubber with minimum 59 percent postconsumer and 22 percent pre-consumer recycled content, mechanically secured to tread rails.
4. Colors, Textures, and Patterns of Inserts: Manufacture’s full color range.
5. Rail Color: Mill finish aluminum.

B. Floor Matts: American Floor Matts RCRDGRM, or Architect approved equal, 9/16-inch-thick, Specialized Nylon Roll Goods: 100 percent Premium Polyamide Nylon Fiber (6.6) with Polypropylene base grid as follows:

1. Carpet Ridge: 9/16-inch-thick with high density anti-slip rubber backing, 103 oz/sq.yd. Color to be selected from manufacture’s full range of colors selected by the Architect from full range of manufacture’s colors.

2.. Options & Accessories:

a. Ultra Flex Premium Sewn-on Nosing

b. Adhesive for Mounting: Multi-Bond Adhesive as recommended by manufacturer

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, operational clearances, and other conditions affecting performance.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install grilles and matts level and flush with adjoining surfaces according to manufacturer's written instructions; level substrate as required to ensure that there is no lippage at the perimeter of the grille or mat.

3.3 ADJUSTING & CLEANING

A. Adjust top surface of assembly to be flush with adjacent finishes.

B. Coordinate top of surfaces with doors that swing across surface to provide adequate under door clearance.

C. Clean dirt and debris from frame recess before installing floor system.

3.4 PROTECTION & REPAIR

A. Replace materials that cannot be repaired, in a manner approved by Architect, before time of Substantial Completion

B. Upon completion of frame installations, provide temporary filler of plywood or fiberboard in grille recesses, and cover frames with plywood protective flooring. Maintain protection until construction traffic has ended and Project is near time of Substantial Completion.

C. Install product when no further wheeled construction traffic will occur and wet type operations including painting and decorating are com

END OF SECTION 12481

SECTION 12491 - HORIZONTAL LOUVER BLINDS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Horizontal louver blinds with aluminum slats to match the Airport Administration Office, the Lobby store front windows will not need blinds.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Show fabrication and installation details for horizontal louver blinds based on field verified window opening dimensions.

C. Samples for Verification: For each type and color of horizontal louver blind indicated.

1. Slat: Not less than 12 inches long, color to be selected by Architect from manufacturers full range of colors and finishes.

2. Color samples.

D. Window Treatment Schedule: For horizontal louver blinds. Use same designations indicated on Drawings.

E. Product Certificates: For each type of horizontal louver blind, signed by product manufacturer.

F. Maintenance Data: For horizontal louver blinds to include in maintenance manuals.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain horizontal louver blinds through one source from a single manufacturer.

B. Fire-Test-Response Characteristics: Provide horizontal louver blinds with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to

authorities having jurisdiction. Identify materials with appropriate markings of applicable testing and inspecting agency.

1. Flame-Resistance Ratings: Passes NFPA 701.

C. Product Standard: Provide horizontal louver blinds complying with WCSC A 100.1.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver horizontal louver blinds in factory packages, marked with manufacturer and product name, lead-free designation, and location of installation using same designations indicated on Drawings and in a window treatment schedule.

1.6 PROJECT CONDITIONS

A. Environmental Limitations: Do not install horizontal louver blinds until construction and wet and dirty finish work in spaces, including painting, is complete and dry and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

B. Field Measurements: Where horizontal louver blinds are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Allow clearances for operable glazed units' operation hardware throughout the entire operating range. Notify Architect of discrepancies. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.7 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Horizontal Louver Blinds: Before installation begins, for each size, color, texture, pattern, and gloss indicated, full-size units equal to 5 percent of amount installed, but no fewer than 4 units.

PART 2 - PRODUCTS

2.1 HORIZONTAL LOUVER BLINDS, ALUMINUM SLATS

A. Products: Subject to compliance with requirements, provide one of the following:

1. Hunter Douglas; Décor.
2. Levolor, a Newell Rubbermaid Company; Riviera.
3. Springs Window Fashions Division, Inc.; Graber; Performance Series.

B. Slats: Aluminum; alloy and temper recommended by producer for type of use and finish indicated; with crowned profile and radiused corners.

1. Width: 1 inch.

a. Spacing: Manufacturers Standard.

2. Thickness: Manufacturer's standard.
3. Finish: One color.

a. Ionized Coating: Antistatic, dust-repellent, baked polyester finish.

C. Headrail: Formed steel or extruded aluminum; long edges returned or rolled; fully enclosing operating mechanisms on three sides and end plugs and the following:

1. Capacity: One blind per headrail.
2. Light-blocking lower back lip.

D. Bottom Rail: Formed-steel or extruded-aluminum tube, with plastic or metal capped ends top contoured to match crowned shape of slat and bottom contoured for minimizing light gaps; with enclosed ladders and tapes to prevent contact with sill.

E. Ladders: Evenly spaced to prevent long-term slat sag.

1. For Blinds with Nominal Slat Width 1 Inch or Less: Braided string.

F. Lift Cords: Manufacturer's standard.

G. Tilt Control: Enclosed worm-gear mechanism, slip clutch or detachable wand preventing overrotation, and linkage rod, and the following:

1. Tilt Operation: Manual with clear plastic wand.
2. Length of Tilt Control: Length required to make operation convenient from floor level.
3. Tilt: Full.

H. Lift Operation: Manual, top-locking cord lock; locks pull cord to stop blind in either fully opened or fully closed position only and is equipped with a ring pull not more than 4 inches long.

I. Valance: Two slats.

1. Finish Color Characteristics: Match color, texture, pattern, and gloss of slats.

J. Mounting: Ceiling mounting, permitting easy removal and replacement without damaging blind or adjacent surfaces and finishes; with spacers and shims required for blind placement and alignment indicated.

1. Provide intermediate support brackets if end support spacing exceeds spacing recommended by manufacturer for weight and size of blind.

K. Colors, Textures, Patterns, and Gloss: As selected by Architect from manufacturer's full range.

2.2 HORIZONTAL LOUVER BLIND FABRICATION

A. Concealed Components: Noncorrodible or corrosion-resistant-coated materials.

1. Lift-and-Tilt Mechanisms: With permanently lubricated moving parts.

B. Unit Sizes: Obtain units fabricated in sizes to fill window and other openings as follows, measured at 74 deg F :

1. Blind Units Installed outside Jambs: Width and length as indicated, with terminations between blinds of end-to-end installations at centerlines of mullion or other defined vertical separations between openings.

C. Installation Brackets: Designed for easy removal and reinstallation of blind, for supporting headrail, valance, and operating hardware, and for hardware position and blind mounting method indicated.

D. Installation Fasteners: No fewer than two fasteners per bracket, fabricated from metal noncorrosive to blind hardware and adjoining construction; type designed for securing to supporting substrate; and supporting blinds and accessories under conditions of normal use.

E. Color-Coated Finish:

1. Metal: For components exposed to view, apply manufacturer's standard baked finish complying with manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness.

F. Component Color: Provide rails, cords, ladders, and exposed-to-view metal and plastic matching or coordinating with slat color, unless otherwise indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, operational clearances, and other conditions affecting performance.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install horizontal louver blinds level and plumb and aligned with adjacent units according to manufacturer's written instructions, and located so exterior slat edges in any position are not closer than 2 inches to interior face of glass. Install intermediate support as required to prevent deflection in headrail. Allow clearances between adjacent blinds and for operating glazed opening's operation hardware if any.

B. Head Mounted: Install headrail on face of opening head.

3.3 ADJUSTING

A. Adjust horizontal louver blinds to operate smoothly, easily, safely, and free of binding or malfunction throughout entire operational range.

3.4 CLEANING AND PROTECTION

A. Clean horizontal louver blind surfaces after installation, according to manufacturer's written instructions.

B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer that ensure that horizontal louver blinds are without damage or deterioration at time of Substantial Completion.

C. Replace damaged horizontal louver blinds that cannot be repaired, in a manner approved by Architect, before time of Substantial Completion.

END OF SECTION 12491

SECTION 12615 – PUBLIC SEATING

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes Lounge Chair Seating with side tables; SYNK2 with side tables including power and USB charging stations for airport terminals, as the Basis of Design. The seating for this project will be provided as part of an allowance.

1.3 RELATED SECTIONS

A. Division 09680 Carpet for coordination and sequencing of work. Division 16 Electrical for wiring and connection of power charging stations.

1.4 SUBMITTALS

A. Product Data: For each seating module and table module indicated, and power poles for charging stations.

B. Installation Drawings: Layout plans and system details showing seating layout, chair widths, table widths and locations.

C. Samples: Prepare samples from the same material to be used for the work.

D. Maintenance data.

E. Graphics for power pole – charging stations.

1.5 QUALITY ASSURANCE

A. Upholstery Vinyl Source Limitations: Obtain vinyl of a single dye lot for each color required.

B. Bidder Qualifications: The successful bidder shall be authorized to distribute the specified seating. These dealerships shall be contractually committed to meet the manufacture’s quality standards both in distribution and installation services.

C. The authorized dealer must have written evidence to support the mutually agreed upon Dealer Agreement. This agreement contains both dealer and manufacturer

obligations for servicing and installation. Dealers are also required to maintain a reputation for high quality service, consultative selling, and business integrity and to render prompt and courteous service with respect to every product in this contract.

D. Selected dealer shall provide an installation staff authorized to install, service and provide expertise to manage the warranties associated with the specified seating product.

1.6 WARRANTY

A. General Warranty: Provide manufacturers standard warranty against defects in materials and workmanship for a period as specified below. Any defects or failure, expecting ordinary wear and tear, shall be repaired or replaced by the Manufacturer and or Dealership promptly upon receipt of written notice from the Owner. Warranty shall cover all shipping, taxes, materials and labor.

1. Warranty Period
   a. Upholstery: 12 years from date of manufacture
   b. Frame 12 years from date of manufacture
   c. Arms: 12 years from date of manufacture
   d. Tables 12 years from date of manufacture

1.7 SUBMITTALS

A. Samples of all fabric, hardware, metal and laminate for verification and acceptance of the materials to be provided.

B. Seating layout showing existing chairs and tables, new chairs and tables for the Lobby area. The chairs shall be installed after finish is completed.

PART 2 – PRODUCTS

2.1 PUBLIC SEATING

A. Basis of Design – Lounge Chair Synk2 with custom laminate side tables including power and USB charging stations at the fac of the side table.

PART 3 – EXECUTION

3.1 INSTALLATION

A. Install seats and tables level and plumb-ganged seats must be assembled at the factory.

B. Repair minor abrasions and imperfections in finishes as suggested by manufactured instructions.

C. Replace seat and back vinyl damaged during installation. Do not use Owner's extra materials, stock for replacement of damaged vinyl during installation, unless directed by Owner or their agent.

D. Remove all trash, shipping containers, etc. from project site and dispose of properly.

E. Vacuum floor, and wipe clean the areas with seating after installation. Repair floor, wall, or ceiling finishes, if damaged during installation.

F. Coordinate with the Contractor's schedule and the project phasing requirements for both permanent and temporary seating arrangements.

3.2 TESTING

A. The seating module must pass the following ANSI/BIFMA tests:

1. X5.4-1983, 17 test for leg strength which calls for a 75-pound functional load and 125-pound proof load.
2. X5.4-1983, 5 test for horizontal back strength, which calls for a 150-pound functional load and a 250-pound proof load.
3. X5.4-1983, 16 test for base loading, which calls for 2,500 pounds applied twice.
4. X5.4-1983, 18 test for unit drop, which calls for three 12-inch drops and one 24-inch drop.
5. X5.4-1983, 15 test for structural durability, which calls for 100,000 cycle.

B. The seating module must pass the following additional tests:

1. Arm loading test that passes 50,000 cycles of 200.
2. Impact test that passes 200-pound, 112-inch drop impact with a 1/8" permanent set maximum allowable performance requirement.
3. Humidity shock test.
4. Swinging impact chair backs test with 100,000 cycles of 105-pound load at 7" impact with no affect.
5. Attachment strength of chair fasteners test with a 600-pound performance requirement.

END OF SECTION 12615

SECTION 12931 – BICYCLE BOLLARD

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General Provisions and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Bicycle post bollard.

B. Related Sections include the following:

1. Division 3 Section "Cast-In-Place Concrete."
2. Division 5 Section "Metal Fabrications."

1.3 - REFERENCES

A. American Society for Testing and Materials ASTM A 513 – Standard Specification for Electric-Resistance-Welded Carbon and Alloy Steel Mechanical Tubing.

B. American Society for Testing and Materials ASTM A 500B – Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.

1.4 - SUBMITTALS

A. Manufacturer’s data sheets on each product to be used, included:
   1. Preparation instructions and recommendations.
   2. Maintenance requirements and recommendations.

B. Shop Drawings: Manufacturing details, dimensions, and mounting for each bicycle bollard post(s).

1.5 – QUALITY ASSURANCE

A. Manufacturer’s Qualifications:
   1. A firm experienced in manufacturing bicycle bollard post(s) similar to those required for this project and with a record of successful in-service performance.

B. Installer Qualifications:
   1. An experienced installer who has completed installation of bicycle bollard post(s) similar in material, design, and extent to that indicated for this project

and whose work has resulted in construction with a record of successful in-service performance.

C. Source Limitations: Obtain each color, finish, shape and type of bicycle bollard post(s) (if multiple posts are required) from a single source with resources to provide components of consistent quality in appearance and physical properties.

1.6 – DEILVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Store and dispose of solvent-based materials, and materials used with solvent-based materials, in accordance with requirements of local authorities having jurisdiction.

1.7 – PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

PART 2 - PRODUCTS

2.1 - MANUFACTURERS

A. Contractor will select manufacturers known for producing quality bicycle bollard post(s).
B. The basis of design for the bicycle post shall be Model BKR-35 as manufactured by Victor Stanley, Inc. 1-800-368-2573.

1. 3" outside diameter tube steel bollard.
2. In-ground mounted.
3. TGIC polyester powder coatings.

2.4 - MATERIALS

A. Steel Tube: ASTM A 513, electric welded steel tubing.

B. Steel Pipe: ASTM A 500B steel pipe.

2.5 - FINISH

A. Manufacturer's standard factory applied polyester paint finishes using a powder coating heat cured system. Color as approved by the Architect.

1. All fabricated components shall be shotblasted, etched, phosphatized,

preheated, and electrostatically powder-coated with TGIC polyester powder coatings.
2. Products shall be fully cleaned and pretreated, preheated and coated while hot to fill crevices and build coating film.
3. Coated parts shall fully cure to coating manufacturer's specifications.
4. Thickness of the finish coat shall be 8-10 mils.

B. Manufacturer's standard hot dipped galvanized steel finish.

1. Prior to powder coating, components shall receive hot dipped galvanizing.
2. Galvanizing of lids shall be as per manufacturer's standard process.

C. Coat all embedded metal components (concealed) with bituminous coating.

PART 3 - EXECUTION

3.1 - EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 - INSTALLATION

A. Bicycle bollard post(s) shall be securely set into a thickened footing isolated from the pad and sidewalk.

B. Concrete Foundation & Pad

1. Material: Portland Cement Concrete

2. Curing: See 201 FDOT Specification 520-8

3. Strength: 2,500 psi @ 28 days

4. Finish: Concealed below sidewalk; not applicable

5. Dimensions: The thickened footing shall be 33 inches deep minimum, and 14 inch diameter and set below the bottom face of side walk. Use sonotube for casting the footing; and, provide an isolation joint around the bollard. The dimensions & thickness of the bicycle parking area pad shall be per the Drawings.

3.3 - PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion

END OF SECTION 12931

SECTION 13341 - METAL BUILDING SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes metal building systems that consist of integrated sets of mutually dependent components including structural framing, roof panels, wall panels, soffit panels, doors and accessories.

B. Related Sections include the following:

1. Division 3 Section "Cast-in-Place Concrete" for concrete foundations, slabs, and anchor-bolt installation.
2. Division 7 Section "Building Insulation" for insulation installed in metal roof and wall panel assemblies, “Caulking and Sealants”, and “Metal Wall Panels”.
3. Division 8 Section for “Metal Doors and Frames” and “Overhead Ceiling Doors”
4. Division 9 painting Sections for finish painting of shop-primed structural framing and “Gypsum Board Assemblies”.
5. Division 10 Section for “Louvers and Dampers”.

1.3 DEFINITIONS

A. Bay: Dimension between main frames measured normal to frame (at centerline of frame) for interior bays, and dimension from centerline of first interior main frame measured normal to end wall (outside face of end-wall girt) for end bays.

B. Building Length: Dimension of the building measured perpendicular to main framing from end wall to end wall (outside face of girt to outside face of girt).

C. Building Width: Dimension of the building measured parallel to main framing from sidewall to sidewall (outside face of girt to outside face of girt).

D. Clear Span: Distance between supports of beams, girders, or trusses (measured from lowest level of connecting area of a column and a rafter frame or knee).

E. Eave Height: Vertical dimension from finished floor to eave (the line along the sidewall formed by intersection of the planes of the roof and wall).

F. Clear Height under Structure: Vertical dimension from finished floor to lowest point of any part of primary or secondary structure, not including crane supports, located within clear span.

G. Terminology Standard: Refer to MBMA's "Metal Building Systems Manual" for definitions of terms for metal building system construction not otherwise defined in this Section or in referenced standards.

1.4 SYSTEM DESCRIPTION

A. General: Provide a complete engineered, integrated set of metal building system manufacturer's standard mutually dependent components and assemblies that form a metal building system capable of withstanding structural and other loads, thermally induced movement, and exposure to weather without failure or infiltration of water into building interior. Include primary and secondary framing, metal roof panels, metal wall panels, and accessories complying with requirements indicated.

1. Provide metal building system of size and with spacing's, slopes, and spans indicated.

2. Provide metal framing of size and spacing's, spans required for hangar door assembly and installation.

3. Provide sub framing and blocking required for door, window louvers, signage or other exterior mounted building components.

B. Primary Frame Type:

1. Rigid Clear Span: Solid-member, structural-framing system without interior columns.

C. End-Wall Framing: Provide primary frame, capable of supporting full-bay design loads, and end-wall columns.

D. Secondary Frame Type: Manufacturer's standard purlins and joists and exterior-framed (bypass) girts.

E. Eave Height: Manufacturer's standard height, as indicated by nominal height on Drawings. Manufacturer's standard spacing, as indicated.

F. Bay Spacing: By nominal bay spacing on drawings.

G. Roof Slope: 1 inch per 12 inches, U.O.N.

H. Roof System: Manufacturer's standard vertical-rib, standing-seam metal roof panels.

I. Exterior Wall System: Manufacturer's standard field-assembled, metal wall panels, with filed installed insulation.

1.5 SYSTEM PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide metal building systems capable of withstanding the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:

1. Engineer metal building systems according to procedures in MBMA's "Metal Building Systems Manual."
2. Design Loads: As required by ASCE 7, "Minimum Design Loads for Buildings and Other Structures." And the Florida Building Code latest edition in effect and the local Authorities Having Jurisdiction.
3. Live Loads: Include vertical loads induced by the building occupancy indicated on Drawings. Include loads induced by maintenance workers, materials, and equipment for roof live loads.

    a. Building Occupancy: As indicated on drawings.
4. Wind Loads: Include horizontal loads induced by a basic wind speed corresponding to a 50-year, mean-recurrence interval at Project site.
5. Collateral Loads: Include additional dead loads other than the weight of metal building system for permanent items such as sprinklers, mechanical systems, electrical systems, and ceilings, minimum 7 pounds per square foot.
6. Auxiliary Loads: Include dynamic live loads, such as those generated by cranes and materials-handling equipment indicated on Drawings.
7. Load Combinations: Design metal building systems to withstand the most critical effects of load factors and load combinations as required by ASCE 7, "Minimum Design Loads for Buildings and Other Structures." And with the 2006 International Building Code.
8. Deflection Limits: Engineer assemblies to withstand design loads with deflections no greater than the following:

    a. Purlins and Rafters: Vertical deflection of 1/180 of the span.
    b. Girts: Horizontal deflection of 1/240 of the span.
    c. Metal Roof Panels: Vertical deflection of 1/180 of the span.
    d. Metal Wall Panels: Horizontal deflection of 1/240 of the span.

9. Design secondary framing system to accommodate deflection of primary building structure and construction tolerances, and to maintain clearances at openings.
10. Provide metal panel assemblies capable of withstanding the effects of loads and stresses indicated, based on testing according to ASTM E 1592.

B. Thermal Movements: Provide metal panel systems that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.

C. Air Infiltration for Metal Roof Panels: Air leakage through assembly of not more than 0.06 cfm/sq. ft. of roof area when tested according to ASTM E 1680 at negative test-pressure difference of 1.57 lbf/sq. ft..

D. Air Infiltration for Metal Wall Panels: Air leakage through assembly of not more than 0.06 cfm/sq. ft. of wall area when tested according to ASTM E 283 at static-air-pressure difference of 6.24 lbf/sq. ft..

E. Water Penetration for Metal Roof Panels: No water penetration when tested according to ASTM E 1646 at test-pressure difference of 2.86 lbf/sq. ft..

F. Water Penetration for Metal Wall Panels: No water penetration when tested according to ASTM E 331 at a minimum differential pressure of 20 percent of inward-acting, wind-load design pressure of not less than 6.24 lbf/sq. ft. and not more than 12 lbf/sq. ft..

G. Wind-Uplift Resistance: Provide metal roof panel assemblies that comply with UL 580 for Class 90.

1.6 SUBMITTALS

A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of the following metal building system components:

1. Structural-framing system and engineered bracing and erection drawings.
2. Metal roof panels.
3. Metal wall panels .
4. Insulation and vapor retarders.
5. Flashing and trim.
6. Doors.
7. Accessories.
8. Windows.
9. Louvers.
10. Florida Product Approval Certifications for exterior building elements, if required by Authorities Having Jurisdiction.

B. Shop Drawings: For the following metal building system components. Include plans, elevations, sections, details, and attachments to other work.

1. For installed products indicated to comply with design loads, include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation, licensed in the State of the metal building installation.
2. Anchor-Bolt Plans: Submit anchor-bolt plans before foundation work begins. Include location, diameter, and projection of anchor bolts required to attach metal building to foundation. Indicate column reactions at each location.
3. Structural-Framing Drawings: Show complete fabrication of primary and secondary framing; include provisions for openings. Indicate welds and bolted connections, distinguishing between shop and field applications. Include transverse cross-sections.

4. Metal Roof and Wall Panel Layout Drawings: Show layouts of metal panels including methods of support. Include details of edge conditions, joints, panel profiles, corners, anchorages, trim, flashings, closures, and special details. Distinguish between factory- and field-assembled work; show locations of exposed fasteners.

    a. Show roof-mounted items including equipment supports, pipe supports and penetrations, lighting fixtures, skylights, roof vents, and items mounted on roof curbs.
    b. Show wall-mounted items including doors, louvers, and lighting fixtures.
    c. Show translucent panels.

5. Accessory Drawings: Include details of the following items, at a scale of not less than 1-1/2 inches per 12 inches:

    a. Flashing and trim.
    b. Gutters.
    c. Downspouts.
    d. Roof ventilators.
    e. Louvers.
    f. Service walkways.
    g. Windows and doors.

C. Samples for Verification: For each type of exposed finish required, prepared on Samples of sizes indicated below.

1. Metal Roof and Wall Panels: Nominal 12 inches long by actual panel width. Include fasteners, closures, and other exposed panel accessories.

D. Product Certificates: For each type of metal building system, signed by product manufacturer.

1. Letter of Design Certification: Signed and sealed by a qualified professional engineer licensed in the State of the metal building installation. Include the following:

    a. Name and location of Project.
    b. Order number.
    c. Name of manufacturer.
    d. Name of Contractor.
    e. Building dimensions including width, length, height, and roof slope.
    f. Indicate compliance with AISC standards for hot-rolled steel and AISI standards for cold-rolled steel, including edition dates of each standard.
    g. Governing building code and year of edition.
    h. Design Loads: Include dead load, roof live load, collateral loads, deflection, wind loads/speeds and exposure and auxiliary loads (cranes).
    i. Load Combinations: Indicate that loads were applied acting simultaneously with concentrated loads, according to governing building code.
    j. Building-Use Category: Indicate category of building use and its effect on load importance factors.

k. AISC Certification for Category MB: Include statement that metal building system and components were designed and produced in an AISC-Certified Facility by an AISC-Certified Manufacturer.

E. Welding certificates.

F. Erector Certificate: Signed by manufacturer certifying that erector complies with requirements.

G. Manufacturer Certificate: Signed by manufacturer certifying that products comply with requirements.

H. Qualification Data: For Erector manufacturer professional engineer.

I. Material Test Reports: Signed by manufacturers certifying that the following products comply with requirements:

1. Structural steel including chemical and physical properties.
2. Bolts, nuts, and washers including mechanical properties and chemical analysis.
3. Tension-control, high-strength, bolt-nut-washer assemblies.
4. Shop primers.
5. Non-shrink grout.

J. Source quality-control test reports.

K. Field quality-control test reports.

L. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for insulation and vapor retarders. Include reports for thermal resistance, fire-test-response characteristics, water-vapor transmission, and water absorption.

M. Maintenance Data: For metal panel finishes and door hardware to include in maintenance manuals.

N. Warranties: Special warranties specified in this Section.

O. Other Action Submittals:

1. Door Schedule: For doors and frames. Use same designations indicated on Drawings. Include details of reinforcement.

a. Door Hardware Schedule: Include details of fabrication and assembly of door hardware. Organize schedule into door hardware sets indicating complete designations of every item required for each door or opening.
b. Keying Schedule: Detail Owner's final keying instructions for locks. Include schematic keying diagram and index each key set to unique door designations.

2. Refer to Section “Metal Doors and Frames” for specific project requirements.

1.7 QUALITY ASSURANCE

A. Erector Qualifications: An experienced erector who has specialized in erecting and installing work similar in material, design, and extent to that indicated for this Project and who is acceptable to manufacturer.

B. Manufacturer Qualifications: A qualified manufacturer and member of MBMA.

1. AISC Certification for Category MB: An AISC-Certified Manufacturer that designs and produces metal building systems and components in an AISC-Certified Facility.
2. Engineering Responsibility: Preparation of Shop Drawings and comprehensive engineering analysis by a qualified professional engineer.

C. Testing Agency Qualifications: An independent agency qualified according to ASTM E 329 for testing indicated, as documented according to ASTM E 548.

D. Source Limitations: Obtain primary metal building system components, including structural framing and metal panel assemblies, through one source from a single manufacturer.

E. Product Options: Drawings indicate size, profiles, and dimensional requirements of metal building system and are based on the specific system indicated. Refer to Division 1 Section "Product Requirements."

1. Do not modify intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If modifications are proposed, submit comprehensive explanatory data to Architect for review.

F. Welding: Qualify procedures and personnel according to AWS D1.1, "Structural Welding Code--Steel," and AWS D1.3, "Structural Welding Code--Sheet Steel."

G. Structural Steel: Comply with AISC's "Specification for Structural Steel Buildings--Allowable Stress Design, Plastic Design," or AISC's "Load and Resistance Factor Design Specification for Structural Steel Buildings," for design requirements and allowable stresses.

H. Cold-Formed Steel: Comply with AISI's "Specification for the Design of Cold-Formed Steel Structural Members," or AISI's "Load and Resistance Factor Design Specification for Steel Structural Members," for design requirements and allowable stresses.

I. Fire-Resistance Ratings: Where indicated, provide metal panel assemblies identical to those of assemblies tested for fire resistance per ASTM E 119 by a testing and inspecting agency acceptable to authorities having jurisdiction.

1. Combustion Characteristics: ASTM E 136.
2. Fire-Resistance Ratings: Indicated by design designations from UL's "Fire Resistance Directory" or from the listings of another testing and inspecting agency.
3. Metal panels shall be identified with appropriate markings of applicable testing and inspecting agency.

J. Surface-Burning Characteristics: Provide field-insulated metal panels having thermal insulation and vapor-retarder-facing materials with the following surface-burning characteristics as determined by testing identical products per ASTM E 84 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

1. Flame-Spread Index: 25 or less, unless otherwise indicated.
2. Smoke-Developed Index: 450 or less, unless otherwise indicated.

K. Pre-Erection Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Project Management and Coordination." Review methods and procedures related to metal building systems including, but not limited to, the following:

1. Inspect and discuss condition of foundations and other preparatory work performed by other trades.
2. Review structural load limitations.
3. Review and finalize construction schedule and verify availability of materials, Erector's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Review required testing, inspecting, and certifying procedures.
5. Review weather and forecasted weather conditions and procedures for unfavorable conditions.

L. Pre-installation Roof Assembly Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Project Management and Coordination." Review methods and procedures related to metal roof panel assemblies including, but not limited to, the following:

1. Examine purlin and rafter conditions for compliance with requirements, including flatness and attachment to structural members.
2. Review structural limitations of purlins and rafters during and after roofing.
3. Review flashings, special roof details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that will affect metal roof panels.
4. Review temporary protection requirements for metal roof panel assembly during and after installation.
5. Review roof observation and repair procedures after metal roof panel installation.

M. Pre-installation Wall Assembly Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Project Management and Coordination." Review methods and procedures related to metal wall panel assemblies including, but not limited to, the following:

1. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
2. Review structural limitations of girts and columns during and after wall panel installation.
3. Review flashings, special siding details, wall penetrations, openings, and condition of other construction that will affect metal wall panels.
4. Review temporary protection requirements for metal wall panel assembly during and after installation.

5. Review wall observation and repair procedures after metal wall panel installation.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver components, sheets, panels, and other manufactured items so as not to be damaged or deformed. Package metal panels for protection during transportation and handling.

B. Unload, store, and erect metal panels in a manner to prevent bending, warping, twisting, and surface damage.

C. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal panels to ensure dryness and with positive slope for drainage of water. Do not store metal panels in contact with other materials that might cause staining, denting, or other surface damage.

1.9 PROJECT CONDITIONS

A. Weather Limitations: Proceed with installation only when weather conditions permit metal panels to be installed according to manufacturers' written instructions and warranty requirements.

B. Field Measurements:

1. Established Dimensions for Foundations: Comply with established dimensions on approved anchor-bolt plans, establishing foundation dimensions and proceeding with fabricating structural framing without field measurements. Coordinate anchor-bolt installation to ensure that actual anchorage dimensions correspond to established dimensions.
2. Established Dimensions for Metal Panels: Where field measurements cannot be made without delaying the Work, either establish framing and opening dimensions and proceed with fabricating metal panels without field measurements, or allow for field trimming metal panels. Coordinate construction to ensure that actual building dimensions, locations of structural members, and openings correspond to established dimensions.

1.10 COORDINATION

A. Coordinate size and location of concrete foundations and casting of anchor-bolt inserts into foundation walls and footings. Concrete, reinforcement, and formwork requirements are specified in Division 3 Section "Cast-in-Place Concrete."

B. Coordinate installation of roof curbs equipment supports and roof penetrations, per the drawings or scheduled or scheduled or specified elsewhere.

C. Coordinate metal panel assemblies with rain drainage work, flashing, trim, and construction of supports and other adjoining work to provide a leak-proof, secure, and noncorrosive installation.

1.11 WARRANTY

A. Special Warranty on Metal Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Finish Warranty Period: 20 years from date of Substantial Completion. Special Weathertightness Warranty for Standing-Seam Metal Roof Panels: Manufacturer's standard form in which manufacturer agrees to repair or replace standing-seam, metal roof panel assemblies that fail to remain weathertight, including leaks, within specified warranty period.

3. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. American Buildings Company.
2. Butler Manufacturing Company.
3. Ceco Building Systems; Division of Robertson-Ceco Corporation.
4. Gulf States Manufacturers, Inc.
5. Metallic Metal Building Company; Division of NCI Building Systems, LLP.
6. VP Buildings, Inc.; a United Dominion Company.
7. Nucor Building Systems Group.
8. Chief Buildings.
9. OSI Building Systems.

2.2 STRUCTURAL-FRAMING MATERIALS

A. W-Shapes: ASTM A 992/A 992M; ASTM A 572/A 572M, Grade 50 or 55; or ASTM A 529/A 529M, Grade 50 or 55.

B. Channels, Angles, M-Shapes, and S-Shapes: ASTM A 36/A 36M; Grade 50 or 55.

C. Plate and Bar: ASTM A 36/A 36M; ASTM A 572/A 572M, Grade 50 or 55.

D. Steel Pipe: ASTM A 53/A 53M, Type E or S, Grade B.

E. Cold-Formed Hollow Structural Sections: ASTM A 500, Grade B or C, structural tubing.

F. Structural-Steel Sheet: Hot-rolled, ASTM A 1011/A 1011M, Structural Steel (SS), Grades 30 through 55.

G. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grades 33 through 80 with G60 coating designation; mill phosphatized. Retain paragraph and subparagraphs below for secondary framing if required.

H. Metallic-Coated Steel Sheet Prepainted with Coil Coating: Steel sheet metallic coated by the hot-dip process and prepainted by the coil-coating process to comply with ASTM A 755/A 755M.

1. Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grades 33 through 80 or High-Strength Low Alloy Steel (HSLAS), Grades 50 through 80; with G90 coating designation.

I. Non-High-Strength Bolts, Nuts, and Washers: ASTM A 307, Grade A, carbon-steel, hex-head bolts; ASTM A 563 carbon-steel hex nuts; and ASTM F 844 plain (flat) steel washers.

1. Finish: Hot-dip zinc coating, ASTM A 153/A 153M, Class C.

J. High-Strength Bolts, Nuts, and Washers: ASTM A 325, Type 1, heavy hex steel structural bolts; ASTM A 563 heavy hex carbon-steel nuts; and ASTM F 436 hardened carbon-steel washers.

1. Finish: Hot-dip zinc coating, ASTM A 153/A 153M, Class C.
2. Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F 1852, Type 1, heavy-hex-head steel structural bolts with splined ends.

a. Finish: Mechanically deposited zinc coating, ASTM B 695, Class 50, baked epoxy coated.

K. Unheaded Anchor Rods: ASTM F 1554, Grade 36.

1. Configuration: Straight.
2. Nuts: ASTM A 563 heavy hex carbon steel.
3. Plate Washers: ASTM A 36/A 36M carbon steel.
4. Washers: ASTM F 436 hardened carbon steel.
5. Finish: Hot-dip zinc coating, ASTM A 153/A 153M, Class C.

L. Headed Anchor Rods: ASTM F 1554, Grade 36, straight.

1. Nuts: ASTM A 563 heavy hex carbon steel.
2. Plate Washers: ASTM A 36/A 36M carbon steel.
3. Washers: ASTM F 436 hardened carbon steel.
4. Finish: Hot-dip zinc coating, ASTM A 153/A 153M, Class C.

M. Threaded Rods: ASTM A 193/A 193M.

1. Nuts: ASTM A 563 heavy hex carbon steel.
2. Washers: ASTM F 436 hardened carbon steel.
3. Finish: Hot-dip zinc coating, ASTM A 153/A 153M, Class C.

N. Primer: SSPC-Paint 15, Type I, red oxide.

2.3 MATERIALS FOR FIELD-ASSEMBLED METAL PANELS

A. Metallic-Coated Steel Sheet Pre-painted with Coil Coating: Steel sheet metallic coated by the hot-dip process and pre-painted by the coil-coating process to comply with ASTM A 755/A 755M.

1. Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grades 33 through 80, with G90 coating designation.
2. Surface: Smooth, flat finish.
3. Exposed Finishes: Apply the following coil coating, as specified or indicated on Drawings:

a. High-Performance Organic Finish (2-Coat Fluoropolymer-70% PVDF): AA-C12C40R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: conversion coating; Organic Coating: manufacturer's standard 2-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with AAMA 2605 and with coating and resin manufacturers' written instructions, except as modified below:

1) Humidity Resistance: 1000 hours.
2) Salt-Spray Resistance: 1000 hours.

b. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored backer finish, consisting of prime coat and wash coat with a total minimum dry film thickness of 0.5 mil.

B. Refer to specification Section 07421 Metal Wall Panels for additional information; the metal panels shall be horizontal ribbed panels, with concealed fasteners.

2.4 THERMAL INSULATION FOR FIELD-ASSEMBLED METAL PANELS

A. Metal Building Insulation: ASTM C 991, Type I, or NAIMA 202, glass-fiber-blanket insulation; 0.5-lb/cu. ft. density; 2-inch- wide, continuous, vapor-tight edge tabs; and with a flame-spread index of 25 or less.

B. Vapor-Retarder Facing: ASTM C 1136, with permeance not greater than 0.02 perm when tested according to ASTM E 96, Desiccant Method.

1. Composition: White polypropylene film facing and fiberglass-polyester blend fabric backing.

C. Retainer Strips: 0.019-inch- thick, formed, galvanized steel or PVC retainer clips colored to match insulation facing.

D. Vapor-Retarder Tape: Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.

E. Refer to Section “Building Insulation” for additional requirements.

2.5 DOOR AND FRAME MATERIALS

A. Refer to Section “Metal Door and Frames” for exterior door requirement and Section “Overhead Ceiling Doors“ for roll up doors.

2.6 MISCELLANEOUS MATERIALS

A. Fasteners: Self-tapping screws, bolts, nuts, self-locking rivets and bolts, end-welded studs, and other suitable fasteners designed to withstand design loads. Provide fasteners with heads matching color of materials being fastened by means of plastic caps or factory-applied coating.

1. Fasteners for Metal Roof and Wall Panels: Self-drilling Type 410 stainless-steel or self-tapping Type 304 stainless-steel or zinc-alloy-steel hex washer head, with EPDM or PVC washer under heads of fasteners bearing on weather side of metal panels.
2. Fasteners for Flashing and Trim: Blind fasteners or self-drilling screws with hex washer head.
3. Blind Fasteners: High-strength aluminum or stainless-steel rivets.

B. Bituminous Coating: Cold-applied asphalt mastic, SSPC-Paint 12, compounded for 15-mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

C. Gypsum Board: Refer to Section “Gypsum Board Assemblies” for gypsum board requirements. All gypsum board to be 5/8” thick minimum.

D. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, non-staining, mixed with water to consistency suitable for application and a 30-minute working time.

E. Metal Panel Sealants:

1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray poly-isobutylene compound sealant tape with release-paper backing. Provide permanently elastic, non-sag, nontoxic, non-staining tape of manufacturer's standard size.
2. Joint Sealant: ASTM C 920; one-part elastomeric polyurethane, polysulfide, or silicone-rubber sealant; of type, grade, class, and use classifications required to seal joints in metal panels and remain weather tight; and as recommended by metal building system manufacturer.

3. Refer to Section “Caulking and Sealants” for additional submittal and product requirements.

2.7 FABRICATION, GENERAL

A. General: Design components and field connections required for erection to permit easy assembly.

1. Mark each piece and part of the assembly to correspond with previously prepared erection drawings, diagrams, and instruction manuals.
2. Fabricate structural framing to produce clean, smooth cuts and bends. Punch holes of proper size, shape, and location. Members shall be free of cracks, tears, and ruptures.

B. Tolerances: Comply with MBMA's "Metal Building Systems Manual": Chapter IV, Section 9, "Fabrication and Erection Tolerances."

C. Metal Panels: Fabricate and finish metal panels at the factory to greatest extent possible, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements. Comply with indicated profiles and with dimensional and structural requirements.

1. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of metal panel.

2.8 STRUCTURAL FRAMING

A. General:

1. Primary Framing: Shop fabricate framing components to indicated size and section with baseplates, bearing plates, stiffeners, and other items required for erection welded into place. Cut, form, punch, drill, and weld framing for bolted field assembly.

    a. Make shop connections by welding or by using high-strength bolts.
    b. Join flanges to webs of built-up members by a continuous submerged arc-welding process.
    c. Brace compression flange of primary framing with steel angles or cold-formed structural tubing between frame web and purlin or girt web, so flange compressive strength is within allowable limits for any combination of loadings.
    d. Weld clips to frames for attaching secondary framing members.
    e. Shop Priming: Prepare surfaces for shop priming according to SSPC-SP 2. Shop prime primary structural members with specified primer after fabrication.

2. Secondary Framing: Shop fabricate framing components to indicated size and section by roll-forming or break-forming, with baseplates, bearing plates, stiffeners, and other plates required for erection welded into place. Cut, form,

punch, drill, and weld secondary framing for bolted field connections to primary framing.

a. Make shop connections by welding or by using non-high-strength bolts.
b. Shop Priming: Prepare uncoated surfaces for shop priming according to SSPC-SP 2. Shop prime uncoated secondary structural members with specified primer after fabrication.

B. Primary Framing: Manufacturer's standard structural primary framing system, designed to withstand required loads and specified requirements. Primary framing includes transverse and lean-to frames; rafter, rake, and canopy beams; sidewall, intermediate, end-wall, and corner columns; and wind bracing.

1. General: Provide frames with attachment plates, bearing plates, and splice members. Factory drill for field-bolted assembly. Provide frame span and spacing indicated.

a. Slight variations in span and spacing may be acceptable if necessary to meet manufacturer's standard, as approved by Architect.

2. Rigid Clear-Span Frames: I-shaped frame sections fabricated from shop-welded, built-up steel plates or structural-steel shapes. Interior columns are not permitted.
3. Frame Configuration: Single gable.
4. Exterior Column Type: Tapered.
5. Rafter Type: Tapered.

C. End-Wall Framing: Manufacturer's standard primary end-wall framing fabricated for field-bolted assembly to comply with the following:

1. End-Wall and Corner Columns: I-shaped sections fabricated from structural-steel shapes; shop-welded, built-up steel plates; or C-shaped, cold-formed, structural-steel sheet; with minimum thickness of 0.0598 inch.
2. End-Wall Rafters: C-shaped, cold-formed, structural-steel sheet; with minimum thickness of 0.0598 inch; or I-shaped sections fabricated from shop-welded, built-up steel plates or structural-steel shapes.

D. Secondary Framing: Manufacturer's standard secondary framing members, including purlins, girts, eave struts, flange bracing, base members, gable angles, clips, headers, jambs, and other miscellaneous structural members. Fabricate framing from cold-formed, structural-steel sheet or roll-formed, metallic-coated steel sheet pre-painted with coil coating, unless otherwise indicated, to comply with the following:

1. Purlins: C- or Z-shaped sections; fabricated from minimum 0.0598-inch- thick steel sheet, built-up steel plates, or structural-steel shapes; minimum 2-1/2-inch- wide flanges.
2. Girts: C- or Z-shaped sections; fabricated from minimum 0.0598-inch- thick steel sheet, built-up steel plates, or structural-steel shapes. Form ends of Z-sections with stiffening lips angled 40 to 50 degrees to flange and with minimum 2-1/2-inch- wide flanges.

3. Eave Struts: Unequal-flange, C-shaped sections; fabricated from 0.0598-inch- thick steel sheet, built-up steel plates, or structural-steel shapes; to provide adequate backup for metal panels.
4. Flange Bracing: Minimum 2-by-2-by-1/8-inch structural-steel angles or 1-inch diameter, cold-formed structural tubing to stiffen primary frame flanges.
5. Sag Bracing: Minimum 1-by-1-by-1/8-inch structural-steel angles.
6. Base or Sill Angles: Minimum 3-by-2-by-0.0598-inch zinc-coated (galvanized) steel sheet.
7. Purlin and Girt Clips: Minimum 0.0598-inch- thick, steel sheet. Provide galvanized clips where clips are connected to galvanized framing members.
8. Secondary End-Wall Framing: Manufacturer's standard sections fabricated from minimum 0.0598-inch- thick, zinc-coated (galvanized) steel sheet.
9. Framing for Openings: Channel shapes; fabricated from minimum 0.0598-inch- thick, cold-formed, structural-steel sheet or structural-steel shapes. Frame head and jamb of door openings, and head, jamb, and sill of other openings.
10. Miscellaneous Structural Members: Manufacturer's standard sections fabricated from cold-formed, structural-steel sheet; built-up steel plates; or zinc-coated (galvanized) steel sheet; designed to withstand required loads.

E. Canopy and Lean to Framing: Manufacturer's standard structural-framing system, designed to withstand required loads, fabricated from shop-welded, built-up steel plates or structural-steel shapes. Provide frames with attachment plates and splice members, factory drilled for field-bolted assembly.

1. Type: As indicated.

F. Bracing: Provide adjustable wind bracing as follows:

1. Rods: ASTM A 36/A 36M; ASTM A 572/A 572M, Grade 50; or ASTM A 529/A 529M, Grade 50; minimum 1/2-inch- diameter steel; threaded full length or threaded a minimum of 6 inches at each end.
2. Cable: ASTM A 475, 1/4-inch- diameter, extra-high-strength grade, Class B zinc-coated, 7-strand steel; with threaded end anchors.
3. Angles: Fabricated from structural-steel shapes to match primary framing, of size required to withstand design loads.
4. Rigid Portal Frames: Fabricate from shop-welded, built-up steel plates or structural-steel shapes to match primary framing; of size required to withstand design loads.
5. Fixed-Base Columns: Fabricate from shop-welded, built-up steel plates or structural-steel shapes to match primary framing; of size required to withstand design loads.
6. Bracing: Provide wind bracing using any method specified above, at manufacturer's option.

G. Bolts: Provide plain finish bolts for structural-framing components that are primed or finish painted. Provide hot-dipped galvanized bolts for structural-framing components that are galvanized.

H. Factory-Primed Finish: Apply specified primer immediately after cleaning and pretreating.

1. Prime primary, secondary, and end-wall structural-framing members to a minimum dry film thickness of 1 mil.

a. Prime secondary steel framing formed from uncoated steel sheet to a minimum dry film thickness of 0.5 mil on each side.

2.9 METAL ROOF PANELS

A. Trapezoidal-Rib, Standing-Seam Metal Roof Panels: Formed with raised trapezoidal ribs at panel edges and intermediate stiffening ribs symmetrically spaced between ribs; designed for sequential installation by mechanically attaching panels to supports using concealed clips located under one side of panels and engaging opposite edge of adjacent panels. Exposed metal fasteners for roof panels will not be acceptable.

1. Material: Zinc-coated (galvanized) steel sheet, 0.0269 inch thick.

a. Exterior Finish: Fluoropolymer.
b. Color: As selected by Architect from manufacturer's full range. Color to match existing adjacent metal buildings.

2. Clips: Manufacturer's standard, floating type to accommodate thermal movement; fabricated from zinc-coated (galvanized) steel sheet.
3. Joint Type: Mechanically seamed, folded as standard with manufacturer.
4. Panel Coverage: 24 inches.
5. Panel Height: 3 inches.
6. Uplift Rating: UL 90.

2.10 FIELD-ASSEMBLED METAL WALL PANELS

A. Tapered-Rib-Profile, Exposed-Fastener Metal Wall Panels: Formed with raised, trapezoidal major ribs and intermediate stiffening ribs symmetrically spaced between major ribs; designed to be field assembled by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps. Horizontal ribbed metal panels shall match the GA Terminal Building, refer to specification section 07421 Metal Wall Panels for additional information. The metal panels at the back of the parapet, concealed from view, do not need to be ribbed panels.

1. Material: Zinc-coated (galvanized) steel sheet, 0.0209 inch thick.

a. Exterior Finish: Fluoropolymer.
b. Color: As selected by Architect from manufacturer's full range.

2. Major-Rib Spacing: 12 inches o.c.
3. Panel Coverage: 36 inches.
4. Panel Height: 1.25 inches.

2.11 TRANSLUCENT PANELS

A. Fire-Test-Response Characteristics: Provide panels with the following surface-burning characteristics as determined by testing identical products per ASTM E 84 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

1. Flame Spread: 25 or less.
2. Smoke Developed: 450 or less.

B. Insulated Translucent Panels: Fabricate insulating units of 2 sheets of glass-fiber-reinforced polyester, translucent plastic separated by an air space; complying with ASTM D 3841, Type CC1 (limited flammability), Grade 1 (weather resistant); smooth finish on both sides. Match profile of adjacent metal panels.

1. Exterior Panel Weight: Not less than 8 oz./sq. ft..
2. Interior Panel Weight: Not less than 8 oz./sq. ft..
3. Light Transmittance: Not less than 42 percent according to ASTM D 1494.
4. Metal Edge: Fabricate full length of each side of panel with metal edge for seaming into standing-seam roof panel joint.
5. Color: White.

C. Mastic for Translucent Panels: Nonstaining, saturated vinyl polymer as recommended by translucent panel manufacturer for sealing laps.

2.12 METAL SOFFIT PANELS

A. General: Provide factory-formed metal soffit panels designed to be field assembled by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners and factory-applied sealant in side laps. Include accessories required for weathertight installation.

B. Metal Soffit Panels: Match profile and material of metal roof and wall panels.

1. Finish: Match finish and color of metal wall panels.

C. Concealed-Fastener Metal Soffit Panels: Formed with vertical panel edges and a single wide recess, centered between panel edges; with flush joint between panels; with 1-inch- wide flange for attaching interior finish; designed to be field assembled by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners and factory-applied sealant in side laps.

1. Material: Zinc-coated (galvanized) steel sheet, 0.0209 inch thick.

a. Exterior Finish: Fluoropolymer.
b. Color: As selected by Architect from manufacturer's full range.

2. Panel Coverage: 16 inches.
3. Panel Height: 1.5 inches.

2.13 ACCESSORIES

A. General: Provide accessories as standard with metal building system manufacturer and as specified. Fabricate and finish accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes. Comply with indicated profiles and with dimensional and structural requirements.

1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.

B. Roof Panel Accessories: Provide components required for a complete metal roof panel assembly including copings, fasciae, corner units, ridge closures, clips, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal roof panels, unless otherwise indicated.

1. Closures: Provide closures at eaves and ridges, fabricated of same material as metal roof panels.
2. Clips: Manufacturer's standard, formed from stainless-steel sheet, designed to withstand negative-load requirements.
3. Cleats: Manufacturer's standard, mechanically seamed cleats formed from stainless-steel sheet or nylon-coated aluminum sheet.
4. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
5. Closure Strips: Closed-cell, expanded, cellular, rubber or cross linked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1-inch- thick, flexible closure strips; cut or pre-molded to match metal roof panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.
6. Thermal Spacer Blocks: Where metal panels attach directly to purlins, provide thermal spacer blocks of thickness required to provide 1 inch standoff; fabricated from extruded polystyrene.

C. Wall Panel Accessories: Provide components required for a complete metal wall panel assembly including copings, fasciae, mullions, sills, corner units, clips, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal wall panels, unless otherwise indicated.

1. Closures: Provide closures at eaves and rakes, fabricated of same material as metal wall panels.
2. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
3. Closure Strips: Closed-cell, expanded, cellular, rubber or cross linked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1-inch- thick, flexible closure strips; cut or pre-molded to match metal wall panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.

D. Flashing and Trim: Formed from minimum 0.0159-inch- thick, metallic-coated steel sheet or aluminum-zinc alloy-coated steel sheet pre-painted with coil coating; finished to match adjacent metal panels.

1. Provide flashing and trim as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, eaves, rakes, corners, bases, framed openings, ridges, fasciae, and fillers.
2. Opening Trim: Minimum 0.0269-inch- thick, metallic-coated steel sheet or aluminum-zinc alloy-coated steel sheet pre-painted with coil coating. Trim head and jamb of door openings, and head, jamb, and sill of other openings.

E. Gutters: Formed from minimum 0.0159-inch- thick, metallic-coated steel sheet or aluminum-zinc alloy-coated steel sheet pre-painted with coil coating; finished to match roof fascia and rake trim. Match profile of gable trim, complete with end pieces, outlet tubes, and other special pieces as required. Fabricate in minimum 96-inch- long sections, sized according to SMACNA's "Architectural Sheet Metal Manual."

1. Gutter Supports: Fabricated from same material and finish as gutters; spaced 36 inches o.c.

F. Downspouts: Formed from 0.0159-inch- thick, zinc-coated (galvanized) steel sheet or aluminum-zinc alloy-coated steel sheet pre-painted with coil coating; finished to match metal wall panels. Fabricate in minimum 10-foot- long sections, complete with formed elbows and offsets.

1. Mounting Straps: Fabricated from same material and finish as gutters; spaced 10 feet o.c.

G. Roof Ventilators: Gravity type, complete with hardware, flashing, closures, and fittings.

1. Continuous or Sectional-Ridge Type: Factory-engineered and -fabricated, continuous unit; fabricated from minimum 0.0159-inch- thick, metallic-coated steel sheet or aluminum-zinc alloy-coated steel sheet pre-painted with coil coating; finished to match metal roof panels. Fabricated in minimum 10-foot- long sections. Provide throat size and total length indicated, complete with side baffles, ventilator assembly, end caps, splice plates, and reinforcing diaphragms.

a. Bird Screening: Galvanized steel, 1/2-inch- square mesh, 0.041-inch wire, or aluminum, 1/2-inch- square mesh, 0.063-inch wire.
b. Dampers: Manually operated, spring-loaded, vertically rising type; chain and worm gear operator; with chain of length required to reach within 36 inches above floor.
c. Throat Size: 9 or 12 inches, as standard with manufacturer, and as required to comply with ventilation requirements.

H. Louvers: Size and design indicated; self-framing and self-flashing. Fabricate welded frames from minimum 0.0428-inch- thick, metallic-coated steel sheet; finished to match metal wall panels. Form blades from 0.0329-inch- thick, metallic-coated steel sheet; folded or beaded at edges, set at an angle that excludes driving rains, and secured to frames by riveting or welding. Fabricate louvers with equal blade spacing to produce uniform appearance. Louver sub frames and flashings shall be galvanized and painted with a rust inhibitive coating to match the metal wall panel.

1. Blades: Fixed.
2. Free Area: Not less than 7.0 sq. ft. for 48-inch- wide by 48-inch- high louver.
3. Bird Screening: Galvanized steel, 1/2-inch- square mesh, 0.041-inch wire; with rewirable frames, removable and secured with clips, fabricated of same kind and form of metal and with same finish as for louvers.

a. Mounting: Interior face of louvers.

4. Vertical Mullions: Provide mullions at spacings recommended by manufacturer, or 72 inches o.c., whichever is less.

I. Roof Curbs: Fabricated from minimum 0.0428-inch- thick, metallic-coated steel sheet or aluminum-zinc alloy-coated steel sheet pre-painted with coil coating; finished to match metal roof panels; with welded top box and bottom skirt, and integral full-length cricket; capable of withstanding indicated loads and of size and height indicated.

1. Curb Sub-framing: Minimum 0.0528-inch- thick, angle-, C-, or Z-shaped steel sheet.
2. Insulation: 1-inch- thick, rigid type.

J. Pipe Flashing: Pre-molded, EPDM pipe collar with flexible aluminum ring bonded to base.

2.14 FINISHES, GENERAL

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.15 SOURCE QUALITY CONTROL

A. Special Inspector: Owner will engage a qualified special inspector to perform the following tests and inspections and to submit reports. Special Inspector will verify that manufacturer maintains detailed fabrication and quality-control procedures and will review the completeness and adequacy of those procedures to perform the Work.

1. Special inspections will not be required if fabrication is performed by a manufacturer registered and approved by Authorities Having Jurisdiction to perform such Work without special inspection.

a. After fabrication, submit certificate of compliance with copy to Authorities Having Jurisdiction certifying that Work was performed according to Contract requirements.

B. Tests and Inspections:

1. Bolted Connections: Shop-bolted connections shall be tested and inspected according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."
2. Welded Connections: In addition to visual inspection, shop-welded connections shall be tested and inspected according to AWS D1.1 and the following inspection procedures, at inspector's option:

a. Liquid Penetrant Inspection: ASTM E 165.
b. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration will not be accepted.
c. Ultrasonic Inspection: ASTM E 164.
d. Radiographic Inspection: ASTM E 94.

C. Correct deficiencies in Work that test reports and inspections indicate do not comply with the Contract Documents.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Erector present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.

1. For the record, prepare written report, endorsed by Erector, listing conditions detrimental to performance of work.

B. Before erection proceeds, survey elevations and locations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments to receive structural framing, with Erector present, for compliance with requirements and metal building system manufacturer's tolerances.

1. Engage land surveyor to perform surveying.

C. Proceed with erection only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean and prepare surfaces to be painted according to manufacturer's written instructions for each particular substrate condition.

B. Provide temporary shores, guys, braces, and other supports during erection to keep structural framing secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural framing, connections, and bracing are in place, unless otherwise indicated.

3.3 ERECTION OF STRUCTURAL FRAMING

A. Erect metal building system according to manufacturer's written erection instructions and erection drawings.

B. Do not field cut, drill, or alter structural members without written approval from metal building system manufacturer's professional engineer.

C. Set structural framing accurately in locations and to elevations indicated and according to AISC specifications referenced in this Section. Maintain structural stability of frame during erection.

D. Base and Bearing Plates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting plates. Clean bottom surface of plates.

1. Set plates for structural members on wedges, shims, or setting nuts as required.
2. Tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.
3. Promptly pack grout solidly between bearing surfaces and plates so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.

E. Align and adjust structural framing before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that will be in permanent contact with framing. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.

1. Level and plumb individual members of structure.
2. Make allowances for difference between temperature at time of erection and mean temperature when structure will be completed and in service.

F. Primary Framing and End Walls: Erect framing true to line, level, plumb, rigid, and secure. Level baseplates to a true even plane with full bearing to supporting structures, set with double-nutted anchor bolts. Use grout to obtain uniform bearing and to maintain a level base-line elevation. Moist cure grout for not less than seven days after placement.

1. Make field connections using high-strength bolts installed according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for type of bolt and type of joint specified.

    a. Joint Type: Snug tightened or pretensioned.

G. Secondary Framing: Erect framing true to line, level, plumb, rigid, and secure. Fasten secondary framing to primary framing using clips with field connections using non-high-strength bolts.

1. Provide rake or gable purlins with tight-fitting closure channels and fasciae.
2. Locate and space wall girts to suit openings such as doors.
3. Locate canopy framing as indicated.
4. Provide supplemental framing at entire perimeter of openings, including doors, windows, louvers, ventilators, and other penetrations of roof and walls.

H. Bracing: Install bracing in roof and sidewalls where indicated on erection drawings.

1. Tighten rod and cable bracing to avoid sag.
2. Locate interior end-bay bracing only where indicated.
3. Bracing shall be designed by a licensed professional engineer to accommodate wind loading during erection.

I. Framing for Openings: Provide shapes of proper design and size to reinforce openings and to carry loads and vibrations imposed, including equipment furnished under mechanical and electrical work. Securely attach to structural framing.

J. Erection Tolerances: Maintain erection tolerances of structural framing within AISC's "Code of Standard Practice for Steel Buildings and Bridges."

3.4 METAL PANEL INSTALLATION, GENERAL

A. Examination: Examine primary and secondary framing to verify that structural panel support members and anchorages have been installed within alignment tolerances required by manufacturer.

1. Examine roughing-in for components and systems penetrating metal panels to verify actual locations of penetrations relative to seam locations of metal panels before metal panel installation.

B. General: Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.

1. Field cut metal panels as required for doors, windows, and other openings. Cut openings as small as possible, neatly to size required, and without damage to adjacent metal panel finishes.

    a. Field cutting of metal panels by torch is not permitted unless approved in writing by manufacturer.

2. Install metal panels perpendicular to structural supports, unless otherwise indicated.
3. Flash and seal metal panels with weather closures at perimeter of openings and similar elements. Fasten with self-tapping screws.
4. Locate and space fastenings in uniform vertical and horizontal alignment.

5. Locate metal panel splices over, but not attached to, structural supports with end laps in alignment. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
6. Lap metal flashing over metal panels to allow moisture to run over and off the material.

C. Lap-Seam Metal Panels: Install screw fasteners with power tools having controlled torque adjusted to compress neoprene washer tightly without damage to washer, screw threads, or metal panels. Install screws in predrilled holes.

1. Arrange and nest side-lap joints so prevailing winds blow over, not into, lapped joints. Lap ribbed or fluted sheets one full rib corrugation. Apply metal panels and associated items for neat and weathertight enclosure. Avoid "panel creep" or application not true to line.

D. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating, by applying rubberized-asphalt underlayment to each contact surface, or by other permanent separation as recommended by metal roof panel manufacturer.

E. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weatherproof performance of metal panel assemblies. Provide types of gaskets, fillers, and sealants indicated or, if not indicated, types recommended by metal panel manufacturer.

1. Seal metal panel end laps with double beads of tape or sealant, full width of panel. Seal side joints where recommended by metal panel manufacturer.

3.5 METAL ROOF PANEL INSTALLATION

A. General: Provide metal roof panels of full length from eave to ridge, unless otherwise indicated or restricted by shipping limitations.

1. Install ridge caps as metal roof panel work proceeds.
2. Flash and seal metal roof panels with weather closures at eaves and rakes. Fasten with self-tapping screws.

B. Field-Assembled, Standing-Seam Metal Roof Panels: Fasten metal roof panels to supports with concealed clips at each standing-seam joint at location, spacing, and with fasteners recommended by manufacturer.

1. Install clips to supports with self-tapping fasteners.
2. Install pressure plates at locations indicated in manufacturer's written installation instructions.
3. Seamed Joint: Crimp standing seams with manufacturer-approved motorized seamer tool so clip, metal roof panel, and factory-applied sealant are completely engaged.
4. Rigidly fasten eave end of metal roof panels and allow ridge end free movement due to thermal expansion and contraction. Predrill panels for fasteners.

5. Provide metal closures at peaks rake edges rake walls and each side of ridge caps.

C. Metal Roof Panel Installation Tolerances: Shim and align metal roof panels within installed tolerance of 1/4 inch in 20 feet on slope and location lines as indicated and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

3.6 METAL WALL PANEL INSTALLATION

A. General: Install metal wall panels in orientation, sizes, and locations indicated on Drawings. Install panels perpendicular to girts, extending full height of building, unless otherwise indicated. Anchor metal wall panels and other components of the Work securely in place, with provisions for thermal and structural movement.

1. Unless otherwise indicated, begin metal panel installation at corners with center of rib lined up with line of framing.
2. Shim or otherwise plumb substrates receiving metal wall panels.
3. When two rows of metal panels are required, lap panels 4 inches minimum.
4. When building height requires two rows of metal panels at gable ends, align lap of gable panels over metal wall panels at eave height.
5. Rigidly fasten base end of metal wall panels and allow eave end free movement due to thermal expansion and contraction. Predrill panels.
6. Flash and seal metal wall panels with weather closures at eaves, rakes, and at perimeter of all openings. Fasten with self-tapping screws.
7. Install screw fasteners in predrilled holes.
8. Install flashing and trim as metal wall panel work proceeds.
9. Apply elastomeric sealant continuously between metal base channel (sill angle) and concrete, and elsewhere as indicated, or if not indicated, as necessary for waterproofing.
10. Align bottom of metal wall panels and fasten with blind rivets, bolts, or self-tapping screws.
11. Provide weatherproof escutcheons for pipe and conduit penetrating exterior walls.

B. Field-Assembled, Metal Wall Panels: Install metal wall panels on exterior side of girts. Attach metal wall panels to supports with fasteners as recommended by manufacturer.

1. Field-Insulated Assemblies: Install thermal insulation as specified. Install metal liner panels over insulation on interior side of girts at locations indicated. Fasten with exposed fasteners as recommended by manufacturer.

C. Installation Tolerances: Shim and align metal wall panels within installed tolerance of 1/4 inch in 20 feet, non-accumulative, on level, plumb, and location lines as indicated and within 1/8-inch offset of adjoining faces and of alignment of matching profiles.

3.7 TRANSLUCENT PANEL INSTALLATION

A. Translucent Panels: Attach translucent panels to structural framing with fasteners according to manufacturer's written instructions. Install panels perpendicular to

supports, unless otherwise indicated. Anchor translucent panels securely in place, with provisions for thermal and structural movement.

1. Provide end laps of not less than 6 inches and side laps of not less than 1-1/2-inch corrugations for metal roof panels.
2. Align horizontal laps with adjacent metal panels.
3. Seal intermediate end laps and side laps of translucent panels with translucent mastic.

3.8 METAL SOFFIT PANEL INSTALLATION

A. Provide metal soffit panels full width of soffits. Install panels perpendicular to support framing.

B. Flash and seal metal soffit panels with weather closures where panels meet walls and at perimeter of all openings.

3.9 THERMAL INSULATION INSTALLATION FOR FIELD-ASSEMBLED METAL PANELS

A. General: Install insulation concurrently with metal wall panel installation, in thickness indicated to cover entire wall, according to manufacturer's written instructions.

1. Set vapor-retarder-faced units with vapor retarder to warm side of construction, unless otherwise indicated. Do not obstruct ventilation spaces, except for firestopping.
2. Tape joints and ruptures in vapor retarder, and seal each continuous area of insulation to surrounding construction to ensure airtight installation.
3. Install factory-laminated, vapor-retarder-faced blankets straight and true in one-piece lengths with both sets of facing tabs sealed to provide a complete vapor retarder.
4. Install blankets straight and true in one-piece lengths. Install vapor retarder over insulation with both sets of facing tabs sealed to provide a complete vapor retarder.

B. Blanket Roof Insulation: Comply with the following installation method:

1. Over-Purlin-with-Spacer-Block Installation: Extend insulation and vapor retarder over and perpendicular to top flange of secondary framing members. Install layer of filler insulation over first layer to fill space formed by metal roof panel standoffs. Hold in place by panels fastened to standoffs.
2. Retainer Strips: Install retainer strips at each longitudinal insulation joint, straight and taut, nesting with secondary framing to hold insulation in place.
3. Thermal Spacer Blocks: Where metal roof panels attach directly to purlins, install thermal spacer blocks.

C. Blanket Wall Insulation: Extend insulation and vapor retarder over and perpendicular to top flange of secondary framing members. Hold in place by metal wall panels fastened to secondary framing.

1. Retainer Strips: Install retainer strips at each longitudinal insulation joint, straight and taut, nesting with secondary framing to hold insulation in place.

D. Replace torn, cut, or ripped insulation panels, use new undamaged panels.

E. Install insulation panels to match the metal building exterior at the hangar door.

3.10 ACCESSORY INSTALLATION

A. General: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.

1. Install components required for a complete metal roof panel assembly including trim, copings, ridge closures, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.
2. Install components for a complete metal wall panel assembly including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.
3. Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action by painting contact surfaces with bituminous coating, by applying rubberized-asphalt underlayment to each contact surface, or by other permanent separation as recommended by manufacturer.

B. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.

1. Install exposed flashing and trim that is without excessive oil canning, buckling, and tool marks and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof and weather-resistant performance.
2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet with no joints allowed within 24 inches of corner or intersection. Where lapped or bayonet-type expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch deep, filled with mastic sealant (concealed within joints).

C. Gutters: Join sections with riveted and soldered or lapped and sealed joints. Attach gutters to eave with gutter hangers spaced not more than 4 feet o.c. using manufacturer's standard fasteners. Provide end closures and seal watertight with sealant. Provide for thermal expansion.

D. Downspouts: Join sections with 1-1/2-inch telescoping joints. Provide fasteners designed to hold downspouts securely 1 inch away from walls; locate fasteners at top and bottom and at approximately 60 inches o.c. in between.

1. Tie downspouts to underground drainage system indicated.

E. Continuous Roof Ventilators: Set ventilators complete with necessary hardware, anchors, dampers, weather guards, rain caps, and equipment supports. Join sections with splice plates and end-cap skirt assemblies where required to achieve indicated length. Install preformed filler strips at base to seal ventilator to metal roof panels.

F. Louvers: Locate and place louver units level, plumb, and at indicated alignment with adjacent work.

1. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where required to protect metal surfaces and to make a weathertight connection.
2. Provide perimeter reveals and openings of uniform width for sealants and joint fillers.
3. Protect galvanized- and nonferrous-metal surfaces from corrosion or galvanic action by applying a heavy coating of bituminous paint on surfaces that will be in contact with concrete, masonry, or dissimilar metals.
4. Install concealed gaskets, flashings, joint fillers, and insulation as louver installation progresses, where weathertight louver joints are required. Comply with Division 7 Section "Caulking and Sealants" for sealants applied during louver installation.

G. Pipe Flashing: Form flashing around pipe penetration and metal roof panels. Fasten and seal to panel as recommended by manufacturer.

3.11 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing and inspecting agency to perform the following tests and inspections and to submit reports.

B. Special Inspector: Owner will engage a qualified special inspector to perform the following tests and inspections and to submit reports.

C. Tests and Inspections:

1. High-Strength, Field-Bolted Connections: Connections shall be tested and inspected during installation according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."
2. Welded Connections: In addition to visual inspection, field-welded connections shall be tested and inspected according to AWS D1.1 and the following inspection procedures, at inspector's option:

a. Liquid Penetrant Inspection: ASTM E 165.
b. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration will not be accepted.
c. Ultrasonic Inspection: ASTM E 164.
d. Radiographic Inspection: ASTM E 94.

D. Correct deficiencies in Work that test reports and inspections indicate do not comply with the Contract Documents.

3.12 ADJUSTING

A. Doors: After completing installation, test and adjust doors to operate easily, free of warp, twist, or distortion.

B. Door Hardware: Adjust and check each operating item of door hardware and each door to ensure proper operation and function of every unit. Replace units that cannot be adjusted to operate as intended.

1. Door Closers: Adjust door closers to compensate for final operation of heating and ventilating equipment. Adjust sweep period so that, from an open position of 70 degrees, the door will take at least 3 seconds to move to a point 3 inches from the latch, measured to the leading edge of the door.

2. Refer to Section “Metal Doors and Frames” for additional requirements.

3.13 CLEANING AND PROTECTION

A. Repair damaged galvanized coatings on galvanized items with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.

B. Remove and replace glass that has been broken, chipped, cracked, abraded, or damaged during construction period.

C. Touchup Painting: After erection, promptly clean, prepare, and prime or reprime field connections, rust spots, and abraded surfaces of prime-painted structural framing, bearing plates, and accessories.

1. Clean and prepare surfaces by SSPC-SP 2, "Hand Tool Cleaning," or SSPC-SP 3, "Power Tool Cleaning."
2. Apply a compatible primer of same type as shop primer used on adjacent surfaces.

D. Touchup Painting: Cleaning and touchup painting are specified in Division 9 painting Sections.

E. Metal Panels: Remove temporary protective coverings and strippable films, if any, as metal panels are installed. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.

1. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

F. Doors and Frames: Immediately after installation, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible air-drying primer.

1. Immediately before final inspection, remove protective wrappings from doors and frames.

G. Louvers: Clean exposed surfaces that are not protected by temporary covering, to remove fingerprints and soil during construction period. Do not let soil accumulate until final cleaning.

1. Restore louvers damaged during installation and construction period so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by Architect, remove damaged units and replace with new units.

a. Touch up minor abrasions in finishes with air-dried coating that matches color and gloss of, and is compatible with, factory-applied finish coating.

END OF SECTION 13341

SECTION 02361 – TERMITE CONTROL

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Furnish and apply soil treatment with termiticide as indicated on the Drawings and specified herein.

B. Provide soil treatment at all new slab-on-grade areas within the interior of building.

1.3 QUALIFICATIONS

A. This Contractor shall be a licensed termite control operator and shall have as part of his organization a professional entomologist.

1.4 DELIVERY

A. Chemicals shall be delivered to the Project site in a transport equipped with a gauge capable of indicating the correct number of gallons being applied to required areas.

1.5 SUBMITTALS

A. Submittals shall comply with Section 01330 – Submittal Procedures.

B. Submit certifications for applicator qualifications and gauge readings of applications.

C. Submit product data including the following:

1. Working solution to be used and manufacturer's printed data.
2. The color of dye to be used.
3. Working solution to be mixed in accordance with Bureau of Entomology, State of Florida Board of Health and EPA.

D. Submit sample form of warranty per Article 1.6 of this Section.

E. Furnish an applicator’s “Certificate of Protective Treatment for Prevention of Termites” upon completion of all required FBC treatments and prior to slab-on-grade placement and provide a second copy with the project closeout documents.

1.6 WARRANTY

A. Upon completion of the work, and as a condition of Final Acceptance, Owner shall be furnished with a written warranty stipulating that termiticide treatment shall prevent subterranean termites from attacking and damaging the building or its contents for a period of not less than 5 years, starting from date of Substantial Completion of the building.

B. If subterranean termite activity exists in or under the building during the warranty period, the Contractor promptly, and without expense to the Owner, shall:

1. Retreat the soil to prevent subterranean termites from attacking the building or its contents, using means acceptable to the Owner.
2. Make good all damage caused by subterranean termite activity, up to Ten Thousand Dollars ($10,000.00).
3. The warranty shall be written in favor of the Owner. A specimen of the form of warranty shall be submitted to the Architect for review prior to commencement of work.

PART 2 – PRODUCTS

2.1 MATERIALS

A. Working solutions shall be based on any of the following termiticides in the strength indicated and meeting approval of all Federal, State and Local Regulatory agencies:

1. “Altriset”; Syngenta.

B. Dye, of any type, such as Blazon by Milliken Chemicals, not chemically harmful to termiticide emulsions and red or blue in color shall be added to solution before application.

C. Solution shall be mixed in strict accordance with spray solution chart as prepared by the Bureau of Entomology, State of Florida Board of Health and EPA.

PART 3 – EXECUTION

3.1 INSTALLATION, GENERAL

A. Termiticides shall be applied by experienced skilled mechanics and in the best workmanlike manner of this trade.

B. Termite control shall not begin until all the subgrade soil preparation work has been completed and made ready for the vapor barrier installation.

C. Termiticides shall not be applied when soil is excessively wet as determined by the Owner’s Testing Laboratory.

3.2 APPLICATION

A. Application for emulsion shall be applied as follows, but in NO CASE less than the manufacturer's printed directions for use for preconstruction treatment.

B. Horizontal Barriers: Termiticides shall be applied uniformly to all areas that will be covered by concrete slabs, including beneath sidewalks and entrance platforms adjacent to the building.

1. To produce a horizontal barrier, apply the emulsion at the rate of 1 gallon per 10 square feet of backfill.
2. If the backfill is washed gravel or other course material, apply at 1-1/2 gallons per 10 square feet.
3. At critical areas such as along the inside of foundation walls, around plumbing, utility services, and other features that will penetrate the concrete slab(s), apply emulsion at 2 gallons of solution per 5 linear feet to soil.
4. Applications shall be made with pressures less than 50 psi at the nozzle, using a course spray nozzle.
5. If concrete slabs cannot be poured over soil the same day it has been treated, a waterproof cover shall be placed over the soil to prevent erosion.

C. Vertical Barriers: Vertical barriers shall be established in soil which will be under the perimeters of floating or supported slabs, around utilities and in other critical areas which will be covered by concrete. After the final exterior grading is completed, vertical barriers shall be created in backfilled soil against foundation walls or against the outside of monolithic slab.

1. To produce a vertical barrier, apply the emulsion at the rate of 4 gallons per 10 linear feet of depth from grade to the top of the footing.
2. In hollow concrete masonry unit voids, apply emulsion at the rate of 2 gallons per 10 linear feet.

D. Reapply soil treatment solution to areas disturbed by subsequent excavation, grading, landscaping, or other construction activities.

END OF SECTION 02361

SECTION 02660

POTABLE WATER SYSTEM

02660-1 General

02660-1.1 Work Included.

A. Furnish all labor, materials and equipment necessary to provide water mains and appurtenances for potable and fire service.

02660-1.2 Installer's Qualifications.

A. The Concessionaire shall have a valid certified underground utility contractor's license, certified by the State Fire Marshal for installation of Fire Protection Systems and having at least three years of successful installation experience of potable water piping.

02660-1.3 Requirements of Regulatory Agencies.

A. All work is subject to FDOT Standards, Florida DEP Regulations, Florida Building Code and local utility agency regulations.

B. All utility construction shall be in conformance with the local utility agency standards and the Florida Department of Environmental Protection State Standards for Utility Construction.

C. Fire service lines shall be constructed and inspected in accordance with the regulations of the State Fire Marshal's Office.

02660-1.4 Reference Standards.

ASTM D 2241 Standard Specification for Poly (Vinyl Chloride) (PVC) Pressure-Rated Pipe (SDR Series).

AWWA C111 Standard for Rubber-Gasket Joints for Ductile-Iron and Gray-Iron Pressure Pipe and Fittings.

AWWA C508 Standard for Swing-Check Valves for Waterworks Service, 2 inch through 24 inch NPS.

AWWA C509 Standard for Resilient-Seated Gate Valves for Water and Sewerage Systems.

AWWA C600 Standard for Installation of Ductile-Iron Water Mains and Appurtenances.

AWWA C605 Standard for Underground Installation of Polyvinyl Chloride (PVC) Pressure Pipe and Fittings for Water.

AWWA C651 Standard for Disinfecting Water Mains.

AWWA M23 PVC Pipe - Design and Installation.

02660-1.5 Submittals.

A. Submit manufacturer's technical product data and installation instructions for potable water system materials and products.

B. Submit shop drawings for potable water systems, showing piping materials, sizes, layout and elevations. Include details of underground structures, connections, thrust blocks, and anchors. Show interface and spatial relationship between piping and proximate structures.

C. Submit maintenance data and parts lists for potable water system materials and products. Include this data, product data, shop drawings, and record drawings in maintenance manual.

02660-2 Products.

02660-2.1 Markings.

A. All water mains shall have a blue marker tape buried 24 inches above the top of the pipe for its entire length.

B. A blue coated #14 gauge UF (Underground Feeder per National Electric Code Article 339) solid tracer wire and joint seal (Kearney Aquaseal or Bishop) shall be installed along all pipe and service and must be taped below the spring line of the pipe and stubbed up at hydrants and valves.

02660-2.2 Ductile Pipe and Fittings.

A. Ductile Iron Pipe: Ductile iron pipe shall conform to the requirements of ANSI, A 21.51 and AWWA C151, latest revision. The pipe shall have a minimum rated water working pressure of 250 psi for diameters 4 inches through 12 inches and shall be furnished in nominal laying lengths of 20 feet or less. Flanged pipe shall have a minimum thickness class of Class 53.

B. Lining and Coatings:

1. Interior Lining for Potable, and Non-Potable Reuse Water Piping: Ductile iron pipe, fittings and specials shall be cement lined in accordance with ANSI/AWWA C 104, Cement-Mortar Lining for Ductile Iron and Gray Iron Pipe and Fittings for Water. The cement lining shall have standard thickness and, after curing, the lining shall have a seal coat of bituminous material.

2. Exterior Coatings for Buried Pipe: Ductile iron pipe, fittings and specials to be installed underground shall be coated on exterior at the factory with an asphaltic coating as specified in AWWA C 151. All clamps, bolts, nuts, studs and other uncoated parts of joints for underground installation shall be coated with coal tar epoxy prior to backfilling. Coal tar epoxy shall be equal to Kop-Coat Bitumastic No.300-M.

3. Exterior Coating for Exposed Pipe: Ductile iron pipe, fittings and specials to be installed aboveground shall be furnished with a shop applied primer on the exterior.

C. Fittings: Fittings for ductile iron pipe shall be either mechanical joint, restrained joint or flanged joint as indicated on the Drawings and shall have a minimum working pressure of 250 psi. Fittings shall be ductile iron and shall conform to ANSI/AWWA C 110, ANSI/AWWA C 111 and ANSI/AWWA C 153, latest revisions for flanged and mechanical joint pipe. Fittings shall be coated and lined as specified above for ductile iron pipe. The rubber gaskets for flanged, mechanical, and push-on joints shall be as described below.

D. Push-On Joints: Pipe using push-on joints shall be in strict accordance with AWWA C 111 and ANS1 A 21.11, latest revision and shall be as manufactured by American Cast Iron Pipe Company (Fastite Joint), United States Pipe Company (Tyton Joint), or Clow Corporation (Super Bell Tite Joint). Jointing materials shall be provided by the pipe manufacturer and installation shall be in strict accordance with the manufacturer's recommended practice.

E. Mechanical Joints: Jointing materials for mechanical joints shall be provided by the pipe and fitting manufacturer. Materials assembly and bolting shall be in strict accordance with ANSI/AWWA C 111 and ANSI/AWWA C 153, latest revisions. Tee head bolts and nuts for mechanical joints shall be manufactured of CORTEN, high strength, low alloy, corrosion resistant steel as manufactured by NSS Industries, or equal.

F. Flanged Joints: Flange drillings shall be Class 125 per ANSI B 16.1 with any special drilling and tapping as required to insure correct alignment and bolting.

1. Gaskets: Full face 1/8-inch thick, cloth-inserted rubber: Johns-Manville No. 109, John Crane Co., Style 777, or equal. Gaskets shall be suitable for a water pressure of 350 psi at a temperature of 180°F.

2. Bolts and Nuts for Flanges:

a. Bolts and nuts for flange located indoors and in enclosed vaults and structures shall be carbon steel, ASTM A307, Grade B.

b. Bolts and nuts for buried and submerged flanges and flanges located in wet wells, and manholes shall be Type 316 stainless steel conforming to ASTM A193, Grade B8M for bolts, and ASTM A194, Grade 8M for nuts.

3. Flanges shall be long-hub type screwed tightly on pipe by machine at the foundry prior to facing and drilling. Flange machine surfaces shall be coated with rust inhibitor immediately after facing and drilling. Field assembled screwed on flanges are prohibited.

G. Restrained Joints: Restrained joints shall be provided for all buried piping systems as indicated on the Drawings to restrain system thrust. Pipe joints and fittings shall be restrained as specified below.

1. Manufactured Restrained Joints: Manufactured restrained joints shall be Flex-Ring, Lok-Ring, Lok-Fast or Fast Grip, manufactured by the American Cast Iron Pipe Company, Lok-Type or Tr-Flex Type, manufactured by the United States Pipe Company or an equal approved by the Department. Joints shall be manufacturer's standard specifically modified push-on type joints with joint restraint provided by ductile iron retainer rings joined together by corrosion resistant, high strength steel tee head bolts and nuts or with joint restraint provided by a welded-on retainer ring and a split flexible ring assembled behind the retainer ring.

2. Restrained joint pipe and fittings shall be ductile iron only and shall comply with applicable portions of this specification. Manufactured restrained joints shall be capable of deflection during assembly. Deflection shall not exceed 80 percent of the manufacturer's recommendations.

3. Tee head bolts and nuts for restrained joints shall be manufactured of CORTEN, high strength, low alloy, corrosion resistant steel as manufactured by NSS Industries, or equal.

H. Alternate Restrained Joints: When prior approval is obtained from the Department, ductile iron pipe and fittings with mechanical joints may be restrained using a follower gland which includes a restraining mechanism. When actuated during installation, the restraining device

shall impart multiple wedging action against the pipe wall which increases resistance as internal pressure in the pipeline increases.

1. The joint shall maintain flexibility after installation. Glands shall be manufactured of ductile iron conforming to ASTM A536 and restraining devices shall be of heat-treated ductile iron with a minimum hardness of 370 BHN. The gland shall have standard dimension and bolting patterns for mechanical joints conforming to ANSI/AWWA C 111 and C 153, latest revisions.

2. Tee head bolts and nuts shall be manufactured of corrosion resistant, high strength, low alloy CORTEN steel in accordance with ASTM A242.

3. The restraining wedges shall have twist-off nuts to insure proper torquing. The mechanical joint restraint device shall have a minimum working pressure rating of

I. 250 psi with a minimum safety factor of 2 to 1 and shall be MEGALUG^{R} as manufactured by EBAA Iron, Inc. No other retainer gland type device will be acceptable. After installation prior to backfilling, all parts of the joint restraint system shall be coated with coal tar epoxy equal to Kop-Coat Bitumastic No. 300-M.

J. Identification: All buried piping shall receive a color-coded adhesive identification tape.

02660-2.3 PVC Pipe and Fittings.

A. Small PVC Pressure Piping: Unless otherwise specified, PVC pressure pipe smaller than 4 inches nominal diameter shall be Schedule 80 PVC in accordance with ASTM D 1785. Schedule 80 pipe shall have either solvent welded or threaded joints. PVC pressure pipe shall bear the approved seal of the National Sanitary Foundation (NSF). PVC pipe that is exposed to sunlight shall be manufactured with additives to provide resistance to ultraviolet deterioration.

1. Fittings: Socket type, solvent welded fittings for Schedule 80 PVC pipe shall be in conformance with ASTM D2467. Threaded type fittings for Schedule 80 PVC pipe shall be in conformance with ASTM D2464.

2. Flanges: Flanges for Schedule 80 PVC pipe shall be rated for a 150 psi working pressure with ANSI B 16.1 dimensions and bolting pattern. Flanges shall be connected to PVC piping with either solvent welded or threaded joints in accordance with ASTM D2467 or ASTM D2464, respectively. Gaskets shall be full faced type with a minimum thickness of 1/8 inch. Nuts and bolts shall be hexagonal with machine threads, manufactured of Type 316 stainless steel in accordance with ASTM A320, Class 2. Type 316 stainless steel flat washers with lock washers shall be used against PVC flanges.

3. Solvent Cement: As recommended by pipe manufacturer and in compliance with ASTM D2564.

4. Thread Lubricant: Plastic pipe dope as recommended by the pipe manufacturer, or Teflon tape.

B. Large PVC Pressure Piping: Unless otherwise noted, for diameters 4 to 12 inches use AWWA C 900 pipe with a dimension ratio of DR18, pressure class of 150 psi, and for larger than 12 inches use AWWA C 905 pipe with a dimension ratio of DR18, pressure class

of235 psi. Pipe shall be designed with not less than a 4 to 1 sustained hydrostatic pressure safety factor. Fittings shall be ductile iron fittings with restrained mechanical joint ends as specified hereinbefore. Pipe dimensions shall be made to match ductile iron pipe O.D.'s.

Pipe joints shall be made with integral bell and spigot pipe ends. The bell shall consist of an integral thickened wall section designed to be at least as strong as the pipe wall. The bell shall be supplied with factory glued rubber ring gasket that conforms to the manufacturer's standard dimensions and tolerances. The gasket shall meet the requirements of ASTM F477 Elastomeric Seals (Gaskets) for Joining Plastic Pipe. PVC joints shall be "Ring-Tite" as manufactured by J-M Manufacturing Company, Inc. or equal.

C. Identification: All buried piping shall receive a color-coded adhesive identification tape.

02660-2.4 PVC Ball and Check Valves.

A. PVC Ball Valves: All PVC ball valves 1/2 inch through 4 inches in size shall be of a one piece capsule type manufactured of Type 1, Grade 1 PVC. Ball valves shall be true union design with two-way blocking capability and shall have solvent welded socket or NPT threaded ends. Ball valves shall have Teflon seats with Viton backing cushions and Viton O-ring seals, and shall be designed for a 150 psi water working pressure at 120°F. Valves shall be supplied with ABS lever operating handles. PVC ball valves shall be manufactured by Asahi/America, or an equal approved by the Department.

02660-2.5 Gate Valves.

A. Bronze Gate Valves: Gate valves installed aboveground, 2 inches in size and smaller, shall be Class 150 all bronze valves conforming to Fed. Spec. WW-V-54d, Type I, Class B designed for a non-shock water pressure of 300 psi. Valves shall be furnished with screwed ends, handwheel operator, non-rising stem, one-piece solid wedge disc and screwed bonnet and shall be as manufactured by Crane, Powell or equal. The minimum weight of valves shall be as follows:

Valve Size (Inches)	Valve Weight (Pounds)
½	1.0
¾	1.5
1	2.5
1 ¼	3.6
1 ½	4.6
2	7.6

B. Iron Gate Valves:
   1. Iron gate valves shall open by turning to the left (counter-clock-wise), when viewed from the stem. When fully open, gate valves shall have a clear waterway equal to the nominal diameter of the pipe. Operating nut or hand wheel shall have an arrow cast in the metal indicating the direction of opening. Each valve shall have the manufacturer's distinctive marking, pressure rating and year of manufacture cast on the body. Prior to shipment from the factory, each valve shall be tested by applying to it a hydrostatic pressure equal to twice the specified working pressure. Hydrostatic and leakage tests shall be conducted in accordance with ANSI/AWWA C 500 or ANSI/AWWA C 509, latest revisions, whichever is applicable.

   2. Gate valves with nominal sizes from 2 to 2-1/2 inches shall conform to ANSI/AWWA C 500, latest revision, and shall be designed for a minimum working pressure of 200 psi.

Valves shall be iron body, bronze-mounted, double disc, parallel seat, non-rising stem type with double, Buna-N, O-ring stem seals. Bronze items of construction shall include the stems, seat rings, stem nuts, wedge bushings and upper and lower wedges. Bronze used for construction of these items shall be low zinc alloy bronze. Valve ends shall be screwed and as specified for steel pipe and fittings. Interior ferrous surfaces of valve, except for finished or bearing surfaces, shall be coated with a fusion bonded or thermo-setting epoxy coating in accordance with AWWA C 550, latest revision. Coating shall be holiday-free, NSF approved, with a minimum thickness of 12 mils. Surfaces shall be clean, dry, and free from rust and grease before coating. Exterior surfaces shall be coated as specified hereinafter.

Gate valves for this size range shall be as manufactured by American-Flow Control, Kennedy Valve Manufacturing Company, Dresser Industries, Inc., or equal.

3. Gate valves with nominal sizes from 3 to 16 inches shall conform to ANSI/AWWA C509, latest revision, and shall be designed for a minimum working pressure of 200 psi. Valves shall be iron body resilient seat type with O-ring stem seals. The valve stem, stem nut, glands and bushings shall be bronze. Valve disc shall be constructed to assure uniform seating pressure between disc seat ring and body seating surface. Resilient seat of valve shall be formed by a special corrosion and chloramine resistant, synthetic elastomer which is permanently bonded to and completely encapsulates a cast iron valve disc.

   Valve ends for underground installation shall be mechanical joint as specified for ductile iron pipe and flanged for above ground valves. Interior of valve body shall be coated with a fusion bonded or thermo-setting epoxy coating in accordance with AWWA C 550, latest revision. Coating shall be holiday-free, NSF approved, with a minimum thickness of 12 mils. Surfaces shall be clean, dry and free from rust and grease before coating. Exterior surfaces shall be coated as specified hereinafter. Resilient-seated type gate valves shall be manufactured by M & H Valve Company, U.S. Pipe Company, or equal.

4. Valve Joints: All gate valves shall have either mechanical joint, restrained joint or flanged ends to fit the pipe run in which they are to be used. Gate valves installed on push-on joint pipe shall have mechanical joint ends unless otherwise specified.

5. Valve Operators: Unless otherwise shown on the Drawings or specified herein, gate valves shall have non-rising stems. Buried gate valves shall be furnished with a 2-inch square AWWA standard nut operator with a valve box and cover. Gate valves located aboveground or inside structures shall be furnished with a handwheel operator which shall have an arrow cast in the metal indicating the direction of opening. 16-inch gate valves shall be equipped with gearing with a 2:1 gear ratio. All aboveground gate valves shall be of the open screw and yoke (OS&Y) gear operator design with a handwheel operator. All below ground 16-inch valves shall have bevel gear operators.

6. Exterior Valve Coatings: All exterior surfaces of iron body gate valves shall be clean, dry and free from rust and grease before coating. For buried service, the exterior ferrous parts of all valves shall be coated at the factory with coal tar epoxy with a minimum total finish dry film thickness of 20 mils. Prior to back- filling, all uncoated nuts, bolts, glands, rods and other parts of joints shall be coated in the field with coal tar epoxy equal to Kop-Coat Bitumastic No. 300-M. For valves installed aboveground, the exterior ferrous parts of all valves shall be shop primed at the factory with one coat,

minimum dry film thickness 2 - 3.5 mils, of a lead and chromate- free primer with rust-inhibitive pigments and synthetic resins. Primer shall be suitable for finish paint specified. Following installation, aboveground valves shall be finish painted.

02660-2.6 Air Release Valves (Clean Water Service).

A. Large Valves: Valves 1 inch or larger shall have heavy duty compound lever operating mechanism with 316 stainless steel pivot pins and 316 stainless steel retaining rings. Valves shall be constructed of cast iron ASTM A 48, Class 35 with 316 stainless steel trim and float. Valves shall have an adjustable orifice button, constructed of 316 stainless steel with viton or Buna-N seating. Provide 1/2-inch threaded outlet and stainless-steel plug for top cover and body drain. Valves shall have a working pressure rating of at least 150 psi. Valves shall be APCO Model 200A, or as manufactured by Valmatic, or equal.

B. Valve End Connections:
   1. Valves smaller than 3 inches shall have threaded ends. Valves 4 inches or larger shall have flanged ends.

   2. Flanges for Class 150 valves shall comply with ANSI B 16.1, Class 125. Flanges for Class 300 valves shall comply with ANSI B 16.1, Class 250.

   3. Threaded ends shall comply with ANSI B2.1

C. All air release and vacuum release valves shall be isolated from the service line with a 316 stainless steel gate valve for valves up to 3 inches, and a flanged body butterfly valve for valves greater than3 inches (provide a spacer plate if required to clear the rotation of the butterfly disc).

D. The open end of the automatic air release valve installed on potable water main shall be extended to at least one foot above grade and provided with a 20 mesh non-corrodible screen on the outlet of the downward facing elbow.

02660-2.7 Fire Hydrants.

A. Fire hydrants shall be general service type, ductile iron body, fully bronze mounted, for 150 psi working pressure, complying with AWWA Standard C 502, latest revision. The inlet connection shall be mechanical joint type, with accessories, for 6-inch ductile iron pipe. The hydrant foot shall have integral cast tie-back lugs. The integral shut-off valve shall be compression type opening against water pressure, and shall open left (counter-clockwise) as viewed from the operating nut.

B. The main hydrant valve opening shall be 5-1/4 inches. Valve diameter and general interior design shall be sufficient to provide head loss/flow quantity ratios less than specified in the above cited standard. The main valve seat and the threaded portion of the hydrant into which it screws shall be bronze. The hydrant barrel drain valve and port shall be bronze. The hydrant barrel drain shall be actuated by the main valve stem. The drain washer for the drain valve shall be Buna-N rubber which shall provide positive sealing action when the valve is opened. The stem operating threads and thrust bearing, and bronze seat ring threads shall be sealed by replaceable O-rings to protect from moisture and corrosion. Stem and seat ring threads shall be permanently greased lubricated or provided with a means for lubrication. All interior working parts of the hydrant shall be removable from the top of the hydrant to allow for repairs without removing the hydrant barrel after it has been installed. A weather shield shall be provided on the bonnet to protect the operating nut and lock nut area from dirt and water.

C. The hose nozzles shall be bronze with American National Standard fire hose coupling screw threads, one 4-1/2 inch pumper nozzle and two 2-1/2 inch hose nozzles. The hydrant operating nut and nozzle cap nuts shall be the same standard size and shape as specified by the local fire district. Nozzle caps shall be securely chained to hydrant barrel. Chains shall be corrosion resistant and painted to match hydrant color. The hydrants shall be "traffic" type with a frangible flange or lugs and operating stem section at ground line.

D. Hydrants shall be furnished with a 3 foot bury body except where deeper burial depths are indicated on the plans.

E. Coatings For Fire Hydrants: All ferrous metal surfaces of the hydrants shall be clean, dry and free from grease before coating as follows:

1. All exposed exterior surfaces below the ground line shall be coated at the factory with coal tar epoxy equal to Kop-Coat Bitumastic No. 300-M, for a minimum total finish dry film thickness of 20 mils.

2. All exposed interior surfaces above and below the main hydrant valve, except non-ferrous and machined ferrous surfaces shall be coated at the factory with a fusion bonded or thermosetting epoxy coating in accordance with AWWA C 550, latest revision. Coating shall be holiday free, NSF approved, with a minimum thickness of 12 mils.

3. All exposed, exterior, aboveground ferrous metal surfaces including barrel, bonnet, nozzle caps, nozzle cap chains, nuts, bolts and other fasteners shall be coated at the factory. Shop prime with one coat, 2 - 3.5 mils dry film thickness of a lead and chromate-free, rust inhibitive resin primer. Primer shall be compatible with finish coating specified. Finish coating shall be applied in accordance with the coating manufacturer's recommendations. Finish coating shall be Kop-Coat Rustarmor 500, or equal. Color of the finish coating shall be as required by the local fire district.

F. Approved Fire Hydrants: Fire hydrants shall be supplied from one manufacturer for the Project. The fire hydrants supplied shall be for general service type fire hydrants and shall be American Model B-84 B. Kennedy Model K81A Guardian; Mueller Model Centurion A-423; or equal.

G. Auxiliary Gate Valve: Auxiliary gate valve furnished with each hydrant shall be a 6 inch non-rising stem, resilient seated gate valve with mechanical joint ends and a cast iron valve box in conformance with the specifications in this Section.

02660-2.8 Wet Tapping Sleeves and Valves.

A. Wet Tapping Sleeves: Cast iron, mechanical joint type, with working pressure rating of 200 psi for sizes 4 through 12 inches and 150 psi for sizes 14 inches and larger, conforming to the applicable provisions of AWWA C110. Sleeve and glands shall be split type for assembly on pipe, and sleeve and mechanical joint glands and gaskets shall be sized for use with the class and type of pipe being tapped. Sleeve and glands shall be factory coated on interior and exterior with a fusion bonded, thermosetting epoxy coating in accordance with AWWA C550, current revision. Coating shall be holiday free with a minimum thickness of 12 mils DFT, and shall be furnished complete with all accessories. Outlet flange shall be Class 125 Standard. Tapping sleeves shall be as manufactured by the Mueller Company, American Valve and Hydrant Company, Kennedy Valve, or equal. Prior to backfilling, all uncoated exterior nuts, bolts, glands, rods and other parts of sleeve shall be coated in the field with coal tar epoxy to Kop-Coat Bitumastic No. 300-M.

B. Wet Tapping Valves: Tapping valves shall conform to ANSI/AWWA C509, and shall be designed for a minimum working pressure of 200 psi. Tapping valves 3 to 16 inches in size shall be resilient seat type gate valves as specified hereinbefore for gate valves 3 to 16 inches in size. Resilient seat type tapping valves shall be furnished with a raised guide ring cast integrally on the flanged end which is designed to match the groove in the tapping sleeve in accordance with MSS-SP60. The purpose of this guide ring shall be to ensure true alignment of the valve with the tapping sleeve. The interior of the waterway in the valve body shall be a full opening and capable of passing a full sized shell cutter equal to the nominal diameter of the valve. Tapping valves shall be as manufactured by the M & H Valve Company, U.S. Pipe Company, or equal.

02660-2.9 Valve Boxes.

A. Boxes shall be cast iron of standard design with adjustable screw type box. Interior diameter shall not be less than 5 inches with cast iron cover marked "WATER". Any deviations must have approval prior to installation.

02660-2.10 Corporation Stops and Service Paddles.

A. Corporation stops shall be Mueller Co. Type H-15000 for 1-inch service and Type H-10003 for 2-inch service or equal.

B. Corporation stops shall be Ford Meter Box Co. Type F-1000, Mueller co. Type H-15009 or equal with inlet having AWWA tapered threads and outlet for polyethylene or copper tubing with stainless steel insert stiffener.

C. Service Saddles: saddles shall have ductile iron bodies in accordance with ASTM A 536, latest revision, with double stainless-steel straps. Ductile iron body shall have a fusion bonded nylon coating with a minimum thickness of 12 mils. Straps shall be Type 304 stainless steel with premium grade Type 304 L stainless steel bolts and Type 304 stainless steel washers and nuts. The nuts shall be Teflon coated. The gasket material shall be an elastomeric compound resistant to degradation by oil, natural gas, acids, alkalies, most aliphatic fluids and chloramines. The outlet of the saddle shall have NPT threads. Service saddles shall be smith Blair No. 317 or equal.

02660-2.11 Double Check Back Flow Preventers.

A. Standards of Construction: Back flow prevention devices shall be manufactured in accordance with AWWA C 510, latest revision, American Society of Sanitary Engineering Standards, and the University of Southern California Foundation for Cross Connection Control and Hydraulic Research "Manual of Cross Connection Control", Sixth Edition.

B. Product Handling: Exercise care in transporting and handling back flow preventers to avoid damage. Inside of back flow preventers shall be kept free of dirt and debris.

C. Double check valve back flow preventers shall include independent spring-loaded check valves that remain closed until there is a demand for water. Each of the two check valves in series is designed to open at 1 psi pressure differential in the direction of flow. In the event pressure increases downstream of the unit, tending to reverse direction of flow, both check valves are closed to prevent backflow. If the second check valve is prevented from closing tightly, the first check valve will still provide protection from a backflow condition.

D. Double check valve back flow preventers shall have all bronze bodies for sizes 2 1/2 inches and smaller and all ductile iron bodies for sizes 3 inch and larger. Ductile iron bodies shall be coated with a fusion bonded thermosetting epoxy coating in accordance with AWWA C550 with a minimum, holiday-free, coating thickness of 12 mils. The double check

valve back flow preventer shall consist of two independently operated, spring loaded, wye pattern, poppet type check valves designed for installation in a normal horizontal flow attitude. Check valve assemblies, springs and seats, and all other internal parts shall be constructed of Type 316 stainless steel. Check valve seats shall be field replaceable without removing the device from the service line. Back flow preventers shall be designed for a working pressure of 200 psi and a temperature range of 32°F to 140°F. The back-flow preventer shall be manufactured as a complete unit including test cocks, and upstream and downstream isolation gate valves. The test cocks shall be manufactured of bronze and shall be arranged such that the unit can be tested without removing the unit from the line.

E. Isolation Valves: Double check valve back flow preventers shall be furnished complete with isolation valves. For sizes 2-1/2 inches and smaller, the isolation valves shall be all bronze ball valves with Buna N O-rings and valve seats, and a lever operating handle. Ball valves shall be in accordance with AWWA C 800, latest revision. For sizes larger than 3 inches, the isolation valves shall be resilient seated gate valves with flanged ends and OS&Y handwheel operators. Gate valves shall be as specified and described hereinbefore.

F. Exterior Coating: The exterior ferrous surfaces of the double check valve back flow preventer and the isolation valves shall be shop primed and finish painted at the factory.

G. Acceptable Manufacturers: Double check valve back flow preventers shall be Model No. 2 as manufactured by Hersey Products, Inc., Model 805 YD as manufactured by Febco, Model 709 as manufactured by Watts Regulator Company or an equal approved by the Department.

02660-2.12 Water Meter.

A. Water meters shall be standard local utility agency meters. The Concessionaire is responsible for the cost of the meter and installation, as well as impact fees, connection charges and all costs associated with providing fire and potable water to the facility.

02660-2.13 Water Meter Box.

A. Install meter boxes flush to proposed grade. All meter boxes shall meet H-20 traffic loads as established by AASHTO. Meter boxes shall be constructed of a composite material of polymer concrete and fiberglass. Meter boxes shall be manufactured by CDR Systems Corporation or equal.

02660-3 Execution.

02660-3.1 Pipe Installation.

A. Installation shall be performed in accordance with the applicable provisions of AWWA.

B. Restrained joints shall be required at all bends and tees.

C. Install underground marker at all locations where piping is installed.

D. All pipes shall be installed 36 inch (minimum) below unpaved ground and 48 inch (minimum) below pavement surfaces within limited access right-of-way as shown on the Plans.

02660-3.2 Backfilling.

A. Provide a well compacted bed for the pipe and carefully fill and compact along the sides of the pipe in 6-inch layers to a point at least 1 foot over the top of the pipe. Where no pavement is to be constructed and vehicular traffic is to pass over the pipe, such as road
