ADDENDUM NO. 2

BEVILL JASPER INDUSTRIAL COURT ALABAMA ENERGY INFRASTRUCTURE TRAINING CENTER ADDITION PACKAGE C: INTERIOR FIT OUT

Architect Job No. 24-40C

February 27, 2026

ACCS No. 2024 070 BSCC

BIDS DUE:
Thursday, March 12, 2026, until
2:00 p.m., local time, held at
Bevill State Community College
Wade Math and Science Building
President's Conference Room
805 14th Street East
Jasper, AL 35501

The Plans and Specifications are here by amended. The following supersedes all contrary and/or conflicting information and is made part of the contract documents.

SPECIFICATIONS

1. **SECTION 10436 – AUTOMATIC EXTERNAL DEFIBRULATOR**: Add in its entirety

2. **SECTION 12150 – MISCELLANEOUS FURNISHINGS AND FIXTURES**: Revised in its entirety.

DRAWINGS

1. **Sheet A6.1** – INTERIOR ELEVATIONS: Revised interior elevations.

2. **Sheet A8.1** – FINISH FLOOR PLAN AND LEGEND – AREA A: Revised finish pattern legend

3. **Sheet A8.2** – FINISH FLOOR PLAN, LEGEND, AND DETAILS – AREA B: Revised finish pattern legend.

4. **Sheet A8.3** – FINISH SCHEDULE AND LEGEND: Revised finish schedule and materials legend and added the finish pattern legend to the sheet.

CLARIFICATIONS

1. The following documents were provided as part of Package A and B and are included in this addendum for **reference only**, see attached:
   - **Report of Subsurface Exploration and Geotechnical Engineering Evaluation** *REFERENCE ONLY*
   - **Aggregate Piers – Shop Drawings** *REFERENCE ONLY*
   - **Pre-Engineered Steel Building – Shop Drawings and Design Analysis** *REFERENCE ONLY*
   - **Alabama Infrastructure Training Center, Pkg. A Sitework Plans** *REFERENCE ONLY*

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Automated External Defibrillators (AED).
2. Automated External Defibrillator (AED) Cabinets.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for AED cabinets. 1. Include roughing-in dimensions, details showing mounting methods, relationships of box and trim to surrounding construction, door hardware, cabinet type, trim style, and panel style. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for Power Heart AED G3 or a comparable product approved by the Architect.

1. Include rated capacities, operating characteristics, and furnished specialties and accessories.

B. Samples: For each type of cabinet indicated

C. Written statement that the specified AED will fit in the submitted AED cabinet.

1.3 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Coordinate sizes and locations of AED cabinets with wall depths.

B. Sample Warranty: For manufacturer's warranty.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For AED and AED cabinets.

1.5 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1. Review methods and procedures related to AED cabinets including, but not limited to, the following:
   a. Schedules and coordination requirements.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. AUTOMATIC EXTERNAL DEFIBRILLATOR (AED)

1. Basis-of-Design Product: Subject to compliance with requirements, provide Lifeline Power View AED (#DCF-A2310) as manufactured by Cardiac Science Corporation or comparable product approved by the Architect.

B. AED CABINET

1. Cabinet Type: Suitable for holding basis of design AED;
   a. Cabinet Construction: Nonrated.
   b. All cabinet components and equipment shall be accessible, removable and replaceable with the cabinet door in a 90 degree position.
   c. Cabinet Material: Aluminum sheet.
   d. Semirecessed Cabinet: One-piece combination trim and perimeter door frame overlapping surrounding wall surface with exposed trim face and wall return at outer edge (backbend).
      1) Rolled-Edge Trim: 2-1/2-inchbackbend depth.
   e. Cabinet Trim Material: Aluminum sheet.
   f. Size: 17.5”W x 17.5”H x 7”D
   g. Door Material: Aluminum sheet.
   h. Door Style: Standard visibility window.
   i. Door Glazing: Tempered float glass.
   j. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.
      1) Provide manufacturer's standard.
      2) Provide continuous hinge, of same material and finish as trim, permitting door to open 180 degrees.

2. Accessories:
   a. Door Lock: Cam lock that allows door to be opened during emergency by pulling sharply on door handle.
   b. Identification: Manufacturer's standard.

3. Finishes: Aluminum – clear anodized

2.2 FABRICATION

A. AED Cabinets: Provide manufacturer's standard box (tub) with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated.

1. Weld joints and grind smooth.
2. Provide factory-drilled mounting holes.

B. Cabinet Doors: Fabricate doors according to manufacturer's standards, from materials indicated and coordinated with cabinet types and trim styles selected.

C. Cabinet Trim: Fabricate cabinet trim in one piece with corners mitered, welded, and ground smooth.

2.3 GENERAL FINISH REQUIREMENTS

A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Finish products after assembly.

C. Aluminum: Clear Anodized finish.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine walls and partitions for suitable framing depth and blocking where recessed cabinets will be installed.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install AED cabinets in locations as shown on the Drawings and at mounting heights, at heights acceptable to the Authority Having Jurisdiction (AHJ)

B. AED Cabinets: Fasten cabinets to structure, square and plumb.

3.3 ADJUSTING AND CLEANING

A. Remove temporary protective coverings and strippable films, if any, as cabinets are installed unless otherwise indicated in manufacturer's written installation instructions.

B. Adjust cabinet doors to operate easily without binding.

C. On completion of cabinet installation, clean interior and exterior surfaces as recommended by manufacturer.

D. Touch up marred finishes or replace cabinets that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by AED cabinet and mounting bracket manufacturers.

E. Replace AED cabinets that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

1.0 - GENERAL

1.1 Scope

The work of this section consists of furnishing and installing complete, all miscellaneous furnishings, fixtures, and signage items as indicated.

1.2 Existing Conditions

A. It is the general contractor's responsibility to field verify existing signage before a bid and provide signage that shall match all existing signage types and styles currently installed to provide a continuity of design to the owner as required.

1.3 Submittals

Shop drawings shall be submitted.

2.0 - PRODUCTS

2.1 Building Letters

A. Cast aluminum letters, equal to Leeds Architectural Letters, Inc., Select from all available fonts Size: As indicated on drawings, lay-out as indicated. Colors as selected by Architect. Provide flush concealed stud mounting.

2.2 Building Plaque

A. Dedication plaque shall be of cast aluminum. Furnish and install a 24" x 42" plaque with approximately 500 raised letters and raised border. Field shall have stipple finish. Face of letters and borders shall have ground satin finish surface.

B. Plaque layout and designation shall be furnished by the Architect.

2.3 Appliances

A. **Display Refrigerator Merchandiser** - True GDM-23-HC~TSL01
   1. Manufacturer - True
   2. Model GDM-23-HC~TSL01
   3. See Electrical/Plumbing drawings and provide equipment with all required electrical and plumbing rough-ins, hook-ups, and installations.
   4. Warranty: Provide manufacturer's 7-year warranty
   5. Provide Operations/Maintenance Demonstration for Owner.

B. **Ice and Water Dispenser** - Scotsman HID312 Meridian Series Ice and Water Dispenser
   1. Manufacturer - Scotsman
   2. Model - HID312 Meridian Series
   3. Provide manufacturer's recommended machine stands.
   4. See Electrical/Plumbing drawings and provide equipment with all required electrical and plumbing rough-ins, hook-ups, and installations.
   5. Warranty: Provide manufacturer's 3-year warranty
   6. Provide Operations/Maintenance Demonstration for Owner.
   7. Provide manufacturer's recommended machine stands.

C. **Refrigerator -** GE Appliances Model # GDE25EYKFS
   1. See Electrical/Plumbing drawings and provide equipment with all required electrical and plumbing rough-ins, hook-ups, and installations.
   2. Warranty: Provide manufacturer's 1-year warranty.
   3. Provide Operation/Maintenance Demonstration for Owner.

2.4 KnoxBox
Provide one Standard Capacity Model 3274 KnoxBox 3200 - Location as directed by the Architect
Color: Black
Mount Type: Standard Mount
Tamper Switch Type: None

~~2.5 Chemical Toilet~~
~~Provide Serene Life Portable Toilet (s) SLCATL320 or pre-approved equal as required in the Storm Shelter. Provide Maintenance and Instructions with Closeouts.~~

2.5 Wall Corner Protective Guards (Op.2)

A. General
Furnish and install 8'-0" high (or cut to fit) corner guards as indicated on the drawings. Surface mounted corner guards VA Series as manufactured by CS Acrovyn.

B. Corner guards to be surface mounted with self adhesive tape backing. Provide 2-1/2" CS Acrovyn # VA-250 or pre-approved equal. Color to be selected.

2.6 Project Sign - Specification requirements are listed in Section 01030.

3.0 - EXECUTION

3.1 Installation
Installation of all items shall be in full conformity with manufacturer's specifications, recommendations, and approved details.

3.2 Installation of Building Letters
Install building letters on surfaces and at heights as directed. Install in accordance with manufacturer’s recommendations.

3.3 Installation of Plaque(s)
Install plaque(s) where directed.

3.4 Installation of Appliances
Install appliances as directed. Install in accordance with manufacturer’s recommendations.

Subject: Report of Subsurface Exploration and
Geotechnical Engineering Evaluation for
Expansion to Alabama Power HVAC Training Center Building
Beville State Community College
Jasper, Alabama
BECC Project Number: 224039

Dear Mr. McGehee:

BECC has completed the authorized Subsurface Exploration and Geotechnical Engineering Evaluation for the subject project. This work was conducted in accordance with our proposal number Q1-24052 dated April 25, 2024.

The purpose of our work was to evaluate the soil boring data, provide laboratory testing and provide geotechnical engineering recommendations for the subject project. This report outlines the exploration procedures used, exhibits the data obtained, and presents our conclusions and recommendations.

We sincerely appreciate the opportunity to have worked with you on this project. If you have any questions, or if we may be of further service to you, please call us.

Respectfully submitted,
BECC, Inc.

Richard A. Rhinehart

Richard A. Rhinehart, P.E.
Principal Geotechnical Engineer

EXECUTIVE SUMMARY

The proposed project includes Expansion of Alabama Power HVAC Training Center Building in Jasper, Alabama. The following is a brief summary of the exploration including our findings, conclusion and recommendations. Refer to subsequent sections within the text for detailed discussions of these topics.

- Seventeen (17) soil test borings were drilled for the project to depths ranging from 5 to 21 feet.

- Existing fill soils were typically encountered below the surface materials and extended to maximum depths of 21 feet. The fill soils consisted of soft to very stiff, silty clay with traces of shale fragments. Residual soils were generally encountered by the soil borings where the existing fill was not as thick. The residual soils consisted of medium stiff to very hard silty clay with some shale fragments. Auger refusal (rock) varied from 15 to 21 feet by the deeper borings. Perched groundwater was encountered at depths 3 to 15 feet.

- The soil borings indicated a thick layer of existing fill soils in the proposed building expansion area. The fill consistency was highly variable ranging from soft to stiff. These fill soils had characteristics of fill soils that were not systematically placed in standard lift thicknesses and adequately compacted. In our opinion, conventional shallow spread foundations should not be supported by the existing fill soils due to the risk of excessive settlements.

- Mass undercutting of the existing fill soils and replacement with new controlled engineered fill may not be a practical solution due to the vicinity of the existing building and the thickness of the existing fill. We recommend that the new building foundations either be supported by rammed aggregate piers (RAP) or concrete drilled shafts.

- The RAP would be constructed by augering 24 to 36-inch diameter holes to depths below the existing fill soils in the foundation areas then backfilling the holes with thin lifts of compacted aggregate. Conventional shallow foundations supported on rammed aggregate piers can be designed based on a net allowable bearing pressure of 6 ksf.

- In our opinion, rock supported concrete drilled piers can be used as the foundation system to support the building foundations. With this option, drilled piers would be augured through the existing fill and residual soils to bear on the underlying bedrock. Drilled piers bearing on sound, continuous, shale or sandstone can be designed for a maximum allowable bearing pressure of 40 ksf.

- The existing fill soils can provide floor slab support provided the upper 2 feet are compacted to a minimum of 98% of the Standard Proctor maximum dry density (ASTM D698). After compaction, we also recommend that the existing fill soils be proofrolled with a tandem dump truck (50,000 lbs. min.).

NOTE: *It should be noted that this executive summary presents selected elements of our findings and recommendations* ***only.*** *It* ***does not*** *present crucial details needed for the proper application of our findings and recommendations. Our findings, recommendations, and application are related* ***only through the full report****, and are best evaluated with the active participation of the geotechnical engineer who developed them.*

Table of Contents

SECTION 1: SCOPE OF WORK

The purpose of the geotechnical exploration was to evaluate general soil conditions for the Expansion of Alabama Power HVAC Training Center Building in Jasper, Alabama. This work was conducted in accordance with our proposal number Q1-24052 dated April 25, 2024. The following items were included as part of our scope of work:

1. Review the 17 field soil test boring log data drilled by Earthcore, LLC for the project. Prepare final boring logs after BECC's engineer observe and visually classify the soil samples furnished by Earthcore.

2. Laboratory tests were to include natural moisture content (ASTM D2216), Atterberg limits (ASTM D4318), and percent passing #200 sieve (ASTM D1140).

3. A geotechnical engineering report is to include the following items:

   - A site plan illustrating the boring locations
   - Boring logs describing the subsurface and groundwater conditions encountered
   - Description of field and laboratory procedures
   - Discussion of site geology
   - Results of the laboratory tests performed
   - Presence of unsuitable soils within the borings
   - Recommendations for undercutting unsuitable soils
   - General earthwork recommendations (compaction)
   - Recommendations for foundation design alternatives
   - Floor slab recommendations

NOTE: BECC's work scope did not include exploration of the site for environmental contaminants in the subsurface soils or groundwater.

SECTION 2: PROJECT DESCRIPTION

The project will consist of an addition to the Alabama Power HVAC training center building located at 3711 Industrial Court in Jasper, Alabama. The addition will be located on the south side of the existing building. The new addition will be approximately 160' wide and 320' long. We understand that the existing building had foundation problems after construction that were subsequently repaired.

SECTION 3: SITE GEOLOGY

Published geologic maps by the United States Geological Survey (USGS) indicate that the site is underlain by the Pottsville Formation. The Pottsville Formation consists of a thick-bedded coarse-grained, locally conglomeratic basal sandstone overlain by a sequence of alternating thin-bedded shale containing coal beds and thin to medium bedded sandstone.

The sandstone weathers to a sandy soil that has a maximum thickness of about 15 feet. The rocks in this geologic formation are prone to differential weathering, which often results in alternating hard and soft layers. The shales are more susceptible to weathering, and advanced weathering results in the formation of silt and clay strata. In many instances, competent layers of sandstone can be found to be underlain by clay seams derived from weathered shale beds. Wet springs and perennial springs are common in the Pottsville Formation.

In addition to differential weathering, the rocks of the Pottsville Formation have been subjected to intense folding, often creating tightly folded beds. Due to intense folding, the rock beds are sometimes folded to a near vertical orientation, which permits water infiltration and advanced weathering. Anomalous localized conditions are frequently associated with the differential folding which is common to the Pottsville Formation. Previous surfacing mining and underground mining for coal has occurred in the Pottsville Formation. The evaluation of the site for coal mining was not part of BECC's work scope.

3.1 Seismic Design Parameters

The subsurface conditions at the site consist of soils underlain by bedrock. Based on the borings performed at the site and our knowledge of the site geology, we recommend a seismic site class definition of "C" be used in design calculations (International Building Code). Site Coefficient values for spectral response acceleration taken from ASCE 7 Hazard Tool are given below.

Site Location: 33.816671° N Latitude -87.230079° W Longitude

Risk Category	S_S	S_1	S_{MS}	S_{M1}	S_{DS}	S_{D1}	PGA_M	T_L	V_{S30}
II	0.37	0.13	0.37	0.17	0.25	0.11	0.18	12	530

SECTION 4: SUBSURFACE EXPLORATION

BECC received 17 field soil test boring logs and soil samples drilled by Earthcore. The boring locations are shown on the "Boring Location Map" in the Appendix. The soil samples were visually classified by BECC's engineers and the data is presented on the boring logs in the Appendix.

SECTION 5: LABORATORY TESTS

A laboratory testing program was conducted to ascertain additional engineering characteristics of the soils obtaineed. To supplement the visual classification of the soil samples, the following tests were performed. The results of the tests are shown on the "Geotechnical Lab Summary" and the individual test reports in the Appendix.

5.1 Description of Soils (Visual-Manual Procedure) (ASTM D2488)

The soil samples were visually examined by our engineer and soil descriptions were provided. Representative samples were then selected and tested to determine soil classification as described above. This data was used to correlate our visual descriptions with the Unified Soil Classification.

5.2 Natural Moisture Content (ASTM D2216)

Natural moisture contents (M%) were determined on selected samples. The natural moisture content is the ratio, expressed as a percentage, of the weight of water in a given amount of soil to the weight of solid particles.

5.3 Percent Passing #200 Sieve (ASTM D1140)

Wash #200 tests were performed on the selected samples to determine the amount of "fines" in the represented soil. "Fines" are defined as particles with a grain size equal to or less than a diameter of 0.075 millimeters. These particles are typically found in silts, clays, and silty clays, as well as silty or clayey sands.

5.4 Atterberg Limits Tests (ASTM D4318)

Atterberg Limit tests were performed on the selected samples to determine how the characteristics change upon variation in moisture stage. The limits are bracketed by the Liquid Limit (LL) and the Plastic Limit (PL). The Liquid Limit is the moisture content at which the soil will flow as a heavy viscous fluid. The plastic Limit is the moisture content at which the soil is between the "plastic" and semi-solid stage. The soil's Plasticity Index (PI) is the difference between the Liquid Limit and the Plastic Limit. The PI is often used as the indicator of the soil's expansive tendencies. The greater the range between the LL and the PL, the more potentially expansive the soil can be.

SECTION 6: SURFACE & SUBSURFACE CONDITIONS

Details of the subsurface conditions encountered by the test borings are shown on the boring log sheets in the Appendix. The general subsurface conditions encountered, and their pertinent characteristics are described in the following paragraphs. The stratification lines indicated on the logs of boring represent approximate boundaries between soil types. However, the actual transition may be gradual. Conditions represented by the test borings should be considered applicable only at the test boring locations on the dates shown, and it should be assumed that the conditions may be different at other locations at other times.

6.1 Surface Materials

The soil borings typically encountered asphalt paving or topsoil at the ground surface. The asphalt was typically 2 inches thick underlain by approximately 2 inches of crushed stone base. When encountered the topsoil was approximately 1 inch thick.

6.2 Existing Fill Soils

Existing fill soils were typically encountered below the surface materials and extended to maximum depths of 21 feet. The fill soils consisted of soft to very stiff, silty clay with traces of shale fragments. Standard penetration resistance tests (N-values) within the fill soils ranged from 1 and 26 blows per foot (bpf) typically less than 10 bpf. The following table indicates the existing the approximate fill thickness at the boring locations.

BORING NO.	EXISTING FILL THICKNESS (feet)
B-2	3
B-3	5+
B-4	5+
B-6	5+
B-7	5+
B-8	5+
B-9	21
B-10	13
B-11	17
B-11b	8
B-12	20
B-13	16
B-14	16
B-15	20

6.3 Residual Soils

Residual soils are those that have been formed by the in-place weathering of the parent rock. Residual soils were generally encountered by the soil borings where the existing fill was not as thick. The residual soils consisted of medium stiff to very hard silty clay with some shale fragments. N-values in the residual soils ranged from 7 to 100 bpf.

6.4 Auger Refusal

Auger refusal is the drilling depth at which advancement of the borehole can no longer be accomplished by standard soil drilling; rock coring must be employed for further penetration. Auger refusal encountered in the borings ranged from 15 to 21 feet. Auger refusal at the site was due to resistant shale/sandstone bedrock.

BORING NO.	AUGER REFUSAL DEPTH (feet)
B-9	21
B-10	21
B-11	17
B-11b	17
B-12	20
B-12b	15
B-13	16
B-14	16
B-15	20

6.5 Groundwater

Groundwater was encountered in the following soil borings at the time of drilling. The groundwater levels are not true groundwater levels, but rather "perched" or trapped groundwater in the existing fill soils and or just above the rock surface.

BORING NO.	GROUNDWATER DEPTH AT TIME OF DRILLING (feet)
B-3	3
B-9	8
B-10	11
B-11	10
B-12	12
B-13	11
B-14	8
B-15	15

The presence or absence of water in the boreholes at the time of drilling does not necessarily mean that groundwater will or will not be present at other times. Groundwater levels fluctuate seasonally and are related to the amount of rainfall received in months prior to the observations. Perched or trapped groundwater is common near the interfaces of fill/residual soils/rock.

SECTION 7: FOUNDATION RECOMMENDATIONS

7.1 General

The soil borings indicated a thick layer of existing fill soils in the proposed building expansion area. The fill consistency was highly variable ranging from soft to stiff. These fill soils had characteristics of fill soils that were not systematically placed in standard lift thicknesses and adequately compacted. In our opinion, conventional shallow spread foundations should not be supported by the existing fill soils due to the risk of excessive settlements.

Mass undercutting of the existing fill soils and replacement with new controlled engineered fill may not be a practical solution due to the vicinity of the existing building and the thickness of the existing fill. We recommend that the new building foundations either be supported by rammed aggregate piers or concrete drilled shafts. The details are presented in the following sections.

7.2 Rammed Aggregate Piers

The proposed structure can be supported by strip and spread footings resting on existing soil provided it is reinforced by Rammed Aggregate Piers (RAP). Such a foundation system is typically a design-build product performed by a specialty contractor such as Geopier. The piers are constructed by augering 24 to 36-inch diameter holes to extend below the existing fill soils then backfilling the holes with thin lifts of compacted aggregate. Compaction densifies the aggregate and increases lateral stress in the soil matrix. The system serves to reduce settlement by replacing the random fill (compressible) soils with a stiffer composite soil matrix.

RAP elements typically cover approximately 30 percent of the footing footprint area. We recommend a net allowable bearing pressure for shallow spread footings of 6 ksf at the project site where RAP elements are used to modify the subsurface conditions. This bearing pressure can be increased one-third, in accordance with the local practice to resist transient loading conditions associated with seismic events or wind gusts.

Final settlement calculations should be performed by RAP designer. Typically total and differential settlements foundation settlements are estimated to be 1 inch and ½ inch, respectively.

7.2.1 RAP Installation Recommendations

If an aggregate pier-enhanced foundation system is selected, we recommend that the following issues be considered prior to construction.

- The RAP foundation design and construction should be performed by a specialty contractor that has a proven track record of successful projects using RAPs.

- The existing fill may contain isolated rock or boulders which the auger used to install the rammed aggregate piers cannot remove. Other methods of boulder removal may be required before the pier installation (typically trackhoe used for removal of isolated boulders).

- One demonstration pier should be installed with the Contractor's standard procedures and then load-tested to determine the modulus. The load testing setup and procedures should be selected by the Specialty RAP Contractor and submitted for review to the project geotechnical engineer. The demonstration pier should be installed at the foundation grade level.

- All of the RAP element's installation operations should be conducted under the observation of the geotechnical engineer's representative.

- After the foundation soils have been reinforced with RAP elements, the treated ground surface should be cleared and cleaned to the satisfaction of the geotechnical engineer, and shallow foundations installed at grade.

7.3 CONCRETE DRILLED PIERS

In our opinion, rock supported concrete drilled piers can be used as the foundation system to support the building foundations. With this option, drilled piers would be augured through the existing fill and residual soils to bear on the underlying bedrock. **Drilled piers bearing on sound, continuous, shale or sandstone can be designed for a maximum allowable bearing pressure of 40 ksf.** The use of this bearing pressure will require that sound, level, continuous rock is present beneath the bearing surface of the drilled pier. Based on our drilling data, it appears that a typical drilled pier would encounter rock at approximately 15 to 25 feet below the existing ground surface. Some rock excavation should be expected in order to remove weathered/fractured upper rock to reach competent bearing rock.

The minimum drilled pier diameter should be 30 inches so that adequate cleaning and inspection can be accomplished. Each drilled pier should be inspected by a qualified geotechnical engineer by examining the bottom of the shaft to check for rock soundness and the presence of voids and seams. Given the rock condition at the site, we anticipate that at least one test hole (2" diameter) drilled to at least twice the drilled pier diameter will be required to adequately evaluate the condition of the bearing rock. The drilling of any additional test holes should be left to the discretion of the inspecting engineer.

7.3.1 Dewatering

The results of our exploration and experience in this geologic formation indicate that dewatering will be required during drilled pier installation. The anticipated drilled pier depth, and the potential for high groundwater flows make it mandatory that the contractor be prepared to adequately seat casing and have facilities available to handle water in-flows.

We note that it is sometimes necessary to extend drilled piers through what may be adequate bearing material simply to restrict the flow of water into the drilled pier. Occasionally vertical slots are present in the bedrock resulting in significant inflows of water. In this case, measures will be required to control soil inflow and removal during dewatering to minimize potential for future ground loss.

7.3.2 Concrete Placement

The procedures used in installing drilled piers and the nature of the materials penetrated in this area are such that concrete quantities can be underestimated if the "neat" volume of the design drilled pier diameter is used. The drilled pier is typically started one or more sizes larger than design to facilitate "telescoping" as the drilled pier is extended. Since the depth of suitable rock is never a certainty, the contractor must be conservative in terms of being able to be at or above the design diameter when suitable rock is reached.

Another factor contributing to apparent "overages" in concrete quantities is the creation of voids adjacent to the drilled pier due to removal of boulders or the occurrence of actual cavities within the rock or soil mass. These two factors normally result in the actual quantity of concrete used exceeding the "neat" volume of the design shaft by as much as 30% to 70%. These percentages obviously would tend to increase as the depth of the drilled pier increases. For this project we recommend that an allowance for at least 50% overage be included in the foundation concrete budget.

Our experience and current research in the field indicate that drilled piers can be concreted by the "free fall" method without affecting the strength and quality of the in-place concrete. Concrete should free fall without hitting the sides of the excavation or reinforcing. The use of a hopper or other suitable device is recommended to control concrete placement. The placement of concrete in the shaft should proceed until the concrete level is above the external fluid level and should be maintained above this level throughout casing removal.

SECTION 8: FLOOR SLAB CONSIDERATIONS

The existing fill soils can provide floor slab support provided the upper 2 feet are compacted to a minimum of 98% of the Standard Proctor maximum dry density (ASTM D698). After compaction, we also recommend that the existing fill soils be proofrolled with a tandem dump truck (50,000 lbs. min.). Any soft or unstable areas will require undercutting or recompaction. The geotechnical engineer should observe the proofrolling operations and perform density tests on the recompacted fill soils.

In addition, we suggest that all ground supported slabs be founded on a minimum of 4 inches of open graded stone (#57) or 6 inches of dense graded stone (#610 or #825). The granular materials will provide more uniform support, and to act as a capillary break. We recommend that slab joints and construction be in accordance with the guidelines of the American Concrete Institute (ACI) and the Portland Cement Association (PCA).

On most projects, there is a significant time lag between initial grading and the time when the contractor is ready to construct the slab-on-grade. Even though the soils may have been placed and compacted adequately during initial grading, exposure to weather, construction traffic, etc., can destroy the integrity of subgrade soils. On many projects, this becomes a point of controversy when remedial work is required for proper slab support.

SECTION 9: SITE PREPARATION & GRADING CONSIDERATIONS

9.1 Existing Structures and Surface Materials

All existing structures (including above and below ground construction) within the areas to be developed should be removed. Removal should include all vegetation, topsoil, underground pipes and lines, etc., that might interfere with construction. If abandoned underground utilities are to be removed prior to initiation of construction, provisions should be made in the construction specifications and budget to restore the subgrade to a stable condition. Restoration should include backfilling and compaction of the excavated areas.

9.2 Controlled Structural Fill

BECC recommends that the controlled structural fill meet the following recommendations:

- Liquid Limit (LL) less than 50.
- Plasticity Index (PI) less than 30.
- Free of organics.
- Maximum rock size of 4 inches.
- Maximum dry density greater than 100 pcf.

General fill should be compacted to a minimum 98% of maximum dry density, as determined by the Modified Proctor ASTM D1557. A sufficient number of field density tests should be performed to evaluate the grading contractor's performance during filling. During mass grading, lift thickness for fill should be limited to a maximum of 8 inches loose measure. Backfilling in limited access areas such as utility trenches should have a lift thickness limited to 4 inches loose measure.

We also recommend that all structural fill be placed within 2% of optimum moisture content. The grading contractor should acknowledge the importance of proper fill moisture conditioning. **We suggest that the project specifications address that both fill compaction and acceptable fill moisture content will be required for the acceptance of structural fills.** It will be particularly important to have a water truck available if filling takes place during dry months.

9.3 Backfilling of Utility Trenches

Backfilling of storm drain and utility trenches is often accomplished in an uncontrolled manner, leading to subsequent settlement of the fill and cracking of pavements. We recommend that utility trenches be backfilled with acceptable fill in 4-inch lifts and compacted with pneumatic-piston tampers to the project requirements. Should seepage occur in utility trenches, it may be necessary to "floor" the trench with open-graded gravel to provide a dry working surface.

9.4 Surface Drainage and Protection of Soils During Grading

The soils at the site are moisture sensitive and can become easily disturbed causing loss of strength. Proper surface drainage will be very important during grading at the site. If the soils become wet after being exposed it may become necessary to undercut or recondition. On many projects reworking of disturbed soils becomes a point of controversy. We recommend that the specifications for this project provide performance guidelines for protection of exposed soils and correction of disturbed areas.

SECTION 10: CONSTRUCTION MONITORING

We strongly recommend that **BECC, Inc.** be retained to provide a comprehensive construction-monitoring program when the project proceeds. This program would assist the owner in determining that the work is being carried out in general conformance with the plans and specifications and help avoid the potential of change orders and cost overruns. Construction monitoring includes testing of construction materials such as compacted fill, asphalt, and concrete. Also included is engineering observation during the site preparation, paving phases of the project.

Monitoring/testing during the earthwork and foundation construction phases is particularly important since assumptions (and recommendations) have been made based on the soil boring data. Confirmation that actual subsurface conditions are comparable to the assumed conditions is an essential part of the subsurface exploration process.

10.1 Subgrade, Observations, Proofrolling

The purpose of proofrolling will be to densify the exposed near-surface soils and also to reveal soft pockets of soil that will require remedial measures. Areas that pump or rut during the proofrolling operations should be undercut or reconditioned. The geotechnical engineer can determine the depth and extent of areas that will require undercutting.

10.2 Fill Monitoring

We recommend that in-place density tests should be performed in the field by an engineering technician to evaluate the contractor's performance regarding meeting the project specifications for fill placement. A commonly used testing frequency is one (1) test per eight (8) inch lift to fill placed per 2,500 square feet of fill area. The engineering technician can assist the grading contractor in soil moisture content evaluation by performing on-site fill moisture content tests.

10.3 Placement of Pavement & Dense-Grade Base

BECC recommends the placement of dense-grade aggregate base and concrete pavement be observed and tested by a BECC geotechnical engineer or engineering technician. Such testing is necessary to determine the appropriateness of the compaction of aggregate material and compressive and/or flexural strength of concrete material to conform to the specifications and recommendations set forth herein.

10.4 Foundation Excavations

It is recommended that the excavations for foundations be observed and tested by a BECC representative. Such testing is necessary to determine the appropriateness of the bearing level, the adequacy of the bearing materials and the conformity of the foundation to the specification with respect to depth, planned dimensions, cleanliness, etc.

SECTION 11: GENERAL REMARKS/REPORT LIMITATIONS

This report has been prepared for the exclusive use of **McGehee Engineering** for specific application to the subject project. All recommendations contained in this report have been made in accordance with generally accepted soil and pavement engineering practices. No other warranties are implied or expressed. In addition, the analysis and recommendations submitted in this report are based in part upon the data obtained from the test locations. The nature and extent of variations between the test locations may not become evident until construction. If variations then appear evident, it may be necessary to re-evaluate the recommendations of this report.

We emphasize that this report was for design purposes only and is not sufficient to prepare an accurate bid. Contractors reviewing this report should acknowledge that the recommendations and discussions herein are for design purposes.

If significant changes are made in the character of the proposed development, a consultation should be arranged to review them with respect to prevailing subsurface conditions. At that time, it may be necessary to submit supplementary recommendations.

It is imperative that the geotechnical engineer be provided the opportunity to review the final plans and specifications to verify that the recommendations in this report are properly interpreted and incorporated in the design. It will be the client's responsibility to furnish the final grading and foundation plans to BECC for the necessary review. If the geotechnical engineer is not accorded the privilege of making this recommended review, we can assume no responsibility for misinterpretation of our recommendations.

RE: AL Energy Infrastructure Training Center
Jasper, AL
Aggregate Pier Design

Garrett:

SubStruct LLC is pleased to submit this design for Aggregate Piers (AP's) for the above-mentioned project. The AP treatment will provide a bearing capacity of up to 6,000 psf and maximum long-term total settlement of less than 1 inch. This design submittal includes our design and verification procedures, layout drawing, and aggregate pier design summary.

SubStruct appreciates the opportunity to provide our services to you. Please feel free to contact us to discuss any questions you may have.

Sincerely,

Stephen W. Nickerson, PE

SPECTEST ENGINEERING

substruct

Aggregate Pier Design, Installation, and Verification Procedures

The following procedures supersede all sections of the aggregate pier specification section. Acceptance of this design submittal includes acceptance of this document.

1. Shop drawings reference structural drawings by SDG dated August 21, 2024.
2. Design is based on the data provided in the geotechnical report by BECC dated May 17, 2024.
3. Prior to any fill placement and aggregate pier installation, remove and replace any organic/deleterious materials.
4. Aggregate pier survey shall be performed by a licensed surveyor. Aggregate pier plan location may not deviate by more than 6 inches from the design location without the aggregate pier designer's approval.
5. Aggregate piers shall be installed to design depth unless refusal is encountered or the aggregate pier designer's approval. Refusal is determined by the aggregate pier design engineer.
6. Aggregate piers will be compacted by a proprietary hydraulic compactor system with a blow rate of over 300 blows per minute and 1,000 foot-pounds of energy. Compaction will be performed in one lift per location.
7. Aggregate pier diameter will vary due to variability of soil stiffness across the work area. Aggregate piers for foundations are 2 or 2.5 ft diameter.
8. A static load test shall be performed on one test aggregate pier with 2-foot diameter using Procedure A: Quick Test per ASTM D1143. Deviations from ASTM D1143 may be allowed as the standard was developed for the testing of piles, not aggregate piers. The plate utilized shall be 2 feet in diameter. The maximum load tested is 200% of the design bearing pressure (6,000 psf). A telltale will not be utilized.
9. Follow all site preparation recommendations as outlined in the report of geotechnical investigation.
10. Treated areas shall be compacted within footing with a tamper or jumping jack (by others) after AP installation and footing excavation.
11. Please review that all footings with required aggregate pier treatment have been captured in our design layout drawing.

Aggregate Pier (AP) Design Summary

Project Name:	AL Energy Infrastructure Center
Location:	Jasper, AL
Project #:	25-22
Allow Bearing Capacity:	6,000 psf
Allow Total Settlement:	1 inch
Allow Differential Settlement:	1/2 inch
VSC Average Diameter:	2 or 2.5 feet
Groundwater Depth:	8 feet
Pier Stiffness:	120 pci (verified by modulus test)

SOIL PARAMETERS

Layer	Bottom of Layer Depth (ft)	Unit Weight (pcf)	Constrained Modulus (psf)	Poisson's Ratio
Layer 1	20	115	200,000	0.33

ALLMETAL BUILDING SYSTEMS

1943 East Malvern Hwy
Dothan, AL 36305
(334) 792-6121

BUILDING LOADS / DESCRIPTION:

WIDTH: 158 LENGTH: 210.33 HEIGHT: 21 /21
(BUILDING DIMENSIONS ARE NOMINAL. REFER TO PLANS).

THIS STRUCTURE IS DESIGNED UTILIZING THE LOADS INDICATED AND APPLIED AS REQUIRED BY : IBC 21 .

THE CONTRACTOR IS TO CONFIRM THAT THESE LOADS COMPLY WITH THE REQUIREMENTS OF THE LOCAL BUILDING DEPARTMENT.

ROOF DEAD LOAD:	4.00	PSF (ROOF PANELS & PURLINS)
COLLATERAL LOAD:	10.00	PSF
ROOF LIVE LOAD:	20.00	PSF
ROOF SNOW LOAD:	7.70	PSF
BASIC WIND SPEED:	115	MPH
SEISMIC ZONE:	C	
WIND EXPOSURE:	C	

IMPORTANCE FACTORS:

WIND LOAD:	___	1.00
SNOW LOAD	___	
SEISMIC LOAD	___	1.25

GENERAL NOTES:

1) MATERIALS :

	MINIMUM YIELD:	
HOT ROLLED BAR	Fy =	ksi MIN.
STRUCTURAL STEEL SHEET	Fy =	ksi MIN.
STRUCTURAL STEEL PLATE	Fy =	ksi MIN.
COLD FORMED SHAPES	Fy =	ksi MIN.
WALL SHEETING	Fy =	ksi MIN.
ROOF SHEETING	Fy =	ksi MIN.
BOLTS	A307 & A325	

THE METAL BUILDING MANUFACTURER RESERVES THE RIGHT TO SUBSTITUTE THE ABOVE MATERIALS WITH EQUAL OR BETTER MATERIAL.

2) BOLT TIGHTENING REQUIREMENTS:
ALL HIGH STRENGTH BOLTS ARE A325 UNLESS NOTED OTHERWISE. HIGH STRENGTH BOLTS SHALL BE TIGHTENED BY THE TURN OF THE NUT METHOD IN ACCORDANCE WITH THE LATEST EDITION AISC "SPECIFICATION FOR STRUCTURAL JOINTS USING ASTM A325 OR A490 BOLTS". A325 BOLTS SHALL BE INSTALLED WITH OUT WASHERS WHEN TIGHTENED BY THE "TURN OF THE NUT" METHOD. ALL BOLTED CONNECTIONS, FOR SHEAR/BEARING CONNECTION TYPE WITH BOLT THREADS EXCLUDED FROM THE SHEAR PLANE SHALL BE SNUG TIGHT ONLY.

3) ALL STRUCTUAL STEEL TO RECEIVE A RUST INHIBITIVE PRIMER. THIS PAINT IS NOT INTENDED FOR LONG TERM EXPOSURE TO THE ELEMENTS.

ROOF PANELS:

COLOR: Galvalume +

WALL PANELS:

COLOR: NEED SIG 200

TRIM COLORS:

CABLE: NEED SIG 200
CORNER: NEED SIG 200
EAVE: NEED SIG 200
FRAMED OPENINGS: NEED SIG 200

LINER PANELS:

BUILDER / CONTRACTOR RESPONSIBILITIES

IT IS THE RESPONSIBILITY OF THE BUILDER/CONTRACTOR TO INSURE THAT ALL PROJECT PLANS AND SPECIFICATIONS COMPLY WITH THE APPLICABLE REQUIREMENTS OF ANY GOVERNING BUILDING AUTHORITIES. THE SUPPLYING OF SEALED ENGINEERING DATA AND DRAWINGS FOR THE METAL BUILDING SYSTEM DOES NOT IMPLY OR CONSTITUTE AN AGREEMENT THAT THE METAL BUILDING SYSTEM MANUFACTURER OR ITS DESIGN ENGINEER IS ACTING AS THE ENGINEER OF RECORD OR DESIGN PROFESSIONAL FOR A CONSTRUCTION PROJECT.
THE CONTRACTOR MUST SECURE ALL REQUIRED APPROVALS AND PERMITS FROM THE APPROPRIATE AGENCY AS REQUIRED.
APPROVAL OF THE METAL BUILDING SYSTEM MANUFACTURER'S DRAWINGS AND CALCULATIONS INDICATE THAT THE METAL BUILDING SYSTEM MANUFACTURER CORRECTLY INTERPRETED AND APPLIED THE REQUIREMENTS OF THE CONTRACT DRAWINGS AND SPECIFICATIONS. (SECT. 4.2.1 AISC CODE OF STANDARD PRACTICES, 303-22)
WHERE DISCREPANCIES EXIST BETWEEN THE METAL BUILDING SYSTEM MANUFACTURER'S STRUCTURAL STEEL PLANS AND THE PLANS FOR OTHER TRADES, THE STRUCTURAL STEEL PLANS SHALL GOVERN. (SECT. 3.3 AISC CODE OF STANDARD PRACTICE 303-22)
DESIGN CONSIDERATIONS OF ANY MATERIALS IN THE STRUCTURE WHICH ARE NOT FURNISHED BY THE METAL BUILDING SYSTEM MANUFACTURER ARE THE RESPONSIBILITY OF THE CONTRACTORS AND ENGINEERS OTHER THAN THE METAL BUILDING SYSTEM MANUFACTURER'S ENGINEER UNLESS SPECIFICALLY INDICATED.
THE CONTRACTOR IS RESPONSIBILE FOR ALL ERECTION OF STEEL AND ASSOCIATED WORK IN COMPLIANCE WITH THE METAL BUILDING SYSTEM MANUFACTURER "FOR CONSTRUCTION" DRAWINGS.
ALL BRACING AS SHOWN AND PROVIDED BY THE METAL BUILDING SYSTEM MANUFACTURER FOR THIS BUILDING IS REQUIRED AND SHALL BE INSTALLED BY THE ERECTOR AS A PERMANENT PART OF THE STRUCTURE.
TEMPORARY SUPPORTS, SUCH AS TEMPORARY GUYS, BRACES, FALSE WORK, CRIBBING OR OTHER ELEMENTS REQUIRED FOR THE ERECTION OPERATION WILL BE DETERMINED AND FURNISHED AND INSTALLED BY THE ERECTOR. THESE TEMPORARY SUPPORTS WILL SECURE THE STEEL FRAMING, OR ANY PARTLY ASSEMBLIED STEEL FRAMING, AGAINST LOADS COMPARABLE IN INTENSITY TO THOSE FOR WHICH THE STRUCTURE WAS DESIGNED, RESULTING FROM WIND, SEISMIC FORCES AND ERECTION OPERATIONS, BUT NOT THE LOADS RESULTING FROM THE PERFORMANCE OF WORK BY OR THE ACTS OF OTHERS, NOR SUCH UNPREDICTABLE LOADS AS THOSE DUE TO TORNADO, EXPLOSION, OR COLLISION. (SECT. 7.10.3 AISC CODE OF STANDARD PRACTICE, 303-22)
WARNING: IN NO CASE SHOULD GALVALUME STEEL PANELS BE USED IN CONJUNCTION WITH LEAD OR COPPER. BOTH LEAD AND COPPER HAVE HARMFUL CORROSION EFFECTS ON THE ALUMINUM ZINC ALLOY COATING WHEN THEY ARE USED IN CONTACT WITH GALVALUME STEEL PANELS. EVEN RUN-OFF FROM COPPER FLASHING, WIRING, OR TUBING ONTO GALVALUME SHOULD BE AVOIDED.

Do Not Use Abrasive Wheels To Cut Panels

APPROVAL NOTES

THE FOLLOWING CONDITIONS APPLY IN THE EVENT THAT THESE DRAWINGS ARE USED AS APPROVAL DRAWINGS:
IT IS IMPERATIVE THAT ANY CHANGES TO THESE DRAWINGS BE MADE IN CONTRASTING INK (PREFERABLY RED INK), HAVE ALL INSTANCES OF CHANGE CLEARLY INDICATED, AND BE LEGIBLE AND UNAMBIGUOUS.
A SIGNATURE AND DATE IS REQUIRED ON ALL PAGES.
MANUFACTURER RESERVES THE RIGHT TO RE-SUBMIT DRAWINGS WITH EXTENSIVE OR COMPLEX CHANGES REQUIRED TO AVOID MISFABRICATION. THIS MAY IMPACT THE DELIVERY SCHEDULE.
APPROVAL OF THESE DRAWINGS INDICATES CONCLUSIVELY THAT THE METAL BUILDING SYSTEM MANUFAACTURER HAS CORRECTLY INTERPRETED THE CONTRACT REQUIREMENTS, AND FURTHER CONSTITUTES AGREEMENT THAT THE BUILDING AS DRAWN WITH INDICATED CHANGES REPRESENTS THE TOTAL OF THE MATERIALS TO BE SUPPLIED BY MANUFACTURER.
ANY CHANGES NOTED ON THHE DRAWINGS NOT IN COMFORMANCE WITH THE TERMS AND REQUIREMENTS OF THE CONTRACT BETWEEN MANUFACTURER AND ITS CUSTOMER ARE NOT BINDING ON MANUFACTURER UNLESS SUBSEQUENTLY SPECIFICALLY ACKNOWLEDGED AND AGREED TO IN WRITING BY CHANGE ORDER OR SEPARATE DOCUMENTATION. MANUFACTURER RECONGNIZES THAT RUBBER STAMPS ARE ROUTINELY USED FOR INDICATING APPROVAL, DISAPPROVAL, REJECTION, OR MERE REVIEW OF THE DRAWINGS SUBMITTED. HOWEVER, MANUFACTURER DOES NOT ACCEPT CHANGES OR ADDITIONS TO CONTRACTURAL TERMS AND CONDITIONS THAT MAY APPEAR WITH USE OF A STAMP OR SIMILIAR INDICATIOIN OF APPROVAL, DISAPPROVAL, ETC. SUCH LANGUAGE APPLIED TO MANUFACTURER'S DRAWINGS BY THE CUSTOMER, ARCHITECT, ENGINEER, OR ANY OTHER PARTY WILL BE CONSIDERED AS UNACCEPTABLE ALTERNATIONS TO THESE DRAWING NOTES, AND WILL NOT ALTER THE CONTRACTUAL RIGHTS AND OBLIGATIONS EXISTING BETWEEN MANUFACTURER AND ITS CUSTOMER.

IMPORTANT NOTE: FINAL DETAILING, FABRICATION, AND DELIVERY DATE OF THIS PROJECT CANNOT BE COMPLETED UNTIL THE SIGNED APPROVALS ARE RETURNED TO THE METAL BUILDING MANUFACTURER.

THIS PROJECT IS DESIGNED AS AN ENCLOSED BUILDING. ACCESSORIES (DOORS, WINDOWS, ETC.) BY OTHERS MUST BE DESIGNED AS "COMPONENTS AND CLADDING" IN ACCORDANCE TO SPECIFIC WIND PROVISIONS OF REFERENCED BUILDING CODE.

NOTES FOR REACTIONS

Building reactions are based on the following building data:

Width	(ft)	=	138.0
Length	(ft)	=	118.0
Eave Height	(ft)	=	21.0/ 24.5
Roof Slope	(rise/12)	=	2.00/ 2.00
Roof Dead Load	(psf)	=	4.0
Wall Dead Load			
Left Endwall	(psf)	=	2.0
Right Endwall	(psf)	=	0.0
Front Sidewall	(psf)	=	2.0
Back Sidewall	(psf)	=	2.0
Roof Live Load	(psf)	=	20.0
Frame Line Load	(psf)	=	12.0
Collateral Load	(psf)	=	10.0
Snow Load	(psf)	=	7.7
Minimum Snow	(psf)	=	11.0
Wind Speed	(mph)	=	115.0
Wind Code		=	IBC 21
Exposure		=	C
Closure		=	Enclosed
Internal Wind Coeff		=	-0.18, +0.18
Risk Category		=	III- High
Importance - Wind		=	1.00
Importance - Seismic		=	1.25
Seismic Design Category		=	C
Seismic Coeff	(Sms)	=	0.46

EXISTING UTILITY NOTES

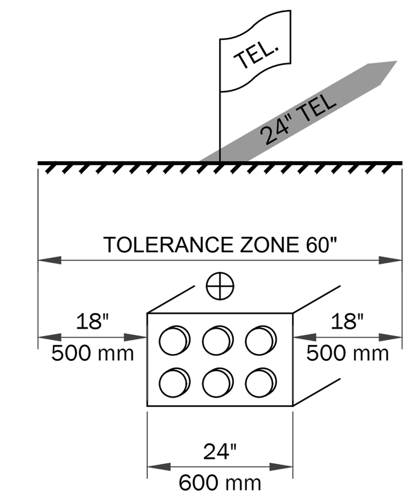
APWA UNIFORM COLOR CODE
FOR MARKING UNDERGROUND UTILITY LINES

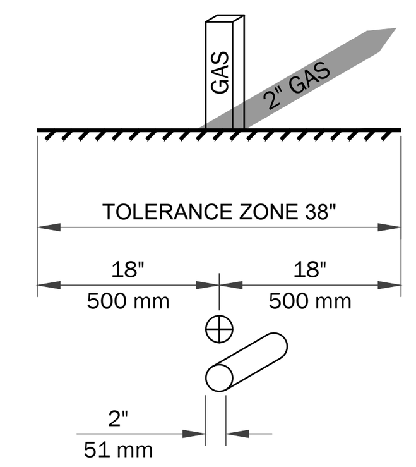
WHITE - Proposed excavation
PINK - Temporary survey markings
RED - Electric Power Lines, Cables, Conduit and Lighting Cables
YELLOW - Gas, Oil, Steam, Petroleum or Gaseous Materials
BLUE - Potable Water
PURPLE - Reclaimed Water, Irrigation and Slurry Lines
GREEN - Sewers and Drain Lines

TO HAVE UNDERGROUND UTILITY LINES LOCATED DIAL:
- 811 (INSIDE ALABAMA)
- (800) 292-8525 (INSIDE AND OUTSIDE OF ALABAMA)

WWW.AL811.COM

ALABAMA Know what's below. 811 Call before you dig





ANY EXCAVATION WITHIN THE TOLERANCE ZONE SHOULD BE PERFORMED WITH NON-POWERED HAND TOOLS OR NON-INVASIVE METHODS UNTIL THE MARKED FACILITY IS EXPOSED. THE WIDTH OF THE TOLERANCE ZONE MAY BE SPECIFIED IN LAW OR CODE. IF NOT, 500 mm (18") IS REQUIRED FROM EACH SIDE OF THE FACILITY. THE TOLERANCE ZONE INCLUDES THE WIDTH OF THE FACILITY PLUS 18" (500 mm) MEASURED HORIZONTALLY FROM EACH SIDE OF THE FACILITY.

GENERAL PROJECT NOTES:

1. THE LOCATIONS OF THE EXISTING UNDERGROUND UTILITIES ARE SHOWN IN AN APPROXIMATE MANNER ONLY, AS PROVIDED BY UTILITY OWNERS. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO DETERMINE THE EXACT LOCATION OF ALL UNDERGROUND UTILITIES "POTHOLING" THEM BEFORE COMMENCING WORK. THE CONTRACTOR SHALL CONTACT THE ALABAMA ONE-CALL, LOCAL WATER AUTHORITIES, AND UTILITY PROVIDERS, ETC. FOR UTILITY LOCATES. IN THE EVENT OF ANY DAMAGE TO IN-PLACE UTILITIES, THEY SHALL BE REPAIRED AND REPLACED TO THE SATISFACTION OF THE ENGINEER AND THE UTILITY OWNER AT THE CONTRACTOR'S EXPENSE.
2. ANY EXISTING PROPERTY CORNERS (I.E.- IRON PIPES,CAPPED PIPES, CAPPED MONUMENTS, ETC). DISPLACED OR DAMAGED DURING CONSTRUCTION SHALL BE RESET. THIS WORK SHALL BE CONSIDERED INCIDENTAL TO THE CONTRACT AND SHALL BE A FINAL PUNCH LIST/CLOSEOUT ITEM. PROJECT PROPERTY CORNERS SHALL BE STAKED AND FLAGGED BY THE OWNER'S REPRESENTATIVE.
3. THE CONTRACTOR MUST MAINTAIN ACCESSIBLE DRIVES AND PUBLIC ROADWAYS. ANY ADDITIONAL STONE, GRADING, INSTALLATION, ETC. TO MAKE SIDEWALKS, DRIVES, AND ROADWAYS ACCESSIBLE DURING CONSTRUCTION SHALL BE CONSIDERED INCIDENTAL TO THE CONTRACT AND NO ADDITIONAL COMPENSATION SHALL BE GIVEN.
4. THE CONTRACTOR SHALL KEEP THE PROJECT RIGHTS-OF-WAY CLEAN FROM TRASH AND DEBRIS. PLACEMENT/DISCARDING OF TRASH AND REFUSE IN UTILITY TRENCHES AND/OR OTHER EXCAVATIONS ASSOCIATED WITH THE PROJECT SHALL BE PROHIBITED. THE CONTRACTOR SHALL PROVIDE TRASH RECEPTACLES FOR WORKER USE. THE ROADWAYS AND SIDEWALKS SHALL BE SWEPT AND WASHED DOWN TO LIMIT THE TRACKING OF DIRT FROM THE PROJECT ONTO PUBLIC RIGHTS-OF-WAY DAILY. THIS WORK SHALL BE CONSIDERED INCIDENTAL TO THE CONTRACT AND NO ADDITIONAL COMPENSATION SHALL BE GIVEN.
5. CONFLICTS MAY ARISE BETWEEN EXISTING AND PROPOSED UNDERGROUND FACILITIES. CROSSINGS OF REQUIRED AND EXISTING GRAVITY UTILITIES SHALL BE EXCAVATED AND ELEVATIONS VERIFIED AT THE BEGINNING OF THE PROJECT BEFORE ANY UTILITIES ARE INSTALLED TO MAKE SURE THERE ARE NO CONFLICTS. WHEN THESE CONFLICTS ARE IDENTIFIED, THE CONTRACTOR SHALL PROMPTLY NOTIFY THE OWNER'S REPRESENTATIVE. ADJUSTMENTS AS SPECIFIED BY THE OWNER'S REPRESENTATIVE SHALL BE MADE IN THE PROPOSED AND/OR EXISTING FACILITIES. IF CONFLICTS OCCUR WHILE INSTALLING GRAVITY UTILITIES AND THE CONTRACTOR DID NOT IDENTIFY ELEVATIONS AT CROSSINGS IN ADVANCE, THEN THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL COSTS ASSOCIATED WITH THE CORRECTIVE ACTION, INCLUDING BUT NOT LIMITED TO, REMOVING AND INSTALLING THE MAIN AND/OR STRUCTURES. WITH THE NUMEROUS EXISTING UTILITIES ON-SITE, IT IS IMPERATIVE THAT THESE BE VERIFIED BEFORE INSTALLATION OF PROPOSED WORK.
6. AT THE END OF THE PROJECT THE CONTRACTOR SHALL POWER WASH ALL CONCRETE SURFACES (I.E., CURB AND GUTTERS, SIDEWALK, DRIVES. STORM SEWER BOXES, BRICK PAVERS, EXISTING BUILDING BRICK, ETC.), SPECIFICALLY EXISTING CONCRETE ABUTTING REQUIRED CONCRETE SURFACES WITHIN THE PROJECT RIGHT-OF-WAY TO ELIMINATE STAINING FROM EARTHEN MATERIAL, CONSTRUCTION EQUIPMENT, OILS, PAINTS, ETC. THIS WORK SHALL BE CONSIDERED INCIDENTAL TO THE CONTRACT AND NO ADDITIONAL COMPENSATION SHALL BE GIVEN.
7. EXISTING LANDSCAPED AREAS PARALLEL TO THE PROJECT IMPACTED/DAMAGED DURING CONSTRUCTION SHALL BE RETURNED TO THEIR ORIGINAL CONDITION. THERE SHALL BE NO ADDITIONAL COMPENSATION FOR THIS WORK.
8. ALL ACCESSIBLE RAMPS AND SIDEWALKS SHALL BE ADA COMPLIANT.
9. ALL TEMPORARY STONE FOR ROADWAY, SIDEWALK, DRIVES, ETC. SHALL BE CONSIDERED INCIDENTAL TO THE PROJECT. NO TEMPORARY STONE SHALL BE WASTED ON THE SITE SPECIFICALLY IN THE FINAL SUBGRADE LAYER AND TOPSOIL. EXCESSIVE STONE WILL INHIBIT THE GROWTH OF THE LANDSCAPE. ALL STONE SHALL BE REMOVED FROM AREAS TO RECEIVE TOPSOIL, NO EXCEPTIONS.
10. THE CONTRACTOR SHALL INSTALL TEMPORARY ASPHALT PATCHING WITHIN 24 HOURS AFTER THE COMPLETED INSTALLATION OF UTILITY CROSSINGS ON ROADWAYS OPEN TO TRAFFIC. IF THE ROADWAY IS CLOSED TO LOCAL TRAFFIC THEN ALL ASPHALT CUT LOCATIONS SHALL BE PATCHED BEFORE THE ROADWAY IS REOPENED. THE CONTRACTOR SHALL NOT BE ALLOWED TO INSTALL ALL UTILITIES AND THEN TEMPORARY ASPHALT PATCH ALL AT ONE TIME. TEMPORARY ASPHALT PATCHING MUST OCCUR PERIODICALLY PHASED AS REFERENCED ABOVE.
11. WHEN TEMPORARY ASPHALT PATCHING OCCURS THE MIX SHALL BE HOT MIXED AS SPECIFIED IN THE PLANS. ASPHALT COLD MIXES SHALL NOT BE ACCEPTED. POORLY PATCHED CROSSINGS DISPLAYING NONUNIFORM, UNSMOOTH FINISHES SHALL NOT BE ACCEPTED AND SHALL BE REMOVED AT ONCE. THE REPATCH OF THE AREA SHALL BE PAID FOR AT THE CONTRACTOR'S EXPENSE.
12. THE CONTRACTOR SHALL NOTE EXISTING STORM DRAIN AND STORM DRAIN STRUCTURES TO BE RETAINED AS PART OF THIS PROJECT. THIS EXISTING INFRASTRUCTURE SHALL BE USED TO DRAIN THE PROJECT DURING PHASES OF CONSTRUCTION. PROPER EROSION CONTROL METHODS SHALL BE USED TO PROTECT THIS INFRASTRUCTURE AT ALL TIMES.
13. THE CONTRACTOR SHALL COORDINATE HIS WORK WITH THE OWNER, PRIVATE UTILITY COMPANIES, AND ANY OTHER OWNER OR GOVERNING AGENCY WITH EXISTING INFRASTRUCTURE OR JURISDICTION IN THIS AREA.

DEMOLITION NOTES:

1. THE PROJECT DEMOLITION, CLEARING AND GRUBBING GENERAL AREAS HAVE BEEN REFLECTED ON THE DEMOLITION PLAN. THE AREA IS GENERAL IN NATURE AND IS INTENDED TO GIVE THE CONTRACTOR AN APPROXIMATE AREA OF DEMOLITION. REGARDLESS OF THE AREA SHOWN, THE CONTRACTOR SHALL DEMOLISH, CLEAN AND GRUB ALL AREAS AND EXISTING INFRASTRUCTURE (ABOVE AND BELOW GROUND) NECESSARY TO COMPLETE ALL FINAL IMPROVEMENTS AS SHOWN ON THE CONSTRUCTION PLANS.
2. ALL AREAS DISTURBED BY THE CONTRACTOR; INCLUDING BUT NOT LIMITED TO ACTUAL IMPROVED AREAS, LAYDOWN AREAS, AREAS DISTURBED BY MOVING EQUIPMENT SHALL BE IMPROVED PER THE REQUIREMENTS OF THE PLANS, NO EXCEPTIONS.
3. ANY PERMANENT AND/OR CONSTRUCTION FENCING (EXISTING OR REQUIRED PER THE PLANS) REQUIRED TO BE REMOVED/RESET FOR INSTALLATION OF SITE, UTILITY, BUILDING, ETC. IMPROVEMENTS SHALL BE DONE SO AT NO ADDITIONAL COST TO THE PROJECT AND IS CONSIDERED INCIDENTAL. THE PLANS HAVE BEEN NOTED WITH GENERAL AREAS THIS IS TO OCCUR IN. THE REMOVAL AND/OR REPLACEMENT LIMITS WILL BE DETERMINED IN THE FIELD.

GRADING NOTES:

1. ALL DISTURBED AREAS SHALL BE SEEDED AND MULCHED TO PROVIDE TEMPORARY GRASSING UNTIL THE NEXT PACKAGE UNLESS OTHERWISE NOTED ON THE EROSION CONTROL PLAN. REFER TO EROSION CONTROL NOTES FOR TEMPORARY GRASSING AND MULCHING DURING GRADING OPERATIONS.
2. ALL ENGINEERED FILL MATERIALS SHALL BE REVIEWED AND APPROVED BY THE OWNER'S REPRESENTATIVE WELL IN ADVANCE OF FILL OPERATIONS. THE CONTRACTOR SHALL IDENTIFY ALL BORROW SOURCES FOR PD SAMPLES TO BE TAKEN AND EVALUATED. ALL EMBANKMENT FILL AND BORROW EXCAVATION MATERIALS SHALL BE COMPACTED IN LOOSE 8" LIFTS AS PER THE OWNER'S REPRESENTATIVES REQUIREMENTS. SEE THE GEOTECHNICAL REPORT FOR THIS INFORMATION.
3. THE CONTRACTOR SHALL CLEAR AND GRUB AS NECESSARY WHERE GRADING OPERATIONS ARE TO BE PERFORMED AS SHOWN. THE MAJORITY OF THE PROJECT WILL REQUIRE CLEARING AND REMOVAL OF EXISTING SIDEWALK, DRIVES, CURB AND GUTTER, CURBING, TREE STUMP REMOVAL, TOPSOIL, GRADING, ETC. AS SHOWN THROUGHOUT THE PROJECT CONSTRUCTION PLANS AND CONTRACT DOCUMENTS.
4. GRADING OPERATIONS SHALL INCLUDE TOPSOIL STRIPPING AND REMOVAL THROUGHOUT THE PROJECT SITE, UNCLASSIFIED EXCAVATION, AND BORROW EXCAVATION, ROCK REMOVAL, ETC. TO BRING THE SITE TO FINISHED SUBGRADE (ONLY LEAVING PAVEMENTS AND TOPSOIL TO REACH FINAL FINISHED GRADE) AS SHOWN ON THE CONSTRUCTION PLANS. NO EXTRA PAYMENT WILL BE MADE FOR EXCESS MATERIAL BROUGHT ON-SITE, MATERIAL REQUIRED TO BE MOVED MULTIPLE TIMES BECAUSE OF CONSTRUCTION PHASING, OR EXCESS MATERIAL TO BE REMOVED FROM THE SITE UPON GRADING COMPLETION.
5. THERE SHALL BE NO DEBRIS (ROOTS, ROCKS, ETC.) IN THE TOPSOIL LARGER THAN ½" IN DIAMETER. THERE ALSO SHALL BE NO WASTED TEMPORARY GRAVEL, CONCRETE, OR ANY OTHER BUILDING MATERIALS FOUND IN THE TOPSOIL. ANY FOUND DEBRIS SHALL BE REMOVED IMMEDIATELY.
6. ALL REMAINING TOPSOIL SHALL BE STOCKPILED AND TEMPORARILY GRASSED FOR USE IN THE NEXT PACKAGE.

STORM DRAIN NOTES:

1. STORM DRAIN STRUCTURE RINGS AND COVERS AND STEPS SHALL BE INSTALLED ON THE STRUCTURE WALL FREE OF PIPING AND/OR INLET THROAT OR AS DIRECTED BY THE OWNER'S REPRESENTATIVE.
2. STORM DRAIN STRUCTURES MEASURING FOUR (4) FEET OR GREATER IN DEPTH FROM THE FINISHED TOP OF THE STORM STRUCTURE TO THE INVERT OUT ELEVATION SHALL HAVE STEPS INSTALLED.
3. ALL REQUIRED STORM SEWER STRUCTURE RING AND COVER TOPS SHALL MATCH TOP OF CURB, ROADWAY AND/OR VEGETATED FINISHED GRADE ELEVATIONS UNLESS NOTED OTHERWISE ON THE CONSTRUCTION PLANS. ANY ADJUSTMENTS TO LEVEL RING AND COVER TOP ELEVATIONS WITH FINAL ASPHALT, SODDING, ETC. SHALL BE CONSIDERED A SUBSIDIARY OBLIGATION OF THE STORM DRAIN STRUCTURE INSTALLATION.
4. THE CONTRACTOR SHALL BE REQUIRED TO MAINTAIN STORMWATER FLOW IN EXISTING AND PROPOSED STORM SEWERS WITHIN THE PROJECT LIMITS AND IF AFFECTED BY CONSTRUCTION ACTIVITIES, OUTSIDE THE PROJECT LIMITS. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO PROVIDE ANY AND ALL MATERIAL AND LABOR REQUIRED FOR TEMPORARY STORM SEWERS AND/OR PUMPS THAT MAY BE REQUIRED FOR BYPASSING. THE OWNER OR ITS REPRESENTATIVES SHALL NOT ACCEPT ANY RESPONSIBILITY FOR THE ADEQUACY OR ACCURACY, OR ACCEPT ANY RESPONSIBILITY FROM CLAIMS OR DAMAGES RESULTING FROM THE FAILURE OF THE CONTRACTOR'S TEMPORARY STORM SEWER BYPASS FACILITIES.
5. ALL STORM DRAIN STRUCTURES ARE REQUIRED TO HAVE REBAR REINFORCEMENT IN THE WALLS, BOTTOM, AND TOP. ALTHOUGH THE TOPS VARY FOR AN S-INLET, GRATE INLET, AND JUNCTION BOX, THE BOX ITSELF IS THE SAME AND REBAR REINFORCEMENT SHALL BE PLACED PER THE STANDARD DETAIL AND NOTES.
6. CONICAL MANHOLE SECTIONS AND MANHOLE RIMS AND COVERS SHALL BE ORIENTED AS PER THE PLANS AND AS DIRECTED BY THE OWNER'S REPRESENTATIVE TO ENSURE THE BEST ACCESS INTO THE MANHOLE. FAILURE TO ORIENT CORRECTLY SHALL RESULT IN REORIENTATION AT THE CONTRACTOR'S EXPENSE.
7. WHEN TYING TO EXISTING UTILITY PIPING WITH STORM DRAIN, THE CONTRACTOR SHALL USE EXTREME CARE ONLY EXCAVATING AND REMOVING THE NECESSARY AMOUNT OF PIPING TO INSTALL THE REQUIRED STRUCTURE. DAMAGE TO THE EXISTING UTILITY PIPING DUE TO OVEREXCAVATION OR POOR EXCAVATION WORK SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO REMOVE/REPLACE AT HIS COST.
8. CONTRACTOR SHALL MAKE SURE THAT THERE IS FLEXIBILITY IN EACH STORM STRUCTURE CONICAL SECTION AND RING AND COVER TO ENSURE FINAL RING ELEVATION MATCHES FINAL PAVEMENT ELEVATION. FAILURE TO DO SO WILL REQUIRE REMOVAL OF AS MUCH STRUCTURE AS NECESSARY TO ALLOW TOP RING AND COVER TO MATCH PAVEMENT.
9. THE CONTRACTOR MAY USE PRECAST CONCRETE STORM STRUCTURES FOR THE STANDARD/SPECIAL STRUCTURES REQUIRED ON THE CONSTRUCTION PLANS.
10. THE CONTRACTOR SHALL NOTE EXISTING STORM DRAIN AND STORM DRAIN STRUCTURES TO BE RETAINED AS PART OF THIS PROJECT. THIS EXISTING INFRASTRUCTURE SHALL BE USED TO DRAIN THE PROJECT DURING PHASES OF CONSTRUCTION. PROPER EROSION CONTROL METHODS SHALL BE USED TO PROTECT THIS INFRASTRUCTURE.
11. THE CONTRACTOR SHALL BACKFILL THE SPACE (WHEN BETWEEN 6 INCHES AND 2 FEET) BETWEEN STORM DRAIN AND SANITARY SEWER MAINS WHEN CROSSING WITH NO. 57 STONE MECHANICALLY CONSOLIDATED IN-PLACE TO PREVENT ANY SETTLEMENT AT THE CROSSING. THIS STONE SHALL EXTEND THE WIDTH OF THE UTILITY TRENCH TO APPROXIMATELY FOUR (4) FEET TO EITHER SIDE OF THE CROSSING.
12. THE CONTRACTOR SHALL GROUT AS NECESSARY ALL LIFTING HOLES IN STORM DRAIN PIPING SECTIONS BEFORE BACKFILL. THIS SHALL BE REQUIRED REGARDLESS IF PREFABRICATED LIFTING PLUGS ARE USED OR NOT. THE COMBINATION OF THE TWO (2) IS RECOMMENDED TO ENSURE THAT THE LIFTING HOLES DO NOT REMAIN OPEN ALLOWING EARTHEN MATERIAL TO ENTER THE DRAIN POSSIBLY CAUSING A SINK HOLE AT THE SURFACE.

GENERAL UTILITY NOTES:

1. THE CONTRACTOR SHALL BE PREPARED TO CAMERA ANY DISCOVERED UTILITY MAIN FOUND DURING CONSTRUCTION NOT SHOWN ON THE PLANS TO VERIFY IF THE MAIN SHOULD BE TIED TO THE PROPOSED SYSTEMS OR BE ABANDONED AND/OR REMOVED.
2. ALL STORM DRAIN AND SANITARY SEWER SYSTEM STRUCTURES AND PIPING SHALL REMAIN ACTIVE UNTIL PROPOSED PROJECT UTILITIES ARE INSTALLED AND CAN COME INTO SERVICE. THIS APPLIES TO AREA INLETS IN YARDS AND/OR ROOF DRAINS. ANY WATER OR SEWER DAMAGE TO PRIVATE PROPERTY DUE TO FAILURE OF THE CONTRACTOR TO COORDINATE REMOVAL OF EXISTING UTILITIES AND TIE-INS TO REQUIRED UTILITIES SHALL BE PAID FOR BY THE CONTRACTOR INCLUDING ALL CLEANUP AND ADDITIONAL WORK REQUIRED TO CORRECT THE DAMAGE.
3. THE CONTRACTOR SHALL REMOVE/RESET/RAISE ALL PRIVATE UTILITY COMPANY BOXES, MANHOLE RING AND COVER, ETC. IF THESE ITEMS ARE BEING RETAINED. ANY ITEMS DAMAGED DURING THIS WORK SHALL BE REPLACED AT THE CONTRACTOR'S EXPENSE.

EROSION CONTROL NOTES:

1. REGARDLESS IF AN NPDES PERMIT IS REQUIRED OR NOT, THE CONTRACTOR SHALL BE RESPONSIBLE FOR USING BEST MANAGEMENT PRACTICES (BMP'S) FOR EROSION AND SEDIMENT CONTROL THROUGHOUT CONSTRUCTION. AN EROSION CONTROL PLAN IS PROVIDED AS A MINIMUM GUIDE FOR PROVIDING STRUCTURAL BMP'S. PHASING, TEMPORARY GRASSING, AND OTHER METHODS AS PROVIDED IN THE ALABAMA HANDBOOK FOR EROSION CONTROL, SEDIMENT CONTROL, AND STORM WATER MANAGEMENT, SHALL BE UTILIZED TO MINIMIZE EROSION. NO EXTRA COMPENSATION SHALL BE GIVEN TO THE CONTRACTOR FOR MAINTAINING EROSION CONTROL ITEMS OR ADDITIONAL EROSION CONTROL ITEMS REQUIRED TO COMPLY WITH THE NPDES PERMIT.
2. THE DESIGN OF THE CBMPP, IF REQUIRED, SHALL BE THE SOLE RESPONSIBILITY OF THE CONTRACTOR'S QCP. IN THE EVENT THAT SEDIMENT BASINS ARE REQUIRED BY THE DESIGN, NO ADDITIONAL COMPENSATION SHALL BE GIVEN TO THE CONTRACTOR FOR STOCKPILING MATERIAL TO LATER FILL THE BASINS, ADDITIONAL GRADING TO FILL THE BASINS, TEMPORARY PIPING, RESEEDING AND REMULCHING, RESTORING PERMANENT DRAINAGE STRUCTURES AND GRADES TO THEIR PERMANENT REQUIREMENTS, OR ANY OTHER ITEMS OF WORK THAT ARE REQUIRED BY THE PHASING OF CONSTRUCTION OR THE CBMPP.
3. ANY FINES INCURRED DUE TO FAILURE TO MAINTAIN EROSION CONTROL MEASURES SHALL BE PAID FOR BY THE CONTRACTOR. ANY ADDITIONAL WORK AND MATERIALS REQUIRED TO COMPLY WITH ANY VIOLATIONS SHALL BE AT THE CONTRACTOR'S EXPENSE.
4. ALL TEMPORARY RIPRAP USED FOR EROSION CONTROL PURPOSES SHALL BE INCLUDED IN THE PRICE OF EROSION CONTROL. TEMPORARY RIPRAP BERMS SHALL BE SPREAD OUT IN AREAS WHERE PERMANENT RIPRAP IS REQUIRED AND SHALL BE SPREAD IN A MANNER TO NOT IMPEDE FLOW OF STORM DRAINS AFTER THE SITE IMPROVEMENTS ARE COMPLETE AND THE PROJECT IS STABILIZED. THERE SHALL BE NO ADDITIONAL COMPENSATION FOR TEMPORARY RIPRAP OR SPREADING IT UPON COMPLETION OF THE SITE IMPROVEMENTS. ALL TEMPORARY RIPRAP THAT IS SPREAD FOR USE AS PERMANENT RIPRAP SHALL BE PLACED ON THE STONE BEDDING AND FILTER FABRIC AS SHOWN IN THE DETAILS. COSTS FOR STONE AND FILTER FABRIC PLACED UNDERNEATH ALL TEMPORARY RIPRAP THAT IS SPREAD IN PERMANENT LOCATIONS SHALL BE INCLUDED IN THE UNIT PRICE BID FOR EROSION CONTROL MANAGEMENT AND MAINTENANCE, OR IF THERE ARE NO UNIT PRICES, THE COST SHALL BE INCIDENTAL TO THE PROJECT.
5. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO MAINTAIN AND KEEP CLEAN ALL EROSION & SEDIMENT CONTROL STRUCTURES UNTIL THE NPDES PERMIT IS ACCEPTED AS COMPLETE BY THE QCP & ADEM, AND IS TERMINATED BY THE CONTRACTOR.
6. SILT FENCES SHALL HAVE SEDIMENT DEPOSITS REMOVED IF THEY REACH A DEPTH OF FIFTEEN INCHES (15") OR 1/2 THE HEIGHT OF THE FENCE. SEDIMENT REMOVED FROM THE SILT FENCE SHALL BE PLACED ONSITE AND STABILIZED.
7. THE PROJECT AREA SHALL REMAIN CLEAN AT ALL TIMES. THE CONTRACTOR SHALL USE WHATEVER MEANS NECESSARY TO KEEP THE PROJECT AREA CLEAN, INCLUDING MOTORIZED STREET SWEEPERS, WATER AND VACUUM TRUCKS, HAND SWEEPING AND SHOVELING, ETC. IT IS THE CONTRACTOR'S RESPONSIBILITY TO ADDRESS THIS ISSUE EACH DAY INCLUDING WEEKENDS AND SPECIFICALLY PRE AND POST RAIN EVENTS.
8. THE CONTRACTOR SHALL IDENTIFY WORK AREA ENTRANCE/EXIT LOCATIONS FOR EQUIPMENT AND INSTALL TEMPORARY GRAVEL DRIVES TO REDUCE TRACKING ONTO PUBLIC RIGHT OF WAY. THE CONTRACTOR SHALL BE RESPONSIBLE FOR KEEPING ALL STREETS CLEAN OF ANY SEDIMENT FROM THE CONSTRUCTION SITE ON A DAILY BASIS, NO EXCEPTIONS.
9. ALL DISTURBED AREAS, INCLUDING THE EARTHEN STOCKPILES, SHALL BE MULCHED UPON COMPLETION OF GRADING OPERATIONS. ADEM REGULATIONS REQUIRE ALL DISTURBED AREAS NOT UNDERGOING ACTIVE DISTURBANCE OR ACTIVE CONSTRUCTION FOR LONGER THAN THIRTEEN (13) DAYS TO BE PROVIDED WITH TEMPORARY GROUND COVER.
10. THE CONTRACTOR SHALL INSTALL WATTLES, SANDBAGS, AND/OR SILT FENCE TRENCHED THROUGH PAVEMENT AFTER SAW-CUTTING THE ASPHALT TO AVOID RUNOFF INTO OTHER ROADWAYS, DRIVES, AND AREAS PARALLEL AND ADJACENT TO THE PROJECT. IT IS THE CONTRACTOR'S RESPONSIBILITY TO ADDRESS THIS ISSUE EACH DAY INCLUDING WEEKENDS AND SPECIFICALLY PRE AND POST RAIN EVENTS.
11. WATTLES FOR SEDIMENT CONTROL SHALL HAVE A MINIMUM DIAMETER OF 12”.
12. THE CONTRACTOR SHALL INSTALL STONE AND/OR STABILIZE ENTRANCE/EXIT, SIDEWALKS, ROADWAY/DRIVES, ETC. AS NECESSARY. ALL STONES FOR CONSTRUCTION ENTRANCE/EXIT , SIDEWALKS, ROADWAY/DRIVES, ETC. ARE CONSIDERED INCIDENTAL REGARDLESS THE NUMBER OF TIMES FRESH STONE IS REQUIRED FOR EROSION CONTROL MEASURES. AT THE END OF THE PROJECT, ALL STONE SHALL BE REMOVED AND NOT WASTED ON THE PROJECT SITE.
13. WHEN INSTALLING SILT FENCE OR OTHER BMP'S, THE CONTRACTOR SHALL USE THE LOCATIONS PROVIDED ON THE DRAWINGS OR THE CBMPP. WASTEFUL AND/OR POORLY PLANNED INSTALLATIONS SHALL NOT RECEIVE ADDITIONAL PAY FOR REINSTALLATION AFTER MOVING TO ANOTHER PHASE OF THE WORK.
14. ADEM CLOSELY MONITORS DEVELOPMENTS FOR EROSION & SEDIMENT CONTROL VIOLATIONS. VIOLATIONS CAN LEAD TO THEM ISSUING A STOP WORK ORDER. THE PROJECT SHALL FALL UNDER THE SAME GUIDELINES. ANY FINES AND LEGAL FEES ASSOCIATED WITH THE CONTRACTOR'S FAILURE TO PROPERLY INSTALL AND MAINTAIN EROSION CONTROL MEASURES SHALL BE PAID FOR BY THE CONTRACTOR INCLUDING ANY ADDITIONAL REQUIREMENTS PLACED ON THE PROJECT BY THE FINING AGENCY. THERE SHALL BE NO CLAIMS CONSIDERED OF LOST CONTRACT TIME, MONEY, ETC. DURING THE STOP WORK PERIOD. THIS IS A SITUATION TOTALLY IN THE CONTROL OF THE CONTRACTOR AND HE WILL MEET HIS RESPONSIBILITIES TO MAINTAIN A STABILIZED CONSTRUCTION SITE.
15. ALL INLETS/STRUCTURES SHALL BE COVERED BY DOME INLET PROTECTORS DURING CONSTRUCTION UNLESS OTHERWISE NOTED TO AVOID SEDIMENT RUNOFF. THESE UNITS SHALL BE KEPT CLEAN DURING CONSTRUCTION. IF THE INLET/STRUCTURE IS TOO LARGE, THEN SEDIMENT LOGS OR SILT FENCE SHALL BE USED TO PROTECT THE INLET.
16. ALL MEANS NECESSARY SHALL BE USED TO ESTABLISH TEMPORARY EROSION CONTROL INCLUDING EROSION CONTROL NETTING, SODDING, REPEATED SEEDING AND MULCHING, ETC.
17. A BEST MANAGEMENT PLAN SHALL AT A MINIMUM RETURN ALL EXPOSED OR DISTURBED AREAS TO ORIGINAL OR BETTER CONDITION WITH AT LEAST A GOOD STAND OF GRASS AND/OR SOD. EROSION CONTROL MEASURES INCLUDING CONSTRUCTION EXIT PADS, SHOWN HEREIN TO PREVENT EROSION AND SEDIMENT RUNOFF ARE A MINIMUM AND SHALL NOT BE INTERPRETED AS BEING ALL THAT IS REQUIRED FOR THE PROJECT. CONTRACTOR SHALL BE MINDFUL DURING ALL PHASES OF CONSTRUCTION AND INSTALL AND UTILIZE ANY AND ALL ADDITIONAL ITEMS NECESSARY TO CONTROL ALL EROSION AND SEDIMENTATION ON THE PROJECT AT ALL TIMES AS REQUIRED BY ADEM AND THE ALABAMA HANDBOOK FOR EROSION CONTROL AND STORMWATER MANAGEMENT ON CONSTRUCTION SITES AND URBAN AREAS, MOST RECENT EDITION.
18. OWNER'S REPRESENTATIVE RESERVES THE RIGHT TO DIRECT ADDITIONAL ITEMS OR REVISE IN-FIELD PLACEMENT OF EROSION CONTROL ITEMS AS DEEMED NECESSARY DURING ALL PHASES OF THE PROJECT.
19. CONTRACTOR SHALL BE RESPONSIBLE FOR CLEANING OUT ALL SANITARY OR STORM SEWER MAINS AND MANHOLES ON A CONTINUAL BASIS IF CONSTRUCTION DEBRIS ENTERS SUCH MAINS. IN NO EVENT SHALL CONTRACTOR DISPOSE OF ANY DEBRIS OR MATERIALS IN SEWERS. CONTRACTOR SHALL IMMEDIATELY REMOVE ANY SUCH DEBRIS OR MATERIAL TO SATISFACTION OF OWNER'S REPRESENTATIVE.
20. CONTRACTOR SHALL BE OBSERVANT OF FORECASTED RAIN EVENTS AND PROMPTLY REPAIR, MAINTAIN, INSTALL NECESSARY EROSION CONTROL ITEMS PRIOR TO SUCH RAIN EVENTS. CONTRACTOR SHALL PROMPTLY MEDIATE, CLEAN UP, REMOVE ANY EROSION OR SEDIMENTATION FROM ALL EROSION CONTROL ITEMS, STRUCTURES, TRAPS, BASINS, ETC. AND REPAIR, MAINTAIN, RE-INSTALL, SUPPLEMENT SUCH IMMEDIATELY FOLLOWING EACH RAIN EVENT OR AS DIRECTED BY OWNER'S REPRESENTATIVE.
21. ALL CONCRETE WASHOUT WATER SHALL BE COLLECTED IN A LEAK PROOF CONTAINER SO THAT IT DOES NOT REACH THE SOIL SURFACE AND THEN MIGRATE TO SURFACE WATERS OR INTO GROUNDWATER. ALL OF THE COLLECTED CONCRETE WASHOUT WATER AND SOLIDS SHALL BE RECYCLED.

PACKAGE A: SITEWORK
3711 INDUSTRIAL COURT, JASPER, ALABAMA 35501
BEVILL STATE COMMUNITY COLLEGE

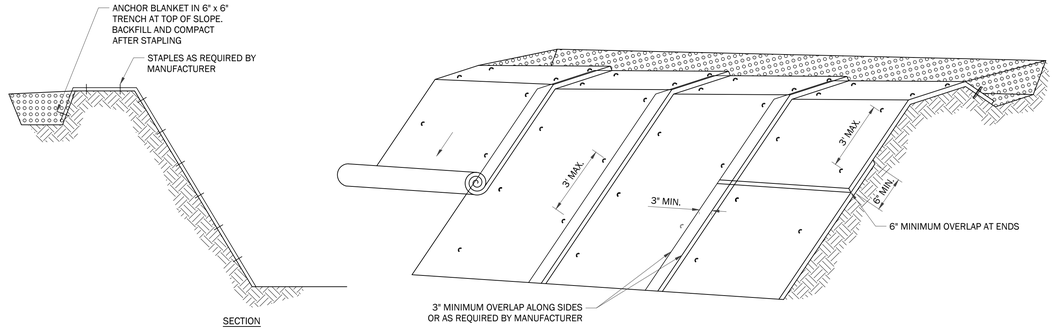
* AASHTO M288 RECOMMENDS A 4 FT POST SPACING.

NOTES:

1. SILT FENCES ARE TEMPORARY EROSION CONTROL ITEMS, THAT SHALL BE ERECTED OPPOSITE ERODIBLE AREAS SUCH AS NEWLY GRADED FILL SLOPES AND ADJACENT TO STREAMS AND CHANNELS.
2. SILT FENCE SHOULD BE PLACED WELL INSIDE RIGHT OF WAY AND ALONG EDGE OF CLEARING LIMITS, THIS WILL ALLOW ROOM FOR A BACK UP FENCE IF FIRST BECOMES FULL. SILT FENCES SHALL BE IN PLACE PRIOR TO ANY CONSTRUCTION OPERATION.
3. WHEREVER POSSIBLE SILT FENCES SHALL BE CONSTRUCTED ACROSS A FLAT AREA IN THE SHAPE OF A HORSESHOE. THIS AIDS IN PONDING OF RUNOFF AND FACILITATES SEDIMENTATION.
4. AFTER THE CONSTRUCTION AREA IS STABILIZED AND EROSION ACTIVITY CURTAILED, SILT FENCES SHALL BE REMOVED.
5. RING FASTENERS USED TO SECURE GEOTEXTILES TO WOVEN WIRE SHALL BE 13 GA. (AMERICAN).
6. IF WOOD POSTS ARE USED, STAPLES FOR SECURING WOVEN WIRE TO POSTS SHALL BE (9) GAUGE, GALVANIZED, 1-1/2" LONG, 5 PER POST AT APPROX. 1'-0" O.C.
7. WOVEN WIRE TO BE 14 GAUGE (MIN.), 6"X6".
8. MACHINE TRENCHED GEOTEXTILE SHAL BE TRENCHED VERTICAL AT LEAST 8" DEEP.
9. FOR J-HOOK APPLICATION AND INTERCEPTED FLOW PERPENDICULAR TO THE SLOPE CAUSING CONCENTRATED IMPOUNDMENT, A MAXIMUM POST SPACING SHOULD BE REDUCED TO 5 FT.

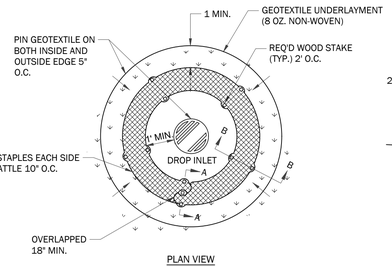
SILT FENCE - TYPE "A"
NOT TO SCALE



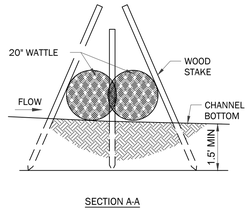
NOTES:

1. SLOPE SURFACE SHALL BE FREE OF ROCKS AND SOIL CLODS TO MAINTAIN GOOD SOIL CONTACT.
2. APPLY SEED, FERTILIZER, AND/OR LIME PRIOR TO THE INSTALLATION OF THE BLANKET.
3. STRIPS SHALL BE ROLLED OUT FLAT, PARALLEL TO DIRECTION OF FLOW WITHOUT BEING STRETCHED.
4. WHEN MULTIPLE STRIPS ARE REQUIRED TO COVER THE WIDTH OF THE SLOPE, THE SIDES SHALL OVERLAP A MINIMUM OF 3".
5. WHEN MULTIPLE STRIPS ARE REQUIRED TO COVER THE LENGTH OF THE SLOPE, THE ENDS SHALL OVERLAP A MINIMUM OF 6".
6. THE UPSLOPE END SHALL BE ANCHORED IN A 6" VERTICAL TRENCH AND BACKFILLED (NOTE: WHEN, IN THE OPINION OF THE QCP, CONDITIONS WARRANT, OTHER EDGES EXPOSED TO EXCESSIVE FLOW SHALL BE INSTALLED AS PREVIOUSLY SPECIFIED).
7. STAPLES SHALL BE U-SHAPED WIRE WITH A MINIMUM 11 GAUGE THICKNESS, AND THE LEGS SHALL BE AT LEAST 6" LONG WITH A 1" CROWN.
8. EACH STRIP SHALL BE STAPLED IN 3 ROWS, AT EDGES AND CENTER, WITH STAPLES SPACED NOT MORE THAN A 3 FOOT GRID.

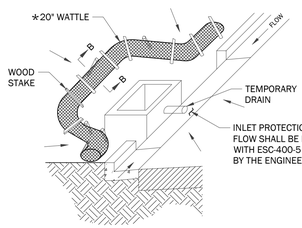
TEMPORARY EROSION CONTROL BLANKET
NOT TO SCALE



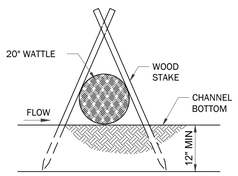
PLAN VIEW



SECTION A-A



CURB INLET PROTECTION

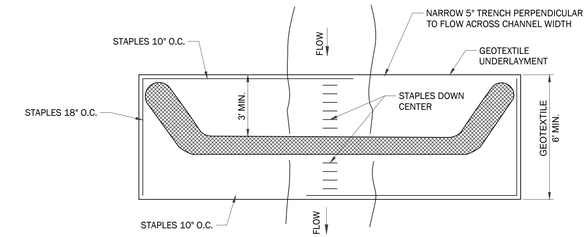


SECTION B-B

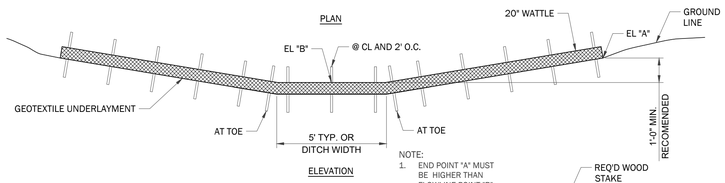
NOTES:

1. ANCHORING STAKES SHALL BE SIZED, SPACED, AND BE OF A MATERIAL THAT EFFECTIVELY SECURES THE WATTLE. STAKE SPACING SHALL BE A MAXIMUM OF TWO FEET.
2. OVERLAP ENDS OF WATTLES PER MANUFACTURERS RECOMMENDATIONS (18"' MIN, 3' MAX).
* 3. SILT FENCE OR SAND BAGS MAY ALSO BE USED FOR THIS APPLICATION. HAY BALES NOT ACCEPTABLE DURING THIS STAGE.

WATTLE INLET PROTECTION
NOT TO SCALE



PLAN



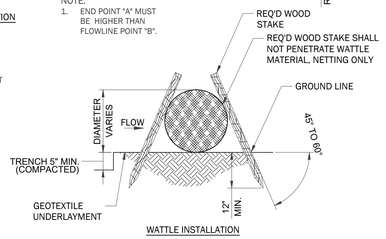
ELEVATION

NOTE:
1. END POINT "A" MUST BE HIGHER THAN FLOWLINE POINT "B".

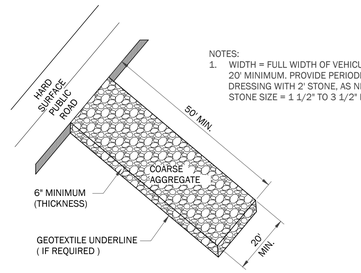
NOTES:

1. SPACING SHALL BE AS SHOWN ON THE PLANS FOR SPECIAL AREA'S, OR AS DETERMINED BY THE ACTUAL PROJECT NEEDS TO MINIMIZE EROSION.
2. ADDITIONAL EROSION CONTROL METHODS WILL BE REQUIRED AT THE DITCH OUTLET TO CONTAIN SEDIMENT.
3. WATTLE SHOULD NOT BE PLACED IN HARD BOTTOM CHANNELS.
4. STAPLES PLACED 18" APART ALONG THE CHANNEL EDGES AND DOWN THE CENTER OF THE CHANNEL. STAPLES PLACED 10" APART ACROSS THE UPSTREAM AND DOWNSTREAM EDGES.

WATTLE CHECK DAM / SEDIMENT CONTROL LOG
NOT TO SCALE



WATTLE INSTALLATION



NOTES:

1. WIDTH = FULL WIDTH OF VEHICULAR ACCESS, 20' MINIMUM. PROVIDE PERIODIC TOP DRESSING WITH 2' STONE, AS NECESSARY. STONE SIZE = 1 1/2" TO 3 1/2" DIA.

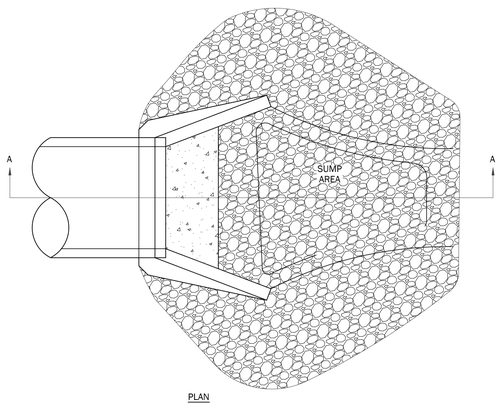
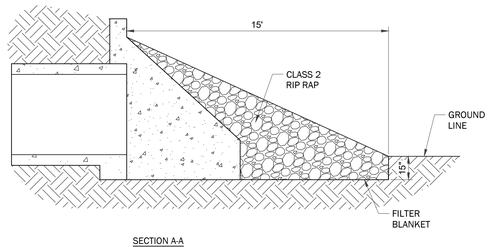
PIPE OUTLET TO FLAT AREA - NOT WELL-DEFINED CHANNEL



PLAN



SECTION A-A

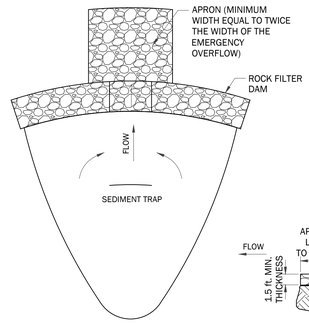
PIPE OUTLET TO WELL-DEFINED CHANNEL

NOTES:

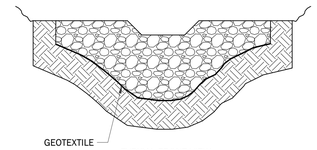
1. IN A WELL DEFINED CHANNEL EXTEND THE APRON UP THE CHANNEL BANKS TO THE TOP OF THE BANK.
2. A FILTER BLANKET OR FILTER FABRIC SHOULD BE INSTALLED BETWEEN THE RIPRAP AND SOIL FOUNDATION. A NON-WOVEN GEOTEXTILE MEETING THE REQUIREMENTS OF AASHTO M288 FOR A CLASS 2 SEPARATION GEOTEXTILE.

OUTLET PROTECTION DURING CONSTRUCTION

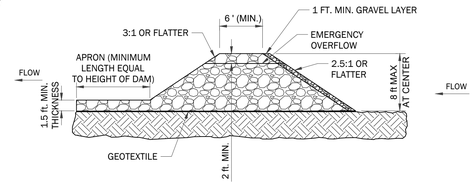
NOT TO SCALE



TYPICAL TOP SECTION



TYPICAL FRONT VIEW



TYPICAL SECTION

NOTES:

1. SEDIMENT TRAP SHALL BE ACCESSIBLE FOR PERIODIC SEDIMENT REMOVAL.
2. DAM SHALL BE FACED WITH 1 FOOT OF SMALLER STONE ON UPSTREAM SIDE, (TYPICALLY No. 57 STONE).
3. REMOVE SEDIMENT FROM THE TRAP AREA WHEN IT ACCUMULATES ½ THE DESIGN VOLUME.
4. IF THE BASIN DOES NOT DRAIN BETWEEN STORM EVENTS DUE TO THE SMALLER STONE ON THE UPSTREAM FACE BEING CLOGGED, THE CLOGGED STONE SHOULD BE REPLACED WITH CLEAN STONE.
5. RIPRAP CLASS AS SHOWN IN PLANS.
6. NON-WOVEN GEOTEXTILE, MEETING AASHTO M288 CLASS 2, SHOULD BE USED AS A SEPARATOR BETWEEN THE GRADED STONE, THE SOIL BASE AND THE ABUTMENTS. GEOTEXTILE MAY ALSO BE ADDED BETWEEN THE SMALLER STONE AND ROCK.

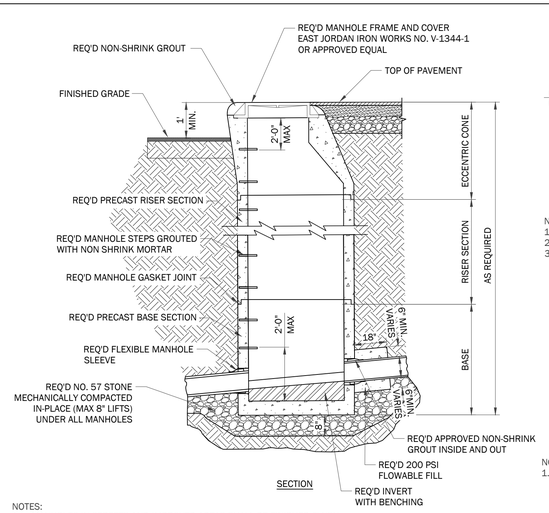
PLAN

NOTES:
1. USE 3000 P.S.I. CONCRETE AND DEFORMED REINFORCING STEEL.
2. IN LIEU OF BOX, CONTRACTOR MAY USE CIRCULAR PRECAST CONCRETE MANHOLE WITH INSIDE DIAMETER EQUAL TO AT LEAST PIPE I.D. + 2'-0"
3. A MINIMUM OF (3) THREE. LADDER BARS ARE REQ'D. IN ALL INLETS. WHERE DEPTH IS GREATER THAN 4' - 0", NUMBER AND LOCATION OF LADDER BARS IN INLET TO BE AS DIRECTED BY ENGINEER.
4. RING AND COVER SHALL BE ALIGNED WILL WALL FOR ACCESS TO LADDER BARS.
5. IF THE CONTRACTOR CHOOSES A CIRCULAR STRUCTURE FOR THE YARD INLET, THEN THE APRON SHALL ALSO BE CIRCULAR.

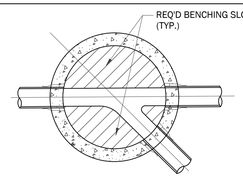
YARD INLET

NOT TO SCALE



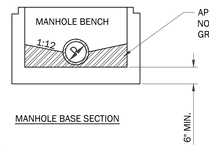
SECTION

NOTES:
1. MANHOLES IN STREETS AND IMPROVED AREAS SHALL BE FINISHED FLUSH WITH FINISHED SURFACE. IN UNIMPROVED AREAS, 12" ABOVE FINISHED SURFACE OR AS DIRECTED BY THE ENGINEER.
2. AFTER SEWER PIPE HAS BEEN LAID TO CORRECT GRADE ALIGNMENT, THE OPENING BETWEEN THE SEWER PIPE AND MANHOLE WALLS WILL BE SEALED WITH NON-SHRINKING GROUT SUCH AS "WATER PLUG OR ANTI-HYDRO".
3. DAMAGE TO THE PRECAST MANHOLE STRUCTURE SPECIFICALLY TO THE TONGUE AND GROOVE ENDS AND/OR GASKET SECTION SHALL REQUIRE THE STRUCTURE TO BE REPLACED BEFORE INSTALLATION. EXTREME CARE SHOULD BE USED DURING DELIVERY, INSTALLATION, ETC.



MANHOLE BASE PLAN

NOTES:
1. PLACE STEPS ON LEAST OBSTRUCTED WALL.
2. MAX. DEFLECTION ANGLE OF SEWER ALIGNMENT = 90°
3. OPENINGS FOR PIPES TO BE FACTORY CAST OR CORED.

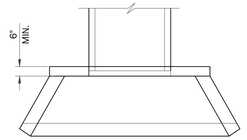


MANHOLE BASE SECTION

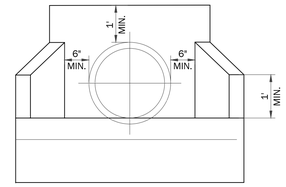
NOTES:
1. BENCH REQUIRED FOR PIPE DIAMETER LESS THAN 48"

STANDARD PRECAST MANHOLE

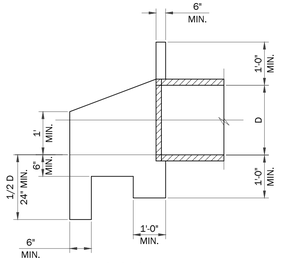
NOT TO SCALE



TOP VIEW



END VIEW

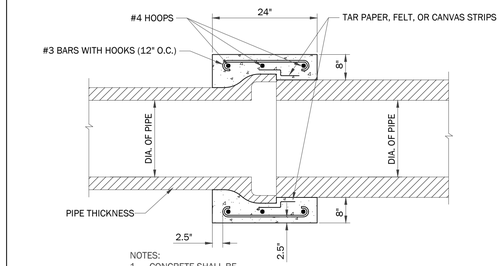


SECTION VIEW

NOTES:
1. ALL SUBMITTAL/SHOP DRAWINGS FOR PRECAST OR CAST-IN-PLACE HEADWALLS SHALL BE STAMPED BY A LICENSED, PROFESSIONAL ENGINEER REGISTERED IN THE STATE OF ALABAMA. ALL DESIGN CALCULATIONS SHALL BE SUBMITTED.
2. THE DETAILS AND DIMENSIONS CHART PROVIDED GIVE STANDARD DIMENSIONS FOR HEADWALLS FOR VARIOUS STORM DRAIN DIAMETERS. THE CONTRACTOR SHOULD NOTE ALL MINIMUM DIMENSIONS.

VERTICAL HEADWALL

NOT TO SCALE



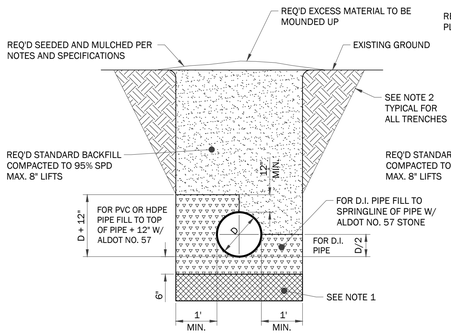
NOTES:
1. CONCRETE SHALL BE 3,000 PSI MIN.

CONCRETE COLLAR DETAIL

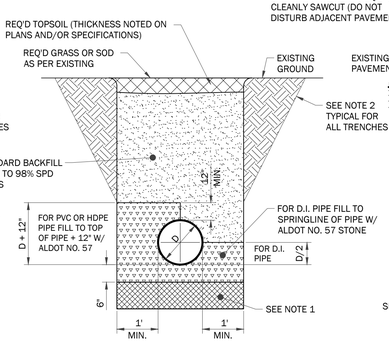
NOT TO SCALE

TRENCH DETAIL - PAVED SURFACES (NEW CONSTRUCTION)

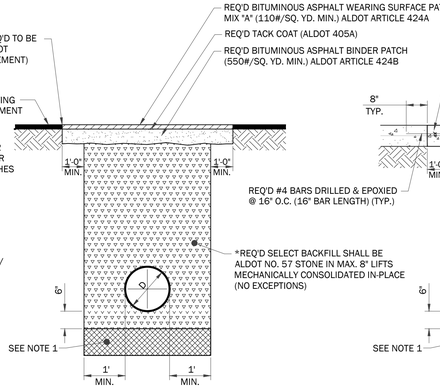
NOT TO SCALE



UNIMPROVED AREAS

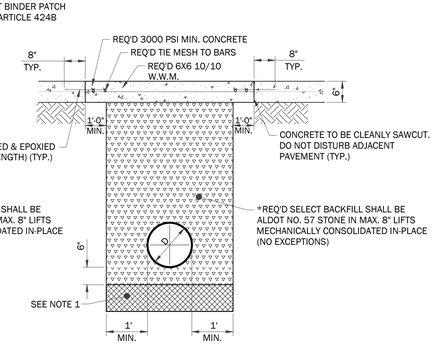


IMPROVED AREAS OR LAWNS



NOTE: IF UTILITY IMPROVEMENT FALLS WITHIN AN AREA THAT IS TO BE REMOVED DURING ROADWAY CONSTRUCTION THEN ELIMINATE THE WEARING SURFACE PATCHING AND MATCH THE BINDER PATCHING WITH EXISTING PAVEMENT.

EXISTING ASPHALT PAVING



EXISTING CONCRETE PAVING

TRENCH DETAILS

NOT TO SCALE

TRENCH DETAIL NOTES

1. TRENCH FOUNDATION REQUIRED IF DIRECTED BY THE ENGINEER, DEPTH VARIES.
2. THERE IS NO ADDITIONAL PAY FOR TRENCH LAY BACK, BENCHING, SHORING, TRENCH BOXES, ETC. THIS IS CONSIDERED A SUBSIDIARY OBLIGATION TO THE UTILITY INSTALLATION.
* 3. THE CONTRACTOR SHALL MECHANICALLY CONSOLIDATE ALL STONE BACKFILL IN MAXIMUM 8" LIFTS AS NOTED. FAILURE TO DO SO SHALL RESULT IN THE STONE BEING REMOVED/REINSTALLED AT THE CONTRACTOR'S EXPENSE OR ONLY PARTIAL PAYMENT BEING MADE FOR THE BID ITEM. STONE SHALL BE PLACED IN APPROPRIATE THICKNESS AND COMPACTED IN THE FOLLOWING SEQUENCE:
   (1) BEDDING (6" MIN.)
   (2) SPRINGLINE OF PIPE
   (3) ONE FOOT ABOVE TOP OF PIPE
   (4) 8" LIFTS FOR REMAINING TRENCH DEPTH
4. UNIMPROVED AREAS SHALL BE CONSIDERED AREAS WHERE NO PREVIOUS DEVELOPMENT HAS OCCURRED AND THE AREA IS NOT MAINTAINED REGULARLY SUCH AS A WOODED/FORESTED AREA OR OPEN FIELD.
5. IMPROVED AREAS OR LAWNS SHALL BE CONSIDERED AREAS WHERE REGULAR MAINTENANCE OCCURS SUCH AS IN PUBLIC RIGHT-OF-WAYS AND ON PRIVATE PROPERTIES. SETTLEMENT OF ANY KIND IN THESE AREAS IS UNACCEPTABLE AND MAXIMUM EFFORT SHALL BE GIVEN TO ENSURE THE IMPROVED/LANDSCAPE AREAS ARE RETURNED TO THEIR PREVIOUS STATE, UNLESS FURTHER IMPROVED BY THE PROJECT.
6. PAVEMENT AREAS (ASPHALT OR CONCRETE) SHALL BE CONSIDERED ANY ROADWAY, DRIVE, SIDEWALK, PAVERS, PARKING LOT, ETC. WHERE THE EXISTING OR FINAL FINISH GRADE IS AN ASPHALT OR CONCRETE SURFACE.
7. IN AREAS OF EXISTING PAVEMENT, THE TRENCH SHALL BE BACKFILLED COMPLETELY WITH STONE AS SHOWN ON THE EXISTING PAVEMENT TRENCH DETAILS. THESE AREAS INCLUDE CROSSING OF EXISTING ROADWAYS, PARKING LOTS, SIDEWALKS, ETC., AND ARE AREAS WHERE EXCAVATED WIDTHS DO NOT ALLOW FOR COMPACTION AND TESTING OF STANDARD BACKFILL. THESE CONFINED AREAS TYPICALLY CANNOT BE BENCHED BACK AND REQUIRE TALLER TRENCH BOXES TO MAINTAIN OSHA REQUIREMENTS.

   IN THE EVENT THAT THE EXISTING PAVEMENT AREA IS BEING COMPLETELY REMOVED TO A LIMIT THAT PROVIDES SUFFICIENT SPACE TO ALLOW PROPER VIBRATORY EQUIPMENT AND, IF NECESSARY, BENCHING OF SIDE SLOPES AS REQUIRED IN THE PROJECT EARTHWORK SPECIFICATIONS (BENCHING IS REQUIRED ON SLOPES GREATER THAN 4:1 SLOPE), THEN THE CONTRACTOR MAY FOLLOW THE TRENCH DETAIL FOR PAVED AREAS (NEW CONSTRUCTION). THIS DETAIL ALLOWS FOR THE USE OF EARTHEN BACKFILL AND WOULD ALSO REQUIRE THE CONTRACTOR TO ALLOW SUFFICIENT WIDTH THAT THE OWNER'S GEOTECHNICAL REPRESENTATIVE COULD TAKE PERIODIC COMPACTION TESTS. IF THE CONTRACTOR IS UNSURE OF WHERE STONE OR EARTHEN BACKFILL IS TO BE INSTALLED ON A PROSPECTIVE PROJECT, THEN THEY SHALL REQUEST CLARIFICATION DURING THE BIDDING OF THE PROJECT. THERE SHALL BE NO CLAIMS CONSIDERED AFTER THE PROJECT HAS BEEN BID.
